THE JEWELERS' CIRCULAR

THE HOROLOGICAL REVIEW,

WITH WHICH ARE CONSOLIDATED THE JEWELERS' WEEKLY, THE JEWELERS REVIEW

Copyright 1903 by THE JEWELERS' CIRCULAR PUB. CO.

Corbin Building, 11 John St., Corner Broadway, New York.

Entered as second-class matter at the New York, N. Y., Post Office.

35TH YEAR. NEW YORK AND CHICAGO, WEDNESDAY, FEB. 4, 1903. VOL. XLVI. No. 1.

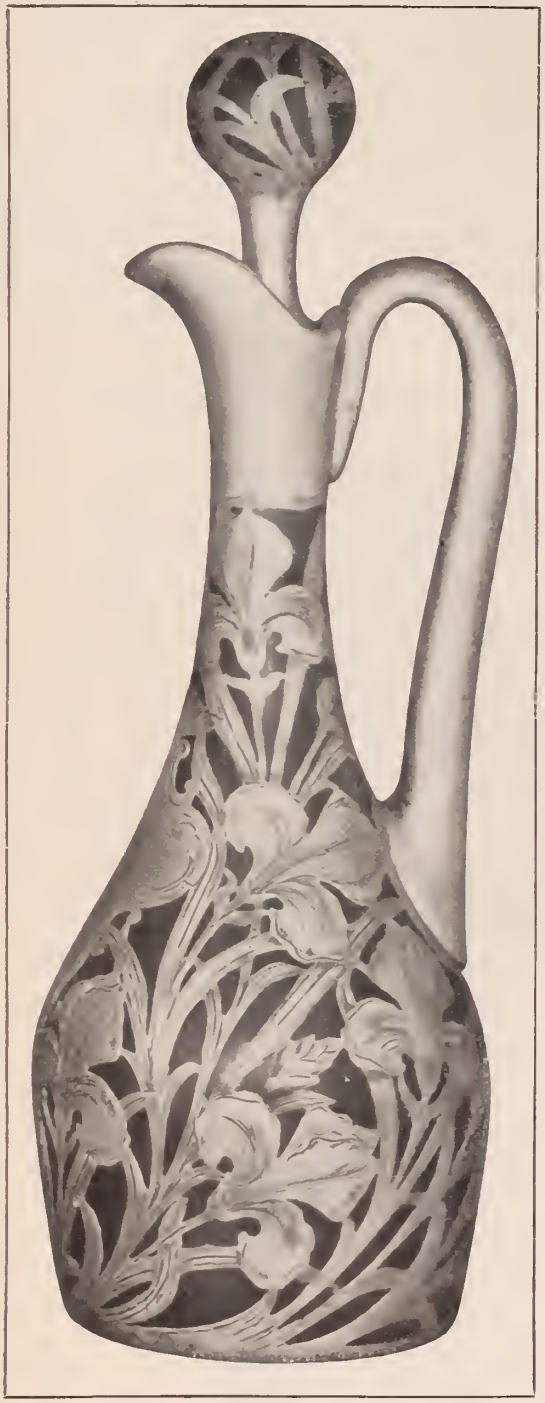
THE MORGAN COLLECTION OF ANTIQUE SILVER MASTERPIECES.

THE most attractive feature of the Silversmiths' Plate Exhibition, recently held at St. James's Court, London, was, doubtless, the matchless collection of works of art of old-time silversmiths, belonging to J. Pierpont Morgan. The collection consists of 72 pieces, and was recently purchased by Mr. Morgan from Herr Gutmann, of Berlin.

One of the remarkable pieces of the collection is the cup, in the form of a large barrel, of parcel gilt, illustrated on this page. A Bacchus sits astride the barrel, holding aloft a goblet. Beautiful creeping vines embellish the barrel, which is resting on four rampant lions. An enameled coat of arms, manifestly that of the family for whom this piece was originally made, is seen on the front above the spigot which is surmounted by a mermaid. This piece is said to be one of the most valuable of the articles exhibited.

Probably the most magnificent and interesting object of this remarkable collection is the group showing Diana seated on a stag. In this, three hounds stand beneath the animal.

CUP IN FORM OF GREAT TUN, WITH BACCHUS ASTRIDE.



whose fore feet are uplifted. This beautiful example of the German silversmith's art is but 15 inches high, but is remarkably perfect in every detail. Diana is gracefully mounted on the stag, and carries on her forehead a crescent set with a large ruby and five diamonds. The figure is embossed, and the hair and clothing are gilt. The body of the stag forms a flask, and, for this reason, the head is removable. One of the hounds is gilt finish, and the other in silver.

The group is provided with a clockwork, which enables it to move around the table. It was made by a famous silversmith in Augsburg, in the 16th century, and there are said to be only five similar examples of such work, viz.: one in the treasury of the Kingdom of Bavaria, another in the Baron Rothschild collection, one each at Gotha and at Stockholm, and a fifth in the Berlin Museum of Arts and Industries.

Other perfect examples of the silversmith's art during the 16th century are the statuette of a cavalier on horseback, and a nautilus mounted in the form

WHEN VISITING THE CITY

We would be pleased to have you call at either of our show rooms

54 Maiden Lane,

or

41 Union Square,

and look over our line of new goods. New shapes and designs in Decanters, Vases, Colognes, Flasks, Jugs, etc., in Alvin Silver Deposit Ware.

Bon Bon Dishes, Berry Bowls, Bread Trays, Water Pitchers, and Fancy Goods in hollow ware.

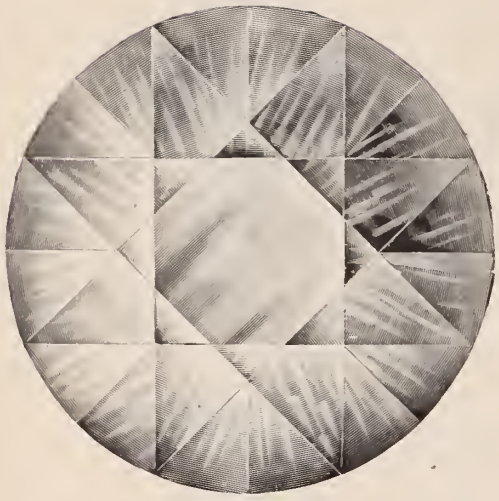
The decoration and engraving is brought out most beautifully. Articles of this character give tone to the Jeweler's entire stock. There is a richness and brilliancy about the Alvin Ware that makes it conspicuous.

There is nothing more suitable for presents.

Alvin Manufacturing Company,

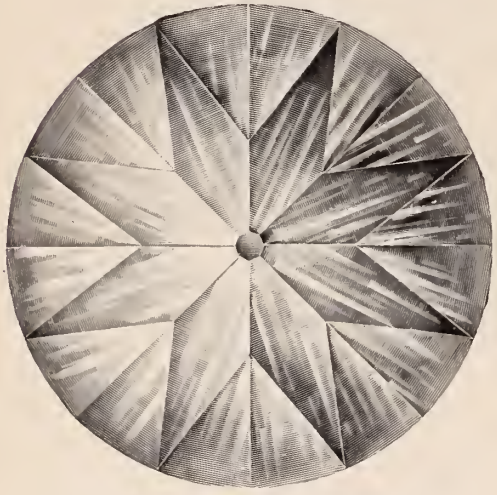
54 MAIDEN LANE, 41 UNION SQUARE,

NEW YORK.



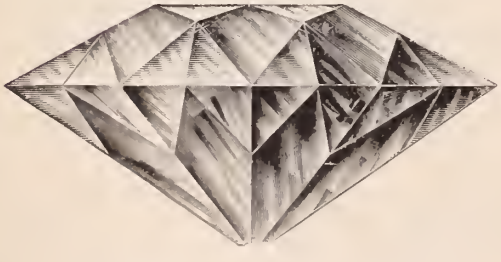
A Simple Business Proposition.

You can sell FAHYS Gold Filled Cases for as much money as you can any case in the market. You can buy them for much less than you can any other high grade case.



It will pay you to investigate if you want to add to your profits, and at the same time add to your reputation.

Any Jeweler in the United States who has not received our new price list on FAHYS Cases---issued February 2, 1903---will oblige us by notifying us at once.



JOSEPH FAHYS & CO.,
Fahys Building, New York.

Cut shows top of diamond with properly laid facets.

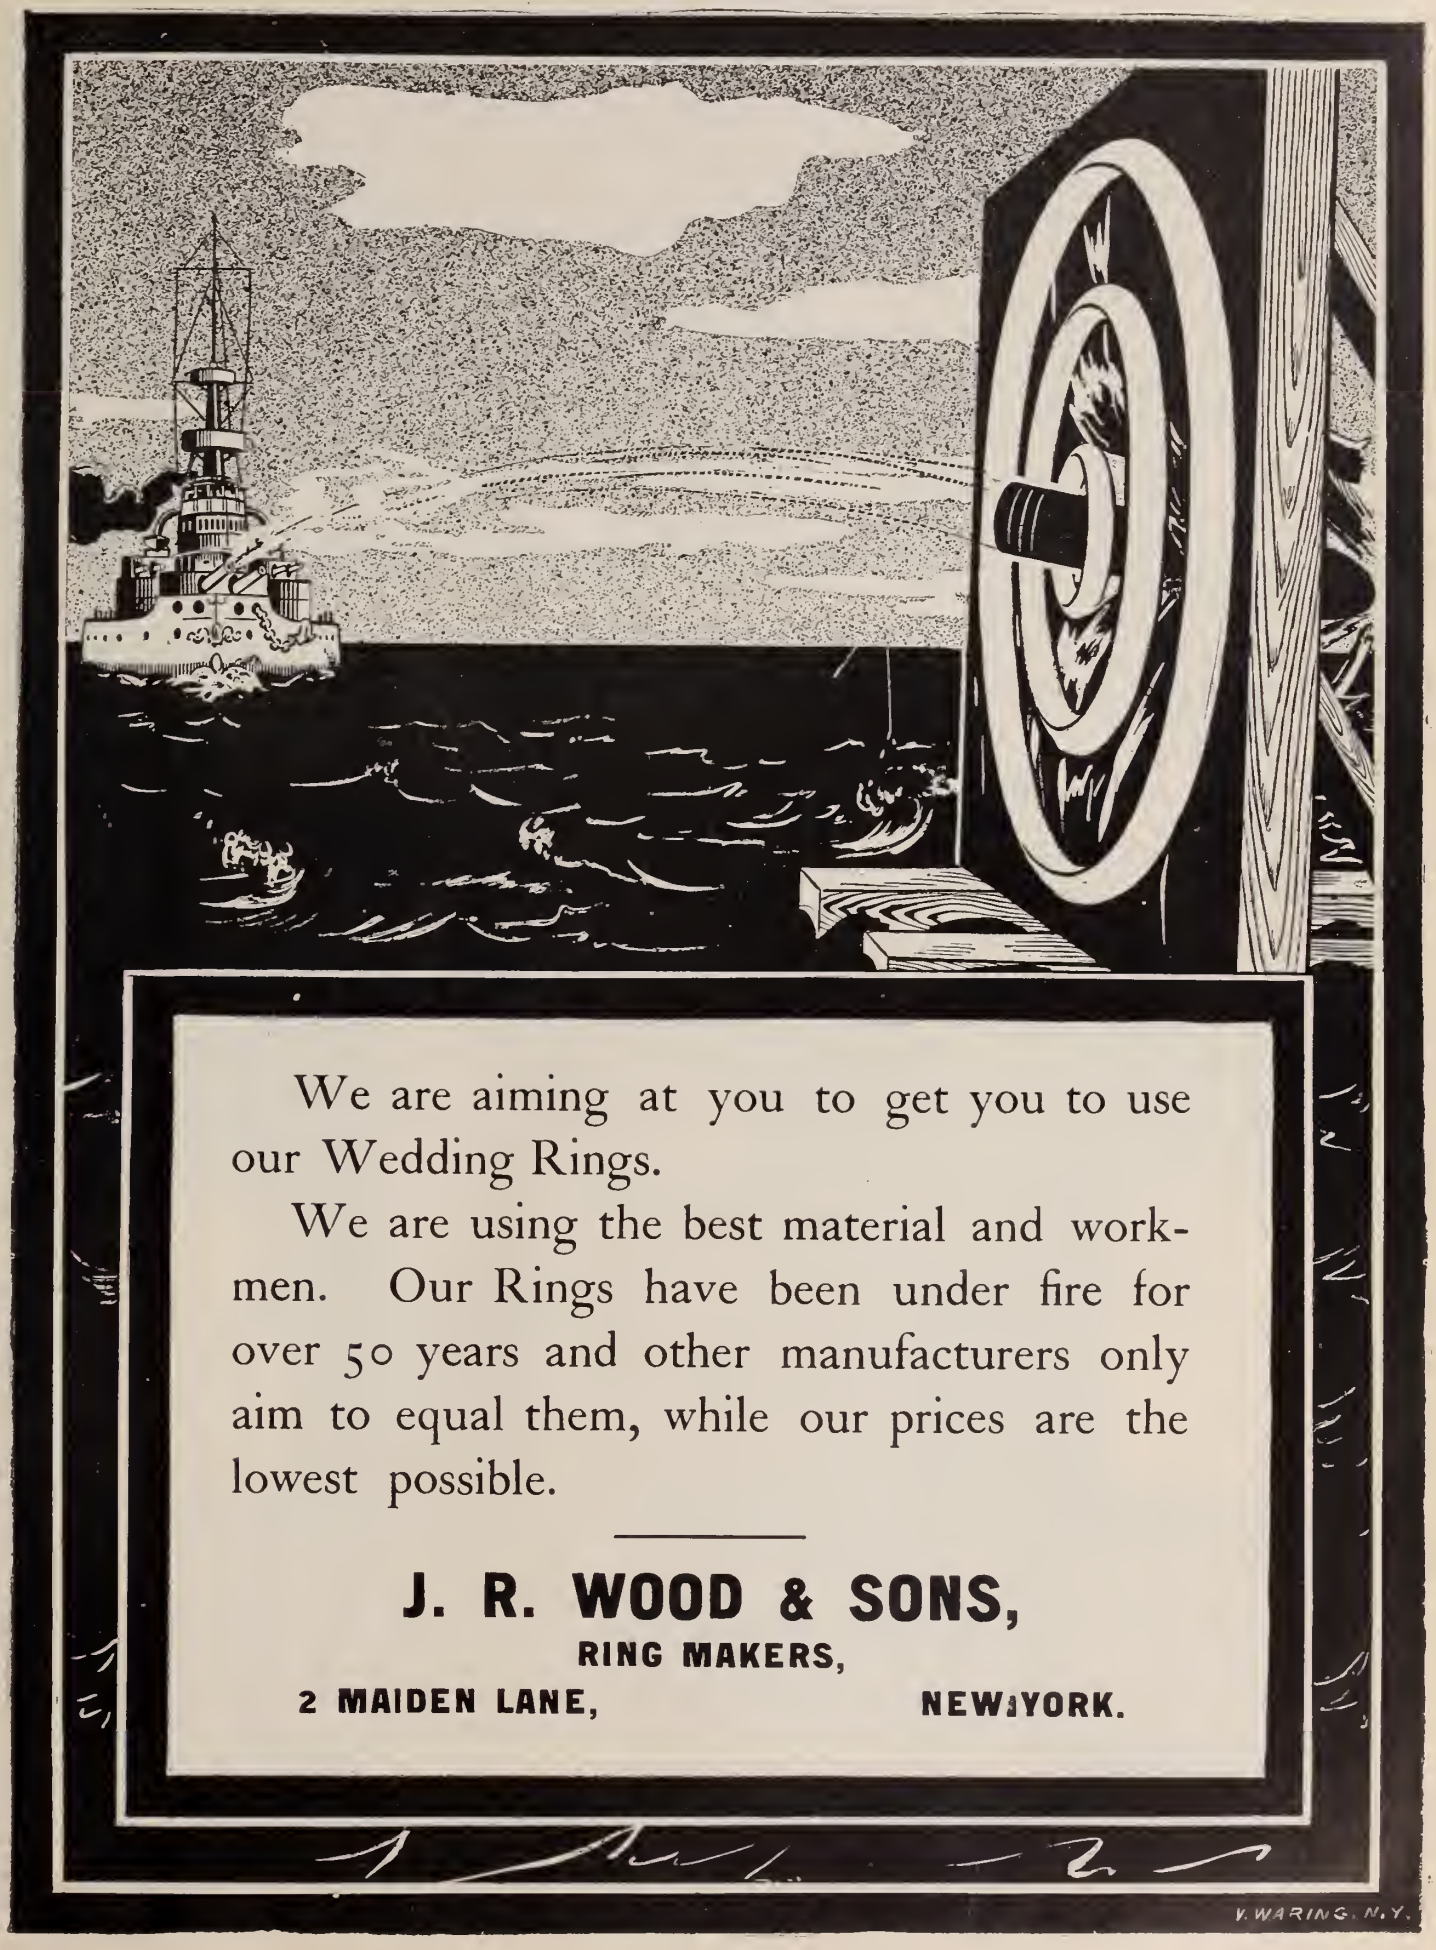
Cut shows bottom of diamond with properly laid facets.

Cut shows side of diamond with properly laid facets and properly shaped diamond.

DIAMOND CUTTING

Brilliancy, brightness or snappiness depends on the cutting of the diamond.

It is light entering from all sides of the stone; the facets deflect it, and it passes out the top of the stone.



If the facets are not properly laid, and the stone not the correct thickness (in relation to the spread) the rays of light do not concentrate and leave the top of the stone at the same angle, and the diamond is not as bright as it should be.

For fuller particulars regarding correct cutting and dimensions of diamonds see our leaflet dated Feb., 1903, which we have mailed. If one has not reached you, send us word.

Our Fiftieth Anniversary

1853
1903

A GREETING to our *many* friends in the trade *throughout* the United States. We feel that we would like to take *each* of you by the hand and thank you *personally* for your confidence and loyal patronage *throughout our* 50 *years* in the MATERIAL BUSINESS. This being impossible, we take this opportunity to do so through the columns of THE CIRCULAR-WEEKLY. We want to express to you our appreciation and to *assure* you that in the future as in the past we shall *always* try our best to please you and to merit a continuance of your patronage. We give below *a few reasons* why we should have *your* MATERIAL BUSINESS.

FIFTY YEARS IN BUSINESS MEANS SOMETHING.

Constant healthy growth has placed us in the front rank in volume of business in our line.

Being *direct importers* as well as *manufacturers* we possess advantages which in turn we give to our customers.

The *complete stock*, which we have always on hand, is one of the fundamental necessities for the avoidance of substitution and for dispatch in filling orders.

Experienced hands are essential to a well-equipped department. We take pains to get and keep them.

Keeping up stock, filling orders *correctly* and *quickly*, are points which we have *carefully watched* and which have in a great measure contributed to the success of this department.

Our prices, *quality* being taken into consideration, are the *lowest* obtainable.

OUR MOTTO IS TO PLEASE OUR CUSTOMERS.

We call your *particular* attention to some of our specialties:

AMERICAN AND SWISS MAINSPRINGS, for which we have been the sole agents for the past 50 *years*. JURGENSEN RECOILING MAINSPRINGS, for High-Grade American and Swiss watches, for which we are the *Sole Agents*.

JURGENSEN PINIONS in all numbers and sizes.

LUTZ HARDENED HAIRSPRINGS, numbered separately, in all sizes.

L. H. K. & CO. FINE TEMPERED HAIRSPRINGS, numbered separately, in all sizes.

FINE RUBY AND SAPPHIRE OLIVE HOLE JEWELS, ass't *separate sizes* and diameters.

ALSO CENTER JEWELS IN RUBY AND SAPPHIRE for *all makes of American and Swiss* watches.

FINE SWISS HANDS FOR HIGH-GRADE WATCHES.

RED AND BLUE LABEL LATOIX GENEVA AND BASSINE WATCH GLASSES.

We voluntarily give our customers the benefit of any reduction in price without notice.

We thank our patrons for the confidence so generously manifested by them in the past and solicit their further commands as well as those of new friends.

The Strength of a Chain

FOSTER'S STRONG LINKS.

LINK No. II.—Finish.

In many years of manufacturing vest chains we have learned one thing well. That one thing is how to obtain the maximum of finish with the minimum of loss of gold.

Our 1-20 chain starts 1-20 and ends 1-20. Our 1-10 chain starts 1-10 and ends 1-10. The exact proportions are maintained throughout.

No loss of gold is suffered in the process of manufacture or finishing, and upon the last link of every 1-10 chain we stamp it 1-10, and we mean just that. Every 1-10 gold chain is soldered with gold solder.

You can place these chains before your customers with absolute confidence. They will bring you satisfaction and other orders. Send for our catalogue.

Gold and Silver Plating in Rouen, France.

THE method employed for gold plating in Rouen, France, is a y old one and differs so greatly from the electro-chemical process employed in the United States that it may be interesting to mention it. The piece to be plated is cleaned thoroughly, heated red-hot, plunged into a weak solution of sulphuric acid, and then dried with bran or sawdust. It is then saturated with a thin solution of mercury, after which is applied by the aid of a brush, a certain quantity of pulverized gold amalgam. The mercury completely volatilizes immediately after the piece is heated, leaving only the dun-colored coat of gold upon the surface. This coat is given a pure gold color by cleaning, rubbing and heating, and afterwards covering with a paste of salt, niter and alum, then placed in boiling water and wiped thoroughly.

What little silver plating is done in Rouen is called *argenture au pouce*—(silvering by friction). It is effected by means of rubbing the object to be plated with chloride of silver recently precipitated and moistened with a little salt water. The silver penetrates into the brass or copper and forms a thick plate on the surface, which is made still more adhesive by thoroughly burnishing. It is said by Rouen silversmiths that one advantage of this method is that when any part of the piece wears or becomes discolored it can be easily replated without the necessity of replating the whole piece.

Large pieces are sometimes plated by means of silver leaves applied to the metal after it is thoroughly cleaned. These leaves are made to adhere by heat and pressure with a steel polisher. From 30 to 60 leaves are used, according to the durability one wishes to give.

Native Silver Workers of Madagascar Show Cleverness in Imitating.

ACCORDING to recent reports received at Washington, in reference to the manufacture of silver in Madagascar, what the consuls have to relate savors more of historical interest than of commercial value. The Hova people of the interior, who are adept imitators, show great skill in the manufacture of gold and silver articles; but their attention has only been turned to the making of silver chains, rings, ornamental mountings to their snuff boxes and other trinkets of personal adornment, which are circulated among themselves and bought up as curiosities in small quantities by foreigners; but their art has never been turned to commercial purposes of any extent, and is virtually confined to Antananarivo.

It might be mentioned, as an example of barbaric splendor, that one of the late Hova kings had a four-post bedstead made entirely of Mexican silver dollars. The Hovas, too, quickly learned from books the many different processes of silver plating, but, strange to say, the art was never learned and practised, but with one object—namely, to issue false coin; and such is their skill in this business that even under the eyes of the French administration they succeed so well that the official journal is constantly publishing notices, putting the public on guard against spurious dollars in circulation.

1903

Greeting and Congratulation.

Under present conditions it is indeed a two-fold pleasure to extend our felicitations to the trade. Never have we emerged from a year of greater achievement, nor entered upon one of greater promise.

The past is gone forever and is useful only in its lessons, not the least of which is the growing importance of dealing with a firm of known and proven worth. Our patronage, always impressive, no less in character than in extent, is the direct result of liberal treatment.

We don't believe in loose business principles—but as has been our wont, we will cling to a broad and magnanimous system of treatment rather than to the rigid letter of the law.

This is the surest road to the confidence of the retailer, and with our resolution, energy and experience, it is easy to travel. We are again first in the field with what is best in WATCHES and DIAMONDS.

Our facilities are copious and our staff eager to serve and efficient to perform.

The Morgan Collection of Antique Silver Masterpieces.

(*Continued from page* 1.)

of a snail, and driven by a negro, holding a bow, in black and colored enamel. The shell is of a handsome lustrous white, and while the whole piece is but seven and three-quarter inches in height, its value is very great.

All the remaining 68 pieces of the col-

GROUP DIANA AND STAG.

lection are incomparable masterpieces. There are no less than 40 cups. Among them are : An odd wager cup, in silver gilt, in the shape of a woman, with large ruff and voluminous skirts, richly embossed; a plain cylindrical gilt tankard, sheathed in filigree silver, arranged around Cupids' heads in relief; a cup, representing a dancing bear, 10 inches high; several

SNAIL AND SHELL, IN BLACK AND COLORED ENAMEL.

cups, made of ostrich eggs, overlaid with delicate tracery of silver filigree, and mounted on animal figures, in silver gilt; a magnificent tankard of parcel gilt, carrying upon its sides the representation of one of the victories of Alexander the Great, the work of the famous Nuremberg silversmith, Hans Keller, who lived in the

17th century; a carved ivory tankard, representing Esther before Ahasuerus; a conch shell, mounted as a cup, surmounted by the miniature figure of a Roman warrior, a shell cup, shaped like a sea monster, gilt embossed—a product of the 17th century.

The last named cup may be briefly described as follows: On the flat of the sloping cover of the cup is a sea monster escaping from the basket. The handle is in scroll work and high, resembling that of a Roman urn, and terminates in a merman, partly hidden from view by seaweeds. A

CAVALIER ON HORSEBACK.

fisher-boy forms the stem, and the high base is embossed with dolphins.

Another piece that attracted universal attention is a handsome triptych, the work of the silversmith Wallbaum, and dating from 1598. The painting, remarkable for perfection of detail, richness of color and minute, delicate execution, was performed by Anton Mozart.

The entire collection of Germanic art is indescribably handsome, and it is difficult to say which piece may be called the gem or deserves the palm. Its value cannot be definitely estimated—it is worth hundreds of thousands of dollars.

The clock in the tower of the New York City Hall stopped recently for the first time in many years. The plate glass dial of the western face was blown off by the wind, which caused the clogging of the hands and machinery of the timepiece. The other three faces continued doing business after the débris had been removed. It was thought that the primary cause of the breaking of the glass was its weakened condition, resulting from shots fired through it some months ago, apparently from one of the upper windows of the Postal Telegraph building. At the time this was done there was considerable comment in the newspapers over the affair, but the person or persons who had fired the shots has never been discovered. The glass was not repaired, and in its weakened condition could not withstand the high winds of last month.

Diamonds and Diamond Mines of India.

By GEORGE CECIL.

THE AUTHOR.

ONE of the most prominent features of the recent evolution of South Africa has been, undoubtedly, the discovery of its mineral treasures, and, from time to time, we have been interested by statistics and romances connected with the precious metals and stones which have been unearthed. The diamonds of Kimberley and the sensational incidents connected with their trading have made them so well known, that probably the public can scarcely believe that India is, after all, the real home of almost all historical diamonds of value.

In the records of the East India Co., as far back as the 17th century, there are references to the industry of diamond finding, and the profitable nature of the occupation as carried out across the Deccan country in the valleys of the Kistna, Penner and Godavari rivers, while celebrated workings were carried on in Central India and in the Sone basin.

The earliest mention of the subject is by a Dutchman, Van Linschoten, whose writings, bearing date of 1596, have been rescued from oblivion by the Hakluyt Society. From him we learn that all large diamonds belonged to the king, smaller ones to the finder, subject to a royalty on their value, and each miner had to pay a license. To quote his own words, "They grow in the countrie of Decane, behinde Ballagate, by the town of Bisnager, wherein are two or three hills, from whence they are digged, whereof the King Bisnager doth reape great profitte; for he causeth them to be straightly watched, and hath farmed them out with this condition, that all diamonds that are above 25 mangelyns in waight are for the King himself, every, and if anie man bee found that hideth anie such, he looseth both life and goodes." This Kingdom of Bisnager is that known as Vijayanagar, which had its capital at the celebrated Hampi, in Bellary District, and extended over Southern India. It was finally overthrown by the Mohammedan Powers in A. D. 1565, after the battle of Telikota.

INTERIOR VIEW OF THE DIAMOND MINE, WAJRA KARUR.

a Hill to see them digg and looke for Dymonds, which is done after this manner, the ground is loose of a Red fat sand and gravell, great and small Black Red and White stones, one or two of the miners loosen the earth with an Iron grow and others with Iron spades, heave it up to a heap, from whence others with Basketts wind the small dust from it with the Wind, thence is carryed to a troff made up of stones and earth filled with water which is brought thither above a mile upon men's heads, where all the gross earth is washed away from the gravell, for the earth melts like sugar and runs out of a hole with the water, soe the gravell all remaines that they carry thence and spreade upon a smooth plaine place prepared for the purpose where the same men (that digg dust and wash the earth) sett all the heat of the day in a ranke one by another with their faces towards

GENERAL VIEW OF THE DIAMOND MINE, WAJRA KARUR.

The next account is by Tavernier, who published in 1669, a full account of Indian diamonds, and specially mentioned the Kollur workings, which were in the territory of Golconda, and it is believed that their yield were classed as Golconda stones. Mr. Streynsham Master, the Governor of Madras, visited these mines in 1679, and referred to them in the quaint English of his days, as follows:

About four a'clock we went to the mines upon the Sun looking for the Dymonds and the man that imploys them sett over against them to see that what they find they deliver to him, and in this manner they find the Dymonds in the same fashion and shape as they are sold rough.

The writer has had occasion to travel over an area of disused mines, which were simple pits, from 10 to 15 feet in depth, and with a surface diameter of, perhaps, 20 feet, and so close to each other that it was difficult to ride a horse between them, while they formed an almost continuous narrow belt, more than five miles in length. Yet the people in the neighboring villages can tell nothing of their old working, and the record of government only enables us to dimly perceive the probable cause of their abandonment.

It is known that the Deccan country, from which the gems were extracted, was usually distracted by war until the advent of the British power caused an all-pervading peace, and it would appear that with that peace also came the practical cessation of diamond mining. It is, however, probable that the trade was already stifled by the Brazilian finds, which dated from about 1727, and also by the imposition taxes by the native rulers; so the British found the trade practically abandoned, and it has never since been resuscitated on any large scale.

This general cessation of diamond mining is not satisfactorily accounted for, and it is considered by scientists that there is no proof of the exhaustion of the mines which were purely superficial, and it is hard to suppose that the country contains no more such glorious gems as they yielded to unsustained effort during a comparatively short period of the world's history.

First and foremost among them is the Kohinur, or Mountain of Light, which tradition tells us was unearthed in 1550 at Golconda, but as this was the capital of the kingdom containing most of the Deccan

mines, the stone probably came from Kollur, in the Kistna, or from Ramalkot, in Kurnool. This gem now gracing the Imperial Crown, weighs, in its cut and polished state, 106 1-16 carats. It came to the British nation with the Punjab, in 1849, having formerly ornamented the Peacock Throne of the Emperors of Delhi.

One of the largest diamonds in the world is in the possession of His Highness the Nizam of Hyderabad. It was first seen some 50 years ago, in the hands of a native child, who played with it in utter ignorance of its value, and not until eight annas was offered for what was considered

GENERAL VIEW OF THE DIAMOND MINE, WAJRA KARUR.

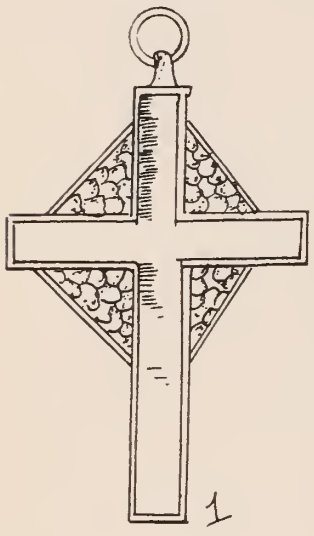
a common stone was the suspicion aroused that ultimately led to the discovery that the child's plaything was a real diamond. The story goes—and we give it for what it is worth—that no sooner was it known to be of value than immense excitement reigned, and much blood was shed to secure its possession; so much so, that the Government had to interfere, and it thus came into the Nizam's possession. That is, he got a portion only, a small piece being chipped off in the struggle, and this piece, after passing through many hands is said to have been purchased by a native banker for 70,000 rupees. Subsequent trace of it has been lost.

The portion in the Nizam's possession is still in the rough state, and is 2.48 inches long, 1.35 inches greatest breadth, with an average thickness of .92 inch. Its actual weight is computed to be 277 carats. It is estimated that the Hyderabad diamond, were it cut, would probably weigh 138½ carats, a weight between that of the Pitt, or Regent diamond, which weighs 136¾ carats, and that of the Grand Duke of Tuscany, weighing 139 carats. Assuming that one-eighth of what it would be when polished was taken off, with the splinter sold to the native banker, he would then have 155½ carats as the possible weight, had the whole stone been cut and polished. It would then be placed between the Tuscan and the great Orloff diamond, of 194¾ carats. The Hyderabad gem was sent to Calcutta some years ago to be cut and polished, but the price asked for doing so was so exorbitant that the then Nizam ordered it to be sent back, and no attempt has since been made to beautify it. It is not known for certain whether this diamond is one of pure water, but from the fact that the piece chipped off sold, according to reports, for 70,000 rupees, it may be assumed that it is one of some purity.

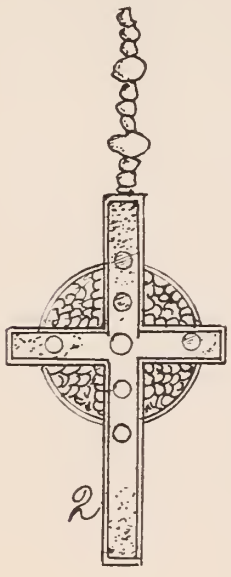
Though the finding of diamonds in India as a regular trade has long since disappeared, gems are still found and come to the diamond market, though not in quantity. The diamonds yielded by India in the past are believed to have been all found in alluvial deposits of sand and clay, in ferrugineous shales, in conglomerates, and throughout the Bellary, Kurnool and Anantapur Districts. In the portion of Kurnool, included in the estate of Banganapalle, stones of small size are constantly sold by poor cultivators to recognized diamond purchasers, but there is no regular search instituted, so that even in a country rich in stones the finds would be poor. Of late, however, stones have come to light from a rocky sub-stratum, which is identified as closely resembling, if not identical with, the celebrated peridotite of the Kimberley mines, and in that case India has at length produced diamonds in their natural matrix.

The accompanying illustrations are of a recently commenced working at Wajra Karur, in the Anantapur District (which was apportioned from the Bellary District) in such a formation. The surface finds at this spot include a very celebrated gem, known as the Gordon Orr, which, when found, in 1883, weighed 62 carats, and changed hands at 5,000 rupees and 15,000 rupees. Afterwards, when polished and cut, it was reduced in weight to 24⅞ carats, but had an unsurpassed luster, and was valued at £15,000. Even recently, a stone of 68 carats, valued at 30,000 rupees, has been found, as well as other small ones.

There is no lack of traditions of other, and even larger stones, than the well known ones already mentioned. One is known to be in a Hindoo temple, not far from Bellary itself, while another is kept in a family and worshipped as a household god. This latter stone is declared to be as large, if not larger, than the Kohinur, which in shape it is said to resemble, so far bearing out the tradition that the Kohinur came from the Bellary District. Not long ago a diamond was taken out of the wall of a poor man's house, where it had got mixed with the mortar. It seems only reasonable to suppose that a land that has yielded such stones, unsurpassed for luster and brilliancy, contains a goodly number more waiting for man's energy and skill to bring them to light.



There need be no fear that the diamond fields of Southern India have been denuded of their treasures, nor is it to be supposed that South Africa has the monopoly of the supply. But it has been the policy of the Government of India to offer no inducement to the speculative capitalist to come to India, and, in fact, it has done much to keep such away from her shores. It has been reserved for the native Governments of Mysore and Hyderabad to inaugurate a successful policy in mining matters, and it is now dawning on the supreme authorities in India that it is part of their duty to develop the mineral, as well as all other products of the great Dependency. In the past year restrictions on mining and prospecting have been relaxed, and a fair field is being opened up for the safe investment of capital in such operations, and of these it can be predicted that the reopening of the southern diamond fields will prove to be one of the least venturesome.



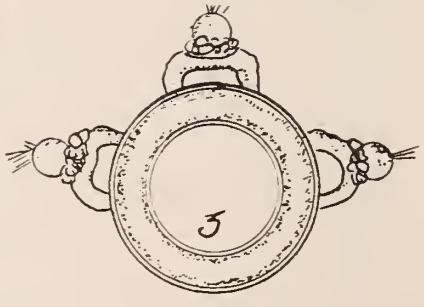
INTERIOR VIEW OF THE DIAMOND MINE, WAJRA KARUR.

Tortoise Shell Ornaments of Mindanao.

YOUR correspondent has been living among the Moros of Mindanao Island of the Philippine group for the past few years, and perhaps can give your readers a little interesting account of the wonderful ornaments employed by these people. The Moros, as is known, are very different in their habits from the tribes of the other isl-

ands in this portion of the Pacific. The leading Sultans of the race are great lovers of trinkets and they have their ears and fingers covered with jewels. Then there are the Dattos, who come next in rank, and these fellows are little below the Sultans in their ideas of ornamentation. The ordinary people are likewise lovers of decoration, with devices of all sorts, and it is com-

mon to see metal chains of considerable weight about the necks and ankles of people and little shell devices attached to various parts of the body.



It is to the tortoise shell ornaments as I saw them in service among these people that I will refer particularly. My first view of the industry was when I saw several natives tugging away at a monstrous turtle along the beach near Jolo. They had fixed several pieces of native rope about the neck and feet of the turtle and were hauling the turtle in this manner over the ground. The weight of the turtle was said to be 270 pounds, and the shell appeared to be very fine material. It glistened in the sunlight to good advantage. This shell would be valued at about $4 gold in its present form. Even then there is the meat, which is usually worth about $1 in gold among the natives, as that meat is relished when properly cooked.

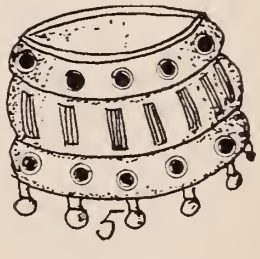
First, the shell was removed from the turtle and the process is by no means a pleas-

A GOOD CATCH.

ant one as performed by the natives. They have several different methods of doing the work. One of the worst I saw involved the heating of the shell until the turtle himself pulled away from it, tearing his flesh, and dying soon after. Other natives kill the turtle with blows upon the head and cut away the flesh with knives. The shell is usually permitted to remain exposed to the sun for about a week, the foreign matter thereby being thoroughly dried off, so that the shell can be scraped advantageously. In the scraping process the thin por-

tions of the shell are often nearly penetrated. The next process involves sawing the shell into pieces of required length, most of the pieces being about six inches square.

There is considerable chipping and filing to be done with very crude tools in order to make some of the patterns called for by the artistically inclined Moro. Some of the Dattos are extremely fond of tortoise shell ornaments with elaborate designs and pay high values for the same. There are natives who devote all of their time and energies to the production of these shell devices for purposes of wear. They often secure the original pattern from imported jewels, or, as I observed in several instances, from the patterns of jewels seen in the catalogues of foreign houses. If a special design is wanted, a good way to obtain it is to secure an engraving of something like what you



need from a circular of a jewelry concern and hand it to the Moro shell worker, and he will come very near to making a correct reproduction.

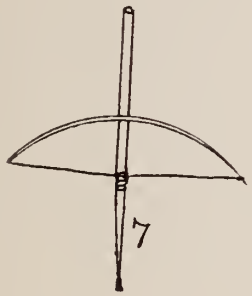
Some of the shell ornaments that I observed in use by the natives and on sale in the shops of the tortoise shell workers are illustrated herewith. In Fig. 1 is a cross pattern carved from the solid shell, with a base or ground of the same material. In fact, it is all one piece, worked out with the crudest descriptions of tools. Often a few pointed instruments, a file-like device and some polishing contrivances are all that the shell manipulator possesses.

In Fig. 2 is another sample of work of the Moro artisan. It consists of a cross supported by a chain of pearls. The pearls are secured from the pearl-bearing oysters of the southern shores of Mindanao Island. The natives are very adept at working out these crosses and arranging them for supporting chains of pearls. The Moros are of the Mohammedan religion, but the people are devout, as a rule, and crosses are freely worn.

I noticed that the shell workers of the country also produced some unique forms of rings from the turtle shells. In Fig. 3 is a model of one type. There are three

projecting places, and from each of these there is a brilliant pearl or stone glistening, giving an odd effect.

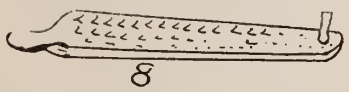
I saw some charms of peculiar order, one of which is presented in Fig. 4. This consists of a little square of the shell, flattened and surfaced with a face-like figure, in some cases a perfect figure-head being



engraved. I was shown several of these ornaments arranged with ferocious faces, to which a startling expression is given by means of protruding eyes, projecting nose, and fangs of considerable length and curvature from the jaws. These figures appeared to please the natives.

Fig. 5 is a ring for the finger, cut from the shell. Sometimes the little balls at the lower edge are cut solid on the parts, representing long days of labor on the part of the maker of the ring. Then, again, one sees that the cylindrical part of the ring is bored at the edge of the flanges for receiving these pins and balls, giving the same effect.

TOOLS AND EQUIPMENTS ALL ANCIENT.



Although the shell workers of the Moro tribes have been employed at their trade for

generations, every one of the tools employed by them is of ancient origin. All of the tools show the results of long usage. There is very good opportunity here for the sale of jewelers' tools and fittings, providing some one visited Jolo or Zamboango to instruct the natives in the use of the same. In the meantime the crude devices will continue to be used.

Fig. 6 is a universal tool among the Moro shell ornament workmen. It is a piece of steel, tapered as shown, with the point kept sharp, so that when the tool is held between the palms of the hand and twirled, and pressure applied, the point of the tool is caused to penetrate. Shell pieces can be drilled very readily in this manner.

There is the trifle more up-to-date boring device, shown in Fig. 7. This has the steel

boring portion fitted with a bow and string. By playing the bow back and forth and holding the steel tool straight, and applying pressure, a hole is drilled through shell quite rapidly.

Then comes the processes of filing, which, as performed by the Moro jewelers in the finishing of shell devices, is done with imported files only occasionally, most of the files used being of the home-made order, one of which is sketched in Fig. 8. This is a piece of metal which is first softened

by heating, so as to remove the temper. Then, with a hardened-pointed instrument, diamond-shaped points are chipped up all over the surface of the metal. The metal is then heated, and when at proper heat is dipped in oil. The temper is thus restored and a crude variety of file results.

The polishing and general finishing devices used by the natives are next shown. Fig. 9 is a pad, made by fitting a skin tightly over wadded portions and fixing to a handle of wood. The skin is fastened with rawhide. This device is used for polishing purposes. A type of brush used, shown in Fig. 10, is made by splitting up the ends

of bamboo. A very useful brush results, and it is surprising what an amount of work can be done with it.

Fig. 11 is one of the typical stone mortars which one sees in all of the shops, while in Fig. 12 is shown one of the sample shell buttons of the people. The Moros are very fond of fancy buttons, and if these buttons

of shell are made with artistic edges and decorated with engravings in some manner they sell very readily. Silver money is often used for buttons.

Antique Silver Exhibited in London.

A UNIQUE exhibition of old table plate was recently held at the Fine Art Society, New Bond St., London. Dating from the 17th century, the collection includes loans from a large number of well-known collectors. It was not a great display, nor of the richest, for it lacked such massive pieces as belong to the high and mighty, but, for that reason, it was the more interesting; the exhibits being representations of the table plate of well-to-do citizens having a homely character eloquent of English life 200 or 300 years ago. Simplicity was the leading characteristic of most of the designs.

The supervision of the selection, and the arrangement and cataloguing of the exhibition was undertaken by Percy Macquoid, and Mr. Macquoid read a paper on the "Evolution of Form in Table Plate," that caused an unusually large company to assemble in the society's rooms.

The subject of the lecture was, of course, a very large one, and Mr. Macquoid contented himself with dealing with the growth and development of form in silver plate from the Tudor period downwards. His remarks were illustrated by limelight views. The illustrations shown included a cup belonging to Oriel College, Oxford; it was used in the second half of the 15th century, and was one of the earliest examples—probably brought over by the Crusaders.

Dealing with those useful and very necessary articles—knives, forks and spoons, Mr. Macquoid said that, though we were in the habit of associating their use together, yet the dates assigned for their introduction were by no means contemporaneous, the spoon being by many centuries the earliest. The table knife did not come into existence until the end of the 15th century, while the fork was not used in conjunction with the knife in this country until the middle of the 16th century, the dagger and spoon being found sufficient for all purposes during mediæval times. In England, the fashion of eating with a fork was at first regarded with much contempt, but after the middle of the 17th century a few sets were evidently in existence.

The earliest knives were very small, with straight slender blades, and handles of carved agate, silver or ivory. These instruments, being regarded as great luxuries, were treated as individual property. Towards the end of the century just named, the sabre blade made its appearance. Then the size gradually grew—the steel was made wider and more curved—till the revolution of fashion once more brought the straight blade into fashion. Long, long ago forks were used for sweetmeats, but not till quite the end of the 15th century did it occur to anybody that they might be usefully applied to meat. The happy thought struck the Italians.

In the exhibition were seen a rare specimen of an old four-pronged fork, dated 1682. The first forks were all two-pronged, and the species is so hardy that in spite of ridicule, it still survives. There were examples of all kinds in the Bond St. collection—one exhibit in particular being remarkable as the earliest known set—wholly silver, and with an English hallmark. The dates thereon are 1698-1701.

The Diamond Setter and His Work.

By MORGAN ROBERTSON.

DIAMOND setting is a trade by itself, separate and distinct from other branches of jewelry manufacture; yet, although a diamond setter, whose work stands at the culmination of the processes through which a piece of jewelry passes, need know nothing of the work preceding his own in order to effectually meet the requirements of his employer, he is oftentimes a graduate from other departments; for this trade, being the highest paid of any in the industry, is looked to by other workmen as a most desirable weapon with which to fight the battle of life.

But all jewelry workmen cannot become diamond setters. The work requires attributes of mind and body inaugurated at birth; and without them the effort to master this trade is sure to be fruitless.

The best of eyesight is needed, with indomitable patience and self-command, nerves capable of the highest tension for nine hours every day, and a large, strong hand and muscular frame to aid the workman in the laborious carving of gold.

The technique is simple. The tools used are nearly the same in scope and utility as an engraver's, and for this reason, engravers very often find their way into the craft.

The most common manner of diamond or, broadly, stone setting is the familiar cramp, or claw style. The setter embeds the mounting in warm shellac on the end of a short stick, which, when cool, holds the delicate piece firm in all parts.

The claws come to him blunt and straight, like the stiffened fingers of a hand; these he files to a point on all but the outside surface, and, with a chisel-like graver or scauper, digs by downward cuts, shoulders for the edge of the stone to rest on. With sharp nosed pliers he bends the cramps inward or outward as is needed until the stone will squeeze tightly into the circle with the edge resting on the shoulders; then the ends, projecting above the edge are bent over and burnished tightly to the stone with what is called a pushing tool, a piece of soft steel about the size and shape of a 10-penny nail, the large end fitted into a round handle and the small end filed square.

The next step is bright cutting the cramps; that is, bringing each to a point with three cuts, two on the sides and one on the top. To leave a glistening surface, the cutter, the chisel-like tool spoken of, is, after sharpening, rubbed sideways on fine emery paper or a polishing stone; the edge thus polished leaves a bright surface where it cuts.

The bright cutting finishes the job, which, with a stone as small as the end of a slate pencil, is done in less time than this description can be read.

Other methods of setting are the close or thread, the star, and the gypsy or flush setting. The latter is used mainly in men's rings where a large stone is sunk in solid gold and the surrounding metal hammered down over the edge.

Star setting is, as its name indicates, cutting a star around the hole to contain the stone, which, however, is usually first fitted in and then removed for convenience in cutting the star. It is quite difficult work and needs to be practiced as a specialty before a perfect job can be done.

The cutter's skill is shown in leaving a raised spur of gold in each hollow point, close to the edge of the hole, to form the bead, so called, which is afterward pressed over the stone and formed into a ball by a heading-tool, a pointed piece of steel with the usual round handle and a semi-spherical hollow in the point. Star set diamonds are used in lockets, charms, watch cases and flat band rings.

Close or thread setting is worthy of detailed description, as the finest and costliest jewelry contains more or less diamonds set in this manner. The mounting, whatever its design, is always made on certain lines with regard to its later handling by the setter; it is invariably thicker than the diamonds are deep; the holes that are to receive the diamonds are separated from each other by the same thickness of gold; and these holes are enlarged to the same distance from the edge of the mounting, generally as close to the edge as it is consistent with strength.

MORGAN ROBERTSON.

The setter with a side-cutting tool, enlarges these holes still more to take the stones, leaving a bearing or shoulder for the edge and, if possible, a thin wall of gold between them to act as a cushion and protect each stone from its neighbor; this is trimmed away afterward. When all are in place they are fastened by beads. With a tool shaped like a carpenter's gouge, but solid, the setter goes along the row of stones and lifts up, from the triangular space between them, a solid spur or "chunk" of gold; working the tool sideways and upward, he forces this spur in until it covers the edges of the two adjacent stones. When these are rounded up with the beading-tool there will appear a symmetrical line of glistening balls on each side of the row of stones. Other things equal, the higher and cleaner are these beads, the greater the skill of the setter, and the better the job.

Beading but half finishes the work; with different shaped cutters, sharpened and polished, he carves away the gold at the side of the row, leaving a smooth, slanting surface from the edges of the stones upward and outward at the edge of the gold, finishing with a narrow, horizontal cut on this edge or thread.

Mountings are made, such as circular clusters, which involve beads on the inside, and cramps on the outside of the row; the beads fastening in the large center stone as well.

A Marquise ring which displays a mass of small diamonds with as little gold between them as possible, must be set carefully, as the beads which hold the inside stones in place will not bear much manipulation without being ruined as ornaments. Indeed, they are mainly ornamental in these rings, and a canon of the trade is: to squeeze the stones in so tightly that they will stay in place without further securing.

Rubies, sapphires, emeralds and all colored stones are set in the same manner as diamonds, but, being more fragile, additional care must be taken in order not to chip them.

It is the fear of breaking stones that is so trying to the nerves of the setter. In order to work quickly he must know just how hard he can press on a stone without breaking it and this knowledge can only be gained by repeated, practical experiments with the breaking pressure of all the different kinds of stones he handles; an expensive course of training for his employer if indulged in at once; hence he must lengthen it out, so that it takes years before his hand possesses the deftness of touch that enables him to proclaim himself master of his trade. And the more phlegmatic he is in temperament, the longer will he escape the irritability and testiness that is the inevitable result of long continued work at this employment.

The pay varies with the skill and speed of the setter and the difference in men is so great that it has never yet been successfully regulated by weekly wages, although some makers of the finest goods insist on paying their men by the week, as precluding the hurry of piece-work and consequent lowering of the standard of workmanship. But the piece system is (or in my time was) the method employed by the majority of manufacturers, and, though the price per stone may rise and fall with the nicety of work demanded and the quantity given to the setter at one

time, he usually receives a uniform rate for cramp setting and for close-set work, while for stones set in the star or gypsy method, which come in smaller quantities, he generally receives special prices.

Morgan Robertson.

THERE are probably few of the many readers of THE CIRCULAR-WEEKLY who have read the forceful and interesting sea stories of the well-known novelist, Morgan Robertson, who are aware of the fact that the tales which they have so much enjoyed are from the pen of a fellow-craftsman; for such Mr. Robertson may truly term himself, having been a practical watchmaker, jeweler and diamond setter for several years.

Some of the novelist's fellow-members in the jewelry trade in New York, who knew him intimately nearly a decade ago, may fail to recognize the illustration on page 24 as the portrait of the jeweler who, in 1894, invented the "nautical watch chain," a novelty that was exceedingly popular among yachtsmen and lovers of the sea. Mr. Robertson, though he has changed considerably in appearance since he left the jewelry trade, is nevertheless in every other respect the same modest, persevering, brilliant and successful worker that he has always shown himself to be in every calling he has followed. Though these have been many, Mr. Robertson has proved that he was an adept at them all, and unlike the usual Jack-of-all-trades, he was not content until he had mastered every one in turn from sailor to novelist.

As no one who has ever read his stories can fail to understand, Mr. Robertson followed the sea for many years, and his love for this life may truly be said to be inherited, as his father, Andrew Robertson, of Oswego, N. Y., was one of the old-time skippers of the Great Lakes. In 1877, when but 16 years old, Mr. Robertson started his career as a sailor on the *Ringleader*, bound from New York to Shanghai. He circled the globe in this ship, left her at Liverpool and came to New York, after which he sailed on the Great Lakes for a season. During the next eight years he varied his time between salt and fresh water sailing, until he had mastered all the details of a sailor's work, frequently filling the position of second and first mate. Mr. Robertson never commanded a ship, for before attaining that position he decided to change his line of work and settle down as a landsman.

Being always handy with tools, Mr. Robertson decided that he would learn a trade, and having saved enough money to live on, during his apprenticeship, he started in to learn the watchmaking trade under the late B. D. Barnes, of Oswego. In this work he made great progress, much to the surprise of his teacher, and by the time his fingers were well limbered up he was sufficiently advanced in his new vocation to come to New York, where he worked as optician for several concerns. Not satisfied with this, he took positions in other lines of work, until he became a diamond setter, which trade he followed with considerable success, working for such firms as Howard & Cockshaw; Cox, Cooper, Ward & Young; M. B. Bryant & Co.; Krementz & Co., and others.

During the great depression in the jewelry trade in 1894, Mr. Robertson found considerable time on his hands, and began utilizing this in contributing to weekly papers and magazines. Little by little this work increased until Mr. Robertson finally left the jewelry trade entirely and devoted his time exclusively to writing magazine stories. His fight for recognition by the public was as hard as that of the usual magazine writer, but owing to the author's determination and perseverance as well as to the brilliancy and thoroughness of his work, he gradually obtained what novelists call a "reading public," until to-day there is no better known writer of short stories, nor one whose tales of the sea are more generally recognized as being the best of their class.

Among his best known works of recent years are the series of short stories, published under the titles of *Spun Yarn, Where Angels Fear to Tread, Ship Mates,* his novel *Masters of Men,* and the novelette, *Futility.* In press at the present time, and soon to be issued by the Harpers, is a novel, known as *Sinful Peek,* and a series of short stories, which will be published under the title of *Down to the Sea.*

In addition to novel writing, Mr. Robertson is a poet of no mean ability, and one of his first literary attempts was a satire, in verse, on some orthodox religions, entitled *The Tale of a Halo,* which has run through several editions.

Whether Mr. Robertson has at last found his calling, time alone will show, though it is more than probable that in the next few years he may add to his "vocational" conquests by graduating as a dramatist, critic or historian. If he does, he will surely be successful in his attempt, as he is in all the work he has ever undertaken, for he possesses to a marked degree the great essentials necessary for success in every line—ability, capacity, determination and application. T. E. W.

The Indian Prince as a Buyer of Jewelry.

BY GEORGE CECIL.

THE half-tamed princes from England's eastern empire, who occasionally visit London, are, as may be inferred from their gaudy and bejeweled attire, men of wealth. It does not, however, necessarily follow that they are strictly punctillious in discharging their debts. Far from it. They come of a race of people who greatly object to paying their tradesmen. And though some of the specimens on view in England's metropolis every Summer are quite as honest as is the British spendthrift of noble family, yet there are many whom it is unwise to trust. For the Rajah or Maharajah who plays polo, shoots, hunts and drives a four-in-hand, though he will only be too pleased to bestow vast orders on Bond St., Piccadilly and Regent St. watchmakers, is not given to signing checks in payment thereof. Indeed, it would seem that the more rupees he possesses the less inclined is he to part with them. It is really more difficult to extract money from a Mahomedan or Hindu of high degree than it is to squeeze champagne out of a brickbat. It sometimes seems as though no power on earth will make the black brother pay the vendor of rings and scarfpins his just dues.

With the spread of education in India the rich colored people have taken largely to drink and to sport. In the latter connection they indent on the wares of that trade, which is thought by a section of the public to make one a millionaire. They require wrist watch straps, to be worn in the Indian jungles, expensive jewelry for use when staying with their distinguished friends in England, and brown leather lip strap watch guards, as well as assorted jewelry of each variety. With a view to exhibiting themselves in the Park, they buy gorgeous studs. For tennis and ping-pong tournaments they require white flannel shirts, in the center buttonhole of which a solitaire reposes. Anything of an exceptionally gaudy nature will appeal to them most strongly. In fact, so ready are they to give the jeweler an order for a dozen or so pairs of sleeve links that their custom can be secured with very little difficulty. If their willingness to buy were only equaled by their anxiety to pay they would be quite ideal customers.

A certain number of the Rajahs visiting England place large orders in Calcutta and Bombay. They are, however, only too glad to transfer their patronage to those London houses which supply royalty and other equally exalted people. It will thus be seen that it is an easy matter to prevail upon them to order watches and clocks of every description. The wily shopman, when confronted with his august client, should have no difficulty in luring him on to investing a considerable sum of money in goods which he does, or does not, want. A few bangles and chains left lying about, so as to attract the attention of the Rajah should result in an inquiry from the black man as to who wears such gew-gaws. A hint to the effect that crowned heads possess themselves of massive seal rings and that the owners of coronets buy diamond bracelets for ladies of the stage would quickly have the desired effect.

With regard to the matter of payment, on giving an order the dusky customer should be politely informed that it is customary in England to pay at the time of delivery. In fact, a hint might be dropped to the effect that this rule holds good in the most exclusive of social circles. Of course, it would be far more pleasant to do business with the Rajah in the usual manner. But as it is absolutely necessary that the jeweler should safeguard himself against loss, it is as well that he should adopt the innovation suggested. Otherwise it is to be feared that he will "get left." It may be added that the native retinue attached to the person of the Indian Prince will probably clamor for a commission. Doubtless British Nestors of commerce refrain from listening to their solicitations. It is equally possible that they will consider it expedient to pander to them.

It may, in conclusion, be observed that the Indian notabilities who come to London every Summer remain in England till the late Autumn. Metropolitan and provincial jewelers are thus afforded the opportunity of selling them goods for use during their visit, and supplying them with a stock to take back to India with them.

SIGNET RINGS

Speaking of Signet Rings

has it ever occurred to you that many of the so-called hand-carved signets on the market are not carved by hand at all, but are cast in a mold and sharpened up with a graver to give them a hand-carved appearance? A genuine hand-carved ring is expensive, because to be high grade it must be the work of a skillful engraver, who, to produce the best work, must be an artist commanding an artist's salary.

We do not claim that the

DURAND RING

is hand-carved, but do maintain that in design, execution and appearance it is equal, and in many cases superior, to any hand-carved ring that can be made. The DURAND RING is made by a patent process, in which each ring is stamped from a solid block of gold by a hydraulic pressure of 140,000 pounds. The most minute lines and ornamentation in the steel die are reproduced on the ring by this great pressure, with the utmost accuracy, so that even under a powerful glass not the slightest imperfection can be seen.

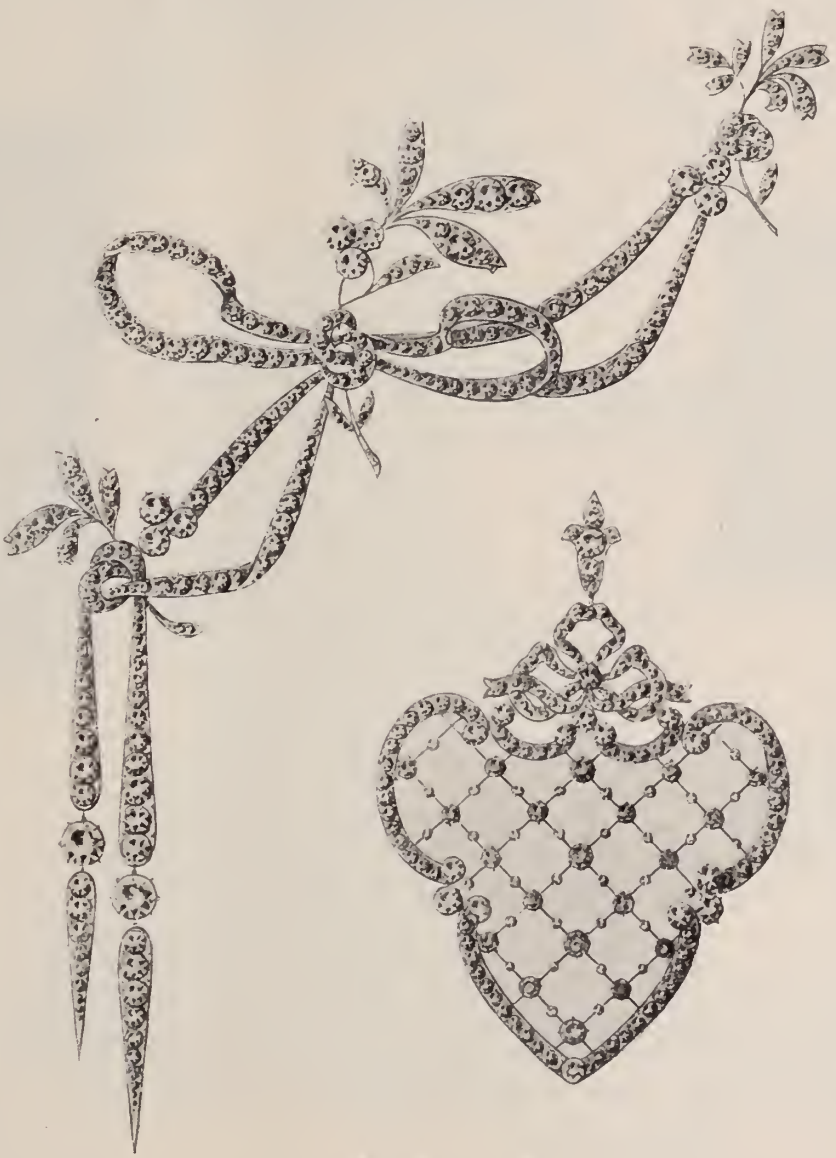
Quality, weight and workmanship considered, the DURAND RING is the cheapest ring on the market, and is THE RING IT WILL PAY YOU TO HANDLE. Send for memorandum selection and let us tell you of our liberal offer to assist you in your advertising.

DURAND & CO.,

49-51 Franklin Street, NEWARK, N. J.

MAKERS OF SIGNET RINGS, SET RINGS, DIAMOND MOUNTED AND GOLD JEWELRY IN 18k. AND 14k. ONLY

Fashions and Fancies of To-day in Jewels and Silver.



By ELSIE BEE.

BETWEEN womankind and that form of art which embodies itself in gems and jewels there has always existed a very great affinity. The astute Isaac, in patriarchal days, knew very well what he was about when he wooed Rebecca with an earring and bracelets of gold, and modern man does not disdain to resort to much the same expedient on occasions. And this brings us to the point that, even for his own personal use, the lord of creation now shows an increasing appreciation of the utility and charm of jewels.

Perhaps the beaux of a century or two ago had better opportunity, with their picturesque costumes, for the display of ornaments, but the gentleman of to-day takes a decided interest in this matter, the result being that jewelers cater to his tastes with unwonted care and thoroughness. It may be true that "man wants but little here below," but, certainly, he intends that little to be of excellent quality. His signet ring and his fob, the two latest items of modish dress, are a *rénaissance* into whose shaping enter the very best ideas of this later day. Around him also gather many small items that are essentially modern—the convenient tie clip, the improved studs and buttons, the elaborate suspender buckles and important stocking supporters. In the line of purely decorative objects his scarfpins range from dainty affairs that often serve a lady's turn equally well, to sporting models that answer to every manly taste in hunting, driving, coaching, racing, yachting, golf, polo and the like. His smoking and desk sets, his pocket knives, cigar cutters, spirit flasks, brushes and combs, shaving set and various cases of decorated leather all diffuse an atmosphere of substantial elegance and more or less ornateness, according to the taste of the owner.

As to particular details of man's modes, the thin-cased watch is one of the more recent wrinkles. Tooth mounting is again effectively used for very costly ring stones, such as large diamonds. Cabochon cutting for rubies, emeralds and sapphires can no longer be called unusual, and there is a decided taste in large and fancy diamonds for the heart and marquise shapes, to which the pear has lately been added. The all-gold and the stone signet rings have not only put themselves upon a firm footing, but some little eccentricities, such as the shield form for the face of the signet are being ventured upon. In gem sleeve links, mismating has been one of the features of the season. The flat, oval forms prevail almost entirely in these useful cuff accessories, though round ones are not unfamiliar, and among these the pearl buttons with diamond centers are an established mode. Entire sets of vest buttons, shirt studs and sleeve links come in this style.

While the fob represents the latest fashion in connection with the watch, both for men and women, it is one that, as far as man is concerned, runs smoothly along on the current side by side with the vest chain. The fob is a favorite with men who interest themselves specially in the changes of the mode, not only because it is a new thing, but because it really affords opportunity for the exhibition of a very pretty taste. It is a nice question whether one will choose, say, five scarabs cut in chrysoprase and linked together with gold, or one big, fine stone in the clutch of eagle's talons and resting on a shining silk ribbon; whether a plain leather or ribbon strap with a buckle will content one, or its fac simile woven in gold with a seal pendant of one of the fashionable stones seems better worth. Just here may be noted the rumor that the topaz is to be much favored again in men's jewelry.

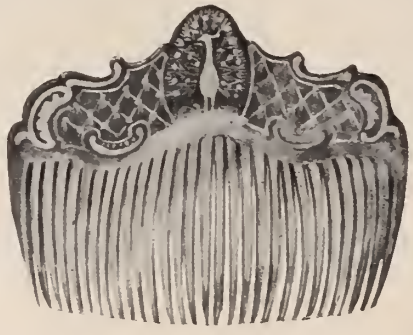
CORSAGE ORNAMENT AND PENDANT.
RIBBON AND TRELLIS MOTIFS.

But to return to the daughters of Eve, with whom this sketch began. Only a few years ago the first class jeweler's answer to the request for earrings was, "We will make them to order." A little later the solitaire diamond screw and the single pearl filled a few cases; then small clusters, such as a turquoise set in diamonds, and balls *pavé* followed, but all to be worn close up to the ear. Now some notion for pendant effects is occasionally seen, with altogether more freedom and variety in design. Earrings are more worn, yet no woman is out of style because of their absence from her toilette.

Long has the bracelet ranked as an affair of sentiment. Dainty fingers may toy with the golden circlet in moments of uncertainty or embarrassment, and, according to modern usage, a manly hand may clasp and lock it upon a lady's wrist in token of a prospective, lifelong alliance. The engagement bracelet remains one of the things that please; all sorts of chain and flexible affairs are in vogue, and oftener than not cabochon gems handsomely punctuate them. Being, as has been said, to some extent a representative of sentiment, it is not surprising to find a chain bracelet mounted with a monogram locket capable of accommodating two portraits. Bracelets of a less retiring disposition, as well as brooches and rings, often present a miniature photograph to public view, for the picture fad is still with us.

More than a twice-told tale is that of the present prestige of jewelry among women of any pretension to fashion; yet it may not be amiss to mention that at all important social functions simplicity is a back number of forgotten date. In full dress a jeweled broad collar does not preclude a riviere or rope of diamonds or pearls; and in the same toilette a magnificent corsage parure and an elaborate stomacher may have their satellites in the shape of all the stray pins and slides for which the costume will afford a background. *Ad libitum* continues to be the rule for rings, and the sensation caused

last season by the appearance of crowns, diadems and coronets has faded into the shade of the past. And it is the artistic work of the designers and craftsmen that makes such an array a vision of loveliness where, under less favorable auspices, conglomerate horror might reign.



Ribbon work in fine jewelry has been so often mentioned in these columns of late that it might be pronounced an old story were it not that this design is more and more used and its variations multiply and grow in beauty. The *devant de corsage* here illustrated exploits most gracefully the *diamanté* bow knot and flexible ribbon, together with fine floral sprays, while the accompanying sketch of a pendant shows the trellis *motif* now largely adopted for corsage ornaments, pendants and brooches. A large moth with latticed wings of diamonds in lightest platinum setting affords a fine example of this work. In a similar ornament the border of the wings, forming the frame of the lattice, is of gold. And here the unsurpassed technique of the modern jewelers, as illustrated by this delicate union of platinum and gold, excites admiration.

DIADEM OF OPALS AND DIAMONDS.

In the accomplishment of a successful coiffure the pins, combs and other ornaments are now carefully considered, so that the jewelers' productions in this line acquire greater importance. During the past year baroque pearls have provided material for innumerable decorative conceits for the adornment of such articles—some dainty, purely lovely; others whimsical or fantastic. Of late *l'art nouveau* has taken a stronger hold on the accessories of the coiffure. A beautiful gold inlay work intermingled with diamonds interprets it exquisitely in one instance. This inlay contrasts pleasingly with tortoise shell in either the rich, dark shades or the lighter tones of the latter. Entirely of the new art is the peacock design that may be noted on the set of combs illustrated. The griffin *motif*, too, is a thing of the new art, and both designs show in the background a lacelike effect which is likely to grow more popular in the future, lace being one of the watchwords of Dame Fashion this season and most lavishly used.

L'art nouveau remains fashion's latest mood. The beautiful work of the Italian jewelers of the 16th century appears to have been the fountain at which certain French designers found a fresh inspiration not many years ago. Like those old-time artists, the new jewelers utilized colored enamels, ivory, ebony and strange materials, and made only a sparing employment of precious stones. *L'art nouveau* jewelry evokes, in the first place, a picture of "beauty of line" that may well be left to speak for itself to all who will hear. Through all its manifestations runs a linear harmony. Though an ornament be modeled most simply in metal or ivory, there never fails the loveliness of rounded form, replacing that fatal "flatness" which had stamped inferiority and meanness

TORTOISE SHELL COMB, PEACOCK DESIGN IN DIAMONDS.

on much of modern jewelry previous to the advent of a richer art.

Superimposed on the primary trait of entrancing form is the perfect coloring of shaded metals and enamels. Soft and harmonious are some of the latter as nature's own tints; again, clear, pure and strong, if the artist so wills—as if there were a picture to be painted rather than a mechanical construction to be built up. In a jewelers' journal it is hardly necessary to touch upon the different enamels used, yet the effectiveness of the translucent variety as it rests in a wide collar on a milk-white throat deserves a word. Then, too, what variety and life enamels impart, and a relief to the solid and heavy parts of a metal ornament, even though that metal be gold.

Third in the new art comes the stone or stones, which are of importance as heightening the ornamental scheme by their color, fire or purity. Gems, enamels and the patina of metals thus compose the palette from which the new art jeweler fills in the outlines that Nature herself has suggested to him. For the *motifs* of the new art are

TORTOISE SHELL COMB, INLAID WITH GOLD AND DIAMONDS.

those of life and not of convention. Plant forms, animal forms, the human figure, how boldly they are rendered, yet all touched by the magic wand of imagination—idealization. The human figures are grotesque, weird, tragic or comic; the animals, creatures of mingled reality, fable and legend; the plants, poetic rendering, such as come to those who "consider" the lilies of the field.

So much for *l'art nouveau* in first estate *pur et simple*. But all things change. The new art modifies itself with time. Because there is a passion and an insistent demand in the mass of social humanity for precious stones, these are now more largely used, yet with as great propriety as at the first. Our jewelers adopt here one idea and there another from the new methods, though following none servilely; and the influence of the new movement extends far beyond its original sphere, showing itself in the greater grace of conventional designing of the old school.

Baroque pearls (which were rapidly brought forward by the new art) have been very thoroughly exploited. "Ubiquitous" sums up in one word their present position in the field of jewels. They form scarfpins, studs and sleeve links; they adorn necklaces, collars, chains, brooches, bracelets and rings; they enrich chain purses and leather work of every description. With their aid are simulated beasts, birds, insects, fishes and

PENDANT OF GREEN ENAMEL, OPALS AND DIAMONDS.

floral treasures of every sort. Their peculiar adaptability to the most delicate designing appears in the little orchid brooch shown. In this dainty presentment a ruby forms the center of the flower, each petal is a baroque and one pink pearl of exquisite hue dominates the whole. To complete the descriptions of the jewel pieces illustrated it may be remarked that the chief merits of the diamond wing brooch lie in its perfect workmanship and the fine cabochon ruby that forms its center.

With this Winter's style of dress cloak clasps have come into greater use. Elaborately carved and jeweled affairs, 6 to 8 inches across, have lately appeared on elegant wraps at swell social functions of the season, and they furnish a welcome innovation in wedding gifts among people with plethoric bank accounts.

That extensive series of stones, hard and handsome in their various colorings, and commonly known as "fancy stones," has been admitted largely into the jeweler's realm within a few days. Turquoise matrix has been accepted as decorative material, and turquoises were never more popular. Chrysoprase, which King Edward, then Prince of Wales, is credited with having

brought into fashion, helps to satisfy the fad for green that has by no means exhausted itself.

The amethyst has many devoted admirers and fashion promises to take it up more warmly than heretofore. It harmonizes with the softest tints in dress and blends well with the warmest. As a beautiful oval of rich purple, surrounded with a rope of pearls or a chain of diamonds it makes a brooch of exceptional beauty. Legend has treated few stones more charmingly than the amethyst, and one always likes a gem the better for agreeable facts and fancies that cluster round it. In color the amethyst is the only representative of royalty among jewels. The true Oriental amethyst was "the eyelid of Venus" to the old Latins. It holds a place in the gates of the Heavenly City of the Christian. To the Hebrews it symbolized human love, planted in sorrow and perfected by faithfulness. The Greeks fashioned amethyst quartz into drinking cups and believed that no evil effects could follow the wine drunk therefrom. The amethyst has been beloved by the poets. Its beauty is sacred to the lofty aspirations and pure ideals that "feed our earthly blindness upon the thought of perfect noon." Modern fancy revives the Hebrew tradition and makes the amethyst the emblem of deep love and fidelity and an assurance of sincerity and peace of mind. An amethyst heart is a charming keepsake between betrothed lovers and parting

NEW ART BELT CLASP.

friends. And, finally, this lovely gem is the natal stone and talisman of good fortune to all who, like THE CIRCULAR-WEEKLY, were born in the month of February.

Coral has quietly pursued its way to general recognition. Not only are strings of beads much worn, but many-rowed collars, after the fashion of the diamond and pearl ones, with diamond slides, are now made. Ropes of coral beads, simulating the magnificent pearl ropes, are mounted in gold. Coral enters into the stone ornamentation of bags and purses; it is utilized in brooches, pins and sleeve links. Coral, by the way, is said to be considered by the native Mexican Indian as a "mascot" against evil; if he is not rich enough to buy a coral necklace for his new-born child he will borrow one or even steal a bead for the child's welfare. The Italians, too, will often wear a jagged piece of coral, just as it is found, because of a belief in its protective power.

Strings of beads of all kinds now enjoy much of their old-time popularity. White coral, pink coral, red coral, amber, turquoise, opal or plain gold, they embody a mode never without its devotees since humanity first began to bedeck itself. Nobody knows who invented beads, but it is quite probable that they were the earliest ornaments of the maidens of the primitive age.

Cameos have shared in the revival of good old things, which it takes only a few whirls of fashion's wheel to turn up afresh from time to time. The popularity of pearls, the demand for diamonds and the tremendous vogue of all the precious stones hardly needs mention here.

Fashion's tale would be quite inadequate were chain bags and purses denied a paragraph. *L'art nouveau* is here again at the front in the decoration of frames, but some of the costliest are quite plain and enriched only with precious stones. The gemming of such articles, however, increases rapidly. A somewhat extreme illustration of stone setting is here given, but in this case the

NOVEL BAG, SET WITH STONES.

bag is silver gilt and the stones of the fancy order.

Art leather goods open another vista of beauty to the observer in their coloring, metal decoration and jewels. Beasts, birds, reptiles and fishes all give up their skins to the making of these articles of luxury. Possibly the snakes and lizards are getting off with less loss of life than for some time, as manufacturers seem to be taking to nobler game, such as elephant and buffalo, when they can be had, and hornback alligator. These answer to a prevailing taste for the bolder effects in leather. Sea animals provide very popular leathers and walrus bags and pocketbooks, of rich color and well marked, are an agreeable acquisition. Ostrich skin is noted as a novelty among the leather small wares.

A bird's-eye view, such as the present one, does but scant justice to the American silver and gold smithing of to-day; for the honorable term of goldsmith finds greater employment than heretofore, and to it might well be added that of coppersmith, it having been one of the marked features of the past year that metals other than the white have been taken largely into favor. Possibly the relic-hunters have been to the fore in this matter. When old pewter became valued an interest naturally arose in new pewter. Copper mellowed by use and age was scarce and difficult to unearth, and modern enterprise instinctively asked, "Why is there not again a field for this handsome metal?" Pewter now makes a modest show, pleasing not a few people in loving cups, mugs, tankards and trays; but right royal has been the road of copper to favor. Its rich hue strikes the eye strongly; its soft lustre strengthens the first pleasing impression. In its splendid color there is a depth and yet a delicacy that arrests and holds the fancy.

Burnished copper with silver embellishment, appearing first in vases and a few such articles, has developed a range that includes writing desk and smoking sets, cases for cigars and various other articles, such as tankards, steins, mugs, umbrella and cane handles and numberless small trifles; and, in general, it may be said that it finds congenial environment wherever utility and ornament go hand in hand. There is, however, one special department of service where there is always room for any newcomer with exceptional merit or unusual novelty. The new combination of silver and copper, therefore, expresses itself in most handsome manner on the toilet table. Imagine a Watteau or Bougereau placque in gray silver warmed and enriched with a decorative frame and handle of shining copper, the whole forming the back of a hand-mirror, while brushes and other articles are manipulated in the same style, each bearing a different design and all worthy of the consideration of a connoisseur.

Silver deposit on copper demands no details as to its effectiveness. Silver deposit on pottery, by which the latter is entirely sheathed in the precious metal, represents one of the recent departures. As might be expected, bowls, cups, vases, pitchers, tankards and the like are its chief exponents. Here, exquisite figure modeling of the new

BROOCH BAROQUE PEARLS AND PRECIOUS STONES.

art kind stands out as the notable point of the decorative scheme. A generous tankard, for instance, shows no such common place device as a conventional handle; the said handle is replaced by a joyous Bacchante, worthy of Macmonnies himself, while beneath the lip of the vessel smiles a mask of Silenus. On a punch bowl, grape-wreathed in bold relief, Rhine maidens disport themselves amid the ripples of the river that cunningly contrive a surface decoration for the bowl. Pieces in this style afford a study in literature and art, and should certainly "serve for table talk," each one having its peculiar interest.

Silver deposit work has lately been turned to very practical account in the fine art of dining. Various dishes are most desirably served *en casserole*, and this has led to some improvements upon the ordinary silver plate casserole. A very attractive brownish pottery is now decorated with silver deposit, mostly in plain bands, such as befit a utilitarian article, and these casseroles come in sizes both large and small. Very taking teapots, too, there are for those who believe in brewing the cheering beverage only in earthen ware, and monogram ornament is considered the swell thing for these.

Empire, Queen Anne and Colonial fashions in all sorts of table silver pursue their

accustomed way and *l'art nouveau* begins to offer too many variations to admit of description. This latter utilizes, for decorative *motifs,* bold flower forms, such as the iris, the lotus, the rose, the chrysanthemum, the pæony, etc., and the grape has lately become a fad of the silversmiths, as it is just now that of the art embroiderers and the milliners. Legend, classic history and pictorial art all help to inspire the figure decorations that divide favor with the flowers.

The small and odd wares of the table offer much novelty. Here, for elegant service, are the *ramequins* of decorated French porcelain set into a pierced silver frame, with the one long side handle characteristic of the cruder prototype; and there are silver *entrée* dishes, with ears and a cover, resting upon a small plate.

Bouillon cups of decorated china in silver frames with loving cup handles form a charming array.

Peculiarly attractive are slender chocolate cups of French porcelain decorated in pink and provided with frames whose base of pierced silver is a square instead of the usual circle.

Quite a pleasing wrinkle for the hostess abreast of the times are the dainty little individual almond dishes that form a set with the regulation almond dish.

The oyster cocktail glass has become a thing of importance in the past year. One example of it in porcelain on a silver standard takes the form of the ordinary champagne glass, and, indeed, might serve either purpose.

Highball glasses are tall, tempting affairs of crystal set in a circular frame with handle.

Russian tea glasses, to accompany the samovar, rest upon a small silver plate with a fixed circular cup in the center for the reception of the glass.

A fashion of the day among many good diners is the serving of mineral water directly after coffee, and a tumbler of approved size placed in a rather heavy gray silver base is the silversmith's provision for this custom.

Decidedly unique is the plant of a silver cracker bowl, where the center of the wide, shallow bowl is arranged for the reception of Worcestershire sauce, horse radish and catsup bottles.

An asparagus holder, like an abbreviated pair of tongs, serves for the deft lifting of a few stalks from one of the new asparagus trays that are provided with a pierced silver bottom or draining board.

Changes are always to be found in the fashions of jewels, silver and gold; but it seems no longer accurate to say of these that one goes out of style in favor of another. Rather, it appears that, nowadays, each new fancy is but an addition to a collection of modes that never grows too large.

There are collectors who fancy that old silver marked by the Goldsmiths Hall is better than that bearing a provincial stamp. This is a mistake. Silversmiths of merit were found all over old England, and customers were in the habit of having their purchases marked locally, because the Civil War and highwaymen made people chary of carrying valuable property to London in the years gone by.

The "Bryant" Rings.

Are only made of such quality and finish as will afford the customers of all careful Retailers complete satisfaction. They have done this already for more than two generations, and will continue to deserve the confidence of the trade.

A Beautiful Collection of Agate Specimens.

PROBABLY no single precious or semi-precious stone has more varied colors and more variety in its mineralogical make-up than has the substance known as agate, which technically consists of a conglomeration of certain silicates or quartz minerals which in texture, color and transparency differ radically from one another. All colors of the rainbow can be found in this substance, and almost every variety of pattern is formed by the lines of the different strata of the chalcedony, carnelian, quartz, jasper or other minerals that compose it.

Because of this unique formation and the strange coloring and shading, agate has always been a popular stone in some forms of jewelry, and is the one most often in demand by curio collectors for cabinet purposes. Several notable collections have been made in this country and abroad, and among the finest and most complete of these is the collection now in the possession of Charles F. Wood & Co., diamond importers of 1 Maiden Lane, New York. This collection was begun more than 30 years ago by the late R. A. Kipling, a well-known connoisseur on precious stones, who was one of the unfortunate passengers that went down with the ocean liner *Mohegan* off the coast of England in October, 1898. Mr. Kipling's experience in dealing in precious stones and his wide acquaintance both in this country and Europe enabled him to form the nucleus of an agate collection that has blossomed out into one of the finest, if not the finest and most complete, in the United States.

AGATE COLLECTION OF CHAS. F. WOOD & CO.

After Mr. Kipling's death the collection he had formed was sold by his widow to its present owners, who immediately began to add to it, keeping up the excellent standard adhered to by its starter and using the same discrimination that characterized Mr. Kipling's work from the beginning. The collection now numbers more than 475 pieces. They have been gathered from every known quarter of the globe, have been examined, classified, neatly tagged and catalogued. They have been placed in a cabinet made especially for them, and in the catalogue which has been placed inside the cabinet is a description of each stone and the place from which it came.

Among the most remarkable specimens to be found in the cabinet is one in the shape of an oval disc, which is about two inches across its widest part. By holding this disc up to the light one is able to see a perfect landscape scene. The shading of the different minerals in the stone produce a ravine, through which runs a small rivulet shaded by trees and a wooded bank rising back from the water to a plain covered with vegetation. The color of the sky, the water and the vegetable growth is very natural, and the whole scene is so complete in every detail that one could almost imagine it to be a painting in miniature.

Another excellent piece of agate which is seen in the roughness of its natural state and which in general appearance is exactly opposite to the one already described, is a piece in which rough turquoise is surrounded by a coating of smoky quartz. The specimen in its original state was probably like an oval disc with a raised top, but as seen in the cabinet this disc is broken open, so that it shows a cross section of the formation. The pieces of turquoise are firmly imbedded in the smoky quartz, while a sort of roof of the same overhangs it. The piece is hollow and must originally have been formed by gases which lifted the smoky quartz from the top of the blue stones, leaving them in a crystal form and in a thoroughly polished state.

Another beautiful specimen of agate has been polished trans-sectionally, showing the agate in a state of formation. Each strata is of a different color and the lines in it are geometrically parallel to each other. There is every shade from black to smoky white, the most beautiful being those of carnelian, chalcedony and jasper. A beautiful specimen consists of an amethyst partly coated with smoky quartz in an agate geode.

According to the catalogue a great many of the most beautiful specimens came from Brazil, where to-day are found some of the most beautiful agates in the world; but there are many others from Germany, Siberia, the Alps, Russia, Mexico, Iceland, Uruguay, Montevideo, India, Egypt, Australia, Hungary, Cuba, England, Scotland, Labrador and from more than half of the states in the United States, including Nevada, Iowa, New Jersey, Rhode Island, California, Maine and Oregon.

After being collected, the major part of these stones were taken to be cut and polished to Oberstein and Idar, Germany, where are the principal agate cutting factories of the world.

Some of the most interesting and most peculiar specimens in the collection were photographed especially for THE CIRCULAR-WEEKLY and are shown on page 36 of this issue. One of the pieces in the group is composed of rock crystal with the quartz pebble ground, from Brazil; another specimen consists of a geode with an outer shell lined with chaberite and goethite from the Hartz mountains; another specimen from Brazil consists of amethyst and quartz and has a feathered interior. Brazil also contributes a beautiful onyx agate with an eye formation and sardonyx agate sur-

rounded by carnelian quartz. A peculiar specimen of onyx is also seen in a Brazilian agate which has been ground and polished so that it appears almost exactly like an owl's head. One of the most beautiful pieces of agate showing a variety of colors is the one from Egypt, which shows jasper, yellow, brown and red in an irregular banded structure. Australia contributes a specimen of opal infiltered on jasper.

Some of the most beautiful agates in the world come from Brazil, though there are many fine specimens found in Scotland, in the United States and in the hills around Oberstein, Germany.

The Sapphire Fields of Anakie.

SAPPHIRES have been known, for several years past, to occur in a number of localities near the small railway station of Anakie in Central Queensland, and a report was written on the subject in 1892 by Dr. Jack, giving details of their occurrence and of the prospecting work carried on up to that time. An examination has recently been made by B. Dunstan, of the Geological Survey of Queensland.

The Anakie railway station is situated on the main Central Queensland line; it is 26 miles west from Emerald and 192 miles west from Rockhampton. The sapphire fields extend from it in a northerly and westerly direction. The Drummond range is the main watershed of the Anakie district, having the Lamia, Anakie and other ranges branching off from it. The most prominent landmark is Mount Leura, a peak about 2,000 feet high. The whole of this area is drained by tributaries of the Nagoa river, of which Theresa creek is the principal affluent. It is the smaller branches of Theresa creek, however, such as the Central, Tomahawk, Retreat, Argyle and Sheep Station creeks, about which most of the deposits of sapphire wash are to be found. There is no difficulty in traveling over most of the country drained by these creeks, but some of it is mountainous, and other low-lying parts are covered with a dense scrub. Granite and its varieties form the oldest and most extensive system of rock masses in the district. Gneisses, schists and slates rest against the granites, and the gradual changes of these rocks from one to the other can be observed in places, and from which it is assumed that the granite is of metamorphic origin. Intrusive rocks occur—both acidic and basic. The former, consisting of pegmatite, felspar porphyry, and felsites, are in great abundance and traverse the granites and gneisses in all directions. The basic variety is either massive hornblende rock or diorite. There are also outcrops of epidote and garnet rock in places, resulting probably from the alteration of limestones in contact with the granite. The next younger formation consists of a series of shales, sandstones and conglomerates, and probably belong to the Permocarboniferous Formation. No fossils, however, have been found in them. There are no representatives of the Mesozoic Formations to be found in the district, except boulders of a hard, flinty quartzite occurring in tertiary and recent alluvial deposits. These remnants of a pre-existing formation are general in their occurrence in Central Queensland and peculiar to that district. The rock is known to miners as "Billy" and has been placed as of "Desert Sandstone" age. It occurs exclusively in the alluvial sapphire deposits formed below the junction of the Drummond beds and the granite. The sapphire deposits are distributed over a large area, but nearly all are confined to the granite district and occur on the banks of the creeks. The thickness of the sapphire wash varies considerably in various workings, in some places being only a few inches, while in others it amounts to several feet. The bottom is usually a reddish clay resting on decomposed schists and slates. Mistakes have been made in supposing this red clay to be invariably the bottom, since richer beds have at times been found below. Frequently the wash is clayey and requires "puddling" before the sapphires can be extracted. Much, however, is loose and friable, and the stones are then obtained by "dry sieving." The important deposits of the district may be separated into the four following main divisions: (*a*) Retreat creek and Sheep Station creek, (*b*) Policeman creek, (*c*) Tomahawk creek, (*d*) Central creek.

AGATE SPECIMENS IN THE COLLECTION OF CHAS. F. WOOD & CO.

On Retreat creek there are numerous, but generally small, claims. The sapphires found vary in color and are blue, green, yellow and parti-colored. The rock boulders and pebbles in the wash include several varieties of "Billy," red and brown jasper, basalt and other rocks, and among the smaller pebbles tourmaline, topaz, rock crystal and varieties of chalcedony. In one claim two yellow sapphires, weighing nearly 50 karats each, were unearthed. The most important area of sapphire bearing country occurs a few miles up Retreat creek, near to Mt. Bullock, and is about four miles long.

Deposits of sapphire wash occur on both the north and south sides of Policeman creek. The workings on the southern side are mostly on the central and western portions, that to the east not containing sufficient stones of marketable size to make it remunerative. The deposits on the north side extend some distance and then cross to the south side of the creek, and are connected higher up with those of Iguana Flat. The stones of the latter place are large and diminish in size to the lower end of Policeman creek.

Of the Central creek deposits very little is known. Their position and area have been fixed approximately, and a rapid inspection disclosed immense bodies of wash, forming whole hills and ridges which can be traced continuously for miles. What the ultimate result will be when they are prospected it is impossible to say, as they might be very poor in sapphires or exceedingly rich. On the surface, wherever inspected, pieces of corundum and pleonaste and occasional fragments of sapphires of a light green color were found. The creek is 27 miles northwest from Anakie station.

The sapphire deposits of Tomahawk creek are the most extensive in the whole district. They are, in places, a mile in width and several miles in length, extending from Mount Hoy to below the junction of Tomahawk and Central creeks. Entire ridges are composed of the wash, so the deposits must be of great thickness. The area so far prospected is exceedingly small compared to its vast extent. The total length so far as is known, is about 15 miles, but it is probable they extend further north. The wash is similar to that of Central creek, and the sapphires found were shades of blue, green and yellow.

The methods used at present for separating the sapphires from the wash-dirt are very simple. If the dirt is loose and dry it may first be passed through an ordinary gravel screen to remove the larger pebbles, and then the fine dust is removed by means of the dry jigger, which consists of a screen on four upright springs of brigalow wood. The sapphires are picked by hand from the intermediate product; as they are generally coated with clay or iron oxides, there is probably a considerable loss in the operations. In the wet method of treatment the same sieves and jiggers are used, and the sorting is done more expeditiously and with less chance of losing the stones than in the dry way. Sluice boxes are not used on account of the insufficient supply of water during the greater part of the year. It has been estimated that up to the time of inspection £10,000 worth of sapphires had been sold to dealers in these stones.—*Imperial Institute Journal.*

The Sapphire Mines of Montana.

MUCH has been written on the question of Montana sapphires within the past few years, and the mines, as well as the geological conditions of the localities in which they exist, have been fully described in reports of the United States Geological Survey, and also the reports of the Bureau of Agriculture, Labor and Industry of Montana; therefore, there is little that can be said in the way of technical description that is not already familiar to mineralogists generally, as well as to many members of the precious stone and jewelry trade. Though much has been written about these mines and their products, very few members of the jewelry trade have ever visited the locality in which the sapphires are found, and, therefore, the illustrations herewith, showing views of the mines and the method of hydraulic mining, will no doubt prove of interest.

OPEN CUT IN THE SAPPHIRE LEDGE AT YOGO.

These cuts are all of the Yogo mines in Fergus County, 13 miles west of the town of Utica, and are situated in the midst of a broad and open basin enclosed on three sides by the Little Belt Mountains. Most of the material mined is derived from an open cut 400 to 500 feet in length, of which a good idea may be formed from the first illustration. Windlasses are employed and men are kept at work with picks and shovels throwing the earth into shallow tubs, which are hauled to the surface and thrown into ordinary dump-carts. This earth is then taken about a mile to the sluice boxes, where it goes through its first washing. In sluicing, the process followed is similar to that of washing gold-bearing gravels, but no mercury is used, the gems dropping between the Hungarian riffles, with which the sluice boxes are fitted.

The following is a description of this process, as published in a former report of the United States Geological Survey:

"When first attacked the magma is passed over a 'grizzly' (screen) and the finer parts pass at once into the sluices. The coarser, harder material is thrown into the dump, where, after is passed over a 'grizzly' (screen) and the finer parts pass at once into the sluices. The process of disintegration occupies from one month to one year, according to the hardness and tenacity of the magma. Superintendent Sweeney of one large company assists the elements in the disintegration of his dumps by turning a flow of water on them occasionally, and by this means the hardest of the vein matter is ready to pass through the sluices in two months.

"For cleaning up, an ordinary rocker is used, with three screens of as many sizes, through which the 'pay dirt' is passed. When the 'pay dirt' has been worked down as closely as possible in the rocker it is panned in one of the finer screens, dried and the stones picked by hand from the small amount of gravel remaining. All the stones are saved, the larger perfect ones being valuable as gems; the smaller ones being used as watch jewels and in other fine mechanical work; the imperfect ones are ground and mixed with diamond dust and used in gem-cutting and for polishing purposes, when it is known as emery."

TUNNEL ENTRANCE TO YOGO SAPPHIRE MINES.

Items About Minerals and Gems.

IN its department devoted to Mineralogy, the *Popular Science News* recently published the following notes about discoveries in gems and minerals which come into the jewelry trade:

MOONSTONE.—A new form of this mineral has been found near Bakersville, N. C. It is a white or gray oligoclase, transparent or translucent, and remarkable because, parallel to the cleavage plane, there are crystals of red goethite, unusually brilliant by reflected light, so that in one position the stone has the appearance of moonstone, and in another that of sunstone.

OPAL.—There is found at Puerto Principe, Cuba, a moss opal which has some resemblance to the moss agate of Wyoming. The moss is of a yellowish-brown color, and is well distributed through pieces of opal varying in size from a walnut up to four inches across. The opal is translucent to opaque, in color yellowish to opal white. The mineral has no gem value, but makes a handsome and interesting cabinet specimen.

PEARL PURCHASING AS A PROFESSION

Money Right in Hand

Never were pearls in higher favor, and never was there a better market for them.

Purchasing American Pearls and Slugs is my specialty.

My facilities for advantageous disposal of them are unrivaled; and this enables me to pay the *highest prices.*

It is clear that the person who pays the highest price for a commodity is the most profitable one to sell it to.

There is more to these statements than the mere wording of them.

My cash returns bear them out.

Dollars talk for me.

Send me your Pearls and Slugs—all sales to me are satisfactory.

MAURICE BROWER,

Importer of *Diamonds and Precious Stones,*

(Anderson Building),
NEW YORK.

How to Identify Precious Stones.

THE greatest difficulty is frequently experienced by persons who have not had opportunities of handling precious stones in the rough to distinguish them one from another and discriminate between gems of the greatest value and others which are comparatively worthless. It is a mistake to place any reliance whatever upon color as a test of a precious stone, as there is no property natural to gems which is so fickle and unreliable as that of color. For instance, if a stone be red, it is not of necessity a ruby, nor a white stone a diamond; and there are yellow sapphires, green diamonds and blue spinels. In the diagnosis of precious stones it is advisable always to apply as many different tests as possible to each specimen and to be guided by the result of them all, as it often happens that one is apt to be misled by the application of a single test.

HYDRAULIC MINING FOR SAPPHIRES AT YOGO.

(See text, page 38.)

Most of the precious stones (opal and turquoise are the exceptions) are crystals of rare minerals occurring in nature in more or less familiar geometric crystalline forms, which are classified by mineralogists into six systems, the study of which comprises the science of crystallography. Although a knowledge of crystallography, of the natural forms in which crystals occur, is of the utmost value in the successful discrimination of rough precious stones, it is not a subject which can be easily mastered or brought into practical use without considerable application and study. The reason for this is obvious, when we consider that, with the exception of diamonds and a few other gems, crystallizing in the "cubic system," precious stones are seldom found to exhibit more than a trace of their characteristic crystalline formation, which fact is due to accidents at some remote period of their existence, rough usage while immersed in rivers and torrents, etc.

HARDNESS AND SPECIFIC GRAVITY.

The natural properties of gems, which are most easily and most universally used as tests, are those of hardness and specific gravity. By the hardness of a gem is meant the power which it possesses of resisting abrasion. Many of the hardest minerals can be easily broken, fractured or chipped, though they cannot be scratched; thus a very hard stone may be a very brittle one. Diamonds, emeralds and zircons, for instance, have often been injured by a blow or a fall. There is a scale of hardness, devised by the mineralogist Mohs, consisting of 12 minerals, which forms a recognized standard to which specimens under examination may be compared. The scale puts the diamond as 10; the sapphire, 9; topaz, 8; quartz, 7; felspar, 6; apatite, 5; fluorspar, 4; etc. In making a test, a number of these minerals, suitably mounted in little handles, are applied in succession to the gem to be examined, so as to attempt to scratch it. When the gem neither scratches nor is scratched by any member of the scale the two stones may be considered the same hardness. When it scratches the softer and is scratched by the harder of two test stones some idea of the position between them may be obtained by drawing all three specimens, with slight pressure, across the surface of a fine, clean, hard file, and noticing the different degrees of resistance to abrasion and the sound produced. This operation requires to be done with a delicacy of touch which is made perfect by practice alone. The following list of a few of the gems and their degrees of hardness will serve to show their relative position to Mohs's scale: Diamond, 10; sapphire, 9; ruby, 8.8; chrysoberyl, 8.5; zircon, 7.8; emerald, 7.8; green garnet, 6. It is an interesting fact, although of no importance in distinguishing precious stones, that slight variations in hardness exist between individual specimens of the same kind of gem brought from different parts of the world, and often, too, even between those obtained from various mines in the same locality. Thus the toughest diamonds come from Australia, while Indian and Brazilian stones are harder than those from the Cape.

To obtain the specific gravity of a stone, liquids of different degrees of density are used, in which the gems either float or sink, according to their relative weight. A solution of mercuric iodide in potassium iodide ("Sonstadt's solution") is a liquid of great service, which should be made up to solutions of several different densities. Solution A equals 3.17; solution B equals 2.9; solution C equals 2.67; solution D equals 2.63. This fluid has, however, the disadvantage of being very poisonous and corrosive. Another suitable liquid is methylene iodide, which is easily diluted by the addition of benzine, each drop of benzine making the liquid less dense. Nothing can be easier or more satisfactory than this method; however minute the stone may be, it can be identified by its density in a few moments. Suppose it to be doubtful whether a certain gem is an aquamarine or a chrysoberyl; all that is necessary is to place it in a tube of methylene iodide, together with a small fragment known to be aquamarine, to serve as an index. If it be a chrysoberyl, which has a specific gravity of 3.6, it will immediately sink; if it be an aquamarine, which has a specific gravity of 2.7, it will float, in which latter case, if the liquid be diluted and stirred until the index fragment is exactly suspended, the doubtful gem also will neither float nor sink, but will remain poised beside it. The only reason why this method has not been more generally adopted is that, unfortunately, a great number of gem stones are heavier than methylene iodide. But this objection is now removed by a discovery made by the distinguished Dutch mineralogist, Retgers. He has found a colorless solid compound which melts at a temperature far below that of boiling water to a clear liquid five times as dense as water and therefore sufficiently dense to float any known precious stone. This compound is a double nitrate of silver and thallium, and possesses the remarkable property of mixing in any desired proportion with warm water, so that by dilution the specific gravity may be easily reduced. The fused mass may be reduced in density by adding water drop by drop, so as to suspend in succession jargoon, carbuncle, sapphire, ruby, chrysoberyl and spinel.

PRECIOUS STONES OPTICALLY CONSIDERED.

The optical properties of precious stones form valuable means of identifying them, especially when cut and polished, and there are several different kinds of scientific instruments of more or less practical character which can be applied in this connection. The method of measuring the extent to which a ray of light is refracted in passing through a gem may be practised with the goniometer, an instrument found in every physical laboratory. In order to avoid the necessity of cutting the stone into a prism, it is advisable—after finding two of the facets which form a convenient angle—to paint over the remainder of the stone. The ray of light may then be traced through the two open facets and in this way can be measured not only the refraction but the double refraction of the stone. For this purpose, also, the little instrument known as the reflectometer is simple, but unfortunately only useful to examine gems of low refractive power, such as topaz and less brilliant gems. The dichroscope is an instrument which enables one to tell at a glance whether

TRADE "1835 MARK R. WALLACE"

We talk very earnestly of the virtues of our goods, as we naturally are enthusiastic over them. But our most convincing argument is that which the ware itself presents. Just compare a piece of

1835-R. WALLACE SILVER PLATE

with the same article in any other brand and you have a practical demonstration of our superiority in every respect; design, die cutting, workmanship and quality, *and a trade-mark that is not like a dozen others.*

a gem be doubly refractive or not, thereby deciding at once if the specimen belongs to the cubic system of crystallography or not. This is of value in distinguishing rubies and sapphires from other somewhat similar stones, which might be mistaken for them, and this instrument is in almost universal use among gem merchants. It is not commonly known that many transparent minerals, when viewed through a spectroscope, cause characteristic black bands to appear across the spectrum. Two of these minerals happen to be the gem stones, jargoon and almandine garnet, sometimes called carbuncle. When a stone, say one set in a ring, is looked at in this way and gives the characteristic spectrum of zircon, it is at once known to be jargoon, without any further trouble. A crystal of tourmaline, while being warmed, becomes electrified, one end becoming charged with positive and the other end with negative electricity. Advantage has been taken of this fact by Prof. Kundt to make a very pretty test for tourmaline. If a mixture of powdered red lead and sulphur be blown or shaken through a sieve, the particles become electrified by mutual friction and if it then be dusted upon a crystal of tourmaline which is being warmed the positive electrified end of the crystal attracts the negative electrified yellow sulphur and the other end attracts the positively electrified red lead—thus one end of the crystal becomes red and the other yellow. Now every crystal of tourmaline behaves in this way and no other gem stone, so that this is a practical test as well as a very pretty experiment.—*Mining World.*

Clock Case Factory at Washington, N. J., Totally Destroyed by Fire.

The clock case factory of Harris & Harrington, importers and manufacturers of clocks and fine art goods, whose New York office is at 32 Vesey St., was totally destroyed by fire Monday evening, Jan. 26. The building, which is known as the Lundy factory, is located at Washington, N. J., and the stock it contained was covered by insurance, but the loss in patterns and new designs and in orders, was very large.

It is not exactly known how the fire started, as almost immediately after it was discovered the entire building was in flames. Adjoining the factory on one side was a woodworking establishment and on the other side a lumber yard and lumber shed. All three buildings were razed to the ground and the total loss was estimated at $75,000.

Hardly were the ashes cold when the concern began negotiating for plans and specifications for a new building to be erected on the site of the old one. The new building will be larger, more modern and better equipped than the old, and the work on it will be begun in a few days.

Harris & Harrington received from their customers and friends many expressions of sympathy since their loss became known. Fortunately for the concern a large number of clock cases had been kept in reserve in their New York show rooms and other places, so that they are not totally out of stock. Among the greatest losses was the destruction of 12 new patterns and designs that had just been finished, and had not yet been shown.

Silverware For the Table

Our "Silver Plate that Wears"

is so universally and favorably known, that articles of our make are recognized and accepted by the trade and public as the standard of the world, and are generally used by experts where examples in the most beautiful table effects are desired.

Particular people, wishing table silver to conform with what is correct in fashion and good taste, should

Gold Medal for the Best Musical Composition Adapted to "America."

There was put on exhibition at the establishment of Tiffany & Co., 15th St. and Broadway, New York, last week a beautiful gold medal, which this concern recently completed for the Society of the Cincinnati in the State of Rhode Island and which has been offered by that branch for the best musical composition adapted to Samuel Francis Smith's "America," also known as "My Country 'Tis of Thee."

The medal, which is one of the most beautiful struck in recent years, is of pure gold, measures 2½ inches in diameter and weighs 150 pennyweights. As will be seen from the illustration on this page, the obverse is ornamented with a copy of the badge of the Society of the Cincinnati in the State of Rhode Island. This consists of an eagle holding in its claws a wreath of laurel and bearing on its breast an oval shield, containing a classical representation of the American Revolution, symbolized by three Roman citizens presenting Cincinnatus with a sword; in the background stands the cottage of Cincinnatus, with his wife at the door. Around the oval shield is inscribed the motto, "Omnia relinquit servare Rempublicam," which, translated, would read, "He leaves all to take care of the Republic."

GOLD MEDAL FOR THE BEST MUSICAL COMPOSITION ADAPTED TO S. F. SMITH'S "AMERICA."

The reverse bears a laurel wreath with a lyre at the bottom, surrounding the inscription, "Awarded to ——— for the best musical competition adapted to S. F. Smith's 'America,' 1902."

The competition for this medal closes Feb. 22.

Frank V. Morris Files Voluntary Petition in Bankruptcy.

UTICA, N. Y., Jan. 29.—Frank V. Morris, a retail jeweler at Carthage, N. Y., filed a voluntary petition in bankruptcy in United States Court here to-day, scheduling his debts at $4,596.09. All are unsecured. The nominal value of the assets is placed at $2,598.84, including stock valued at $1,747; debts due, $445.44, and machinery and other tools, $225. The exemption claimed is $390.

Morris has 105 general creditors, and about one-third live in Carthage. The amounts are small. M. J. Averbeck, New York, holds nine notes given by Morris for goods amounting to $340, and King & Eisele, Buffalo, hold notes amounting to about $500. Edgar C. Morris, of Syracuse, is a creditor for $920, and James E. Coit, Adams, N. Y., for $725. The two latter claims are for borrowed money.

Other creditors are: L. E. Waterman Co., $8; Julius King Optical Co., $13; N. H. White & Co., $34; Robbins & Appleton, $4; Dennison Mfg. Co., $32; Wardell & Co., $6; Cross & Beguelin, $39; Carl Fisher, $11; Bayonne Knife Co., $45; Singer & Rothenberg, $23; J. Kopelowich, $32; M. S. Benedict Mfg. Co., $17; Geverlee Bennett Co., $39; Spalding & Co., $23; J. W. Sherwood & Co., $13; S. A. Weller, $27; New England Watch Co., $14; Harris & Gips, $112; Rogers, Lunt & Bowlen Co., $44; Theodore W. Foster & Bro. Co., $31; International Silver Co., $98.

Referee in Bankruptcy Atwell, of Watertown, will call a meeting of Morris's creditors.

New Watch Inspectors for the Tennessee Central Railroad.

NASHVILLE, Tenn., Jan. 28.—George R. Calhoun & Co., Union and Summer Sts., this city, have received the appointment of general time inspectors of the Tennessee Central Railroad Co.

In the circular of the railroad company to their employes, announcing the appointment, notice is given that the lowest grade of new watches of different manufacturers to be accepted will be: Waltham Watch Co., "Crescent St., 21 jewels and upward; Elgin National Watch Co., "B. W. Raymond" 17 jewels and upward; Hampden Watch Co., "John Hancock" 21 jewels and upward; E. Howard Watch Co., Number 3 and upward; Hamilton Watch Co., No. 940 or 941 and upward. Swiss and other makes must correspond in grade to the above named American watches.

This order does not in any way affect the watches already in service.

Gattle, Ettinger & Hammel, 68 Nassau St., New York, have just completed a large line of high grade pearl necklaces. The firm will hereafter deal more extensively than ever in fine pearls, which they will make one of their specialties.

The Wisconsin State Optical Society will decide the question of affiliation with the American Association of Opticians next July, when the society will convene at La Crosse, Wis. The members present at the last meeting concurred in the opinion that the society had assumed the right attitude in not undertaking to promote legislation, allowing the society to stand on its merits.

"OLD RELIABLE W. & S. B. ★"

BLACKINTON CHAINS.

THEY "MAKE GOOD."

They "Make Good"

There's one thing that the retail jeweler, who sells Blackinton's famous "Old Reliable W. & S. B.★" Chains knows positively—and that is that every chain he sells will "make good." He doesn't guess at it—he knows it. In thousands of instances it has been the privilege of jewelers to know of Blackinton Chains wearing years after the guarantee expired. That's the secret of "W. & S. B.★" popularity—they "make good." Can't shake the confidence of the jeweler who knows. He may handle other brands because he wants a little variety, but he recommends "W. & S. B.★." And his "say so" sells them 99 times in 100.

MADE BY

W. & S. Blackinton Co.,

New York, 14 Maiden Lane. Factory, No. Attleboro, Mass.

Death of Mrs. Theresa Lynch.

Mrs. Theresa Lynch, for many years a retail jeweler at 1 Union Sq., New York, who was often spoken of by the newspapers as the "Queen of Diamonds," died Wednesday morning at her late residence, 65 Central Park West, after an illness of but two weeks.

Mrs. Lynch was widely known in New York and vicinity and in the precious stone markets of Europe. For more than half a century she conducted a successful business in various parts of New York, and demonstrated conclusively that her sex was not a barrier to building up and running a large commercial establishment.

Although the deceased was 73 years old at the time of her death, she gave her personal attention to her business up to the time of her fatal illness. She was first taken with an attack of bronchitis, which became serious and developed into paralysis, which caused her death.

Mrs. Lynch was born in Dublin, Ireland, in 1830, but came to this country with her parents at the age of 10. In November, 1844, when but 15 years old, she married John Lynch, then a wholesale fruit dealer. While yet in her teens Mrs. Lynch purchased a diamond ring, which she afterward disposed of at a profit. It was her first business venture, and the success of it encouraged her to continue in this line until she had laid the foundation of her subsequent lucrative trade. She sold diamonds in a small way with such success that she later opened a small store in East Broadway.

After a short time she removed from this address to Grand St. and then to 12 E. 4th St. In 1867 she hired a store under the old New York Hotel and continued at this address for nine years; then she moved to 925 Broadway. After a short time at this address she moved another block further up, to 937 Broadway, and finally to Broadway and 14th St., or No. 1 Union Sq., her last place of business.

The deceased had a strong personality and a shrewd business sense. From the very beginning of her business career she did business under her own name.

Mrs. Lynch was the mother of 16 children, six of whom survive her. She is supposed to have left a considerable fortune, which is largely invested in real estate.

The funeral services were held Friday morning at 11 o'clock from the Church of St. Vincent de Paul in W. 23d St. The interment was in Calvary Cemetery.

Death of J. B. Street.

JOLIET, Ill., Jan. 28.—J. B. Street, who died last week at his home, 115 Young's Ave., was a well-known jeweler of this city. The deceased was born in Bristol, Pa., July 15, 1850, but removed to Illinois early in his childhood. He had been in the jewelry business here for many years, and was for some time a business associate of George E. Feagans.

Mr. Street is survived by two young children. The funeral services, which took place from his late home, Sunday, were conducted by Rev. W. F. Atchison, and the remains were taken to Bloomington for interment.

Death of Thomas G. Calvert.

LEXINGTON, Ky., Jan. 30.—Thos. G. Calvert, a prominent jeweler of this city for many years, died here last night, and his death is greatly mourned, not only by his personal associates, but by a large number of friends in the jewelry trade of Kentucky and Ohio, in which he was well known.

Mr. Calvert began business as a jeweler here early in the '60s and built up a large trade. He was also interested in racehorses, and, with the late Clemens Hellebush, of Cincinnati, owned a stable that was prominent on the turf.

Death of Peter Kaltenbach.

RACINE, Wis., Jan. 28.—Peter Kaltenbach, who died in this city last week, was one of the pioneer jewelers and watchmakers of Racine, and was in business here for many years.

The deceased was 74 years old, and from 1851 to 1855 resided at Green Bay, Wis. He came to Racine in the latter years and lived here until his death. He did business under his own name for some time, and later was a member of the firm of Feiker & Kaltenbach, which quit business about 1895.

L. Cornelius, Prairie Du Chien, Wis., is the promoter and owner of a new business block recently erected in that town. On the first floor are the offices of The Jewel Casket and the Crawford County Bank. Of the former Mr. Cornelius is proprietor and of the latter he is vice-president.

PHILADELPHIA
WATCH CASE CO.
RIVERSIDE, N. J.

Chas. Kranich, Philadelphia, Pa., a Survivor of the Jersey Central Wreck.

Among the passengers on the New Jersey Central express train which caused the wreck on the Central Railroad of New Jersey, Tuesday evening, Jan. 27, was Charles Kranich, of 2623 Kensington Ave., Philadelphia. Mr. Kranich, who is a retail jeweler in the above mentioned city, had been visiting New York, with his wife and daughter, for three days, on the invitation of Jules Ascheim, wholesale jeweler, at 41 Maiden Lane, New York.

On the night of the accident V. L. Kurtz, one of Mr. Ascheim's salesmen, went to the train with Mr. Kranich and his family to see them off. About 8 P. M. that evening Mr. Ascheim received a telephone message from Mr. Kranich saying that he had been in the wreck, but had received no injuries.

A letter received Wednesday by Mr. Ascheim from the Philadelphia jeweler described the wreck in detail. Mr. Kranich said that he was jarred considerably when the express crashed into the local, and, in company with a son of John Wanamaker, assisted in getting out the wounded and dead of the wrecked car. Mr. Kranich speaks about the zeal and courage shown by Mr. Wanamaker, stating that the overcoat which he wore was burned up the back and his clothing was burned in several places.

After describing the wreck in detail, the writer stated that the express train in which he was riding was pulled back to Jersey City, where it remained until 2 o'clock in the morning. The seats in the cars were torn up and cots made out of them, so that the passengers could sleep. Mr. Wanamaker assisted Mr. Kranich in making a berth for his wife and daughter, as he did many other passengers in the train. Shortly before 2 A. M. the train started again for Philadelphia, and before 3 it was back again at the scene of the wreck. The train finally arrived in Philadelphia about 5 o'clock.

Mr. Kranich said he never was so glad to get home in his life. It was the first time he had ever been away from his native city, and he declared that if every subsequent trip was to have a climax like the last one he did not want to visit New York again.

Elgin National Watch Co. Proposes to Increase Its Capital to $5,000,000.

CHICAGO, Ill., Jan. 28.—It is proposed by the officers in charge of the Elgin National Watch Co. to increase the capital of that corporation from $4,000,000 to $5,000,000. A special meeting of the stockholders to act on this proposition has been called for March 3, and it is supposed that if the increase is decided upon the new stock may be sold at par to present holders.

At the meeting of the directors, held Monday, the following resolutions were passed:

Resolved, That a special meeting of the stockholders of the Elgin National Watch Co., a corporation created by the State of Illinois, be, and the same is hereby, called, to be held at the office of said company, Room No. 201, American Express Building, 76 Monroe St., Chicago, Ill., on the 3d day of March, 1903, at the hour of 12 o'clock M., for the purpose of submitting to a vote of the stockholders the following question, viz.:

The question of increasing the capital stock of this corporation to $5,000,000.

Resolved, Further, that notice of such special meeting be given to the stockholders in the manner provided by law.

In accordance with these resolutions, the notices calling a meeting of the stockholders were sent out yesterday and were signed by A. C. Gartlet, H. A. Blair, C. H. Hulburd, E. A. Hamill, George H. Laflin, M. A. Ryerson and George T. Smith. The proposed increase in the stock is said to be for the purpose of paying for recent large extensions and improvements made to the factory, and provide for further enlargements of the company's business.

Charlie H. Haden has sold his business in Stockton, Mo.

Invisible Material.

Into every JAS. BOSS GOLD FILLED CASE is put some material that cannot be held in a pair of tweezers, or put into a crucible, or drawn through a pair of rolls; cannot be weighed, or measured, or counted; is not catalogued, and cannot be pictured; is "without form," as the soul is without form; IS the soul, the continuing life, of

The Boss Filled Case.

This intangible, invisible material is CHARACTER. It is that which gives vitality to the reputation of the Boss Case; inspires those who fashion it, informs those who sell it, insures those who wear it. It cannot be seen, yet counts for more than all that is shown; cannot be melted down into visible value, yet the good-will-of-the-Trade embodied in it is an asset of imposing worth. And it goes with the Case, "without extra charge"!

NOTE.—The commerce between the United States and Hawaii and Porto Rico, respectively, is not included in the statements of the foreign trade of the United States after June 30, 1900, but after this date the trade of Hawaii and, after July 1, 1901, of Porto Rico with foreign countries is included in the statement of the foreign commerce of the United States.

C. B. Kennerdel, a former jeweler of Waynesburg, Pa., died recently, at Dixmont, of nervous prostration.

Edward J. Hervey, Grand Rapids, Mich., is established in his new quarters at No. 6 Canal St. Extensive improvements have been made in the store, and an entirely new stock has been installed.

H. G. Spafford has left Thorp, Wis., and opened a store in Cadott, Wis.

H. J. Bentley, Waukon, Ia., has had a judgment for $482 rendered against him.

L. W. Swem, a jeweler of Iowa Falls, Ia., has been chosen to act as preacher in the New Christian Church of that place until a regular minister is appointed.

Send in your name

We want the name of every jeweler who sells Wadsworth Cases. For this reason: We are advertising

Wadsworth Watch Cases

extensively in the leading magazines, ladies' papers, engineers', telegraphers' and express journals. From this advertising, we are receiving inquiries from all over the country. Inquiries from your locality will be referred to you, if we know you sell our cases. It is a very desirable class of trade; they will buy other things as well.

That is not all

Our advertising department is run as systematically as the other departments. We want to keep in touch with you, tell you what we are doing, and hear what you care to tell us. If you don't sell Wadsworth Cases, ask your jobber about them. It will be well worth your while.

The Diamond Markets.

ANTWERP, Jan. 16.—The diamond market here is very lively at present. Many foreign buyers are visiting the "Diamant Club" and the offices of the local merchants. The following were here during the past two weeks: Messrs. R. Citroen, Marchand, Hahn, Sevadjuan, D. Misrahi, Mayer Frères, all of Paris; Mr. Gross, of Vienna; Mr. Ponti, of Milan, and Mr. Schenkeim, of New York. These buyers were all looking for first quality stones, which have been very scarce here for some time. There is a good demand for mêlée under 200 francs per carat, but most of these goods cost 210 to 215 francs per carat.

Roses are coming into demand again since the new firm, Daverfeld & Co., have made a specialty of them; the rough for this cutting has become cheaper, so that our cutters are able to sell their roses 10 to 12 francs per carat under former prices. This and other causes makes business much livelier, and the diamond industry has once more taken on an air of activity. All the workmen are busy, and several old cutters, who, owing to the crisis of last year, were obliged to learn another profession, have returned to their old employment of diamond polishing.

Many new apprentices are coming forward, but the organization workmen of the cutters regulate their admittance to the trade in order to prevent an abundance of cutters in the future.

A new diamond firm will soon be formed here, of which further particulars will be given in a future letter.

The Chamber of Arbiters for diamonds is now composed of the following: President Ch. Van Antwerpen; vice-president, J. M. Walk; secretary, Chr. Wauters; treasurer, Alb. Delact; arbiters, J. Kryn, Ch. Van Antwerpen (manufacturers), G. Antoine, S. Saril and J. Walk (merchants) and Ad. Adler, M. Saks and M. Tom (brokers).

M. Rabinovitch, a diamond broker, will be married shortly to Miss E. Kossmann.

AMSTERDAM, Jan. 15.—The first half of January ended very satisfactory for the trade, and it is curious to note that, notwithstanding the increase in the price of diamonds, business was brisk. This proves that everyone has confidence in the market's firmness, and understands that increases can occur without changing the general conditions of the trade.

The large brilliants of the most precious varieties are the most in demand.

Diamonds exported from Amsterdam to the United States for the quarter ending June 30, 1902, represented a value of about 3,855,000 guilders.

PARIS, Jan. 15.—The diamond trade in Paris appears, from the reports of our merchants, to be very good. All report brisk trade in every line, chiefly in fine diamonds, in which the demand for first class goods was unusually great. Several merchants are away looking for suitable goods in other diamond markets.

Colored stones, as usual, are in good demand. Coral is very popular and prices therefor increase daily, especially for light rose colors.

Maurice L. Powers, of firm of Powers & Mayer, New York, is expected shortly and other Americans are expected here during this and next week.

An important lot of Antwerp roses were bought yesterday by one of the large firms.

LONDON, Jan. 14.—The tendency of the market has not been bad. Several sales in rough goods have been made for the Continent and large shipments have been sent to New York. Trade in polished goods continues to be good with firms of Southampton and Birmingham. Representatives of Indian princes have bought many brilliants and colored stones.

Notwithstanding many rumors of discoveries of new diamond fields in various countries, diamonds are firmer than ever. These statements have often been exaggerated, and it is certain that the De Beers Co. will for several years regulate the price of diamonds, so that new increases are anticipated.

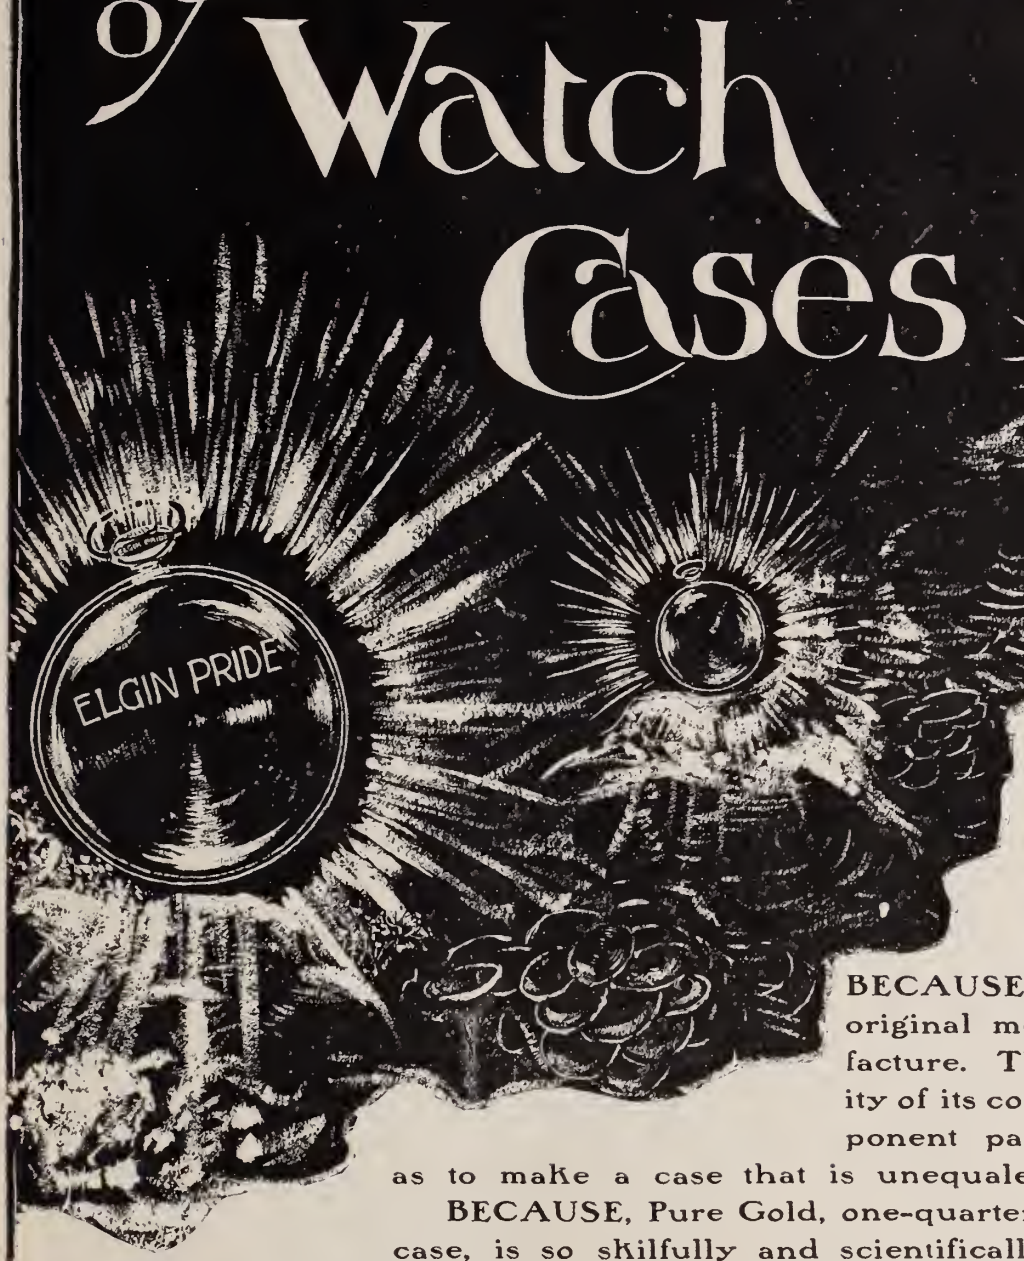
It is rumored that Mr. Chamberlain, at present in South Africa, will visit Kimberley in February, and that he will be the guest of the De Beers Co.

The booklet, entitled "A Short Discourse on Trade," issued recently by the Jewelers' Circular Pub. Co., received a very favorable notice in the issue of *Printers' Ink*. Jan. 28. The booklet was quoted almost in its entirety, which shows the favorable impression it made upon the editor of that well-known authority on advertising. A copy of the booklet will be sent, on application, to any jewelry manufacturer or jobber of the United States.

A Customer's Confidence

is a valuable asset in a business where the dealer's recommendations must largely take the place of buyer's judgment.

ELGIN WATCHES



create confidence in the dealer who sells them, which must redound to the benefit of his store generally.

W. B. Dutton & Co., Weatherford, Tex., Make an Assignment to H. L. Mosely.

WEATHERFORD, Tex., Jan. 28.—W. B. Dutton & Co., jewelers of this town, made an assignment late Saturday, naming H. L. Mosely as assignee. The assets of the firm are given nominally as $6,200, while the liabilities are said to be $4,500.

Among the creditors of the firm are: Merchants and Farmers' National Bank, $1,200; St. Louis Clock & Silverware Co., $65; C. G. Alford & Co., $397; Queen City Ring Co., $105; Morgan & Hawley, $205; Houston Optical Co., $104; Bauman-Massa Jewelry Co., $757; LeNain Optical Co., $87; Jacob Strauss & Sons, $450; M. S. Benedict Mfg. Co., $100; Missouri Glass Co., $118; Lake Bros. & Co., $80; A. L. Silverton, $73; Leonard Krower ,$67; Jos. Bennett & Co., $122; Morris Vogel & Bro., $131; Simmons Hardware Co., $100; Jacob Strauss & Sons, $450, and H. L. Mosely, attorney's fees, $150.

Illness and Business Troubles Cause C. E. Fultz to Commit Suicide.

YOUNGSTOWN, O., Jan. 28.—After making deliberate preparations to end his life by asphyxiation, Col. C. E. Fultz, of Canton, O., turned on the gas in his room, in this place, last night, and was found dead there this morning. Col. Fultz was a well-known resident of Canton, and was formerly foreman in the balance department of the Hampden Watch Co., Canton.

Mr. Fultz took a hose from a gas stove, and tying it firm in his mouth, turned on the gas, dying from asphyxiation a short time later. He left a note of farewell, as follows: "For the past few years I have known that I am threatened with both insanity and paralysis, and the business troubles that I have had for the past few months have sent me at breakneck speed, and I feel that I can stand it no longer."

New Rochelle Jeweler Exonerated From Charge Made by Customer.

NEW ROCHELLE, N. Y., Jan. 28.—Harry P. Kane, a former jeweler of this town, who, as was told recently in THE CIRCULAR-WEEKLY, was arrested on the complaint of Corry Walz, on the charge of appropriating a ring, was vindicated by the Grand Jury last week, and discharged from custody.

Kane was sold out by the Sheriff last December, and testified that, while it was true he had received the ring from the complainant, it was among the property which came into the Sheriff's possession, and when the keys were turned over to him again the ring was missing.

Warren W. Livingston Files Voluntary Petition in Bankruptcy.

BINGHAMTON, N. Y., Jan. 28.—Warren W. Livingston, a watch repairer and jeweler of this city, filed a voluntary petition in bankruptcy last week in the United States Court.

According to the schedules filed with the petition he has liabilities at $5,205.06 and assets of but $7.90. The case has been referred to Referee in Bankrupty R. A. Gunnison. Attorney F. Newell Gilbert represents the petitioner.

J. T. Fields, Caruthersville, Mo., recently suffered a small loss by fire.

Man Arrested at Lebanon, Pa., Believed To Have Robbed Many Jewelry Stores.

LEBANON, Pa., Jan. 29.—Some of the jewelry found in the possession of John Lockley, alias Joseph Snyder, arrested in this city last week, has been identified by Henry W. Reiff, a jeweler of Lederachville, Pa., whose place of business was robbed some time ago. Mr. Reiff sent two of his clerks to this city and they identified a ring, a set of gold shirt studs and other goods as his property. A warrant was sworn out against Lockley, charging him with the Reiff robbery, and he will be tried in the Montgomery County Court on that charge.

Chief of Police Zimmerman is of the opinion that Lockley was connected with numerous robberies of jewelry stores throughout the country. He has received letters from a number of towns making inquiries about Lockley and his goods, the latest coming from South Bend, Ind., where a jewelry store was recently robbed.

Lockley was arrested here for carrying concealed weapons.

Parkersburg, Ia., Jeweler Files a Voluntary Petition in Bankruptcy.

PARKERSBURG, Ia., Jan. 28.—William Miller, a jeweler of this place, was last week declared a bankrupt after filing a voluntary petition in bankruptcy in the United States Court.

The schedules filed with the petition show liabilities of $5,670.51 and assets of $3,100. According to these schedules, Miller's debts cover a period of several years. He owes $50 for back taxes, $150 for rent and a small amount to former clerks. The remainder of the liabilities are divided between creditors in New York, Chicago, Parkersburg and Dubuque. The assets are said to consist of stock valued at about $2,500 and accounts due aggregating $600.

His case has been referred to Referee in Bankruptcy Hoxie, and a meeting of the creditors will soon be called to elect a trustee for the estate.

New Law Affecting Pawnbrokers Introduced in New York Assembly.

ALBANY, N. Y., Jan. 28.—Among the bills now under consideration by the Assembly of interest to the jewelry trade was one introduced recently by Mr. McInerney to amend the laws relating to pawnbrokers.

The bill, which is referred to the Judiciary Committee, seeks to reduce the license fee from $500 to $250 in cities and to reduce the rate of interest in which the pawnbroker is allowed to charge from 3 to 1½ per cent. per month for the first six months and from 2 to 1 per cent. for each succeeding month on loans not exceeding $100, and on loans for more than $100 to reduce the charge from 2 to 1 per cent. for the first six months and from 1 to ½ per cent. for each succeeding month.

S. C. Coyle, formerly of Confluence, Pa., has removed to Duquesne. S. C. Newcomer will continue the business in Confluence.

E. Grodner, a recent graduate in horology from Musser's College, Berlin, Germany, has just taken charge of the watchmaking department of Pirosh & Simmons's establishment, York, Pa.

The Giant of Collar Buttons

IN QUALITY
IN SALES

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read "**The Story of a Collar Button, with Illustrations,**" which may be had FREE for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the year of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

Selling Agents to Jobbing Trade.

Annual Meeting.

Jewelers Association and Board of Trade Elects Directors and Officers.

The annual meeting of the Jewelers Association and Board of Trade of New York was held Thursday, at 2:30 P. M., in the rooms of the association, 170 Broadway, New York. There were 32 members present, and after calling the meeting to order, President Alford read his report for the year, as follows:

PRESIDENT ALFORD'S REPORT.

To inaugurate a system and method that shall be as nearly perfect as possible, is the aim of every successful business man, be he merchant or manufacturer. Failing to do this, in these progressive days, he would soon be relegated to the rear.

An organization of business men, for business men, must meet the requirements made upon it, as otherwise it would cease to be of positive value to its membership. Both in theory and practice the officers and directors of the Jewelers Association and Board of Trade have but one object in view; namely, to make it the very best organization of its kind.

As a commercial agency for imparting information, we unhesitatatingly claim that there is none better. Our reports, authentic, reliable and complete in every detail, give the kind of information that every merchant or manufacturer should have in the conduct of his business, and the cost to members less than that of any other reliable agency.

The high standard that we have reached in our collection department for prompt and systematic work, entitles it to the loyal support of our entire membership.

Speaking of loyalty to our organization, I trust that I will be pardoned when I say that during the two years in which the honor and pleasure have been mine to be its president, that I know whereof I speak, when I say that the value of loyalty and hearty co-operation cannot be overestimated.

Briefly, two illustrations:

A dealer in Alabama announced to his creditors in April last that he was unable to meet his obligations. While he had previously enjoyed a good reputation, his statements were such as required close investigation, the result of which was that the creditors had agreed to accept 33⅓ per cent.

PRESIDENT-ELECT HIRAM A. BLISS.

as the best settlement possible; but before the settlement was completed, we obtained some additional information by which we compelled a settlement of 40 per cent. net cash and cost and expenses paid by the debtor. The creditors had given their claims to us, to do as we thought best. We had the power, we exercised it, and needless to say the creditors were more than pleased to receive the additional dividend.

Very recently a dealer owing upwards of $30,000 found himself financially embarrassed. Individual action in this case would undoubtedly have resulted in throwing the debtor into bankruptcy, the probable result of which would have been a possible dividend of 25 per cent. Prompt and concerted action on our part enabled us to get practically all of the claims against the debtor with full power, and now the probable result is that creditors will realize in full. In this connection permit me to recall to you a resolution adopted by the board of directors on March 13, 1902, as follows:

"*Resolved,* That the members be requested to refrain from signing any paper of compromise or settlement or extension presented to them by a dealer, unless said paper bear the certificate of this corporation that the debtor has filed with the corporation a full statement of his or their affairs, showing names of creditors, the amount owing each, assets and liabilities, etc., or that proper investigation has been made of his or their affairs.

"*Resolved,* That a copy of this resolution be sent to each member of the corporation, to which shall be attached an agreement that the member signing same will comply with the request of the board of directors, asking that same shall be signed and returned to the secretary."

Compliance with this resolution means so much, that every member should hasten to place his claim with us whenever an unfortunate debtor tells his tale of woe, or when a would-be swindler tries to take his creditors "into camp."

Now a word about your directors and committees. Faithfully and conscientiously they have worked for the upbuilding of the organization. Is it not fair that they should know from the membership that their good work is appreciated?

Your finance committee have under consideration at this time certain plans which, when completed, will be of positive value to the members.

Efficiency in this office, as well as in the branch offices in Chicago and Providence, is the watchword which has been, and will be, maintained.

It is a pleasure to me to state that every employe seems to take a personal interest in his or her work.

The report of the secretary is a comprehensive one, and its recommendations, if followed, will tend to broaden and increase the usefulness of the Jewelers Association and Board of Trade.

In the treasury we have a comfortable surplus and a "fighting fund," which may be called upon by any member for the investigation and prosecution of dishonest and fraudulent failures. See detailed report which will be made at this meeting.

To my associates in the directory during my two years' office, my hearty thanks for their unfailing courtesy and kindly consideration. May I ask for my successor the same courtesy and support that has been given me.

The report of Secretary Safford was then presented and read, as follows:

SECRETARY SAFFORD'S REPORT.

I submit for your consideration, the following report for the year ending Dec. 31, 1902:

Last May we moved to our present offices. With sufficient room and additional help, very material progress has been made in the handling and compiling of our reports and records, and in the production of our reference book.

We have revised and written during the year 18,456 reports, as against 17,456 the previous year.

We have issued 41,421 reports to members in answer to special inquiries.

Comparison shows members furnish information to our reporters more freely and fully than heretofore, which results in improvement in the quality and value of our reports. If all members will come to feel a personal interest in the work of the Board, better results still will follow.

Experience shows the closer the members get to the Board, the more they help themselves.

In a recent case of failure investigation shows that debtor was duplicating largely on certain lines of goods, to members who had not previously sold him. If, in making their inquiry members had stated that they had first order, that goods ordered were principally watches or diamonds, etc., it would have started inquiry which might have resulted in preventing heavy losses. I would suggest that either through making more inquiries or some other manner members keep the Board advised as to whom they sell. It happens frequently that in cases of failure we do not know whom of our members to notify as those interested have never made an inquiry or in any other way notified

LONDON, 50 HOLBORN VIADUCT.

us that they are interested, and our first knowledge comes when the list of creditors is filed, perhaps weeks after.

In our collection department, results obtained have been very satisfactory.

We have handled 4,068 claims as against 3,890 for the previous year.

Of these we have collected 2,709, as against 2,494 in the previous year, being 66½ per cent. of the number, as against 65 per cent. the previous year.

The percentage of the amount collected on all claims handled, including bankruptcies, was 56⅓, as against 59½ last year.

Through our system of collecting by drafts or demands from our office, we last year collected for members 472 claims, amounting to $22,746.72, without fee or expense to them.

This in addition to several cases of bankruptcy or compromise, in which, through sufficient control, we were in a position to obtain net settlement.

Our facilities in our collection department are being constantly improved, and as our organization is becoming better known, we find that we can command the services of the best commercial lawyers for our business.

This department should receive a more liberal support even than in the past, for the following reasons: For the benefit of our reports we should know when a party becomes too slow, and through a series of claims as received from members, we first learn this and are put upon investigation, thus perhaps warning those who otherwise would sell the last few bills before the failure. Again, the majority of our attorneys, on whom we must depend for reports, receive no compensation other than the fees on claims sent them for collection. They spend their time willingly in investigating and reporting, and through doing so should be in the best position to collect, if necessary, and as encouragement for their services in reporting, they should receive all the collections of all our members in their locality.

PROVIDENCE OFFICE.

In June we remodeled our Providence office, moving into offices in the Union Trust Co.'s new building, which are better suited to our uses; employed a new manager and additional office help, and as fast as possible our files of reports there are to include all the eastern and middle States in addition to the regular files already kept there.

Extensions and compromises should only be granted after proper investigations. Resolutions passed by the board of directors last March have had a beneficial effect in preventing to a certain extent, *injudicious* extensions and compromises. The object in view when the resolution was adopted, was the prevention of unwise or hasty action of which no record was afterwards accessible to creditors, and to throw certain safeguards around such cases. As the great majority of our membership agreed to act in future on the recommendation of the Board, it necessarily results that to-day no extension or compromise can be obtained until the conditions of this resolution are complied with.

The suggestion that naturally follows is that after compliance with the requirements of this resolution, we have only the debtor's statement of his affairs without either investigation or corroboration, on which to act.

If our Board is strong enough, and with our members working together, we should be, should we not require that through some means to be adopted, at the expense of the debtors, so applying, a full examination of their affairs be made? Members agreeing to act thereafter in accordance with the recommendation of the Board.

Admitting the honesty of debtors, at such a time, human nature is such that naturally they con-

sider their side of the case first. We find that when a statement is made for the purpose of obtaining credit, assets look differently from what they do when valued for the purposes of a settlement or extension.

In one particular case where the extension had been asked for without security, investigation resulted in obtaining a better arrangement in the interest of creditors, as to time, and in addition security was also obtained.

In several cases where an offer of settlement has been made, investigation has resulted in obtaining from 10 per cent. to 100 per cent. more than at first offered. It is true that such results have only been obtained by combined effort, amounting to sufficient control of the claims of creditors, so that no result could be obtained without our consent.

While our bankruptcy law is not perfect, one principal defect in obtaining proper results from it, lies in want of unanimity on the part of creditors who best by combination can preserve their rights and obtain nearer justice, than under the trust deed of Texas and Missouri; the chattel mortgage followed by assignment in Michigan, judgment notes of Pennsylvania and Ohio, confession of judgment in New York, etc.

As a rule a dishonest debtor does not fear his creditors *acting individually*, as by various processes their objections can be overcome, but when he meets them as a body, a different aspect is presented. It is seldom that an individual creditor is willing to incur the expense necessary to prosecution even if other creditors would stand aside and take no action. As in bankruptcy the majority rules, when such a debtor finds himself up against such a majority, it is evident that his road to a settlement is less easy than otherwise.

It was with a view of always combining the mutual interests of creditors that Article 7 of by-laws was adopted. Experience has shown the wisdom of this article, although at the time of its adoption, objection was made that it might infringe upon the right of individual action.

The *obligation laid on members to place their claims with the Board* has been observed by the great majority, however, with the result that in nearly every case in bankruptcy during the past year, better dividends have been obtained than would have been obtained otherwise (in several cases without expense to members), simply because we have had sufficient control in number and amount of claims to elect a trustee who would work under our service, in the interest of the creditors.

It is a well known fact that a failing debtor will furnish a list of his creditors to some friendly attorney in advance, who at once writes or wires creditors for their claims, for the purpose of controlling the election of trustee, frequently promising to make no charge for services, and many creditors, alas, fall into the trap and send their claims, which are voted in the debtor's interest.

Other creditors, thinking to save attorneys' fees, send their claims to the referee to file, who, "for the munificent compensation of $10 and one per cent. on dividends, per case, is expected to act as *guardian ad litem* for perhaps 40 or 50 creditors."

In a recent article I find a case wherein the debtor had borne such a reputation for honesty that creditors thought it unnecessary to act. One creditor, however, investigated and found evidence that debtor had paid no bills for at least 30 days, appropriating sales to his own use, had given fictitious notes to relatives about a week before failure, and placed himself in a fair way to resume comfortably after bankruptcy proceedings. They induced other creditors to join them, demanded a thorough investigation, and as a result debtor withdrew the fictitious claims, stating that "he was mistaken as he did not think any creditor had interest enough to spend any money fighting him."

In this case the creditors also had a representative present at the sale of the stock, who bid it up to a fair price, at which it was even then bought by debtor's wife, with the result of a fair dividend to creditors.

With all our growth and success as a Board, I believe that we are still at the beginning of what we may become, and what we shall ultimately be depends very largely upon the support given to and the confidence shown in the Board, by its members.

On motion, the report was referred to the board of directors, to act upon the recommendations contained therein. All those present were unanimous in their appreciation of the work done by Mr. Safford in the

past year, and throughout the meeting various expressions were heard concerning the success and the effect of his labor for the organization.

The following were then elected Directors for the ensuing year: New York—C. G. Alford, of C. G. Alford & Co.; H. A. Bliss, of Gorham Mfg. Co.; O. G. Fessenden, of Hayden W. Wheeler & Co.; Simon Fink, of Fink, Bodenheimer & Co.; Wm. T. Gough, of Carter, Howe & Co.; Alfred Krower, of Albert Lorsch & Co.; F. H. Larter, of Larter, Elcox & Co.; Samuel H. Levy, of L. & M. Kahn & Co.; A. K. Sloan, of Sloan & Co.; Geo. W. Street, of Geo. O. Street & Sons; Seth E. Thomas, of the Seth Thomas Clock Co.; Chas. F. Wood, of C. F. Wood & Co.; Leo. Wormser, of the Julius King Optical Co. Chicago—Benj. Allen, of Benj. Allen & Co.; Grove Sackett, of the Wm. L. Gilbert Clock Co.; A. L. Sercomb, of the International Silver Co. New England—Geo. H. Cahoone, of Geo. H. Cahoone & Co.; Wm. A. Copeland, of Martin, Copeland & Co.; Geo. K. Webster, of the Webster Co.

Following the election of the directors came the election of officers of the association for 1903. For president, the name of Hiram A. Bliss, of the Gorham Manufacturing Co., was suggested, and he was unanimously elected. After his election, Mr. Bliss made a short address to the members of the association, in which he expressed his thanks and appreciation for the honor conferred upon him, as follows:

REMARKS OF PRESIDENT-ELECT BLISS.

I appreciate the honor of the office and the work to be done, having faithfully performed the work devolving upon me as one of the directors and member of the finance committee for the past four years. I have found the duties pleasant and agreeable, and the united action on the part of those with whom I have been associated has made those duties exceedingly pleasant.

Although I have been connected with several institutions, I have never found a pleasanter or more agreeable body of men to work with, without any dissension, working together with one aim, the success and prosperity of this institution. Many times unpleasantness is necessary; the duties devolving upon the directors are not always pleasant. You have to lay aside your personal feelings and inclinations and work for the one good of this organization. Some people will not understand you, but at the same time you act with one aim, and if you see the right—and the managers and officers of this association cannot help but see the right, with your board of directors, who are men of business ability and whose judgment we would not question. Any way, you show your confidence in electing such a board, and the elections are always unanimous, because the nominating committee has your confidence, and when you elect them to office I am happy to say that you spport them, which is very important. Loyalty in this institution is something that means its whole foundation and strength. If in any part you withdraw your support, just so much strength is taken away from your organization. If you stand by your officers, as you have done in almost every instance, your successes are bound to bring great reward; you are bound to go forward and to make this organization what you intend it shall be, the leading organization of its character. Now, in accepting this office I have the support of every member of the organization, and having that I shall have the support and counsel of the directors.

I did not intend to make any great speech here at this time. I appreciate the fact of being your president, and I assure you of my great interest in this organization, and also of the duties devolving upon me, having been quite intimate with my predecessors, and realizing the high standard to which they have elevated the office, and the amount of work and attention and the careful consideration they have given it, and alike their steadfastness as to the future of this institution.

I thank you for this honor, and will endeavor to fill the office and perform the duties to the best

of my ability and in every instance perform them impartially.

Oliver G. Fessenden, of Hayden W. Wheeler & Co., was then elected first vice-president, and Alfred Krower, of Albert Lorsch & Co., second vice-president. The nominating committee, elected to serve for the coming year, was as follows: Leopold Stern, Gustave F. Veith, Geo. E. Fahys, Wm. I Rosenfeld, Walter T. Thompson, Chas. C. Champenois and Fred. W. Lewis.

In addition to the election of officers, considerable time was given to the discussion and voting on amendments to the by-laws, and finally those relating to sections two and three of Article IV, and three and four of Article V, and two of Article VII were adopted.

Section two of Article IV provides that the finance committee shall consist of four members, and that the arbitration, auditing and membership committees shall be appointed by the president from the board of directors, and shall be subject to the approval of the board. This section also provides that the president shall be a member *ex-officio* of all committees, and that the finance and auditing committees shall hold one regular meeting each month, and one special meeting at the call of the chairman of the said committee.

Section three of Article IV provides that the salary of the secretary and treasurer shall be fixed by the finance committee, with the approval of the board of directors.

Section three of Article V provides that the secretary of the association shall, in addition to his other duties, make and keep a true record of all the meetings of all the committees.

Section four of Article V, which relates to the duties of the treasurer, provides that in addition to his other duties, he shall collect all dues and assessments and all other moneys due to the corporation, and that all disbursements shall be made by him, acting by himself, or through another, selected by him and approved by the board of directors. In the absence of the treasurer, checks shall be signed by the president, and countersigned by the secretary.

Section two of Article VII states that money may be used by the corporation for investigating failures, as well as prosecuting such cases.

Proposed amendments relating to sections one and four of Article IV were laid on the table for future consideration.

Be Careful of This Man Who Offers to Pay by Check.

For the purpose of warning the trade Eliassof Bros. & Co., wholesale dealers in jewelry at 9 Maiden Lane, New York, told a CIRCULAR-WEEKLY reporter Monday about a man who calls himself J. J. Campbell and who, they allege, attempted to obtain goods from them on a worthless check. Mr. Campbell, it is said, had been bothering the firm for days attempting to obtain goods from them on credit. He gave the names of several concerns as references, but on investigation they were not such as would warrant Eliassof Bros. & Co. in trusting Campbell. Saturday afternoon Campbell again called on the concern, after having been repeatedly told that the only conditions under which he would be sold goods were cash on delivery. He said he wanted to make some purchases for which he was willing to pay on the spot, and he made a selection of goods valued at $140.72.

While the bill for the goods was being made out Campbell attempted to pay for them by check. Mr. Eliassof said he would not deliver the goods, however, until the check had been certified. Thereupon Campbell said he wanted the check back. Mr. Eliassof did not give it to him, saying he had been bothered by him long enough and having made the sale he did not propose to lose it. Campbell then left the office in a rage. Two hours later, however, he came back and presented Mr. Eliassof with a letter asking for the check, stating as his reasons for doing so that he wished to cancel his purchase. Mr. Eliassof refused to accede to the request and kept the check.

Monday morning he sent the check to the Seventh National Bank, on which it was drawn, to have it certified. The bank refused to certify it, stating that Campbell's deposit there was not large enough to cover the amount called for.

Campbell has not yet, up to Monday, appeared to claim the goods or to explain why the check was worthless. Campbell is an Englishman, about 35 years old, tall and thin, and has a close-cropped sandy beard.

James Reilly Convicted of Robbing the Jewelry Store of Gerome Desio.

WASHINGTON, D. C., Jan. 30.—After a lapse of nearly five years, the thief who stole about $3,000 worth of diamonds from the store of Gerome Desio, 1107 F St., N. W., has been at last discovered in the person of James Reilly, who was to-day adjudged guilty before Judge Bundy, in this city. His sentence, however, will be pronounced later.

During the interval between the robbery and the conviction of the prisoner yesterday, the thief has served a term in a Pennsylvania penitentiary for a very poorly planned theft of $7,000 worth of diamonds from a jewelry store in Pittsburgh. In that instance he snatched a tray of diamonds and started to run, but was followed by a crowd. In attempting to escape he boarded a street car and forced the motorman, at the point of a pistol, to take him away on the car, but was captured by the police before he had time to leave the city.

Reilly, who is also known as John S. Richards, and James Robinson, is now only about 30 years old, is 5 feet 6 inches tall, slightly built, weighs about 135 pounds, is dark complexioned and wears a small black moustache.

The Desio robbery was committed by Reilly on March 8, 1897, with the aid of two accomplices. The goods stolen included 20 diamond rings and 4 diamond brooches. The method of procedure was the usual one, two of the men entering and inquiring for articles which sent the clerks to different parts of the store, while the third made off with the gems. Detectives were placed on the track of the thieves, their only success being the discovery, in a saloon, on the following day, of the tray which had held the goods. All three of the men were found to have been in the saloon a short time after the robbery and to have bought drinks there.

Mr. Desio and his son have never relaxed their efforts to trace the thieves, and took several trips to other cities in the hope of being able to find the plunder. On one occasion they saw Reilly in a theatre in Boston, but before they could secure an officer, Reilly, who had also recognized the Desios, had made his escape. It was not until they heard that a diamond thief was to be released from the penitentiary at Pittsburgh, that they found their man.

Reilly tried to clear himself by making a statement to the effect that he was in Boston on the day on which the robbery occurred, and this statement was corroborated by his brother and another witness, but he was positively identified by both Mr. Desio, his son, and the barkeeper who sold the men the drinks on the day of the robbery.

Burglars Steal $600 Worth of Jewelry From the Schauweker Bros. Co.'s Store.

CLEVELAND, O., Jan. 31.—Some time last night thieves broke into the jewelry store of the Schauweker Bros. Co. in the Colonial Arcade and carried away more than $600 worth of plunder. The robbers secured an entrance by breaking a glass in the rear window, which opens on a narrow alley, and through this they crawled into a small inclosed office that is not visible from the front of the store. After coming out of this room the thieves evidently crept around to the front of the room behind the counters, and in this way got into the optical room, which adjoins one of the front windows, but is separated from it by a curtain. In the front window mentioned were some valuable goods, left there at night, because the window opens on an arcade, where a watchman is continually on guard.

The thieves succeeded in getting 18 or 20 brooches, set with pearls and a diamond center, two trays of filled watches, one tray of plated stickpins, one tray of solid gold turquoise rings, one tray of solid gold signet rings and one tray of emblem rings, besides some pearl-handle knives and other small articles.

That the thieves had studied the place and become familiar with the interior is shown by the course they took from the hidden window, but that they were in a great hurry is also shown by the fact that they took the filled watches when there was a solid gold $125 watch right by them and that they took other cheap goods and left a lot of costly articles, which were within easy reach.

The store is close to the office of the Colonial Hotel, which is open all night, and a barber shop adjoining it is also open all night, but no one seems to have heard the thieves. The exact value of the goods taken has not yet been determined, but Mr. Schauweker states that it is something over $1,000. There was no burglary insurance on the store.

Burglars entered the store of Mr. L'Heureux, 1432 St. Catherine St., Montreal, Que., Jan. 29, by a back door, and escaped with about $100 worth of cheap jewelry, watches, etc. A man named George Morier has been arrested on suspicion, and some of the stolen jewelry found in his possession. It is believed that there are accomplices, and the police are searching for them.

Eastern Creditors Seek To Replevy Goods Sold To Hillelson Bros.

TOLEDO, O., Jan. 28.—An attempt is being made here by eastern creditors of the defunct firm of Hillelson Bros. to ascertain what became of the assets of the firm before its failure last Summer. In the Court of Common Pleas yesterday, before Judge Pugsley, witnesses were examined by attorneys for the creditors.

As told in THE CIRCULAR-WEEKLY last July, R. W. Barton was appointed receiver of the firm at the instance of the National Bank of Commerce, and under him an inventory of the stock was taken and the assets were appraised at $3,300. The outstanding debts of the concern were said to be at that time near $18,000. Mr. Barton sold the stock to Mrs. B. Hillelson, the wife of Frank Hillelson, for about the amount at which it was appraised, and since then it has been on sale at auction in the Valentine building.

The eastern creditors, who are represented by Attorneys H. M. Chippenden, C. F. W. Kirkley and Charles G. Cunningham, have been seeking to replevy the remainder of the stock held by Mrs. Hillelson, and it was in these proceedings that the examination came up.

Frank Hillelson was closely questioned as to the affairs of the firm, and said that the failure was caused by his brother, Solomon Hillelson, who had taken a trunk full of jewelry and skipped out. About $5,000 worth of jewelry was shipped to Davidsworth, Va., and the rest his brother had gambled away. He said that a Henry Rosen had endorsed for the firm, and to secure him some jewelry was turned over to Rosen last May. After Mrs. Hillelson had purchased the stock some more jewelry was turned over to Rosen to raise funds.

Henry Rosen, on the stand, admitted endorsing for the firm, but denied that he received jewelry as security last May, although he admitted that he received a trunk full of jewelry last Fall and claimed he received it from Mrs. Hillelson for money advanced.

Judge Pugsley decided to allow a writ of replevin on the Griffith claim on the ground that before the goods were shipped the Hillelsons knew they were insolvent and did not intend to pay. Frank Hillelson having testified that he cancelled some orders after he found that the firm was insolvent, writs of replevin were refused to the holders of these claims.

A levy under the Griffith claim will be made on jewelry that was not included in the sale to Mrs. Hillelson.

Incorporation of the Business of Chas. C. Paule, Burlington, Ia.

BURLINGTON, Ia., Jan. 28.—The business of Charles C. Paule, 313 Jefferson St., was recently incorporated with an authorized capital of $50,000, and has received a charter to sell watches, jewelry and silverware for the next 20 years.

The company's affairs will be managed by a president, secretary and treasurer, and the officers for the present year are: President, C. C. Paule; secretary, Emil Baumle, and treasurer, C. C. Paule.

Absconding Jewelry Traveler Arrested in Brazil Coming Back to the United States.

Fred L. Baker, the traveling salesman, who, as already told in THE CIRCULAR-WEEKLY, was arrested last week in Rio de Janeiro by Pinkerton detectives, charged by the Non-Retailing Co., of Lancaster, Pa., with having absconded on Jan. 3 with $18,000 worth of watches and jewelry, has waived extradition and is on his way back to the United States on the same ship in which he sailed to Brazil. He is in charge of the United States vice-consul.

Baker is well known as a traveling man, having been for 18 years in the employ of Hayden W. Wheeler & Co., of 170 Broadway, N. Y., from which concern he was discharged on account of alleged irregularities. He was subsequently hired by the Non-Retailing Jewelry Co., for whom he went on the road with a trunk containing $18,000 worth of samples. When he was not heard from for some days, the concern became worried and asked the Jewelers' Protective Union to hunt him up. This association put detectives on his track with the result that he was arrested in Brazil.

That there may be no mistake in regard to the Jewelers' Protective Union's connection with Baker's arrest, it may be said that the complainants held no certificate in the organization, nor was the stock under Baker's control insured by the Safety Fund Society. The Jewelers' Protective Union considered Baker's apprehension necessary and took up the pursuit of him at the request and expense of the Non-Retailing Co.

Providence Jeweler Held For Trial on Charge of Receiving Stolen Silver.

PROVIDENCE, R. I., Jan. 31.—Sensational testimony marked the examination in the case of John Nelson, the N. Main St. jeweler, which came up before Judge Sweetland this week. Nelson is charged with having received stolen goods, knowing the same to be stolen. He pleaded not guilty when arraigned, and his case was assigned for trial last week, but did not come up until this week. Nelson was defended by ex-Attorney General Willard B. Tanner.

An attempt was made to offer the testimony of George N. Horton, a young man formerly employed by the Gorham Mfg. Co., who is charged with the theft of the stolen silver. He took advantage of his constitutional rights, and escaped from testifying on the ground that he would do nothing that might tend to incriminate himself. Some of the stolen silver was offered in evidence, and Assistant Superintendent Whipp, of the Gorham factory, identified the silver as part of the Gorham stock. He was rigidly cross-examined by Mr. Tanner as to his method of identification, but maintained his assertion, and offered proof to substantiate it, that the silver in question came from the plant of the Gorham Mfg. Co.

Willis C. Horton, a brother of the man who is charged with having stolen the goods, told of disposing of the silver at Nelson's place of business. He said that Nelson remarked, when told that the witness's brother was employed at the plant of the Gorham Mfg. Co., "He is a fool for not taking all the silver he can get." Detectives testified as to watching the store and seeing a young man dispose of silver therein.

In his own defence, Nelson denied ever having met Horton, or of having any such conversation as that testified to by the young man. He admitted that he bought old gold and silver, but had no reason for believing that any of it was stolen property. Two fellow countrymen of Nelson, both from New York, testified as to the method of carrying on the business of buying and selling precious metals. They testified to Nelson's reputation, saying that it was excellent.

After all the testimony had been presented and the attorneys had made their arguments, Judge Sweetland adjudged the defendant probably guilty, and bound him over to the grand jury in the sum of $2,500. Bail was furnished.

A very handy device for determining the weight of a diamond accurately without removing the stone from the mounting has just been placed on the market by Charles Moe, president of the Charles Moe Co., Chicago. By means of a specially designed spring gauge all the measurements of the diamond necessary to determine its weight are made. A small book giving the weight of 1,700 different sized stones accompanies the instrument and by reference to this, from the measurements taken, the weight of any stone from ¼ of a carat to 7⅝ carats, inclusive, can be determined. The entire outfit can be carried in a vest pocket.

New Developments in the Failure of Schumacher & Co.

SAN FRANCISCO, CAL., Jan. 30.—The creditors of Schumacher & Co., bankrupt jewelers, located in the Palace Hotel Block, held a number of conferences last week in the office of Receiver Louis C. Levinson, and ways and means of getting as much as possible out of the failure were considered. Strict secrecy is being observed by all concerned.

Dr. R. L. Rigdon has brought suit against Receiver Levinson for the recovery of an unset diamond, valued at $300, which, it is alleged, had been placed in the hands of Schumacher & Co. to sell on commission. Judge Sloss has issued an order to the receiver to appear and show cause why the diamond should not be delivered.

P. H. Livingston, one of the parties who secured a large quantity of jewelry from Schumacher & Co. previous to the failure, as security for money advanced, has secured the return of the package of jewels, valued at $52,279, which had been seized by the sheriff on replevin proceedings instituted by Receiver Levinson.

Mr. Livingston filed a bond, Jan. 20, and secured the return of the property to his possession. Mr. Livingston's claim amounts to $28,973.

D. Prager, Ft. Scott, Kan., has admitted his sons into partnership, and the firm style hereafter will be D. Prager & Sons.

Death of Henry Hayes.

Henry Hayes, who has been prominently identified with the jewelry business in New York and vicinity for more than half a century, and who has been regarded as one of the best known and most highly respected members of the trade, died suddenly Monday morning at his home, 25 Walnut St., Newark, N. J. Mr. Hayes had been ill but two days, with an attack of angina pectoris, but there was no hint that the nature of the illness was serious until shortly before the end.

The deceased had complained of feeling slightly indisposed on Saturday and Sunday, but considered that his indisposition

THE LATE HENRY HAYES.

was due more to tiredness than to an illness. He had made arrangements with Ira Goddard, Friday, to come to New York the following day and talk over some business matters, but because of his lack of energy on Saturday, he remained home. A physician was called in during the day and also on Sunday, but the illness was not alarming. Monday morning Mr. Hayes appeared to be quite cheerful, but no different than on the two previous days. While the nurse was administering medicine to him, however, he quickly collapsed and died immediately. His death came as a shock both to his family and to his many friends in the jewelry trade, and with his passing goes one of the most able and kindly-disposed men that ever identified himself with the jewelry industry of the country.

Mr. Hayes was 70 years old. He was born and educated in Newark and came from a family of jewelers, his father before him having been one of the early jewelers in Newark. As a boy, Mr. Hayes busied himself about his father's establishment, and when his education was completed, selected the jewelry business as his calling. That was more than 50 years ago. He traveled on the road for various jewelry houses and became connected with the importing and manufacturing business.

In 1857 he went with the firm of Chas. E. Hale & Co., New York, to assist Hayden W. Wheeler in that concern. In the latter years of his business life Mr. Hale's health would not permit him to give his entire attention to the business and much of it fell to Mr. Wheeler and Mr. Hayes. In 1866 Mr. Hale died, and in February of the following year, the concern known as Wheeler, Parsons & Hayes was formed to succeed the former concern. Mr. Hayes remained a partner of the concern until Feb. 1, 1888, when he retired from active business life and gave his time to the associations and societies in the jewelry trade with which he was identified. He was likewise connected with various banking and trust institutions and became a shareholder in stock companies manufacturing jewelry.

Mr. Hayes was one of the organizers of the Brooklyn Watch Case Co., and until his death was one of the stockholders and directors in that company. In 1896 when the control of the company passed into the hands of Jos. Fahys & Co., Mr. Hayes still retained his interest therein both as a stockholder and director. He was also a director of the Howard Savings Institution, of Newark, was one of the organizers of the Jewelers' Safety Fund Society, of New York, of which society he was the president during the 19 years of its existence. Mr. Hayes is, perhaps, most widely known to the jewelers of the country by the fact that he was one of the organizers of the Jewelers' League of New York, and was its president from Jan. 1, 1885, until the time of his death. His able management did much to insure the success of this society and to place it at the head of the mutual insurance associations of the United States.

Mr. Hayes inherited a deep religious sentiment, and from early youth had always been identified with the religious work of the community in which he lived. He was a member of Grace Episcopal Church, of Newark, and for nearly half a century was treasurer of the Newark Episcopal Diocese. He contributed largely to the finances of the church as well as to many charities and religious works, always unostentatiously. He was considered one of the best known and influential laymen in the diocese, having spent much study over things relating to the Episcopal Church.

In addition to his church work, the deceased was public spirited and always ready to assist in the passage of any worthy bill. He was of a quiet, though jovial, disposition, warm hearted, and generous. He moved among the trade and the various organizations and associations with which he was connected, like a venerable patriarch in the jewelry industry.

Although many of the oldest members of the trade say they cannot remember the day when Mr. Hayes was ever sick, yet for the past 10 years the deceased's health, though not impaired, was gradually growing weaker. It is not known that he ever had heart disease, but occasionally he complained of feeling tired.

The deceased was married twice, the first time to Miss Elizabeth Evans, of Newark, to whom a son, Arthur H. Hayes, was born. About six years ago he was married to Miss Louise Allen, of Binghamton, N. Y., who survives him. The deceased is also survived by two brothers and two sisters.

The funeral service will be held to-morrow at the Grace Episcopal Church, Newark and a requiem will be celebrated at 6:15 in the morning and also at 8 o'clock. The funeral services will be held at 11 in the morning, and the interment will be at the convenience of the family.

Because of Mr. Hayes' long association with the Jewelers' Safety Fund Society and the Jewelers' League of New York, it is likely that a delegation from these organizations will be sent to the funeral. Resolutions in memoriam will also be passed by these bodies.

Examination of Arthur M. Felson in Bankruptcy Proceedings.

OGDENSBURG, N. Y., Jan. 30.—The first meeting of the creditors of Arthur M. Felson, a bankrupt jeweler of Gouverneur, was held Wednesday before Referee in Bankruptcy John C. Tillock in this city and occupied the entire day.

Felson was severely cross-examined by the attorney for the creditors, and to questions put to him he stated that his single day's sales at some times ran as high as $800, and that he had sold as much as $10,000 in a month and a half. Felson claims that he was solvent up to June 31, at which time he owned a house and lot in Gouverneur valued at $1,400 and had between $6,000 and $7,000 worth of stock. Since that time it was shown he had purchased $35,000 worth of stock in sums ranging from $100 to $2,500. Since July Felson has mortgaged his house and lot and store and fixtures, and it is said not more than $1,500 worth of goods remain in his stock. Felson claims that he had invested $21,000 in New York city real estate.

At the examination most of the creditors were represented by the Jewelers Association and Board of Trade of New York, who appeared through their attorney, Mr. McKenzie; Levi Levy, of Syracuse, was represented by Sam. Pachard, and W. P. Hitchcock, of the same city, was represented by his brother.

H. Walter Lee, of Gouverneur, who has been acting as temporary receiver, was appointed trustee for the bankrupt. Appraisers were appointed to determine the value of Felson's stock and an adjournment was taken until to-morrow.

M. Fine, jeweler and furnishing goods dealer, St. Joseph, Mo., has been sued for $185.

At the recent meeting of the stockholders of the New England Watch Co., Waterbury, the following officers were appointed: President, E. L. Frisbie, Jr.; vice-president, Geo. I. White; secretary and treasurer, A. O. Jennings; assistant secretary, Chas. R. Churchill; assistant treasurer, Chas. Schapman. The directors elected were James Elton, Chas. F. Brooker, E. L. Frisbie, Jr.; D. LeRoy Dresser, Gordon W. Burnham, Henry W. Scovill, J. Hobart Bronson, George L. White, Otis S. Northrop, A. O. Jennings.

Amendments to the Bankruptcy Law.

THE Senate amendments to the Federal bankruptcy law have finally passed the House by a vote of 124 to 32, and are now before President Roosevelt for his approval. In every instance the amendments favor the creditor. They prevent a bankrupt from receiving his discharge if he has secured goods upon making a false statement, or if, during bankruptcy proceedings, he refuses to answer any lawful questions. An application for a receiver or trustee of property while insolvent is declared to be an act of bankruptcy. It is also provided that only guilty preferences are required to be returned.

The various important decisions rendered under the existing law have been fully met and covered by the amendments, and all difficulties occasioned by those decisions seem to be obviated. Fees of receivers and marshals, for their services in conducting a business as provided by the old law, are made the same as are allotted to trustees, under the amended act. A fee of 25 cents for filing claims is now allowed.

Precious Stone Importations in January.

DESPITE the fact that during the calendar year of 1902 the largest amount of precious stones were imported that ever came to this country during any 12 months, the importations for the coming year promise to be very large. The figures showing the pearls and precious stones brought into the port of New York during January, while not as large as during January, 1902, are enough to put last month among the big months recorded by the Treasury Department.

According to the books of Gen. Geo. W. Mindil, the jewelry examiner at the Public Stores, the amount brought in was $2,023,254, of which $1,350,725.51 was the value of the pearls and cut stones, and $672,528.88 was the value of the rough or uncut stones, principally diamonds. The importations in January, 1902, were $2,352,698.41, of which $1,486,176.68 were cut, and $866,521.73 were uncut.

Creditors of Frank Morgan Seek To Share in Assets Held by Bank.

DES MOINES, Ia., Jan. 29.—Judge Howe in the District Court yesterday heard arguments of the petition of intervention brought by the trustee in bankruptcy for Frank Morgan, who formerly did business under the style of the Morgan Jewelry Co., to compel the Des Moines Savings Bank to account for the proceeds of all the stock of the bankrupt, which had come into its possession. About $18,000 is involved in the suit.

Two years ago Morgan gave a mortgage of $18,500 to the bank, and later the bank, under its mortgage, secured the appointment of a receiver for the business, its assistant cashier being appointed to that position. The receiver closed out the business and realized about $12,000, which was taken possession of by the bank under its mortgage.

About this time the unsecured creditors, whose claims aggregated about $14,000, instituted involuntary proceedings in bankruptcy against Morgan. Instead of attempting to take possession of the stock, they permitted the receiver to administer the business, and now the trustee elected by the creditors wishes to compel the bank to divide the amount received, among all the creditors pro rata, as though no mortgage had been given. They claim that under the bankruptcy law the preference to the bank will not hold.

Stockholders of Keystone Watch Case Co. Buy Stock in Crescent Watch Case Co.

It became definitely known yesterday that something more than friendly feeling will henceforth exist between the Keystone Watch Case Co., of Philadelphia, Pa., and the Crescent Watch Case Co., of New York. The stockholders of the Keystone Watch Case Co. have purchased stock in the latter company, and Irving Smith and other shareholders of the Crescent Co. have bought stock in the Keystone Watch Case Co.

Although the two companies are not merged there is now a community of interest virtually as strong as though they were. Mr. Smith, of the Crescent Watch Case Co., and Mr. Roberts, of the Keystone Watch Case Co., were seen by a CIRCULAR-WEEKLY reporter Tuesday, and verified the report concerning the interchange of stock interest.

R. F. Simmons Co. Declares Second Profit-Sharing Dividend To Employes.

ATTLEBORO, Mass., Feb. 2.—The R. F. Simmons Co. within the past few days has been making a distribution of the percentage of its profits guaranteed to the help under the recently inaugurated profit-sharing arrangement. At a meeting of the directors of the R. F. Simmons Co., held Jan. 22, 1903, a semi-annual dividend of 5 per cent. was declared to the stockholders on record Jan. 1, 1903.

At this same meeting it was also voted to pay in cash to the employes of the company on or before Feb. 1, a profit-sharing dividend covering the period from July 1, 1902.

The dividend amounts to 2.59 per cent.

Reed & Barton Bring Suit To Protect Patent on Baby Spoons.

BOSTON, Mass., Feb. 2.—As predicted in these columns, several weeks ago, the corporation of Reed & Barton, silversmiths, of Taunton, Mass., through its president, W. B. H. Dowse, of 95 Milk St., Boston, has instituted suit against the Oneida Community, Ltd., of the State of New York, for alleged infringement of the patents on the so-called "baby spoon" owned by the former.

Mr. Dowse, in speaking of the case today, stated that the suit was brought for the alleged infringement of but one pattern. The president of the Reed & Barton corporation stated that the suit would probably be tried in March, and intimated that some interesting developments might be looked for.

The plated ware trade throughout the country has manifested much interest in this proposed action of Reed & Barton, and the trial will be watched with interest.

Samuel Seff, Baltimore, Md., Must Pay $68 Damages To Customer.

BALTIMORE, Md., Feb. 2.—William H. Weissager, a lawyer, obtained a verdict for $68 in Part II. of the City Court, last Tuesday, in his suit for damages against Samuel Seff, a jeweler of this city.

The suit was based on the change in color of a diamond purchased by Weissager. The plaintiff testified that the diamond was blue-white when he bought it, but that it soon turned to a yellow color, notwithstanding Mr. Seff's guarantee. In his behalf he had several witnesses testify that there is a certain preparation which will cause yellow diamonds to appear white, but that the original color will return when the preparation wears off.

The plaintiff said that he paid Mr. Seff $250 last Summer for a diamond stud, but later the jeweler took it back. Then, he says, he paid $68 for the stud in question, and when the jeweler refused to take it back he began suit.

Death of Titus Garrettson.

KENTON, O., Jan. 29.—Titus Garrettson, a jeweler of this city, died early Tuesday morning after an illness of a year, during which he suffered from acute attacks of Bright's disease.

Mr. Garrettson was born in Baltimore, December, 1841, and came to this city in 1874. He immediately engaged in the jewelry business here, and continued in that line until his death. The deceased was well thought of in the community, and was a brother of Benj. Garrettson, also in the jewelry business. He is survived by a widow and one son.

Trans-Atlantic Voyagers.

TO EUROPE.

Burglars Rob Jewelry Store of Isaac D. Landis, Coatesville, Pa.

COATESVILLE, Pa., Jan. 26.—The authorities here are trying to discover the burglars who, Sunday morning, committed a bold robbery at the jewelry store of Isaac D. Landis, and escaped with jewelry valued at about $300.

Entrance to the store was gained through the plate glass of the front door, which was broken so as to leave a hole of about 16 inches square. Through this hole one of the burglars must have entered, and it is believed passed the jewelry out to a confederate in the street.

No attempt was made to force the door and this leads the police to believe that the burglars understood that had they done so they would have started the burglar alarm. No effort was made to break into the safe, nor were the goods left for repair touched by the burglars, who contented themselves with selecting watch chains, silver buttons, pins, silver novelties and spoons.

The robbery was reported to Chief of Police Umsted, and although a careful investigation has been made no clue that would show the identity of the thieves has been discovered. It is thought that the theft may have been committed by three strange colored men who visited Landis's store Saturday evening and after looking at various articles of jewelry, left without purchasing. Their actions at the time aroused suspicion, but nothing was found to have been stolen after their departure.

New York Notes.

L. Heller & Son, 51 Maiden Lane, have enlarged their facilities by taking an additional room adjoining their present offices. offices.

The Keystone Watch Case Co. has declared a dividend of 2½ per cent. on its preferred stock, and 3 per cent. on its common stock, payable Feb. 2, on stock of record Jan. 26.

A fire in the cellar of a five-story, brick tenement at 3956 Third Ave., Thursday, caused a damage of $600. The apartment was occupied by Jacob Immergluck, said to be a jeweler.

Thomas H. Leake, who was formerly in the employ of the Criterion Watch Case Company, will represent Jules Ascheim on the road for 1903. Mr. Leake's territory will be in the south and southwest.

C. O. Vaihinger, representing Ernst Gideon Bek, Pforzheim, Germany, arrived last Friday on the *Auguste Victoria*. He left the following day for Boston, Mass., and the east, expecting to return to visit his New York customers in about 10 days, after which he will make his usual trip to the leading western cities before taking his departure for home.

At a bowling tournament of Local No. 1, of the International Jewelry Workers' Union, held last week at a meeting hall, in St. Mark's place, the silver loving cup presented to the winning team by William R. Hearst, was carried off by the Newark branch of the Union. There will be another contest soon, however, and the New York jewelers will endeavor to bring the cup back to this city.

John H. A. Sansom, of 224 Centre St., filed a petition in bankruptcy in the United States District Court, Friday, with liabilities of $59,050 and no assets. Mr. Sansom was formerly a partner in the firm of J. & N. Sansom, manufacturers of pearl and ivory goods, who went out of business several years ago. The bankrupt's liabilities were contracted in 1893, and are principally on accommodation papers.

Word was received in New York from Hackensack, N. J., Friday, that William Harper, 72 years old, who conducted a jewelry store in Hackensack for many years, had been killed by a railroad train near the Passaic St. crossing, Thursday night. Mr. Harper was on his way home from a prayer meeting. When he failed to appear at the proper time, his son instituted a search for him. His body was found near the track, and it is thought that he was struck by the train while attempting to cross.

Local No. 1, of the International Jewelry Workers' Union, held its regular annual meeting last week in Arlington Hall, and elected the following officers for the coming term: President, William Burke; vice-president, M. Ackersteen; recording secretary, S. W. Stern; treasurer, C. Beiselle; sergeant-at-arms, Joseph Gabryel; trustees, S. Ackerman, William McKim and J. Crollick; auditors, M. Duitz, E. Pinsler and J. Maguire; executive board, L. F. Traznick and S. Levinsohn; business agent, E. Koeppicus.

Many persons in the jewelry trade in the city have expressed regret that so venerable and respected a business man as Munroe B. Bryant, of M. B. Bryant & Co., should have been one of the men approached by the tax conspiracy swindlers. Despite the fact that Mr. Bryant would have nothing to do with these men, or allow them to swear off his taxes, he was, by virtue of the very fact that he had been seen by them, subjected to the inconvenience and unpleasant notoriety of testifying in court against the men who had called upon him. Mr. Bryant had never been regarded by Mr. Jerome as being implicated in the swindle, or even as a victim of the swindlers, but, for the purpose of vindicating himself in the eyes of those who may or may not be thoroughly familiar with the circumstances of the case, and who may have heard Mr. Bryant's name mentioned in connection with it, he made the following statement Friday to a reporter of THE CIRCULAR-WEEKLY: "I have never paid or promised to pay a penny to any person to procure for me a reduction of my tax assessment by any other than lawful and legitimate means, and only then upon the receipt of an amended tax bill from the tax office. I dare believe that after more than fifty years of active business life in New York, those who know me will not doubt my statement."

Deputy Sheriff Campbell, who received an execution for $2,023 in favor of Henry L. Gerber, against Abraham Neuman, a manufacturer and dealer in jewelry at 143 Suffolk St., was informed, Wednesday, when he went to make the levy, that the business belonged to Mrs. Neuman. Mr. Gerber is an East Side installment jeweler. He obtained a judgment against Neuman Jan. 17, in the Supreme Court, Brooklyn, resulting from a damage suit, for malicious prosecution. In August, 1898, Mr. Neuman was one of four persons who caused the arrest of Gerber on a charge of grand larceny. The charge could not be proven, and the defendant was exonerated by the Court. Immediately after this he brought suit against his four prosecutors for damages, alleging malicious prosecution. Mr. Neuman, who had been one of the foremost in the prosecution of

DESIGNS AND ESTIMATES FURNISHED. **65 Nassau St., Prescott Bldg., New York.** MEMORANDUM ORDERS SOLICITED.

the defendant, was the first one to have his case tried. He has been in business since 1893. By thrift and economy he managed to accumulate some real estate and capital enough to carry on his business successfully. A few months ago, both his business and real estate was transferred to his wife's name. Mr. Neuman announces that he will appeal from the judgment, and that he will meet all bills presented to him for merchandise and bills obtained against him in the regular course of business.

Greenberg & Glaser, manufacturing jewelers, have removed from 192 Broadway to 125 Fulton St.

Henry and Arthur Silberfeld, retail jewelers, doing business under the firm name of Silberfeld Bros., at 129 Second Ave., dissolved partnership Friday by mutual consent, Arthur Silberfeld acquiring all the assets and assuming all the liabilities of the old concern. Mr. Silberfeld will continue the business at the old address.

Spiro & Hirsch, dealers in watches and jewelry, at 340 E. Houston St., have opened a branch office at 65 Nassau St. where a large assortment of diamonds, loose and mounted, and a stock of watches and jewelry, will be kept on hand for their downtown trade. The downtown office will be in charge of Mr. Hirsch, while Mr. Spiro will give his attention to the management of the business in the E. Houston St. store.

It was stated in THE CIRCULAR-WEEKLY last week that Samuel Schloss, with S. O. Bigney & Co., who had returned from the west, reported business to be in an unusually good condition. That this report may be specific, the fact must be emphasized that it refers to the wholesale and jobbing trade only, as these were the only merchants with whom Mr. Schloss came in contact.

An inquest into the death of Joseph H. Meyer, the senior member of the firm of Joseph H. Meyer & Bros., retail jewelers, at 999 Broadway, Brooklyn, whose strange death was reported in THE CIRCULAR-WEEKLY of Jan. 21, was held last week by Coroner Flaherty. Mr. Meyer's body was found in the water at Bath Beach on the morning of Jan. 16, about two hours after he had left his home at 219 Adelphi St., Brooklyn. The inquest was what is known as a non-jury case, the Coroner not thinking it necessary to summon one. The Coroner's report was to the effect that Mr. Meyer's death was due to accidental drowning.

John G. Williamson and H. R. Caulfield, the alleged proprietors of the company at Haverstraw, N. Y., accused of forming watch clubs, who were arrested the first week of December at the instigation of Anthony Comstock for running an alleged lottery, will be given an examination before United States Commissioner Shields, in New York to-day. Both the defendants were arraigned before the Commissioner Dec. 3, and were released on $1,000 bail for examination Dec. 19. A few days before that date they asked to have the examination postponed and this has been done from time to time until to-day. Meanwhile, it is alleged, the watch clubs have been running the same as usual.

The will of Mrs. Theresa Lynch, whose obituary will be found in another column of this paper, was filed Saturday for probate in the Surrogate's office. The petition gives the value of the real estate as $75,000 and the decedent's personal property as $5,000. This figure is thought to be very much below the actual value of the estate, however. The executors named in the will are Herman H. Perains and Peter Mayer. They are directed to set aside a sum sufficient to net $48 annually, which is to be paid to Mrs. Lynch's brother, John Patrick Reilly, for whom it is said Mrs. Lynch professed great affection. It is intimated by Mrs. Reilly that her husband, however, will not accept the bequest, and that there may be a contest of the probate of the will. After setting aside $1,000 each for her sisters, Eliza Ennis, of Bridgeport, Conn., and Catherine Sterns, of Rochester, N. Y., and settling her real and personal business, Mrs. Lynch requests that the residue of the estate be distributed among her six children in equal shares. The children are Mrs. Ella Leviness, Mrs. Jane P. Burr, Mrs. Adelaide Thompson, George M. Lynch, William P. Lynch and Joseph D. Lynch. The executors and trustees of the deceased have been instructed to carry on her business for a year. They are then to sell all her property, both real and personal and pay the legacies already mentioned.

The stock of William L. Pollack, diamond dealer at 41 Maiden Lane, against whom an involuntary petition in bankruptcy was filed Jan. 5, in the United States District Court, at New York, will be sold at public auction Feb. 4, at 10:30 A. M., in the office of the bankrupt. The

MAKING a CHOICE

In buying stock you want the best, of course. Goods that are made by a house with a long-established reputation and that have stood the test of time are certainly more salable than others less known.

TRADE-MARK

STERLING

If they cost no more than other goods without an equal reputation the matter of choice should be easy. Gorham reputation is not a matter of hearsay. It has been built upon good work, recognized the world over by the award of the highest prizes possible.

Grand Prix Paris, 1900	Five Gold Medals Buffalo, 1901	Highest Award Turin, 1902

Undeviating standards of value, the best in contemporary art of design and the most expert workmanship, give Gorham products their unequalled distinction.
For jewelers only.

GORHAM M'F'G CO.

NEW YORK { Broadway and Nineteenth Street and 21-23 Maiden Lane

BRANCHES

Chicago: 131-137 Wabash Avenue San Francisco: 118-120 Sutter Street
Works: Providence and New York

stock to be sold is very small and consists of precious stones and a safe.

The executors of the estate of the late Charles W. Schumann, who died at his home in New York, Nov. 4, wish to notify all persons having claims against the estate to present the same with vouchers thereof, to Charles W. Schumann, Jr., and George Henry Schumann, at 937 Broadway, New York, on or before the 15th day of June, 1903. The above mentioned executors are sons of the deceased jeweler, and their attorneys are Weekes Bros., 45 William St.

E. Untermeyer, of Chas. Keller & Co., and Leopold Stern, of Stern Bros. & Co., have been appointed a committee by the Hospital Saturday and Sunday Association of New York, to receive and solicit subscriptions to the Saturday and Sunday Hospital Fund in the jewelry trade of New York. The amount of subscription obtained from the New York jewelers last year was $225, but Mr. Untermeyer is under the impression that this amount is altogether too small for such a trade as this, and is anxious to make the subscriptions this year larger than ever before. He invites all those jewelers who can afford it to forward contributions to him at 11 John St., or to Mr. Stern, at 68 Nassau St., New York.

A mysterious robbery of the safe in the Empire Silver Plate Co.'s office at 258 Washington St., Brooklyn, occurred Thursday night, and sheet silver valued at $75, cash amounting to $25, and eight watches left in the keeping of an employe in the place for repairs, and which were valued at $200, were stolen. No clue to the thief has yet been discovered, but whoever the intruder was, it is thought that he had a perfect knowledge of the safe's combination, and by using it to the best advantage managed to get the door open and remove the valuables contained therein. A broken pane in a door leading from the hallway of the building indicated that the place was forcibly entered, but upon examination the detectives found that the glass had been broken from the inside.

A meeting of the creditors of Maxheimer & Beresford, manufacturing jewelers at 9 Maiden Lane, New York, and proprietors of a retail jewelry store at New Rochelle, N. Y., under the style of Beresford & Co., who filed a voluntary petition in bankruptcy in the United States District Court, Jan. 8, was held Monday in the office of Referee in Bankruptcy S. W. Dexter, 71 Broadway. There were about eight creditors present and the examination of Mr. Beresford was begun by Mr. Gleason, of Hastings & Gleason, attorneys for the Jewelers Association and Board of Trade. When it was discovered that the various books of the concern had not been brought to the meeting, and that it would be only wasting time to go on without them, the meeting was therefore adjourned until to-day at 10:30 A. M. The schedules filed with the bankrupt's petition show liabilities of $23,749, and nominal assets of $10,496. There are about 25 creditors of the concern.

(*New York Notes continued on page 80a.*)

Optical Notes and Briefs.

Adolph Ely, optician, Atlantic City, N. J., made a business trip to Philadelphia, Pa., last week.

J. Cohn, with Jacob Macowsky, optician, San Francisco, Cal., is confined to his home by illness.

William Able, traveling optician, Omaha, Neb., has returned from a successful trip through the west.

Dr. J. S. St. John, optician, Kalamazoo, Mich., has just leased elaborate quarters in the Upjohn block.

F. A. Montgomery, optician, has sold his business interests in Sutter Creek, Cal., and will locate in Tonopah, Nev.

J. R. Kyle, optician, with headquarters in Xenia, O., hereafter will visit his office in Waynesville, O., every week.

Andrew V. Brown, optician, with D. V. Brown, Philadelphia, Pa., left Saturday for a business trip to Waxhall, N. C.

W. B. Needles, optician, formerly with Gurney & Ware, Kansas City, Mo., has opened an office in the Rialto building, of that city.

Dr. C. C. Logan, of Drs. Taylor & Logan, of the Los Angeles Optical Co., Los Angeles, Cal., is now in San Francisco, Cal., on his way home from an eastern trip.

G. Beninghausen, Seattle, Wash., is in San Francisco, Cal., purchasing a line of optical goods for the optical department, which he is adding to his new store.

On the site now occupied by McDonald & Wilson, opticians, 398 Westminster St., Providence, R. I., will shortly be constructed a modern seven-story brick building.

R. Reed Gwillan, optician, formerly with W. V. Blair, Meriden, Conn., has left Meriden to take charge of the optical department of Elmer J. Faust's establishment, Allentown, Pa.

E. Colburn, Trinidad, Col., will open a new jewelry and optical store at Whatcom, Wash., about April 1. He has secured a five years' lease of a store there, and will manufacture all kinds of jewelry. The factory will be in the rear of the salesroom.

Dr. H. Henker, the eye specialist who opened offices in Pendleton, Ore., about six weeks ago, has suddenly disappeared. His office is closed, but several of his accounts are still open. When he came to Pendleton, he advertised extensively, and his patronage became very large.

The H. Rembold Optical Co. was incorporated in St. Louis, Mo., last week, with a capital stock of $10,000, one-half paid. There are 100 shares at $100 each; the shareholders being Henry Rembold, 49; John Gramlich, 50, and Francis Kaster, one. The company has leased the store at 512 Pine St., and will commence business about Feb. 15.

The California Optical Co., San Francisco, Cal., tendered a banquet to a number of its employes Saturday evening, Jan. 24, and after a sumptuous feast, optical topics were discussed. During the progress of the evening, a gift was presented by those present to Henry L. Davis, president of the company, as a token of the high esteem in which he is held.

E. Le Roy Ryer, secretary of the Optical Society of the City of New York, has issued circulars, announcing that the next regular monthly meeting of the society will be held Wednesday evening, Feb. 11, at 8:30 P. M. Prof. Wm. Fox will deliver the first of a series of lectures on refraction, and Dr. Walt. Bryan will continue directing the members in their intensely interesting microscopical work.

D. V. Brown, optician, Philadelphia, Pa., who recently acquired the two adjoining properties, 734-736 Sansom St., is having the new building entirely remodeled and improved, and it is probable that Mr. Brown may use part of this building for the extension of his factory. Since its establishment, 11 years ago, the business has grown to such an extent as to make the present quarters somewhat crowded and cramped.

The fourth annual banquet of the Illinois Optical Society will be held Friday evening, March 13, at the Palmer House, Chicago, Ill. The following are the committees in charge of the arrangements: Banquet committee—Loren L. Boyle, chairman; Henry Borsch, Fred H. Smith, George A. Rogers, C. H. Pixley and W. C. Sommer. Reception committee—E. E. Swadener, chairman; W. C. Coup, Robert Von der Heydt, A. W. Gore, J. T. Brayton, Burr Weaver, O. J. Halbe, J. M. Johnston, E. J. Schwartz, C. C. Inskeep, Earl J. Brown, W. F. Newcomb, Dr. Geo. W. McFatrich, E. S. Fowler, Alex. J. Wyatt, R. J. Jansen, A. G. Larson, Walter Wyatt, Peoria; W. A. Foley, Chicago Heights; Andrew Rovelstad, Elgin; G. A. Brock, Joliet; A. M. Smythe, Elgin; A. R. Chamberlain, Aurora; J. A. Sekatz, Hoopeston; A. F. Pierce, Milford; A. E. Wuesterman, Champaign; S. R. Quigley, Elmwood; C. H. Lockwood, Joliet; S. A. Carpenter, Harvey, and A. F. Westlake, Peoria. Literary programme committee—Prof. Geo. A. Rogers, chairman; L. L. Boyle, Otto Warning and W. C. Sommer.

First Quarterly Meeting of the Southern Minnesota Optical Association.

RED WING, Minn., Feb. 4.—The Southern Minnesota Optical Association will hold its first quarterly meeting in the hall of the Commercial Club, this city, Feb. 26, 1903. There will be an afternoon session, commencing at 2 P. M., and an evening session, which will open at 7 P. M. Four persons, technical cases, will be examined and the intricacies of the cases will be described to those present.

The following lectures will be delivered: "Eye Strain from the Medical Practitioner's Standpoint," A. W. Jones, M.D., Red Wing; "The Static Machine, Its Uses," E. H. Bagley, M.D., Lake City; "Electro Therapeutics and the X-Ray," demonstrated with the static machine, F. W. Dimmitt, M.D., Red Wing; blackboard demonstration in Retinoscopy, S. B. Millard, Litchfield; "The Visual Effects of Astigmatism," illustrated with the magic lantern, Dr. E. C. Roberts, Red Wing, and a talk on the various kinds of lenses used in the correction of errors of refraction, by C. A. Hoffman, Minneapolis.

Prof. J. W. Grainger, Rochester, will read a paper on "Choroiditis and Retrinitis," and G. E. Fricke, M.D., Pine Islands, will read one on "Presbyopia."

New York Notes.

(*Continued from page* 80.)

Among those who were sworn in Monday for the February Grand Jury of New York county, was Wm. A. Knapp, jeweler, 15 Union Sq.

Fred Kaffeman, manufacturer of rings at 51 Maiden Lane, has admitted Jack Rothschild and Louis Stern into the firm as partners, and hereafter the firm name will be Kaffeman, Rothschild & Co. The new firm will manufacture a line of fancy gold rings and diamond mountings.

Mary Goldman, 5 E. 118th St., formerly a manufacturing jeweler, filed a petition in bankruptcy in the United States District Court, at New York, Monday, with schedules showing liabilities of $15,739, and nominal assets of $1,500. Of the liabilities, $13,291 is accommodation paper, endorsed by her in 1896, for Leopold Weil & Co., who were then in business at 51 Maiden Lane.

The United States Assay Office was damaged Saturday afternoon by fire to the extent of about $2,000. It is believed by Chief Assayer Torrey that the fire was caused by nitric acid, which is used in testing the bullion brought in for sale to the Government. There was about $40,000,000 in bullion in the vaults and about $1,500,000 lying outside in various parts of the building at the time the fire occurred.

The contest of the probate of the will of the late Morris Prager, the diamond importer who died Nov. 28, in Hotel Netherland, was begun before Surrogate Fitzgerald Monday, and adjourned until yesterday. The Surrogate, Saturday, denied an application by one of the contestants, a sister of Mr. Prager, for the appointment of a temporary administrator of the estate. It is declared by the protestant that the estate of the late diamond merchant was worth more than $1,000,000, and that it would be in the interest of those concerned to have a temporary administrator appointed.

Abraham Barnett, a 14-year-old boy in the employ of C. W. Graebner, of 998 First Ave., was held in $500 bail by the Court of Special Sessions by Magistrate Furlong in the Myrtle Ave. Court, Brooklyn, Saturday, on a charge of grand larceny. The boy had been entrusted by Graebner with jewelry valued at $108 to deliver to Paul Uhl, a jeweler at 1154 Bedford Ave., Brooklyn. The jewelry was given to the boy more than a week ago, and when he did not appear at Graebner's establishment for a few days the jeweler became alarmed and notified the police, with the result that he was found, however, by detectives and nearly all the property was recovered. The boy was turned over to the Society for the Prevention of Cruelty to Children.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended Jan. 31, 1903.

The gold bars exchanged for gold coin reported by the Sub-Treasury for the week ending Jan. 31, 1903, are as follows.

Jan. 26	$25,473.20
" 27	25,863.25
" 28	56,531.49
" 29	76,555.27
" 30	31,320.70
" 31	15,898.08
Total	$231,646.99

Baroque Pearl Jewelry.

Pendants a Specialty. $2.50 to $500 Each.

We also make a line of Gold and Silver Lorgnette Chains, Scarf Pins, Bracelets and Hat Pins. Our Sterling L'Art Nouveau Brooches set with Baroque Pearls are really works of Art.

Send for a selection.

Chas. S. Crossman & Co.,

3 Maiden Lane, New York.

FRED'K KAFFEMAN

takes pleasure in announcing that he has admitted MR. JACK ROTHSCHILD and MR. LOUIS STERN into the firm, and hereafter they will manufacture a fine line of Fancy Gold Rings and Diamond Mountings, under the firm name of

KAFFEMAN, ROTHSCHILD & CO.,

51 and 53 Maiden Lane, N. Y. Rooms 93, 94, 95.

February 3, 1903.

Providence.

TRADE CONDITIONS.

The outlook for a brisk Spring trade is said to be encouraging. This is not confined to any particular line, as all manufacturers who have expressed an opinion seem to share in the general belief that orders will be numerous and that the demand for high class articles, as well as novelties will be good. Most of the houses have their salesmen out hustling after orders and some left for the Pacific slope during the past week.

G. H. Riccius, electro-plater, is now located at 77 Page St.

Frank T. Pearce, of F. T. Pearce & Co., was in New York last week.

E. R. Barker was recently elected president of the Battery A Volunteer Association.

The button plant of the Harvard Mfg. Co. has been purchased by the Locke Button Co., which will continue to operate it at 7 Beverly St.

The regular week for taking account of stock, etc., having arrived, the Gorham Mfg. Co.'s works closed last Saturday for seven days.

Anthony B. Horton, who in his boyhood and early manhood was a jeweler, died at his home in East Providence last week. Of late years he had been a patrolman.

Among the imports at the port of Providence during the week past were two packages of glass stones from Bremen, one package of glass stones and one of precious stones from Havre.

Capt. E. M. Bixby, of the Bixby Silver Co., was last week awarded a revolver sharpshooter's and a rifle sharpshooter's medal. Capt. Bixby commands the First Machine Gun Battery in the State Militia.

At a meeting of the Providence Board of Trade last week several jewelers and refiners were admitted to membership; George W. Parks, of Parks Bros. & Rogers, was recently elected second vice-president of the board.

The attempt to prove that Andrew Elmer, a man employed at one of the local jewelry shops, had sworn falsely to an application for a marriage license in this city failed. Mr. Elmer's former wife brought the charge, but it was not sustained.

In spite of the petitions of prominent organizations, Gov. Garvin did not reappoint William H. Luther police commissioner. Mr. Luther is a Republican, while Governor Garvin is a Democrat. The Republicans have a majority in the Senate, and may force Mr. Luther's appointment later.

The Silversmiths' Mutual Aid Society of the Gorham Mfg. Co. held its annual meeting Saturday at the Gorham Casino. The main interest was in the election of officers. Those chosen are as follows: President, Arnold Brown; secretary, F. A. Burt; doctor, Dr. William L. Harris. There were 490 votes cast for the three physicians who entered the list and Dr. Harris secured 326.

Frank C. Whipple, who resides in this city, but has done business at Attleboro, where he operated a gold and silver refinery, filed a voluntary petition in bankruptcy in the United States Court here last week. According to the schedule, his liabilities are $12,083.96 and his assets are given as $60. Among some of the largest creditors are: The Horton, Angell Co., $1,819.26; W. & S. Blackinton Co., $1,473.62; John Austin & Son, $1,328.87; George M. Baker, $691.08; Waterbury Brass Co., $589.07. The first meeting of the creditors has been called for Feb. 9, at 12 o'clock noon, in the office of Chester W. Barrows, referee in bankruptcy. Mr. Whipple's attorney is James C. Collins, Jr.

Peter Lind, of Heimberger & Lind, has acquired the stock of James Lind in the recently incorporated concern of Thomas W. Lind, in which Thomas W. and James G. Lind were the principal incorporators. Peter Lind becomes treasurer and general manager of the concern, while Thomas W. Lind is secretary and president. It is stated that the two concerns will be wholly independent.

At the last meeting of the Jewelry Workers' Union, held last week, 49 candidates for membership were admitted. The union claims to have 10 shops completely organized now. The members voted to ask the Rhode Island Senators to use their influence toward having the eight-hour law adopted. The union is planning to have a social in the near future and is also contemplating changing its meeting place.

George W. Thompson, formerly in the jewelry business here, died at his home, 35 W. Clifford St., recently. He was born at South Dartmouth, Mass., July 4, 1859, and in 1878 moved with his parents to this city. He worked for a while in the establishment of Capron Bros., manufacturing jewelers, and late at Brown & Sharpe's. About 1882 he purchased an established express business, which he carried on ever since under the name of Thompson's Express.

An act intended to benefit the girls in stores and which will, if passed, affect some of the establishments in which jewelry is sold was introduced in the House of Representatives last week. It was presented by Mr. Buckley, of Pawtucket. The act applies to all towns or cities of more than 3,000 inhabitants. It provides, among other things, that no male employe under 16 years of age and no female employe under 21 years, shall be required to work more than 58 hours per week, or more than 10 hours per day, unless for the purpose of making a shorter workday of some one day of the week. It also specifies that no such employe shall be required or permitted to work before 8 A. M. or later than 10 P. M. of any one day, but makes allowances for the holidays. It provides that not less than 45 minutes shall be allowed for the midday meal. Another section provides that no child under 14 years shall be allowed to work, except during the Summer months of vacation, also that no male child under 16 years of age shall be employed unless a certificate is filed at the place of employment by the truant officer. A fine of $200 is provided for violation of the provisions of the act. The act was sent to the committee on special legislation of the House of Representatives.

Plainville.

H. Alton Hall, bookkeeper for Scofield, Melcher & Scofield, has begun his duties as one of the auditors for the town of North Attleboro.

The employes of Scofield, Melcher & Scofield recently presented Mrs. William McAvoy with a dinner set, as a wedding gift.

Whiting & Davis are running their factory overtime.

Attleboro.

Mr. Clauer, well known to the jewelers through his former connection with Smith & Clauer, Chicago, but who is now in business on his own account, called on the Attleboro manufacturers last week and placed several orders.

Referee in Bankruptcy Clifford P. Sherman gave a hearing Wednesday on the case of Fred M. Ellis & Co., the bankrupt jewelry manufacturers. Adjournment was taken to the fourth Wednesday in the month, after the following claims had been allowed: National Bank of Wichita, Kan., $907; Pollock & Cassidy, $33; Hammel, Riglander Co., $51; J. O. Copeland, $275; Kent & Co., $131; John Lynch, $32; Herbert F. Lasselle, $290; Herbert F. Laselle, minority claim, $108; Ebenezer Briggs, $12; Harry E. Jenckes, $114; Edgar A. Wilkinson, $125; Clarence L. Hodges, $163; Etta M. Sanders, $64; John Thacher, $64; Bridget Healy, $64.

The taking of a subscription for the proposed $50,000 public library building in Attleboro, to fulfil conditions under which a site was accepted by the town from Joseph L. Sweet, of the R. F. Simmons Co., went on with a rush all last week, and is continued up to the present time. Among those who gave sums ranging from $25 to $1,000 were Charles H. Tappan, of the D. F. Briggs Co.; Herbert M. Williams, of the H. M. Williams Co.; Herbert A. Clark, of the Horton, Angell Co.; Herbert C. Bliss, of the Bliss Bros. Co.; Edward T. Bright; William A. Spier, of Spier & Coles; Charles A. Marsh, of C. A. Marsh & Co.; David E. Makepeace, of the D. E. Makepeace Co.; Albert S. Ingraham, of A. S. Ingraham & Co.; J. William Simmonds, of J. M. Fisher & Co.; Jean G. Theobold, with Frank M. Whiting & Co.; Walter B. Allen, of Allen, Smith & Thurston; Frank Fontneau, of Fontneau & Cook; Frank P. Daughaday, of Freeman, Daughaday & Co.; Ernest J. Qvarnstrom, of Carter, Qvarnstrom & Remington, and Henry Wexel, retired.

An advance movement was made last week by the jewelry manufacturers of Mansfield, Mass. The manufacturers opened negotiations with the Attleboro Steam and Electric Company for the sale of electric light and power for their factories. A study of the law showed the impossibility of doing this, so the scheme was at once amplified. A meeting of the Board of Trade of Mansfield was called, and it was the unanimous sentiment that a corporation be formed to sell light and power to the shops, lights to the streets and stores and residences, and power to any other business men who wished to join the group of jewelers in their enterprising step. A committee embracing Doliver S. Spaulding, of D. S. Spaulding & Co., and the senior partner of F. M. & J. L. Cobb was appointed to carry the scheme into effect. These gentlemen held a two-hour conference Saturday, with Joseph L. Sweet, of the R. F. Simmons Co.; Clarence L. Watson, of the Watson & Newell Co., and Raymond M. Horton, of W. E. Richards & Co., and the whole matter was agreed upon in detail, and will be put in execution as rapidly as possible.

North Attleboro.

John P. Bonnet and D. H. Corey have been elected trustees of the local conclave of Heptasophs.

G. Herbert French, of Riley, French & Heffron, has gone to Mellville, Fla., with his family for the balance of the Winter.

The establishment of George L. Claflin & Co. was closed on Wednesday afternoon, during the funeral of W. L. Claflin, a member of the firm.

The W. & S. Blackinton Co. is one of the largest creditors of Frank C. Whipple, who has filed a voluntary petition in bankruptcy. Its claim is reported as $1,472.62.

Arthur C. Sylvester, of the Webster Co., has been re-elected president of the North Attleboro Fish and Game Association. Lewis E. Morse has been elected vice-president.

The Paye & Baker Mfg. Co. is having some necessary alterations made at its newly purchased factory on Richards Ave., and has already started to move its machinery from Providence.

Preston D. White, of the O. M. Draper factory, was the chairman of a committee which had charge of the celebration of the 57th anniversary of Aurora Lodge I. O. O. F. Mr. White is a past-grand master of the lodge.

Last week Mrs. George Price, wife of a pioneer jeweler of this town, celebrated the 95th anniversary of her birth. Mrs. Price is a native of Swansea, Mass., and comes of a family famous for its longevity. George Price, her husband, who died in 1882, was one of the first jewelry manufacturers, his factory being located a short distance from the homestead, which was built nearly 150 years ago. The walls are painted with scenes from places that attracted the attention of Mr. Price during his long trips through the country as a salesman.

Frank O. Coombs, one of the best known engravers in the Attleboros, suffered a serious and painful injury recently while descending a flight of stairs at his home on Park St. In some manner, he lost his balance and fell headlong the entire distance to the floor below, fracturing his left arm and dislocating his shoulder. He will be laid up for a good many weeks, and his detention from business will be keenly regretted by those who depend upon his exceptional skill. His work on souvenir spoons is known throughout the country.

The Attleboro Savings Bank Monday occupied its handsome new building, on Washington St., and celebrated the 43d anniversary of its founding. The history of the bank is in reality the history of the Attleboros, for in its management the most prominent men of both towns have always been engaged. Nearly every officer who has been connected with the institution has been a man prominent in the jewelry trade. Ezekiel Bates was the first president of the bank, and his successors have been Henry Rice, the late Abiel Codding, George A. Dean and Albert Totten, the present incumbent. Charles E. Bliss, of Attleboro, is the present vice-president. The new edifice of the bank is a two-story brick and granite structure, of simple but artistic design, and in appearance indicates the stability of the institution that is to occupy it.

Baltimore.

There is on exhibition at J. Seth Hopkins's store a collection of old Scottish pottery.

Charles C. Steiff, manager of the Baltimore Sterling Silver Co., left Monday, Feb. 2, for an extended trip through California. Prior to his departure, he entertained the members of the Fourth Ward Democratic Club at the club rooms, 15 N. Eustaw St.

A fire occurred shortly after midnight, Tuesday, Jan. 27, in the rear of the store of the Hennigen-Bates Co., but did very little damage. It started between two radiators, and was discovered by the watchman, who, with the aid of an official, extinguished it with half a dozen buckets of water.

The 22d annual banquet of the Merchants and Manufacturers' Association was held last Thursday night at the Hotel Rennett, and more than upheld the association's reputation for its entertainments. The main speakers of the evening were: Lloyd L. Jackson, president of the association; Gov. John Walt. Smith, Mayor Thos. G. Hayes, and Congressmen Landis, Williams and Shallenberger.

Herman Hubers, 226 S. Broadway, was swindled out of a pair of glasses last week, by means of a bogus check. The swindler had the glasses made to order, and sent a young boy for them, with the check. Mr. Hubers refused to accept the check as payment at first, but was induced to send the glasses by the boy's plea that the man was in a bad way with frost-bitten feet, and could not come himself. When the check was presented to the bank, payment was refused.

Greenfield, Mass.

A. N. Hull, of this town, is on a business trip in the interests of Reed & Barton.

A diamond ring, valued at $150, which was stolen from J. H. Hollister Est. last September, has been recovered. It was found in a pawnshop in Holyoke, where $10 had been realized upon it. It is alleged to have been stolen by E. J. Powers, now under arrest in Connecticut for forgery.

Fred L. Gaines, who has been in the jewelry business here for several years, has sold his store and repair business at 137 Main St. to Wayne M. Reed, who comes from the Waltham watch factory. Mr. Reed took possession Feb. 2 and Mr. Gaines has taken the position of secretary of the Goodell Mfg. Co.

Syracuse.

Charles L. Becker, of McClelland & Becker, is visiting New York.

Frank V. Rauscher died Saturday morning, aged 82 years. Mr. Rauscher was a jeweler, and worked for the late Joseph Seymour for 25 years. He was born at Wurtemburg, Germany, and came to this country in 1850. A widow survives him. The funeral was held Monday afternoon.

W. P. Hitchcock and Levi Levy, of Syracuse, were among the wholsale jewelers represented at the first meeting, in Odgensburg, of the creditors in the bankruptcy case of Arthur M. Felson, formerly of Gouverneur.

Newark.

Allsopp Bros., manufacturers of diamond mountings at 60 McWhorter St., have just perfected plans for a new factory, which will be situated on the northwest corner of Camp and Orchard Sts. The building, which will be four stories high, with a basement underneath, will occupy about 40 by 100 feet, and work on the structure will commence about March 1.

Edward Keer, who during many years of his early life was engaged in the jewelry business in Newark, died recently at his home, 53 Crawford St., after a lingering illness. The deceased was 59 years old and was a veteran of the Civil War.

One of the handsomest Masonic past masters' jewels ever made in this city was presented last week to Henry Hahn, retiring master of Triluminar Lodge, F. and A. M., at a banquet held in Jacoby's Hall on Broad St. The medal, which is of solid gold and weighing 90 pennyweight, is elaborately designed and bears Mr. Hahn's name, together with the name of the lodge.

Chas. F. Moore, of Schmitz, Moore & Co., manufacturing silversmiths, at 22 Green St., Newark, N. J., was married Monday to Miss Mabel Luella Heath, daughter of Mr. and Mrs. Louis Bond Heath, in the Calvin Presbyterian church, of Newark, and left for an extended trip of three weeks in the south. Mr. Moore started in business three years ago, and is very well known in New York and among western jobbers. He is the son of Arthur W. Moore, of Moore & Son, ring manufacturers, Newark.

The Arcadian Cut Glass Co., of Newark, was incorporated under the laws of the State of New Jersey last week, with a capital of $30,000. The directors are C. L. B. Tylee and E. V. Pierson, of Newark; and G. E. Tylee, of Holliston, Mass.

There was considerable comment recently over the fact that the steam whistle in the Richardson building, Columbia and Green Sts., was no longer blown at 7 o'clock, although it sounded continuously at this hour every working day for nearly half a century. The change is said to be due the fact that the employes in many of the factories in the building now come to work at a later hour than formerly.

J. Victor Christl, who for the past 12 years has been a member of the firm of Alling & Co., manufacturing jewelers, has opened a jewelry factory at Mulberry and Chestnut Sts., under the firm name of Holske & Co. On his retirement from the old concern Mr. Christl was presented with a handsome piece of statuary by the employes.

Thomas McCauley, alias John Ryan, and Charles Smith, alias John Williams, who were indicted by the Grand Jury for robbing Titus Pantillon's jewelry store at 215 Mulberry St., Jan. 5, and who were arrested in New York 10 days later, have been brought to Newark. They were arraigned Monday in the Court of Quarter Sessions and both pleaded not guilty. They were held for trial March 3.

Balls of green chrysoprase linked together with gold chain form a strikingly handsome bracelet in the fashion of the hour.

Traveling representatives may consider these columns open for the publication of any news or items of interest regarding themselves or their confreres.

E. H. Ray, representative of the Edwards & Sloane Jewelry Co., with headquarters at Dallas, Tex., has just started out on his Spring trip, with a new line of samples.

Frank E. Whitney started out, Feb. 1, in the interests of J. B. Whitney, San Francisco, Cal.

W. R. Hammond, representing J. F. Fradley & Co., left New York, Monday, to cover his western territory.

Arthur Bullion, San Francisco, Cal., representative of eastern manufacturers, has just returned from a southern trip.

Fred Dorrance, representing the Gorham Mfg. Co.'s San Francisco house, interviewed the jewelers of Portland, Ore., last week.

A. M. Benson and A. C. Smalley, travelers for the Columbian Optical Co., Kansas City, Mo., have set out on their respective trips.

Albert Cantor and Fred S. Davis, representing Nordman Bros., San Francisco, Cal., have just started out for their respective territories.

F. S. Geirrine and L. F. Starks, representing W. B. Glidden, San Francisco, Cal., have just set out for their southern and northern territories, respectively.

The Furstnow Ring Co., Fond du Lac, Wis., will be represented by the following travelers during the year of 1903: Will Queeman will cover Wisconsin, Minnesota and Iowa; J. A. King, northern Michigan, the Dakotas and Nebraska; C. H. Shephard, Illinois and Indiana.

The following traveling representatives called on the Columbus, O., trade, during the past week: P. M. Layman, Riker Bros.; Jul. F. Schuman, Jr., William Kinscherf; William J. McQuillin, Hodenpyl & Sons; H. D. Cretcher, Hayden W. Wheeler & Co.; Walter S. Strauss, Jacob Strauss & Sons.

The following eastern traveling representatives were in St. Louis, Mo., this week: Max Huss, S. & A. Borgzinner; J. Guntzburger, R. Guntzburger; Charles H. Anderson, Allsopp Bros.; L. E. Smith, M. B. Bryant & Co.; Sidney H. Joseph, Fred Kaufman; M. Kohn, Silbermann & Co.; J. A. Granbery, J. A. & S. W. Granbery.

Among the travelers who left New York, this week, are Ed. D. Cahn, E. J. Levy, V. L. Kurtz and Thomas H. Leake, all of whom represent Jules Ascheim. Mr. Cahn will go to the Pacific Coast; Mr. Levy will cover the eastern States; Mr. Kurtz will work in Pennsylvania and vicinity, and Mr. Leake will travel through the south and southwest.

Eastern representatives in Chicago, Ill., during the past week, included: George T. Peck, Ziruth-Kaiser Co.; Jules Franklin, L. Tannenbaum & Co.; Frank L. Wood, Ludwig Nissen & Co.; A. J. Sherrard, Enos Richardson & Co.; E. Huhn, Fera & Kadison; Mr. Untermeyer, Charles Keller & Co.; Fred Heffron, Riley, French & Heffron; Mr. Sinnock, Ehrlich & Sinnock; Mr. Lane, Palmer & Capron.

Among the representatives of wholesale houses who, recently, visited the trade in Detroit, Mich., were: W. R. Boss, Hutchison & Huestis; F. D. Newburger, R. Blackinton & Co.; S. C. Howard, Dominick & Haff; D. Skutch, New Haven Clock Co.; W. H. Gregory, Strobel & Crane; Mr. Rogers, N. E. Whiteside & Co.; Charles Hickock, Gorham Mfg. Co.; Frank L. Wood, Ludwig Nissen & Co.; W. H. Bryant, T. G. Hawkes & Co.

D. P. Ingraham, R. R. Evans and E. S. Villamore, representing the C. B. Norton Jewelry Co., Kansas City, Mo., have left for their territories.

Recent travelers in Salt Lake City, Utah, included: Morris Wechsler, Goodman Bros.; Oscar F. Samuelson, Towle Mfg. Co.; F. R. Sheridan, John T. Mauran Mfg. Co.; S. A. Goldsmith, Adolph Goldsmith & Son; J. W. Stoneburner, the J. G. Fuller Co.; J. B. Ellis, Parks Bros. & Rogers.

Among the representatives of eastern houses in St. Paul and Minneapolis, Minn., during the past week, were: Howard Rowbotham, Untermeyer-Robbins Co.; Harry Mix, Wightman & Hough Co.; Mr. Williams, Warren & Williams; J. L. Pendleton, Prentiss Vise Co.; George Paine, E. I. Franklin & Co.; representatives of Smith & Crosby and R. L. Griffith & Son Co.; Mr. Fox, Fox & Co.; W. A. Lamb, George H. Fuller & son Co.; Mr. Lewis, L. Heller & Son; Harry B. Kennion, Parks Bros. & Rogers.

Calling on the trade in Lancaster, Pa., last week, were: C. F. Lawrence, Tower & Lyon; W. R. Cobb, W. R. Cobb & Co.; W. A. Pope, Fred C. Steimann & Co.; E. P. Ledos, Ledos Mfg. Co.; Aikin, Lambert & Co.'s representative; Mr. Goldsmith, Solidarity Watch Case Co.; Lew Myers; Mr. Cushman, Reed & Barton; Mr. Grabowski, Dattelbaum & Friedman; H. Herbert Harding, American Fountain Pen Co.; Mr. Pretzfelder, Manasseh Levy; Blair Fountain Pen Co.'s representative; Mr. Friedlander, H. Z. & H. Oppenheimer; Mr. May, McIntyre, Magee & Brown.

Among the traveling salesmen who visited Denver, Col., during the past week, were: George L. Paine, E. I. Franklin & Co.; W. H. Hurlbert, American Optical Co.; P. A. Wilkinson, J. J. Sommer & Co.; F. T. Barton, P. J. Cummings & Co.; H. E. Cobb, Daggett & Clap Co.; Mr. Warner, National Box Co.; Richard Robinson, J. G. Frothingham & Co.; Harry Farquharson, Bliss Bros.; F. R. Sheridan, Arnold & Steere; Mr. Sandfelder, D. F. Briggs Co.; G. W. Pierce, Bay State Optical Co.; Mr. Cook, Fontneau & Cook; H. C. Wilson, American Waltham Watch Co.; J. W. Stoneburner, J. G. Fuller Co.; D. M. Jacoby, Providence Stock Co.; and Louis E. Fay, R. F. Simmons Co.

The trade in Albany, N. Y., was visited, last week, by the following traveling men: Mr. Moorehead, R. L. Moorehead & Co.; Frank L. Avery, Quaker City Watch Co.; George Mulbell, West Silver Co.; Mr. Guardineer, Bassett Jewelry Co.; Benjamin Westervelt, New England Watch Co.; C. F. Strickland, American Clock Co.; Alva J. Lasher, Wilcox & Evertsen; A. N. Haring, Carter, Howe & Co.; A. W. Youngs, Edward Todd & Co.; Burt Ganz, Gustave Fox Co.; Joseph Rosenberg, Lewis Strasburger's Son & Co.; Frank H. Danna, H. A. Kirby Co.; William J. McQuillin, Hodenpyl & Sons; George C. Ferris, R. Blackinton & Co.; H. A. Macfarland, Dominick & Haff; Mr. Bogart, Waterbury Clock Co.; Joseph Goldberg; representative of Waite, Thresher Co.; representative of Waite & Co.

Traveling representatives visiting Boston, Mass., last week, included: Fred Clarkson, Albert Lorsch & Co.; Louis Nordlinger, L. & M. Kahn & Co.; F. W. Meyer, Bruhl Bros.; Harry Lissauer, Jacobson Bros.; Mr. Waite, Waite, Thresher Co.; Mr. Cluny, Waite, Matthewson & Co.; Paul Gesswein, F. W. Gesswein Co.; C. W. Butts, George H. Fuller & Son Co.; John Heller, L. Heller & Son; Mr. Larter, Larter, Elcox & Co.; Samuel Howland, Joseph Frankel's Sons; Jesse Carpenter, Horton, Angell Co.; Louis Schloss, A. Wallach & Co.; William Matschke, A. Joralemon & Son; H. E. Slater, Champenois & Co.; Mr. Stratton, Alling & Co.; Charles E. Motte, J. B. Bowden & Co.; Mr. Skinner, Roy Watch Case Co.; Mr. Goldberg, W. & S. Blackinton Co.; Mr. Beddell, Courvoisier, Wilcox Mfg. Co.; John T. Miller, Seth Thomas Clock Co.

Representatives of wholesale houses noticed in Syracuse, N. Y., during the past week, included: E. Ball, Woodside Sterling Co.; Howard Thornton, McIntire, Magee & Brown; E. P. Ledos, Ledos Mfg. Co.; L. E. Waterman, L. E. Waterman Co.; Louis Schloss, A. Wallach & Co.; C. G. Walker, Pairpoint Corporation; W. H. Browne, E. H. H. Smith Silver Co.; Mr. Fenton, William L. Gilbert Clock Co.; Moe Adels, Rees & Yankauer; A. E. Alexander, Simpson, Hall, Miller & Co.; E. C. North, Smith & North; Mr. Everton, H. H. Curtis Co.; J. Goldberg; W. S. Gardner, Bassett Jewelry Co.; Alfred Goldsmith, Adolph Goldsmith & Son; A. M. Haring, Carter, Howe & Co.; M. B. Saunders, Wilcox & Evertsen; Mr. Lind, Harvey B. Kimmey; John C. Hull, Silver Plated Cutlery Co.; Mr. Platt, Theodore W. Foster & Bro. Co.; H. E. Kirstein, E. Kirstein's Sons Co.; Fred S. Eason, N. H. White & Co.; Mr. Macpherson, C. Ray Randall & Co.; C. E. Hunt, William B. Kerr & Co.; Theodore L. Parker, Martin, Copeland & Co.; L. Ellmore, La Pierre Mfg. Co.; H. B. Crawford, S. Sternau & Co.; Joseph Rosenberg, Louis Strasburger's Son & Co.; Emanuel Jacobson, Jacobson Bros.

The following traveling representatives of eastern houses visited Kansas City, Mo., last week: B. Hyman, Hirsh & Hyman; Simon Goldsmith, Solidarity Watch Case Co.; Mr. Hurlburt, American Optical Co.; Fred Wurtz, Spencer Optical Mfg. Co.; Fred L. Pettee, Waterbury Clock Co.; Otto Schneider, Hammel, Riglander & Co.; Mr. Leach, Frank W. Smith; William G. Andrews, C. Sydney Smith; P. L. Smith, Roger Williams Silver Co.; Harry S. Aicher, Alvin Mfg. Co.; T. W. Agnew, New Haven Clock Co.; Isaac Price, Louis Strasburger's Son & Co.; Mr. Wile, Buffalo Jewelry Case Co.; W. A. Lamb, George H. Fuller & Son Co.; J. M. Friede, Eisenstadt Mfg. Co.; F. L. Carpenter, Frank M. Whiting & Co.; Cy. Price, Sol. Lindenborn; W. A. Moore, F. W. Gesswein Co.; Mr. Tyler, Ansonia Clock Co.; Theo. Jacobs, Joseph Brown & Co.; Mr. Rogers, Riker Bros.; W. R. Boss, Hutchison & Huestis; L. E. Smith, M. B. Bryant & Co.; S. E. Friede, Quaker City Cut Glass Co.; H. B. Koopman, Bernard Rice's Sons; H. H. Cushman, F. B. Rogers Silver Co.; John O. Shemmony, J. B. Bowden & Co.; J. A. Patterson, Hayden W. Wheeler & Co.; Mr. Cobb, W. R. Cobb & Co.; Mr. Fox, Fox & Co.

The following representatives visited Pittsburgh, Pa., during the past week: Emanuel Untermeyer, Charles Keller & Co.; H. A. Bliss, Gorham Mfg. Co.; Charles T. Dougherty, William L. Sexton & Co.; F. D. Smith, Reeves & Browne; T. M. Schroeder, Schickerling Bros.; A. J. Sherrard, Enos Richardson & Co.; L. Jacobs, Peckham Seamless Ring Mfg. Co.; P. M. Layman, Riker Bros.; H. A. Bliss, Krementz & Co.; R. C. Wide, Meriden Cutlery Co.; R. H. Stevenson, E. G. Webster & Co.; W. R. Ross, Hutchison & Huestis; Mr. Parker, Osmun-Parker Mfg. Co.; W. H. Gregory, Strobel & Crane; R. L. Seely, Moore & Son; Walter S. Strauss; Mr. Rogers, N. E. Whiteside & Co.; E. E. Stockton, E. Ingraham Clock Co.; D. A. Davidson, Wallach & Schiele; J. F. Schuman, Jr., William Kinscherf; H. C. Barnum, Shafer & Douglass; B. Frank Hodgins, Snow & Westcott; Mr. Cook, Fontneau & Cook; Lewis Squire, F. H. Cutler & Co.; H. A. Scofield, Scofield, Melcher & Scofield; F. P. Kennedy, Joyce & Co.; William B. Peck, Waite-Thresher Co.; J. Carpenter, Horton, Angell Co.; Donald LeStage, H. D. Merritt & Co.; Mr. Strandberg, Sykes & Strandberg; F. W. Collom, J. J. White & Co.; Mr. Bigelow, Sturtevant, Whiting & Bigelow; William J. McQuillin, Hodenpyl & Sons; Charles S. Peckham, J. H. Peckham & Co.; C. F. Brinck, Crescent Watch Case Co.; James O. Otis, Harvey & Otis.

Refunds of Duty on Jewelry and Optical Products Paid To Importers.

WASHINGTON, D. C., Jan. 29.—Acting under the requirement of Section 24 of the Customs Administrative Act of June 10, 1890, the Secretary of the Treasury has transmitted to Congress a detailed statement of the refunds of customs duties for the fiscal year ended June 30, 1902, from which the following figures of interest to the trade are taken:

Bausch & Lomb Optical Co., on manufactures of glass, $11.50, on account of error in classification; A. Bader & Co., on glass beads, loose, $32, court judgment; Louis Duclos, on opals, cut, not set, $22.80, error in classification; R. F. Downing & Co., on jewelry, etc., $103.17, error in classification; R. C. Hahn, on articles and specimens of agate, $95.30, court judgment; R. C. Hahn, on articles of agate, $4.10, court judgment; Hooman, Schutts & Co., on japanned and plated ware, $2,119.65, court judgment; Maurice J. Karpeles, in imitation precious stones, $2.75, duties twice paid; Mandel Bros., on watch movements, $6.80, error in classification; G. W. Sheldon & Co., on watch case, $2.10, clerical error; William Schutte & Co., on japanned and plated ware, $2,782.68, court judgment; C. M. Von Bauer, on plated buckles, $64.52, court judgment.

A thief last week smashed the plate glass window in the store of Patenaude Bros., Nelson, B. C., and was caught by a policeman while attempting to escape with several watches and a large quantity of miscellaneous jewelry.

Boston.

Carl D. Stockwell will hereafter represent the Mossman, Davis Co.

The jewelry firm of Vorenberg & Hecht, 15 Winter St., is to be dissolved, Mr Hecht retiring. The business will be continued by his former partner.

Preparatory to remodeling his store at 571 Massachusetts Ave., Cambridge, A. J. Applegate is conducting a daily auction in order to entirely dispose of his present stock.

Fred H. Pope, until recently a member of D. C. Percival & Co., has made no statement as yet as to his plans for the future. Mr. Pope says that he may take a vacation until Fall, but if some "good chance" arises he may resume business again in the near future.

Henry W. Patterson, of Smith, Patterson & Co., has gone on a trip to Canadian cities in connection with the trip to Boston next Fall, of the Ancient and Honorable Artillery, of London. The Boston company intends to take the London company to various cities in Canada.

E. A. Cowan, of E. A. Cowan & Co., started this week on a two-months' southern trip, and W. F. Macomber, representing the same firm, has started on a four-months' trip through the southwest. George E. Garland is away on his Vermont trip for the same firm.

William P. Shreve, of the Shreve, Crump & Low Co., represented the Massachusetts Commandery of the Order of the Loyal Legion of the United States at the memorial services held at Trinity Church last week in commemoration of the 10th anniversary of the death of Bishop Phillips Brooks.

J. A. Remick, for 35 years a well known diamond dealer and expert in precious stones, is closing out his stock at 20 Tremont St., preparatory to his retirement from business. The Boston Museum building, in which his store is located, is soon to be torn down, to be replaced by a modern office building.

Inquiries are made every day as to the whereabouts of Ezra E. Rubin, whose disappearance from Boston was reported in the last number of THE CIRCULAR-WEEKLY, but thus far nothing definite has been learned. It seems to be the general opinion that Mr. Rubin is traveling with his family, but as far as can be ascertained he has not been seen in New York during the last week.

Out-of-town buyers seen in Boston last week included G. A. Bartlett, Holliston, Mass., C. W. Flagg, Woonsocket, R. I.; H. S. Hewitt, Brockton, Mass.; S. K. Gurney, of Gurney Bros .Co., Brockton, Mass.; T. R. Cushing, Rockland, Mass.; Mr. Low, of Daniel Low & Co., Salem, Mass.; J. H. Connor, Lynn, Mass.; Frank Schneider, Lawrence, Mass.; G. A. Collins, Salem, Mass.; W. F. Newhall, Lynn, Mass.; C. D. Tucker, Medford, Mass.; E. A. Stratton, Manchester, N. H.; R. H. Safford, Leominster, Mass.; William H. Harris, Lowell, Mass.; T. L. Williams, Quincy, Mass.; Andrew Rosen, North Easton, Mass.

STRONG FACTS.

F. Matteson, formerly with E. E. Chandler, Boone, Ia., has accepted a position with the Cleaver Jewelry Co., of that place.

A. J. Pearson, a former jeweler of Spiceland, Ind., has moved to Linwood, Neb., where he may eventually open a store.

Paul E. Wilt has resumed his duties as watchmaker for Charles H. Bullock, Denton, Md., after a brief mid-winter vacation.

S. L. Price, Oscheydon, Ia., was a recent visitor to Grank Forks, N. D., where he is interested in certain real estate transactions.

Sims & Elrick have been succeeded in business in Waco, Tex., by F. T. Elrick, who assumes all the indebtedness of the firm.

Leon K. Nowierski, Floresville, Tex., who had been suffering from a severe ocular ailment, is rapidly regaining the use of his eyes.

C. F. Williams, of the bankrupt firm of G. F. Williams & Co., Mankato, Minn., contemplates traveling for a large diamond concern, in New York.

Geo. W. Cross, formerly of Adams, N. Y., has purchased the business of John M. Arniel, Cape Vincent, N. Y., and will take possession about March 1.

A small fire was caused last week in the establishment of Carl Kleffler, Easton, Pa., by the explosion of a defective oil stove. The entire loss was not more than $50.

Albert E. Starr & Son, Rock Falls, Ill., have decided to close out their stock and seek a new location. Their withdrawal from Rock Falls leaves but one jeweler in that place.

A. C. Guth, Du Bois, Pa., was unable to open his safe last week and was obliged to send for an expert, who, after three hours' labor, succeeded in swinging open the heavy doors.

L. R. Goldstein, 1708 Atlantic Ave., Atlantic City, N. J., started last week on a trip through Pennsylvania, visiting principally the jewelers of Harrisburg and Pittsburgh.

Peter Hansen, Le Claire, Ia., was married in Davenport, Ia., last week, to Miss Anna Jensen. Hansen advertised for a wife, and Miss Jensen answered—the result being a quiet wedding.

Alfred Fuchs, son of Gustav Fuchs, Milwaukee, Wis., was awarded three prizes at the Wisconsin Feather Stock Show recently held in Milwaukee for the best collection of buff wyandottes.

B. D. Rowland, son of Denton Rowland, a jeweler of Louisville, Ill., is enjoying the praises of his friends for saving a large residence of that place from being totally destroyed by fire.

Greyer & Scott, Muncie, Ind., will remove their stock, March 1, from 205 E. Main St. to 100 Walnut St. (cor. Main and Walnut Sts.), where they will have better facilities for their increasing business.

Judge H. F. Garretson, Tacoma, Wash., who was recently offered the presidency of the Bethel Electric Alarm Clock Co., with headquarters in Seattle, has declined the offer on the ground that he could not attend to his office duties without neglecting other important work.

In the recent bankruptcy case of B. L. Holt, McKeesport, Pa., the court made an order restraining an attaching creditor from proceeding with his attachment and appointed Justus Mulert as receiver.

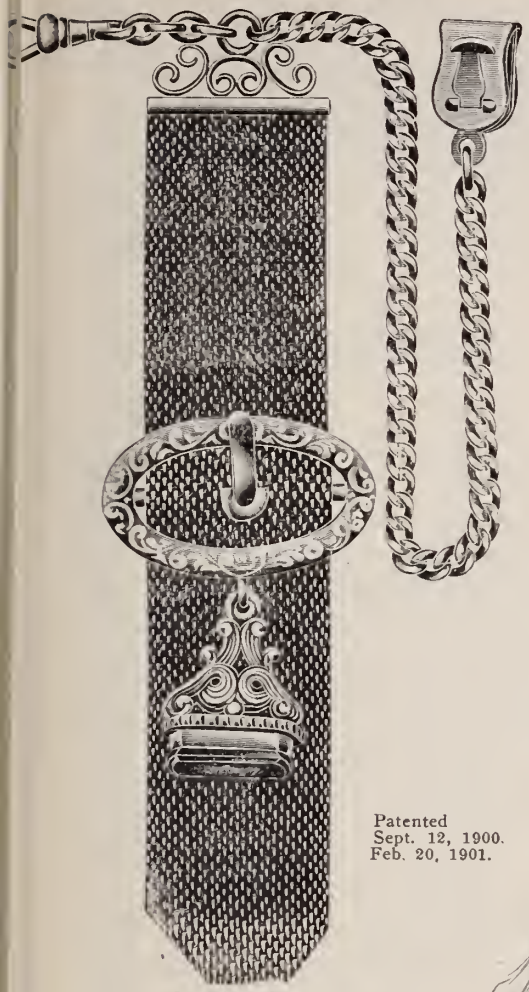
A thief recently entered the store of Max Strenant, Beaumont, Tex., and, aiming a revolver at the jeweler, demanded a watch. Mr. Strenant drew his own weapon upon the man and the latter made good his escape.

It was reported from Prairie Du Chien, Wis., last week that a representative of a large Paris jewelry firm, who has been visiting that place, has deposited $50,000 there as a guarantee of its intention of buying up a very large quantity of American pearls.

The store of T. Lichtenstein, 617 Washington St., San Francisco, Cal., was entered, Jan. 26, by three daring young thieves, who, after holding up the proprietor and his clerks and hurling a brick through the show window, escaped with a diamond brooch valued at $375

At the hearing before Alderman Keech, in York, Pa., Thursday, the evidence against Geo. Yohne, Geo. Monahon and Benj. Kline, the three young men charged with robbing seven stores in that city, including the jewelry store of M. R. Swartz, was overwhelming, and all three were recommitted to jail, to await trial at court.

Some of the old stock of Alvira J. Cross, who for many years conducted a business in Adrian, Mich., and who later made an assignment to his brother, Joseph, now deceased, was found last week by Sheriff Shepherd in the little shop on N. Winter St., and included antique jewelry, several old-fashioned clocks and other articles of the genuine "Auld Lang Syne" type.



Burglars last week broke into the store of H. Rohrheimer, Shamokin, Pa., and stole clothing and jewelry valued at several hundred dollars. Among the stolen goods were a dozen rings and several watches and charms. The men boldly cut out the plate glass in front of the store right under the glare of an electric light between four and five o'clock in the morning.

A daring attempt to loot the store of Hiram J. Smith, Racine, Wis., was made last week by burglars, who first effected an entrance to a printing office situated on the floor immediately above. They then tried to gain admission to the jewelry store by boring holes through the floor, but the closely built joists impeded their progress, and they abandoned the premises aftering securing only $2.00 in cash from the money drawer in the printing establishment.

The business of O. W. Bullock & Co., Springfield, Mass., manufacturers of jewelers' tools and light hardware, has been reorganized and incorporated with a capital of $400,000. The officers chosen are: President, W. B. Fish, Springfield, Mass.; secretary, E. C. Watson, Springfield, Mass.; treasurer, Wm. M. Mick, Newton, Mass.; directors: O. W. Bullock, Springfield; W. B. Fish, E. C. Watson, Wm. M. Mick and H. N. Bingham, Oradell, N. J. The principal reason for the reorganization is the ill health of Mr. Bullock, who will continue to have a large interest in the business, but who will, nevertheless, be relieved from the active management.

S. O. BIGNEY & CO.,

Factory, Attleboro, Mass. **New York Office, 3 Maiden Lane.**

Washburn Patent Fastener.

BIGNEY VEST FOB FOR GENTLEMEN.

The Bigney Vest Fob is here to stay,
It's been tried and tested and won its way,

VOL. XLVI. CHICAGO, WEDNESDAY, FEB. 4, 1903. No. 1.

Chicago Notes.

TRADE CONDITIONS.

While the extremely active conditions that prevailed during the early part of January have subsided to some extent, business in this city is in an excellent condition, manufacturers and jobbers alike reporting good trade. Feeling the pulse of the country it is safe to prophesy a first class Spring trade for all lines. The wonderful prosperity the railroads are enjoying is the best indication that the manufacturing industries of the country are prosperous. The influx of out-of-town buyers has begun and they are placing encouraging orders. Those travelers who are already in their territories in the west, are sending in good orders, and report conditions and prospects excellent. Some of the houses have completed their inventory, while others are still at it. Owing to the inclement weather retail trade has been rather dull during the past week, but conservative retailers predict a resumption of good business with the advent of fine weather, other conditions remaining in their present favorable state.

Charles D. Peacock is a member of the February Grand Jury.

W. E. Crellin, Chillicothe, Mo., was a trade visitor last week.

Hugh King, manufacturers' agent, left Sunday for a trip through the west.

The examination of Isaac Yaseen, bankrupt, was continued from Jan. 29 to Feb. 2.

F. M. Klein, representing Lapp & Flershem, left last week for a trip through the west.

W. M. Stone, Minneapolis, Minn., accompanied by his wife, spent the past week in this city.

A. H. Davis, of the A. H. Davis Jewelry Co., Red Lodge, Mont., was a visitor to the trade last week.

T. L. Coombs, of T. L. Coombs & Co., Omaha, Neb., was in town visiting his old friends last week.

J. H. White, representing factory "L" of the International Silver Co., left Monday for a western trip.

Mr. Pollard, of Pollard & Couthway, Springfield, Ill., called on the local trade during the past week.

The stock of Landon, Ziegler & Co., Columbus building, has been sold at private sale to the Harris Co.

The Howard Watch Manufacturing Co., of Chicago, has increased its capital stock from $15,000 to $30,000.

G. V. Dickinson, general agent of the Elgin National Watch Co., returned last week from a brief eastern trip.

P. M. Vermaas, western manager for the Van Bergh Silver Plate Co., leaves this week for an extended western trip.

W. L. Walters, of Longwell & Walters, Wellman, Ia., accompanied by his wife and son, was in Chicago last week, combining business with pleasure.

Harris & Co., the purchasers of the Drackett, Clock & Jehlinger stock and fixtures, have paid for and take possession of these assets. The price paid was $9,000.

J. W. Pearce, son of W. W. Pearce, Wichita, Kan., will in future cover the territory formerly covered by G. W. Sheperdson for the R. Wallace & Sons' Mfg. Co.

Samuel Swartchild, of Swartchild & Co., left last week, accompanied by his wife, for an extensive trip through the east. Mr. Swartchild will combine business with pleasure.

Among those buyers in town the past week not elsewhere mentioned were: C. Jacobs, Richmond, Mo.; George F. Beach, Valparaiso, Ind.; Charles McKee, Wolcott, Ind.

L. A. Dorrance, western manager for Simons, Bro. & Co., returned Monday from Philadelphia, where he had been attending the annual meeting of the salesmen of the company.

George H. Whitlock, who has been house salesman for L. H. Schafer & Co., will in future represent the house in Wisconsin and Michigan. Mr. Whitlock starts on his initial trip this week.

F. J. Essig filed for record, Jan. 24, the transfer of property E. F. 50 x 150 on Sheridan Road, 146 ft. north of Wilson Ave. (with an incumbrance of $3,500) to Hedwig Weber in consideration of $2,500.

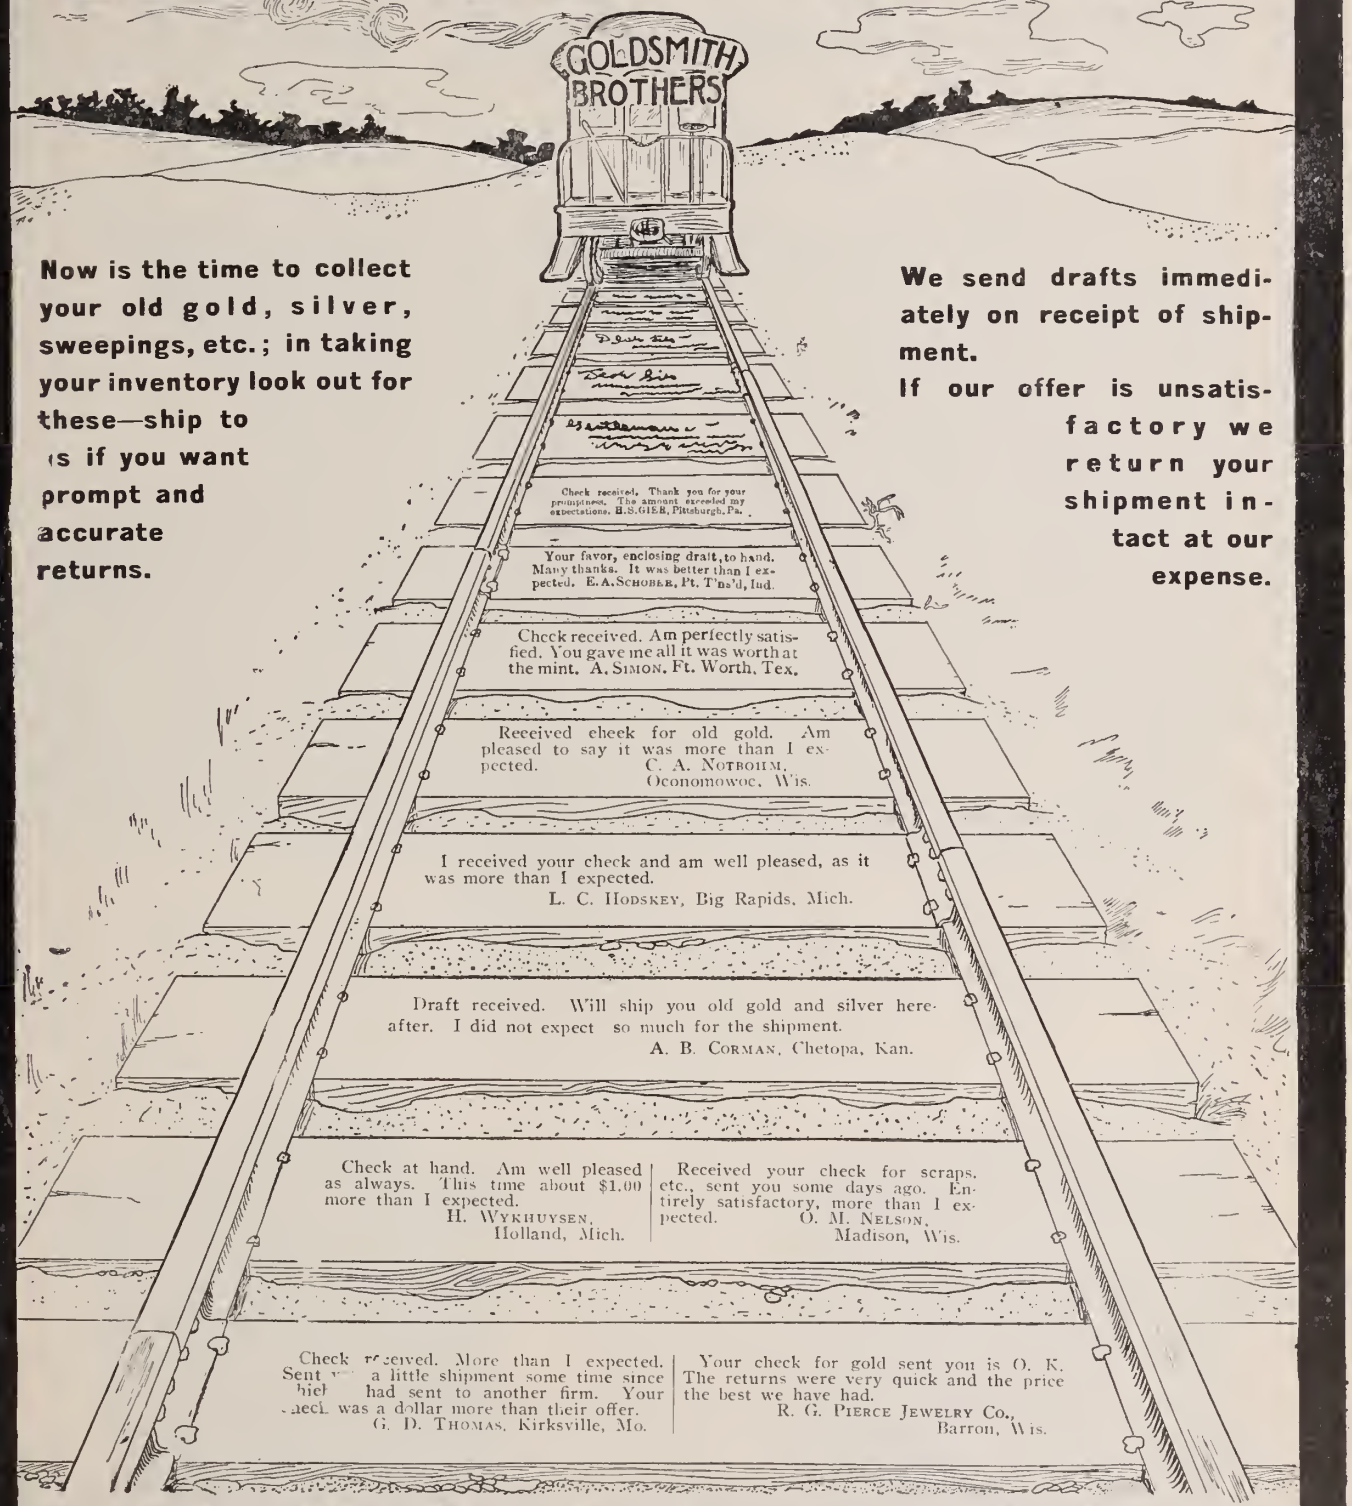
The Cox & Kuss Jewelry Co., La Salle, Ill., has been incorporated with a capital of $7,000 to conduct a general mercantile business. The incorporators are Joseph F. Kuss, Irene Cox and John Henry Cox.

The Campbell Investment Co. has leased for Louis Schlesinger to L. H. Goldsoll, for two years and three months, the store and basement of 148 State St. The rental is $27,000, or an advance of $2,000 a year over the present lease.

Mr. Birks, of Henry Birks & Sons, Montreal, Can., passed through this city last week while en route east from Winnipeg, Man. Although Mr. Birks represents the leading jewelry house of Montreal and has traveled extensively in this country and Europe, this was his first visit to Chicago.

George Kuehl, an importer of cuckoo clocks, has taken his brother into partnership. The firm will hereafter be known as George Kuehl & Co. Theodore Keuhl will leave about Feb. 15 for a visit to the factory of the company in the Black Forest of Germany, returning about the middle of April.

L. Beckman, Kendallville, Ind., was called to the city last week on account of the illness of his son, who is a student at the Chicago University. Mr. Beckman, Jr., was successfully operated upon for appendicitis, and when his condition improved last week his father left Chicago and returned home.



George C. Edwards, vice-president of the International Silver Co., and W. J. Miller and S. L. Barbour, directors of the same company, were at the Chicago office of the company during the past week. Following his usual custom when in the west, Mr. Edwards spent a couple of days at Albert Lea, Minn., where he has extensive interests.

Colonel Leavenworth, treasurer of the R. Wallace & Sons' Mfg. Co., and George M. Wallace, formerly manager of the local office of the company, stopped over in this city last week, while en route from the San Francisco office to the factory at Wallingford, Conn. R. W. Morris, the local manager for the company, leaves this week for a visit to the factory.

William Davidson, representing J. F. Forsinger, assisted by W. J. Buckley, representing the Seth Thomas Clock Co., recently secured the contract for one of the finest tower clocks ever made, which is to be erected in the tower of the new passenger station of the Southern Railroad at Knoxville, Tenn. The dials are sectional iron and glass 11 feet in diameter. The pendulum rod is zinc and steel compensating, and is 14 feet long, with a pendulum ball weighing 350 pounds. The clock has a gravity escapement.

Carl Wood, West Point, Ia., his given a chattel mortgage for $450.

THE RECORD ON OUR TRAIL.

Now is the time to collect your old gold, silver, sweepings, etc.; in taking your inventory look out for these—ship to us if you want prompt and accurate returns.

We send drafts immediately on receipt of shipment.

TRADE CONDITIONS.

The wholesale business continues good and traveling men are sending in large orders. The retail trade is very quiet and there is little doing among the dealers. They do not look for any better trade until the latter part of March or the beginning of April, when business generally starts up.

The Mermod & Jaccard Jewelry Co. is advertising for salesmen in the daily newspapers.

Herman Mauch, who is president of the Patrons' Association of the Monroe School, distributed the diplomas to the graduates, Jan. 23.

Col. Morris J. Meyer, for several years missionary for the Keystone Watch Case Co., has taken a position with the Eisenstadt Mfg. Co., as city representative.

E. E. Gutfreund, of the Eisenstadt Mfg. Co.'s factory, will shortly enjoy his first vacation in 10 years, when he will go to the Pacific Coast and combine business with pleasure. He will go via the Southern route, and will stop at various points on the way.

Harry Doty, formerly with the Eisenstadt Mfg. Co., has resigned his position and gone to New Orleans, La., to engage in the laundry business. His father, who had been a salesman for the Mermod & Jaccard Jewelry Co. for a long time, has also resigned, and will go into business with his son.

All the members of the Missouri Retail Jewelers' Association have had telephones installed in their stores since the advent of a swindler from Alton, Ill., who placed orders and paid for them in forged checks. Those jewelers who had telephones were notified at once by E. H. Kortkamp, who was the first to discover the fraud.

The following out-of-town jewelers were here last week buying goods: H. W. Foerste, Okawville, Ill.; Mr. Brown, of Brown & Borsheim, Omaha, Neb., J. T. Fields, Caruthersville, Mo.; Ed. Steinmeyer, Cape Girardeau, Mo.; Jno. Koetting, St. Genevieve, Mo.; Jno. H. Booth, Alton Ill.; Roy Goulding of E. H. Goulding's Sons, Alton, Ill.

Omaha, Neb.

W. A. Myers has bought out his brother at York, Neb.

Mrs. Shook, secretary and treasurer of the Shook Mfg. Co., has returned from a trip to the east.

C. A. Green, Geneva, and J. F. Oyer, Kingfisher, have entered the Omaha Horological School for a full course.

L. G. Trower, Oberlin, Kan., recently gave a real estate mortgage for $270.

S. O. Huseth, Park River, N. D., has sold his business to Hanson & Catherwood.

Kansas City.

TRADE CONDITIONS.

The weather during the past week has been almost Spring-like in temperature, but damp and muddy, making shopping disagreeable. Last week the lumbermen held a convention here.

C. W. Nelson, with Emery, Bird, Thayer & Co., was in Cameron, last week, attending the funeral of his mother.

J. R. Mercer was busy taking an inventory of his stock, last week, preparatory to purchasing Spring goods.

Julius Winkelman, formerly watchmaker for Jas. Morino & Co., has accepted a position with Emery, Bird, Thayer & Co.

Mr. Riddlebarger, watchmaker for H. L. Pierce, Belleville, Kan., stopped off in Kansas City a few days last week en route for Paola, Kan., where he will spend a short time among his old friends.

The following out-of-town merchants visited this city last week: Arthur Y. Bowswell, Fairland, Ind. T.; H. P. Sutton, McCook, Neb.; J. L. Potts, Marceline, Mo.; George Spangle, Chetopa, Kan.; J. B. Bryant, Edna, Kan.; A. M. Cross, Topeka, Kan.; E. E. Foreman, Greenleaf, Kan.; Leslie White, Lee's Summit, Mo.; Arthur West, Odell, Neb.; George R. Green, Geneva, Neb.; A. M. Ward and wife, Abilene, Kan.; W. L. Spear, with Chas. H. Morrison, Topeka, Kan.; R. H. Reed, Polo, Mo.; E. E. Venrick, Norton, Kan.; A. Marks, Lawrence, Kan.; Sol. Marks, Lawrence, Kan.

Minneapolis and St. Paul.

S. H. Clausin, of S. H. Clausin & Co., Minneapolis, has gone to California, where he will remain until the first of March.

Among the visitors to Minneapolis and St. Paul during the past week, were: E. Restikangas, Ishpeming, Mich.; J. H. Bergquist, Brandon, Minn.; Fred Soderberg, Braham, Minn.; H. F. Leuders, Norwood, Minn.; O. Bratvet, Kenyon, Minn.; J. J. Bill, Madelia, Minn.; Louis H. Bruns, Anoka, Minn.; I. M. Radebaugh, Janesville, Minn.

J. B. Hudson & Son's show window, Minneapolis, was broken last week by a large piece of coal which had been hurled against it. The police believe that it was the work of some intoxicated person, and not of burglars, as the break was five feet from the sill, and the police say that if robbery was contemplated, the break would have been made lower in the window.

Among the visitors to the exhibition of the Arts and Crafts Society, held in Minneapolis last week, was Miss Jessie Preston, of Chicago, Ill., whose work in bronze and jewelry has made a very favor-

These goods will not last long and we advise you to order before they are gone. We carry a large assortment of movements and cases and can furnish you any size or any make. Our new circular is just out. Send for one and it will tell you the rest.

Jos. Brown & Co., 176, 178, 180 E. Madison St., CHICAGO, ILL.

able impression on several jewelers. By preference Miss Preston works chiefly in the baser metals and semi-precious stones even in her jewelry.

Detroit.

Two 33d degree jewels, manufactured by W. A. Sturgeon & Co., were conferred upon James Findlater and Joseph Mayworn last week at the quarterly meeting of the Michigan Sovereign Consistory of the Ancient and Accepted Scottish Rite Masons.

Horace W. Steere last week swore out a warrant for the arrest of Fred Fox, a clerk in the jewelry store of Charles R. Rice, 205 River St., charging him with the larceny of three diamond rings, valued at $300. Fox was sent to the store by his employer last Saturday and obtained the jewels, but never returned.

An amusing contest over standard and sun time is being waged at Ann Arbor, the seat of the University of Michigan. The Board of Supervisors ordered the hands of the City Hall clock turned back to standard time, but Probate Judge Watkins says local time is good enough for him, and ordered the hands pushed forward again. This process has been repeated several times, and both sides threaten legal proceedings.

Denver.

John Auert, Lafayette, was a visitor to this city last week.

George R. Slater has accepted a position with Henry Lubelski.

E. A. Eaves has bought out the stock of Glenn W. Carruth at Idaho Springs.

The Charles Stapper Jewelry Co. has moved from 16th St. to Glenarm St., near 16th St.

James E. Lewis has just returned from a business trip to Central City and surrounding towns.

J. W. Barker, Central City, has been called to Middle Park on account of illness in his family there.

Syman Bros. have made extensive improvements in their establishment, including the entire remodeling of the front of the store.

The elegant silver punch set, consisting of bowls, 12 cups, ladle and tray, presented by the citizens of Denver to the cruiser *Denver*, is on exhibition at Boyd Park's in this city. The metals of which the set is composed are copper, gold and silver, all products of the State. The designs and decorations were suggested by Boyd Park and executed in New York at Dominick & Haff's. The bowl, which is of sterling silver, lined with gold, holds 40 quarts of liquid, and is edged with a large twisted rope of old silver festooned in sailor knots. The base is surmounted by two large eagles in copper and the pedestal is handsomely decorated in heavily applied work. Two large seals, one of the city of Denver and one of the navy, are cut in relief and set on each side of the cruiser design. At either side of the bowl are two nymphs holding out wreaths of laurel, which serve for handles. The tray is 36 inches in diameter and is edged with copper. At either side repose spread eagles in native copper cut in relief in the edge of the tray. The cups are mini-

ature representations of the bowl, each bearing the city seal in relief. The same idea is carried out in the ladle, the bowl of which is gold.

Frank Newton, a pawnbroker of this city, who, some time ago, accused Miss Winnie Green, a former employe, of purloining diamonds valued at $600, has failed in his attempt to have the girl brought back to Denver to stand trial. The Judge of the Circuit Court in Bloomington, Ill., whither Miss Green had gone after leaving the employ of Newton, declared that the latter has not made even a showing sufficient to warrant the court in holding her.

Pacific Coast Notes.

J. B. Vogle, Lompoc, Cal., will remove his stock into his new building on H St. when completed.

H. C. Richie, Fisher, Tex., was in Portales, N. M., last week, looking over the ground for a suitable location for a jewelry store.

The store of Antone F. Luiz, Mendocino, Cal., was entered by thieves a short time ago and a large quantity of jewelry, several gold watches and gold rings were taken. There is no clue.

W. E. Richter, formerly of Elgin, Ill., where he was instructor in the watchmaking schools, is now watchmaker with S. Vann & Son, Albuquerque, N. M., watch inspectors of the Santa Fé Railroad.

V. H. Boudreau, of the late firm of Wheelock & Boudreau, Hanford, Cal., is now the sole owner of that business, which was founded by D. A. Woodward. The business will be continued at the old stand.

Phil Dell is having the building adjoining his present quarters on 6th St., Las Vegas, N. M., thoroughly remodeled, and as soon as the improvements are completed he will instal his large stock of jewelry, curios, etc.

C. L. Metgar, a well-known prospector of Los Angeles, Cal., is much interested in a find which he made on the desert a few days ago in the southern part of California, where he picked out from a ledge numerous rubies of a very beautiful color. He has taken the stones to Los Angeles, where he intends having them tested. Some weeks ago George Bergin found gems of a similar character in that vicinity.

Indianapolis.

TRADE CONDITIONS.

City trade has been very quiet during the past week, but jobbers report a fair country trade.

Jay D. Taylor, Logansport, Ind., has put in handsome new silverware cases and otherwise improved his salesroom.

E. M. Wilhite, Danville, Ind.; J. W. Hudson, Fortville, Ind., and E. M. Wilson, Anderson, Ind., were replenishing stock in this city last week.

R. E. Kelso, 1529 N. Illinois St., a short time ago received notice that a fortune is awaiting him in England. He has faith in the news, and is making arrangements to visit that country next Summer to investigate the matter.

Portland Ore.

TRADE CONDITIONS.

The jewelry trade of Portland, Ore., is experiencing a slight lull. Business started briskly the first of the month, but has dropped off some during the past week. Holiday business is now cleaned up and the jewelers are ready for more new business. Extra clerks have been laid off and business is again back to its normal condition.

Jaeger Bros. have just completed taking their inventory.

J. W. Rowett, Silver City, Idaho, has just returned home from a month's visit to Delmar, Idaho.

Information which reached the office of THE CIRCULAR-WEEKLY for the issue of Jan. 14, in regard to Henry R. Moore and George O. Brandenberg & Co., was slightly erroneous. The item should have stated that Mr. Brandenberg's company had opened a new establishment and that Mr. Moore had commenced business in the old location.

San Francisco.

TRADE CONDITIONS.

Trade for the new year has not begun as early as was expected. The representatives of local wholesale houses are just starting out on their respective trips and business in the wholesale and retail quarters has so far been rather quiet. For the last few days it has been raining steadily along the Pacific Coast territory, and prospects in the country are very much brighter than they were last week.

E. L. Dorrit has entered the employ of the Baldwin Jewelry Co., of this city.

W. Wooster, of this city, has accepted a position with L. Katz, Sutter Creek, Cal.

F. Ewart and wife were in this city last week on a short visit from Woodland, Cal.

W. A. Hearst has accepted a position with the Frank Golden Jewelry Co., Carson City, Nev.

W. A. Green, of Carrau & Green, will leave for Europe, Feb. 15, to make diamond purchases.

R. G. Bonestell, Pacific coast agent for the Crescent Watch Case Co., has set out for a trip to the east.

Nearly every retail store in this city now closes at 6 P. M. as a result of the movement made by the Retail Clerks' Union.

Messrs. Tuckey and Klein, of the firm of Tuckey & Klein, last week enjoyed a hunting trip to Mr. Klein's shooting reserve.

W. H. Kinna, Pacific coast representative of the Elgin National Watch Co., has returned from a two months' trip to the east.

The W. K. Vanderslice Co. will move its manufacturing department into the adjoining building. The quarters will be larger and more help will be added.

A. T. Lipman has started for the southern part of the State in the interests of the Morgan & Allen Co. This company has just fitted up a room adjoining its quarters to be used exclusively for cut glass and sterling silverware.

George Morgenstern, alias Harry Herzberg, aged 23 years, who claimed to be a traveling representative for a Brooklyn, N. Y., jewelry house, and who, last week, had embezzled a gold watch and pawned it, committed suicide, Jan. 21, in this city, fearing arrest.

Among those from interior towns who visited this city last week were: W. A. Ray, Lakeport; J. J. Fretwell, Los Gatos;

Mr. Floberg, of Klune & Floberg, Sacramento; A. Hansell, Stockton; Alex. Kaiser, Stockton; M. Markheim, Stockton; D. F. Badgley, Anderson; D. L. Wertheimer, of Wertheimer & Co., Delamar, Nev.; John D. Bennett, San Rafael; F. W. Carter, Santa Rosa, and James J. Hoien, Antioch, Cal.

The Supervisors' joint committee on license and police reported, Jan. 17, in favor of an ordinance regulating the operations of pawnbrokers by requiring them to make a daily report to the Police Department of all goods which they buy, and to keep such goods for a period of 10 days before disposing of them.

Cincinnati.

B. Greenwald is putting up a large and handsome electric sign in front of his store, at 514 Race St.

Al Kallmyer, the bookkeeper for Jos. Noterman & Co., is back at his desk after a painful operation on his nose.

Friends of the late W. A. Aicher, a jeweler of Pomeroy, O., expressed deep regret at the news of his death, received here last week.

B. H. Wolf, 612 Vine St., is holding an auction sale, preparatory to his retirement from business. Dan. I. Murray is the auctioneer.

Edgar Fox, of Lindenberg & Fox, and son of Sol Fox, of Fox Bros. & Co., celebrated his twenty-first birthday last week with a champagne supper.

Adolph Muehlmatt, maker of the Monarch engraving block, has given Sussfeld, Lorsch & Co., New York, the exclusive wholesale agency of this block.

Rauch & Goldsmith, now at 19 W. 6th St., will move into the new Commercial Tribune building about March 1, occupying rooms 209 to 212 on the second floor.

The old store of the late H. H. Mithoefer is no more. The last of the fixtures and stock were taken away a few days ago, and the place is now for rent. In the passing of this store another old jewelry landmark has been effaced.

Frank Herschede is in the east in the interest of the Herschede Hall Clock Company, having made all the large cities en route with splendid success. Mr. John Herschede, manager and general secretary of the company, will follow next week on an eastern trip, covering all the large towns, and will wind up in New York the latter part of the month. The new company will go into its new quarters about Feb. 10.

William Thelan, who opened a jewelry store at 1043 Central Ave., last Fall, had his show window smashed last week by a thief who got away with a handful of cheap jewelry. Mr. Thelan, who lives over the store, heard the crash and opened his window to see the man fleeing down the

street. It was past midnight, but he came down to the store and remained there the rest of the night. The thief, however, did not come back.

Chris. Hewig, Evansville, Ind., and M. McCarthy, of Maysville, Ky., were in Cincinnati buying goods last week.

G. L. Lovel, Somerset, Ky. stopped in Cincinnati a short time this week on his return from a visit to his old home in Indiana.

L. Greenbank, who now represents the Clemens Oskamp Co. on the road, has made his first trip up through Ohio and Indiana.

Peter Dormey, manufacturing jeweler, 608 Elm St., has in his place a very interesting clock, which he made when he was but 17 years old. The clock has four dials showing the days, hours and months and dates, with a globe representing the moon in its quarters. It took him three years to complete its various parts.

H. A. Smith, of Chicago, was fortunate enough this week to find undisturbed his roll of chains which his carrier lost while carrying it around among the trade in this city. The roll was valued at about $500, and was picked up by an honest man who returned it. Mr. Smith covers the retail trade and was on his way to visit Henry Korf, 625 Main St., when the loss occurred.

Governor Nash, of Ohio, has commissioned a committee to raise $30,000 subscription fund to buy a silver service for the battleship *Ohio*. The committee consists of Stacy B. Rankin, of South Charleston, chairman; John G. Deshler, Columbus, president. A. B. Voorheis is the Cincinnati member of the committee. An address is to be issued to the people of the State asking them to subscribe to the fund as soon as possible.

CHEAPEST IN EXPENSE. MOST SATISFACTORY, SEARCH-LIGHT VAPOR LAMPS FOR ANY USE. ARE RIVALLED ONLY BY SUN LIGHT.

Search-Light Mfg. Co. 182 Division St. Chicago.

Cleveland.

TRADE CONDITIONS.

The jobbers of this city state that, though it is quite early to predict for the Spring season, they believe that it will be an excellent one. They base their ideas upon the fact that the holiday season was one of the best the retailers have ever had, and think that the business will continue, as there has been nothing to detract buyers of jewelry. The retailers, for the most part, are in good condition and their stocks consist of only such goods as are salable.

C. M. Wilson, Salem, O., was in the city last week buying goods.

A. F. Wagner has opened up a new jewelry store on Pearl St.

L. J. Goddard, Ravenna, was in the city on business early last week.

W. J. Higgins, Shelby, O., was a business visitor here a few days ago.

Harris & Co. are holding an auction sale at their store on Euclid Ave.

Scribner & Loehr will move into their new location on Erie St., about April 1.

John Hoise, of Canal Fulton, O., was a visitor among the wholesale houses last week.

Messrs. Wagner and Kennon have started out on their first Spring trip for the Sigler Bros. Company.

Mr. Tousie will open a manufacturing jewelry establishment in the Clarence building in a few days.

Capt. R. E. Burdick, of the Bowler & Burdick Company, has just returned from a trip to the eastern markets.

Adolph Nunvar has severed his connection with the Sigler Bros. Company and has gone into the optical business at 227 Fullerton St., this city.

The man who threw a bottle through J. H. Heiman's window some time ago has been arrested. It seems he was intoxicated and did not commit it for purposes of robbery.

Miss Blanche Schwartz, for some time cashier of the Sigler Bros. Company, has resigned her position and gone to Pittsburgh, where she will soon be married. Miss Tryan takes her place with the Sigler Bros. Company.

It is reported that S. Nusbaum is forming a stock company to enter the wholesale and retail jewelry business in this city. No particulars can be ascertained, but it is said that one or two other gentlemen now with other houses here are also interested in the venture.

The wholesale merchants' board of the Chamber of Commerce has arranged for two incoming trade excursions, with a fare of one and one-third granted by the passenger association. The first excursion will take place the last of February, and the second, the first days in March. They will be good for several days and will allow visiting merchants plenty of time to select their goods.

Columbus.

T. T. Tress is taking a week's vacation in the west.

Two local jewelry houses, Bancroft Bros. and the Bonnet & Ross Co., were victims of a swindler, who uses worthless checks, last week. In both cases, the man, Jerome A. Booth, formerly of St. Louis, was vouched for by responsible persons. Gold watches were secured from both jewelers.

No answer being filed by the defendants in the U. S. Tussing bankruptcy case, the papers were forwarded to Cincinnati Jan. 24, and on Jan. 27 the papers of adjudication were received from Cincinnati, and the case was referred to Referee Rogers, Tussing having been declared an involuntary bankrupt. Thursday a list of the creditors was filed with Referee Rogers, but the amounts due were not stated in the papers. The first meeting of the creditors has been called for Feb. 10. The list is as follows: Nelson A. Sims, Samuel Freelander, C. Edward Born, Franklin county treasurer; East End Savings Bank, State Savings Bank and Trust Co., L. E. Jones, Mrs. W. S. Tussing, L. B. Tussing, Mrs. Brown, John W. McCafferty, Elliot Brothers, Courtright & Ruhl, Fred W. Acheson, Charles W. Linke, M. Kridel, Columbus Edison Co., Wellsbach Co., Central Ohio Natural Gas and Fuel Co., John Tussing, Amos Walters, Fitzpatrick & Hoeffner, White-Haines Optical Co., Freudenheim Bros. & Levy, Ira Goddard, Richard Ful-

Montana.

E. Pratt, Belt, has taken the agency for the silverware of the Royal Mfg. Company, of Detroit, Mich., and is showing a large assortment of that firm's goods.

A man named Knight walked into Mr. Glass's store at Great Falls, last week, and under cover of looking at other goods, stole a watch. When brought into court he pleaded guilty, and was fined in the sum of $10, which he paid.

Dr. Dodd, who has for some time done a large optical business in Helena, devoted the entire day of Jan. 2, to children whose eyes he examined free and for whom he fitted glasses at half price. His office was crowded all day. Dr. Dodge states that he has fitted 8,000 pairs of glasses during the six years he has done business in this State.

A man named J. M. Merrill has been making the rounds of the jewelry stores in Missoula endeavoring to get the jewelers to let him take watches and other jewelry to show his wife who was confined to her room at the hotel. None of the jewelers complied with his request, but suspicion was aroused and Merrill was arrested. It was then found that he had been passing what are alleged to be bogus checks, and he was promptly locked up. He states that he comes from Salt Lake.

Harrisburg, Pa.

The Merchants' Association, of York, will banquet at the York Country Club Feb. 19.

It is reported that the property now occupied by E. G. Hoover, on N. 3d St., is among those wanted as the site for a new theatre.

It is stated that the Wyeth property, on Market St., the lower floor of which is occupied by the jewelry store of C. Ross Boas, has been sold.

Among the callers on the trade last week were L. R. Goldstein, Atlantic City, N. J., and J. F. Neill, Jr., representing J. F. Neill and John Yardley, Philadelphia.

An amended statement has been filed in court here, in the case of the Dorst Co. *vs.* B. Cohen, for the recovery of $160, alleged to be due upon some jewelry purchased from the plaintiff by Cohen, a Steelton merchant.

The Simon building, in Lock Haven, in which is located C. L. Weidhahn's jewelry store, has been sold, and will be torn down to give place to a three-story brick cigar factory on the site. Mr. Weidhahn's lease still has some time to run.

The following bills of interest to jewelers and pawnbrokers have been introduced in the House of Representatives of Pennsylvania: Anti-trading stamp bill, placing a penalty of not less than $100, or more than $500, or imprisonment for 90 days for each violation; imposing a fine of $1,000, or two years imprisonment, for usury, also designating the lawful rate of interest at five per cent.

The Commonwealth Trust Co., assignee of Optician E. L. Egolf, has given notice to all creditors, asking them to make proof of claim against Egolf within six months from Jan. 9, 1903, or be debarred from coming in upon the fund. The assignee is confident of paying all claims in full within a reasonable length of time. Mr. Egolf continues to manage the business for the assignee.

The police of Lebanon, Pa., are holding a suspect who had in his possession a lot of valuable jewelry and burglar's tools.

PROSPEROUS JEWELERS DECORATE FOR EASTER DISPLAY

No. 7086. No. 7086½.

Published by

THE JEWELERS' CIRCULAR PUBLISHING CO.,

11 John St., Cor. Broadway, New York.

Philadelphia.

E. S. Kolb, with C. L. Le Cato, casemaker, is in New York on business.

John Halleck, salesman, has resigned his position with Strawbridge & Clothier.

E. and J. Weinmann, of Weinmann & Co., started on southern trips last week.

Oster Bros., 719 Sansom St., have concluded to retain their present quarters.

Henry Euler, 716 Chestnut St., was critically ill last week with pneumonia.

Joseph Rothman has removed from 338 S. 3d St. to larger quarters at 765 S. 2d St.

Wm. Fulton, of Lit Bros.' jewelry department, was critically ill all of last week.

Julius Hardegg, watchmaker, has resigned his position with A. N. Peoples, Chester, Pa.

Charles B. Lynch, 16th and Market Sts., spent a few days in Atlantic City on business.

Jack Zimmurn, of M. Sickles & Sons, left Thursday on his midwinter trip through the south.

Wm. Waller, late of Wanamaker's, has opened a handsome retail store at 1129 S. 20th St.

Al. Perpignan, with J. E. Caldwell & Co., was confined to his home last week with la grippe.

Wm. Beck, Vineland, is receiving the condolences of the trade on the death of his wife, Jan. 22

F. Grofine, with Paulina Schless, N. 8th St., spent part of the week in Baltimore visiting relatives.

Geo. W. Long, in charge of J. E. Caldwell & Co.'s silverware department, was also on the sick list.

John Barry, brother of Harry and Fred Barry, has fully recovered from an attack of typhoid fever.

George E. Donaldson, city salesman for Wm. Morris & Co., was married Jan. 21 to Miss Ella Reilly.

Joseph Somer, of the Philadelphia Jewelry Mfg. Co., 36th and Market Sts., spent the week in Chicago on business.

J. C. Sheldon, watchmaker, is reported to intend severing his connection with E. C. Albertson, jeweler, Bridgeton, N. J.

The interest of the estate of George Dunlap in the firm of C. R. Smith & Son, 18th and Market Sts., is to be gradually withdrawn and Mr. Smith is to conduct the business, established in 1837, alone.

Samuel Bond, watchmaker, has resigned his position with S. Kind & Co., and accepted a place with H. Jacobson & Son.

Ed. Sickles, who sailed for Bermuda, Saturday, was accompanied by O. O. Stillman, Evan Eastwood and Daniel Walsh.

E. P. Ledos, of the Ledos Mfg. Co., Newark, N. J., after spending a few days with friends in this city, left Saturday for Canada.

Mr. Bracher, of Bracher, Becker & Barnett, Newark, N. J., left his home in Jenkintown Sunday on a business trip to Florida.

Daniel Schellinger, 726 Sansom St., is reported to intend to cease business as a manufacturer and to confine himself to the diamond trade.

Julius Hickey, formerly in the clock department of J. E. Caldwell & Co., has opened a store of his own at Jefferson and Newkirk Sts.

Malcolm Graham, watchmaker for Joseph Gumpert, 2218 Ridge Ave., is ill with typhoid fever. His place is being temporarily filled by Al. Galleschick.

John Smedley, manager of L. C. Reisner's Philadelphia store, has just completed stock taking and reports the most successful year in the history of the local branch.

Mr. Beitel, lately of Newark, N. J., and formerly in business at Easton, Pa., has bought out the store of the late Morris Herzberg at 2951 Kensington Ave.

Thos. C. Ford, with Greenleaf & Crosby, St. Augustine, Jacksonville and Palm Beach, Fla., was notified last week of the death, at Flemington, N. J., of his sister, Miss Ford.

J. E. Caldwell & Co. made the silver loving cup and C. L. Le Cato made the oak chest which was presented Friday to Arthur Freeman, of the Pioneer Suspender Co., by his employes.

Among the jewelers who attended the Knight Templars Tourney last week were J. Warner Hutchins, George E. Fletcher, Ed. Titus, Harry S. Greenwald, Robert Coates, and E. S. Kolb.

James L. Pequignot, associated in business with his father, Z. J. Pequignot, 1322 Chestnut St., is directing the rehearsal of an Augustin Daly play to be produced for charity's sake next month.

The traveling salesmen of Simons, Bro. & Co., who have held their annual meeting, scattered throughout the country last week. Mr. Maddock started for the far south and southwest on his regular Spring campaign.

Hubert Somborn, of New York, while here last week, took part in a bowling tournament at 9th and Walnut Sts. in which was entered Walter Haselton with C. H. O'Bryon and Mr. Penfold with the Quaker City Watch Co.

Wm. A. Schick, 328 South St., has leased the property now occupied by John Demmert at 1602 Market St., and intends to abandon his old store and remove to the Market St. store March 25. He will refurnish and remodel his new establishment and stock it with new goods to compete with the old established Market St. firms. With the surrender of the property at 328 South St. passes away a landmark in the jewelry trade of this city. Mr. Schick succeeded at that place Samuel Simpson, who had been in business 40 years and who had succeeded a man named O'Brien, who founded a jewelry business there when old South St. between 3d and 4th Sts. was tenanted by merchants who sold to the most exclusive trade.

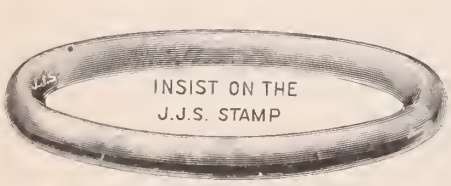
Albany.

A. L. Solomon, a well-known western jeweler, was a visitor in Albany during the past week.

Frederick W. Hoffman recently brought suit in the city court here to recover $226 for goods purchased by Edgar Wheeler, of this city. Judgment was secured by the plaintiff, and has been entered in the County Clerk's office.

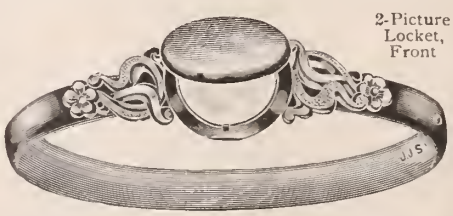
The jewelers of Albany state that the grade of watches now carried by railroad men in charge of trains are far superior than ever before. This is the result of the railroad officials directing an inspection of all watches to be made every 15 days. The new rule on the railroads has made the men realize the necessity of purchasing a good timepiece, consequently the Albany jewelers are selling nothing but high-grade watches.

The presentation of the silver service, which is to be given the cruiser *Albany* by the citizens of this city, will occur on the afternoon of Feb. 7. The mayor, citizens and aldermanic committees will leave here Saturday morning at 8 o'clock, and proceed directly to the Brooklyn Navy Yard, where the presentation will take place. Mayor Charles H. Gaus, of this city, has received word from Commander John A. Rodgers of the *Albany* that the cruiser will be in the Navy Yard at that time, and suggests that the mayor communicate with the Commandant of the Navy Yard, Rear-Admiral A. S. Barker. The cruiser will leave for Europe Feb. 15.



The Wadsworth Watch Case Co., Dayton, Ky., has produced for the Spring the most complete and attractive line it has ever shown. Mr. Walton reports that his eastern trip, from which he has just returned, was one of the best he has ever had, while the western business, in charge of the new Chicago representative, H. E. Jones, is showing large gains.

J. J. SOMMER & CO.



Manufacturing Jewelers

New York Office:
180 Broadway—Samples only.

NORTH ATTLEBORO, MASS.

2-Picture Locket, Front

LARGEST AND MOST SELECT LINE OF

Secret Joint and Catch Bracelets

Made in Solid Gold, 1-10 Gold and Sterling Silver.

"An Equivalent for Value Received" is our motto.

ESTABLISHED 1877.

Connecticut.

Cephas B. Rogers is confined to his home with la grippe.

The R. Wallace & Sons' Mfg. Co. has just purchased 36 acres east of Quinnipiac River and south of the factory.

George C. Edwards, of the Holmes & Edwards Silver Co., has been elected a director of the Hall-Elton Co., Wallingford.

An official of the International Silver Co. recently stated that the letter of the factory just closed at Lyons, N. Y., may be given to the plant of C. Rogers & Bros.

Samuel Hague, Jr., for several years with the Milford Silver Co., committed suicide Jan. 25 at a New Haven hotel. His son in Little Falls, N. Y., took charge of the remains.

Factory "H" of the International Silver Co., Hartford, formerly occupied by the Wm. Rogers Mfg. Co., has been moved from 66 Market St. to the building in the rear, recently vacated by the Barbour Silver Co.

The R. Wallace & Sons' Mfg. Co., Wallingford, has decided to form its own fire brigade. A meeting attended by several of the employes was held Jan. 30, and a chief, three assistants and a captain of the salvage corps were chosen.

George H. Wilcox appeared before the Meriden Board of Relief, Jan. 27, and requested the board to make a further investigation of the Bronze Co.'s plant, and then make the assessment. The board voted to lessen the assessment by $5,000.

A gang of burglars last week entered the store of E. M. Beckwith, Niantic, and escaped with $150 worth of stock, including watches and miscellaneous jewelry. An entrance was gained through the front door by means of chisels, which were secured in a blacksmith shop close by. It is believed that the thieves belong to a gang that operated in Ivoryton a short time ago.

A real gold brick on exhibition in the windows of Hansel, Sloan & Co., Hartford, is attracting a great deal of attention. It is valued at $3,855 and was milled in a mine in Lower California, Republic of Mexico, in 30 minutes from 600 pounds of ore. A hole drilled in one side of the brick indicates the manner in which the Mexican Government collected its 5 per cent. duty, imposed on all gold exportations.

The annual report of the International Silver Co., just filed with the Secretary of State, shows the following outside securities, with number of shares owned by the corporation: Manning, Bowman & Co., 1,045 shares; E. A. Bliss Co., 160; J. D. Bergen Co., 45; C. F. Adams Co., Erie, 40; Standard Silver Co., Ltd., Toronto, Ont., 300; Simpson, Hall, Miller & Co., Ltd., Toronto, Ont., 200; Meriden Britannia Co., Ltd., Hamilton, Ont., 500.

The annual meeting of the stockholders of the New Haven Clock Co. was held recently, and the following directors were elected: Pierce N. Welch, Henry F. English, Walter Camp, George E. Stevens, New York; Frank J. Stevens, London; S. E. Morgan, New York; Arthur Jennings, New York. Mr. Jennings is elected to the vacancy caused by the death of the late Samuel A. Galpin. No action was taken regarding the presidency of the company.

Lancaster, Pa.

J. F. Neill, Jr., representing John Yardley and J. F. Neill, Philadelphia, visited Lancaster Wednesday.

C. F. Reitling, Carlisle, Pa., and H. S. Landis, Frederick, Md., paid a visit to the trade in Lancaster last week.

Heiland, Meisky & Co., dealers in watch materials, supplies, etc., have removed their business from 39 E. Grant St. to the second and third floors of 13½ E. King St., where they have more room and better facilities than ever before.

At a meeting of the stockholders of the Lancaster Silver Plate Co., whose incorporation was noted in THE CIRCULAR-WEEKLY of last week, officers and directors for the ensuing year were elected. The directors are Chas. H. Locher, S. Clay Miller, Robert E. Locher and Augustus Rhoads, and the officers: Albert Rosenstein, H. C. Rhoads and Isidore Rosenthal. The directors have voted to increase the capital stock from $100,000 to $500,000, of which $250,000 shall be in preferred, and $250,000 in common stock. Of the preferred stock, $100,000 is to go into the treasury, to be used for improvements when required. The preferred stock is to pay a 7 per cent. dividend. The business taken over by this corporation was organized in 1889 by A. Rosenstein and M. W. Fraim, and two years after the death of the latter, in 1896, H. C. Rhoads became a partner of Mr. Rosenstein, and the business was conducted by them until the recent incorporation.

Pittsburgh.

P. C. Gillespie, of Gillespie Bros., was in Philadelphia and New York, on business, last week.

Dr. George L. Gibson, of Norfolk, Va., is the new optician and jeweler at B. E. Arons's store.

Mr. and Mrs. B. E. Arons will leave next week for a three weeks' trip through Florida. Before returning home, they may visit Havana.

The pawnshop and fixtures of George Cohen, on Smithfield St., are advertised for sale. Mr. Cohen is one of the oldest pawnbrokers in this city, and has been in the business on Smithfield St. for almost 40 years. He will retire as soon as his business is sold.

Gustave Zahringer, formerly a jeweler on Butler St., this city, died last week, of pneumonia, at his home, in Ford City. Mr. Zahringer was in business here for several years, but for the past four years has been located in Ford City. He was about 39 years old, and was married.

Pittsburgh soon will have more jewelry stores in proportion to its size than almost any other city in the country. It is said that no less than five new establishments will be opened in the Spring. Some of the new proprietors will be men who have been employed here for years past, while one or two others will be newcomers to the city.

John B. Wilson entered suit, Wednesday, against L. K. and C. A. Reider, Allegheny jewelers, for $100 damages. He avers that on Sept. 5 he left a $30 watch with the defendants to he repaired; that he presented the check several times, and could not get it. He says that the defendants finally kept the check and offered him a watch that was not his own, and which he refused to accept.

The Mildred Photo-Monogram Bracelet.

FOR TWO PHOTOGRAPHS.

These bracelets are put up in white satin-lined square boxes and can be had in either all plain, half chased or all chased, in either silver or filled. **Price $2.25.** Of all novelties in bracelets this is the best, and will sell when others have disappeared from the market.

OUR Messrs. **Ed. Cahn, Vic. L. Kurtz, E. J. Levy** and **Tom Leake** take pleasure in notifying their friends that they will call upon them shortly with a line that is not surpassed by any shown on the road. **Watch this space for Ladies' Signet Rings next week.**

Jules Ascheim,

41 Maiden Lane, - - NEW YORK CITY.

A Review of United States Commerce, for the Fiscal Year 1901-2.

WASHINGTON, D. C., Jan. 27.—The foreign commerce of the United States in the fiscal year of 1902 was larger than in any year of its history except 1901. Compared with 1901, there was an increase in the imports of more than $80,000,000, and a decrease in the exports of over $106,000,000, the increase in the imports being due chiefly to the large demand for foreign goods to be used in the manufactures, and the decrease in exports to the shortage of the corn crop.

In the importations there was an increase of $69,333,522 in material imported to be used again in manufacturing; $15,655,898 in manufactured articles ready for use, and $14,919,543 in articles of luxury. The total value of materials imported for use in manufacturing amounted to $328,506,597, and of articles partly manufactured and for use in manufacturing the value was $86,645,277. The total importations of manufacturers material imported is far above that of any preceding year in the history of our commerce and industries.

While manufacturers have increased their importations of materials for use in manufacturing, they have also in many cases increased their exports, very many classes showing a very large increase. The exportations of manufactures since 1899 have averaged over $400,000,000 per annum, being more than twice as much as in any year prior to 1896; four times as much as in any year previous to 1877, and ten times as much as in any year previous to 1867.

For every five years since 1880, the imports of unmanufactured ivory were as follows: In 1880, no quantity stated, but a total value was reported of $1,181,964; in 1885 the value had declined to $692,862 for 8,458,043 pounds; in 1890 the quantity decreased to 5,265,331 pounds, and the value increased to $909,582; reversing conditions again in 1895, when the quantity increased to 8,309,488, and the value decreased to $859,193. In 1900 the quantity imported was 16,389,812 lbs., at $1,049,034; in 1901 it was 13,958,116 lbs., at $1,021,968, and in 1902, while the quantity only increased to 15,137,315 lbs., yet the value was $1,151,836.

Clocks and watches are forming quite an important item in connection with our export trade with Hawaii, Porto Rico, the Philippines, etc. During 1900 the exports under this heading to Porto Rico only amounted to $649; in 1901 they had increased to $2,043, and in 1902 to $5,133. The returns to the Philippines in 1900 were $19,014; in 1901 at $12,659, and in 1902 at $53,457. It is presumable that the same holds true with the Hawaiian Islands, although since 1900, when the value given was $18,527, it has been impossible to secure data, because previous to the year 1902 these figures were given more as a matter of courtesy than necessity, and were not obtainable with any regularity, but hereafter they will be compiled by customs officials, and will be regularly available. The rapid increase in the share which all of these islands are supplying of the tropical imports of the United States, and the increasing value of our products which they take in exchange justifies a more detailed study of the growth of their producing and consuming power, especially in those in which the freedom of exchange with the United States has been sufficiently extended to indicate its effect upon their industries, more so, in fact, than is possible in the present article.

Prior to the year 1875, our exports exceeded our imports in nearly every instance; since that time, in nearly every instance, the reverse has been the case. In imports of jewelry, manufactures of gold and silver, and precious stones, a very marked increase is shown, as, combined, the values every fifth year have been as follows:

1875	$4,299,976
1880	7,174,884
1885	7,202,942
1890	13,744,439
1895	8,074,788
1900	17,783,076
1901	24,216,407
1902	25,990,570

The returns for the past 10 years show that of jewelry and precious stones fluctuated very materially between the years of 1892 and 1897, but since that time there has been a steady increase, evidenced by the following figures, viz.:

1892	$14,069,525
1893	16,931,794
1894	5,909,076
1895	8,074,788
1896	7,835,743
1897	3,559,566
1898	10,388,878
1899	17,650,413

Wrist Bags.

6892¾.

Red Saffian, with laced leather edges and adjustable braided wrist chain.

Our Spring line for 1903 is now ready for inspection.

The collection includes the most fashionable designs with high grade mountings.

SEND FOR ILLUSTRATED CATALOGUE.

1900	17,783,076
1901	24,216,407
1902	25,990,470

During the same 10 years the imports of clocks and watches have been as follows:

1892	$1,930,538
1893	1,997,982
1894	1,200,620
1895	1,319,521
1896	1,623,222
1897	1,566,999
1898	966,422
1899	1,335,982
1900	1,750,551
1901	2,038,239
1902	2,460,324

The exports for similar periods show an almost uninterrupted increase in value, namely, in clocks and watches, as follows:

1892	$1,229,616
1893	1,204,181
1894	1,302,813
1895	1,204,005
1896	1,460,375
1897	1,770,402
1898	1,727,469
1899	1,863,431
1900	1,977,694
1901	2,340,751
1902	2,144,490

In this connection it may he stated that exports of goods manufactured in the United States have increased from $158,000,000 in 1892, to over $400,000,000 in 1902.

A summary of the imports for the years 1900, 1901 and 1902, show the following items:

	1900.	1901.	1902.
Agates, unmanufactured. Free	$635	$975	$1,272
Agates, manufactures of	16,471	17,583	13,545
Alabaster, manufactures of	35,596	24,456	22,823
Art works, production of American artists. Free	344,673	481,102	336,623
Art works, all other	2,264,218	2,823,444	3,179,913
Beads and head ornaments	1,177,670	800,444	919,405
Clocks and parts of	344,440	359,146	458,890
Watches and parts of	1,406,111	1,679,093	2,001,434
Coins, medals and other articles bestowed as trophies or prizes. Free.	92,473	6,379	9,162
Diamond dust. Free	2,256	1,032	2,755
Coral, manufactures of	621,832	788,726	785,649
China, porcelain, parian and hisque, not decorated or ornamented	1,081,685	1,000,896	955,517
Decorated or ornamented	7,176,659	8,063,687	8,309,911
Glass enamel, white, for watch dials. Free	7,883	5,082	7,833
Gold and silver sweepings. Free	43,258	51,208	47,274
Goldbeaters' molds and skins. Free	45,501	37,911	43,582
Ivory, unmanufactured:			
Animal. Free	805,486	842,233	986,347
Vegetable. Free	243,548	179,735	165,489
Manufactures of	49,418	51,794	64,314
Jet, manufactures of	3,097	1,190	2,508
Diamonds, uncut, including miners', glaziers' and engravers,' not set. Free	3,891,226	6,574,630	6,154,853
Diamonds, cut, hut not set	7,890,945	11,680,823	12,732,670
Other precious stones, uncut. Free	51,967	35,303	56,783
Other precious stones, cut, hut not set, including natural pearls	2,403,048	2,134,980	4,403,919
Jewelry and manufactures of gold and silver	3,545,890	3,790,671	2,642,345
Pearl, mother of, not manufactured. Free	.....	335,377	831,172
Unmanufactured shells. Free	1,019,731	552,942	633,723
Manufactured shells	87,934	95,143	104,289

These imports have been subdivided in various ways, for instance: First, as to magnitude of duty collected, and under this heading diamonds, not set, stand 18th; in 1901 the value of the imports under this head was $11,611,240.87, on which the duty at 10 per cent. amounted to $1,161,124.09. In 1902 the value was $12,737,-050.02, and the duty, $1,273,705. Of all other jewelry and precious stones the value in 1901 was $4,878,747.64, and the duty paid on same amounted to $981,607.87, and in 1902 to $6,322,430.79, and the duty to $1,218,989.60, an average ad valorem duty of 19.28 per cent. as against 20.12 per cent. in 1901. Clocks and watches and parts of same stood 30th on the list. In 1901 the value was $2,010,646.78, on which the duty paid amounted to $722,685.89, or an average of 35.94 per centum ad valorem; in 1902 the value was reported as $2,443,919.31, duty paid amounted to $833,542.54, or an average ad valorem rate of 34.11 per cent.

Under the heading of articles wholly or partly manufactured and free of duty are reported glass enamel for dials, with a value of $7,869, as against $5,082 in 1901; under the heading of glass plates or disks, rough and unpolished, there was an import value in 1901 of $137,633, increasing in 1902 to $195,709.

Under the same classification, hut dutiahle, we find that the importations of gold and silver leaf in 1901 amounted to $2,78[illegible] on which the duty paid amounted to $1,119.10, or 40.13 per cent. average ad valorem. In 1902 the value is reported as heing $7,088, the duty paid amounted to $3,179, or 44.85 per cent. Under the same classification we also find that the importations of polishing and finishing powders of all kinds made a remarkable jump from $6,649, on which the duty was $1,329.80 in 1901, to $31,585, and duty paid of $6,317.11 in 1902.

Among the manufactured articles ready for consumption and free of duty we find that the importations of glaziers' and engravers' diamonds have increased from $4,071 in 1901, to $10,757 in 1902; goldheaters' molds and skins showed an increase from $38,556 to $43,577. Under this heading we find that the imports of finished clocks and watches increased from a value of $2,010,-646.78, in 1901, on which the duty amounted to $722,685.29, an average ad valorem rate of 35.94 per cent., to that of $2,443,919.31 in 1902, with a duty paid of $833,542.54, or 34.11 per cent. The special values for lenses and spectacles cannot he given, as these are included in a very large class of "Glass ware," and it would be impossihle to determine what share of the total helonged to spectacles. The manufactures of onyx show an increased import value from $4,136.95, with duty amounting to $2,068.48, in 1901, to $10,100.87, with duty at $5,050.44, in 1902.

(To be continued.)

Frank S. Shaw has established himself in business in Allison, Ia.

The friends of George W. Lane, a jeweler of Lewiston, Me., who mysteriously disappeared a short time ago, are daily growing more solicitous as to his whereabouts. He left home telling his children that he would return in a few minutes, and has not been seen by his friends or family since.

The German Jewelry Trade.*

By W. AUGUSTUS STEWARD.

Chief Instructor in Gold and Silverworking at the Central School of Arts and Crafts, London.

(*Continued from issue of Dec.* 31, 1902.)

THERE are 700 firms engaged in the gold and silver trade of Pforzheim, and over 18,000 men and women are employed. Indeed, Pforzheim is the chief manufacturing town of Germany for this class of goods. There are 43,097 inhabitants living in the town, so that it will be seen that a very considerable proportion of the residents are engaged in the industry. More than 400 of the factories use electricity for both motive power and lighting their establishments, and about 80 utilize steam, while a few use petroleum. It is noteworthy that, while there are over 150 wholesale dealers, only three retail jewelers carry on business in the town. It will be interesting to both British and American readers to learn that in some respects Pforzheim is known in foreign countries much better than in its own neighborhood, for a Parliamentary official in discussing the budget recently stated that Pforzheim was in San Francisco.

MAIN WORKSHOP OF J. F. GLEBE'S FACTORY.

The time which saw the birth of the jewelry industry in Pforzheim also witnessed the starting of the industry in Birmingham, and it is interesting to recall that the British center of the jewelry trade wherein the bulk of the cheaper classes of jewelry are produced (and in these latter days also some of the best) was once part of the lovely forest of Arden immortalized by Shakespeare, who is as much revered in Germany as in England, and that Pforzheim is at the mouth of the Black Forest, one of the most romantic and beautiful districts in Europe. But, whereas Birmingham has its hundreds of chimneys emitting a continuous black smoke, and its air tainted with sulphurous fumes, Pforzheim is still a comparatively quiet, healthy town; so pure indeed is its air that handsome roses grow in profusion outside the factory and workshop doors, while all kinds of fruit grow and ripen easily on the green stemmed trees.

Whether Pforzheim, with its increasing number of large factories, will swallow up the gardens and with hundreds of tall chimneys polluting the atmosphere, become in all verity the Birmingham of Germany, remains to be seen, but as one crosses Germany one realizes to the full that she is, economically speaking, a young country, and that every effort is being made to develop her industries and establish new ones wherever possible. The crowded state of Birmingham and its smoky atmosphere is not, however, due to the jewelers or silversmiths' factories, but to the brass, "toy," iron and gun works, for is it not, so to speak, at the mouth of the black country?

FACTORY BUILDING OF J. F. GLEBE.

I presume the reason why Pforzheim has been called the Birmingham of Germany is due to the fact that its manufacturers set themselves to produce the same classes of jewelry as British manufacturers, but, as my remarks will show, in all other respects the British Birmingham does not compare with the "Birmingham of Germany." Its location, its healthy atmosphere, and, above all, its methods, are as different from those in vogue in England as could possibly be, and mayhap the difference, albeit against the British manufacturer, is largely due to the fact that Great Britain is an old industrial country and is resting on its laurels; but the clarion cry of the Prince of Wales, "Wake up, England!" must be heeded, else the pioneers will be ousted by the newer generation of industrials.

As I have previously stated, there are still the small workshops of Pforzheim* competing not only with the larger producers in Germany, but with English and even American producers; it is, doubtless, due in some measure to economic factors that Birmingham cannot boast of such handsome establishments in any sense of the word, but that cannot be the excuse for the want of such a complete and far-reaching system of organization as prevails in the modern German workshops.

FACTORY OF ANDREAS DAUB.

The leading Pforzheim manufacturers have indeed modeled and builded splendid establishments, but it is not always handsomely arranged bricks and mortar or well ventilated buildings that enable fortunes to be made. The main reason why the German is successful is undoubtedly due to the perfect system that prevails, for the German manufacturer, after studying how best to keep his workpeople healthy and what is the best machinery to use, sets himself to work to organize and personally superintend the carrying on of the business in which he is interested, and so it comes about that, while in Great Britain and indeed in America as well, large office staffs are engaged, the German manages, very ably, to run his factory with the minimum of employes in the Bureau and the maximum in the workshop. It is no uncommon thing to find a German business in which 400 or 500 people are engaged being conducted with an office staff of 10 or 12, including the employer. Incredible as this may seem to some, the fact nevertheless remains and must be realized by other manufacturers. The result of such economy must be at once apparent to the business man, and is indeed one of the reasons why, coupled with a quiet and far-reaching system, the German manages to compete so thoroughly.

MAIN WORKSHOP OF ANDREAS DAUB'S FACTORY.

Privileged to inspect not only the workshops in which such men as Wilhelm Stöffler, Theo. Fahrner and others pursue their calling without the aid of complicated mechanical devices, but also the finest and most up-to-date factories, and assisted in my investigations by those who exhibited a friendliness which would surprise many Englishmen who had not worked with sons of the Fatherland, I could appreciate and understand that these modern establishments are run in such an excellent manner that they repay their owners very well, as the handsome dividend of 15 per cent. which Rothman & Jourdan paid last year demonstrated. This firm, which is a limited liability company, has built one of the most handsome and well-ventilated buildings in Pforzheim. It is covered, externally and internally, with green and white glazed bricks, so that cleanliness is ensured. It faces a sidewalk of grass bordered with trees, and has some garden land of its own, so that the effect of colored tiles and the surrounding foliage is very pleasant.

As showing the exceedingly forward manner in which the German manufacturers act, I would state that, while the best machinery obtainable is used, that required for the manufacture of chains is also made upon the premises, while in order that the different departments may be kept in touch with one another, there is a central telephone station with 18 connections in the different departments.

(To be Continued.)

*Copyright, 1902, by The Jewelers' Circular Pub. Co. All rights in Great Britain reserved by the author.

*About 300 women and 900 men work in their homes. In Birmingham the outworker is still an important factor in production, but in the London jewelry industry the number of outworkers or garret masters is comparatively small.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

SOME POINTS OF EXCELLENCE in Harrison Umbrellas, gained by 25 years of careful study of the details so essential in making an umbrella adapted to the wants of the Jewelry trade:

Exclusive Designs in Handles. Quality of Silks.
Perfection of Finish in Handles. Finest Tempered English Frames.
Compactness in Roll. Strength of Construction.

Harrison's Gold Head Walking Sticks have stood the test for more than a quarter of a century. They comprise all the Standard Shapes and are made of twenty-year 14k. Filled Gold and of twenty-year 14k. Filled Gold with 14k. Solid Gold tops, ends and name plates. Also a line of Solid Gold Heads.

The only Umbrella and Walking Stick Manufacturer in the United States not selling to the Dry Goods and Department Stores.

W. W. HARRISON, 405 Broadway, New York.

"Modeled by Photography."

We can probably be of material service to you in making models for silverware, novelties, etc. Models in plaster or metal from photographs, pen and ink sketches, wash drawings or from originals. Any size and VARIOUS SIZES FROM ONE ORIGINAL DESIGN.

Formerly PLASTIC MFG. CO.,

213 - 217 East 24th Street, - NEW YORK.

The Pearl in the Ages.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from *Le Diamant.*)

PEARLS were used for adornment in the earliest historic times. The Orientals styled them drops of hardened dew. Pliny also attributes their growth to the dew. A pleasant legend of India ascribes the discovery of the pearl to the god Vishnu, who drew it from the depths of the ocean to adorn his daughter, Pandaia.

The Indians imitated their goddess. The rajahs employed pearls in profusion for their vestments, their arms and their furniture. Some continue to do so. Throughout the East a necklace of pearls was an indispensable adjunct to the royal dignity. The sacred books of India speak of pearls as even covering the elephant.

In 1633 a shah of Persia bought of Tavernier, at the price of 2,700,000 francs, a pearl that the latter had purchased of an Arab at Cutifa. Tavernier has recorded curious incidents of his travels in the East, and he had reason for his amazement at the magnificence displayed. The rich and the poor alike wore earrings of pearls.

The throne of Aurangzeb was decked with incomparable profusion. The canopy of costly fabric was covered with pearls and bordered with a fringe of the same precious stones. It was surrounded from the base to the summit with rows of pearls of the first water, and surmounted with a royal peacock with outstretched tail; the body of the bird was of gold decked with jewels; to its breast was attached a ruby, from which was suspended a pearl of 50 karats; the tail, spread out as an immense fan, was incrusted with sapphires, rubies and emeralds. On each side of the throne was a parasol of red velvet embroidered and fringed with pearls, the handle of which was decorated with various precious stones, principally pearls, rubies and diamonds, and was nearly two meters in length.

One of the most admired pearls belonged to the Imdur of Muscat; its value was estimated at 800,000 francs. Tavernier had the opportunity of admiring it at an entertainment given by the Khan of Ormus to the Arabian prince, to which several Europeans were invited. After the repast the prince took the gem from a purse and exhibited it to the company. It excited astonishment from its clearness and transparency. It soon became famous throughout the Orient. The Grand Mogul had a passionate desire to obtain it, but the prince would not part with it.

In China pearls were regarded as sacred. The oldest Chinese dictionary, the Urlja, composed 10 centuries before our era, speaks of pearls as serving for adornment and as amulets against fire. At a date still more remote they were employed for the liquidation of tributes and imposts. In our own times the inhabitants of the Celestial Empire ascribe to them medical virtues.

The Bible mentions pearls from the highest antiquity. In the Book of Job and the Proverbs of Solomon there are delicate allusions to them. The Babylonians, the Medes and the Egyptians held them in high esteem. The hall in which Ahasuerus met his audiences had hangings of pearls for its principal ornament. The story of Cleopatra is known to all.

The Phœnicians, who had the monopoly of the Mediterranean commerce, introduced the pearls of India to all the peoples dwelling on the isles and borders of that sea. The Greeks had a passionate taste for them, lavished vast sums to procure those that were rare, and made use of them for necklaces, bracelets, ear pendants and other esteemed ornaments. Suidas, the Greek author, says: "The pearl is one of the greatest delights that Love has; the charm of its possession affords him nourishment." Philostratus painted his Loves with baskets of fruit garnished with a profusion of pearls. At Athens the young men wore a pearl in the right ear and the maidens wore them in both ears.

The Romans prized them so highly that they classed them among fixtures to be transferred without legal form and according to their pleasure to their descendants. Julius Cæsar did not fear to pay 1,200,000 francs for a single pearl, which he presented to Servilia, mother of Brutus Pompey brought from the palace of Mithridates a prodigious quantity of pearls. He had his cabinet completely tapestried with them; he enriched the temple of Venus and presented some to Jupiter, who was enthroned on the summit of the capital. At his second triumph his figure and garlands were covered with pearls, causing Pliny to exclaim, "this kind of display is not becoming to a great general."

The Empress Lollia Paulina, wife of Caligula, wore in a single adornment more than 8,000,000 of pearls and emeralds. Her hair, her ears, her arms and her fingers were loaded with them, besides three necklaces, according to the fashion of the Roman ladies—the *monile,* the *dilinum* and the *triinum*—the first composed of pearls only, the second and third having green and blue stones intermixed with large pearls.

Most of the precious stones possessed by the ancients were buried in their tombs; a small portion only fell into the hands of the barbarians. The former luxury, however, reappeared in the time of Charlemagne; the women then wore at the neck and ears not necklaces and pendants, but massive circlets and rings incrusted with pearls and precious stones. They mingled pearls with their tresses and put them on the fillets with which they surrounded the head. The crowns of emperors and kings were loaded with them.

The Hungarian crown of St. Stephen one of the most ancient in existence, is not less celebrated for its pearls than for its antiquity. When Charles the Bold attended the Diet of Treves in 1473 he wore a coat covered with these jewels.

Philip II., King of Spain, exhibited an unsurpassed magnificence in his devotions. Of the pearls presented to him each year he reserved the most splendid for the divine service. All the white of a vestment of Notre Dame of Guadeloupe was composed of pearls, the red of rubies and the green of emeralds; from this may be inferred how great the quantity consecrated to religious purposes. The sovereign of the Indies manifested at times a unique taste; thus, he presented to his wife, Elizabeth of France, a salad in which the salt was represented by pearls, the vinegar by rubies, the oil by topazes and the leaves by large emeralds. It was he who bought, in 1579, the historic pearl called *The Peregrina,* "the incomparable," which weighed 134 karats; it came from Panama, was of the size of a pigeon's egg, and estimated in value at more than 50,000 ducats.*

Another celebrated pearl is the one purchased by Philip IV., King of Spain, of the form of a pear, perfectly regular in shape and very beautiful in tint, weighing 126 karats. It was brought from the Indies by Francis Gorgibus de Calais, who presented it to the king, when the sovereign inquired: "Why did you venture to put your whole fortune into so small an object?" "I knew there is a King of Spain who would buy it of me," was the response of the merchant. Philip IV. paid him 80,000 ducats; the like could not be found, and it was worn as a button in his chapeau. To-day it is the companion of the "polar star" in the caskets of Princess Yousoupof.

Christian IV., King of Denmark, who created a company of the Indies for the commerce in pearls, had in his treasury at the castle of Rosenborg, at Copenhagen, five crowns studded with pearls, 45 large medallions ornamented with pearls, and 15 necklaces formed of large pearls.

The Indian Sea, the Persian Gulf and the Red Sea did not suffice for such a demand and new sources came to light. On the discovery of America harvests of pearls fell into the hands of the Spaniards. Christopher Columbus found on the shores of the Gulf of Paria Indians wearing bracelets of pearls, who showed him the shellfish from which they obtained them. His crew were able to exchange some article of slight value for all the pearl necklaces they desired. Columbus himself procured some that were splendid as a present for Queen Isabella.

But at Peru the most ancient laws confined the luxury of pearls to persons of royal blood. At Mexico the interior of the temple where King Montezuma went for prayer at night was covered with plates of gold, profusely decorated with pearls.

The conquest of Florida was attended with the dazzling discovery of the Temple of Tolomeco. Garlands of pearls hung from the summit of the edifice to the ground; inside similar garlands were suspended from the roof; along the walls stood statues of warriors covered with pearls, and in the middle of the temple were three rows of large vessels filled with pearls displayed in pyramids. Whence came these treasures, more wonderful than the imaginings of "the Thousand and One Nights?" In those countries pearls were reserved for the dead exclusively, and the temple enclosed the burial place of the chiefs of the land; the precious ornaments had accumulated there for ages unknown. The whole fell a prey to the conquerors.

In France, the pearl was very much in vogue in the reigns of Louis XIII. and Louis XIV. Among the jewels of the crown of France were 1,000,000 pearls forming the most unique collection in the world.

*It is now in the Zosima Museum at Moscow.

Turquoise inlaid in dark tortoise shell make very smart hair ornaments.

BERGEN CUT GLASS

The holiday rush is over, but the demand for cut glass has never been so great as now. The demand for

POPULAR-PRICED

BERGEN CUT GLASS

has been and is unprecedented, yet by keeping our factory under pressure, we always maintain our line complete. We are thus in the unique position of being able at all times to fill rush orders promptly.

There is no glass made that combines high quality and originality of designs with popular prices as does

BERGEN CUT GLASS.

All our customers realize this fact. If you do not know our glass, send us a trial order and you will appreciate why it is so popular with the trade and the consumer. Our salesmen are out now with new goods. Whether they get around to you or not you should have a copy of **OUR CATALOGUE**—the one with the red cover—

(if you haven't received one already). It will be cheerfully sent to any responsible dealer on request. It contains fine half-tone reproductions of the goods. It is much better than the regulation cut glass catalogue, which too often conveys an entirely different impression of what the goods really are. You can readily make sales from this catalogue whenever you don't happen to have particular pieces in stock.

The J. D. Bergen Co. CUT BERGEN GLASS

Factory—Meriden, Conn.

38 Murray Street, NEW YORK.

Electrotypes furnished free for newspaper ads.

Making Spoons.

F. Candor in the *American Machinist.*

THIS is to describe the making of a common spoon. Most graded and stamped spoons are made of german silver, which is a stiff, strong metal for these articles. First, we order our sheet stock from the rolling mills to the correct sizes needed for each size of spoon to be made. The width, thickness and length being determined by previous experience, gives us the stock ready for the blank chopping press, this being the first press operation. The cutting of these first blanks is one of the most interesting operations, as they are cut without any waste, cutting two blanks at each stroke of the press, while only one cutting die and punch are used. A shearing off cutter is attached to this die, which makes a parting cut at the proper distance from the die to make a second blank. Fig. 1 will show this blank chopping process. *A* gives the shape of the chopping die and *B* the location of the parting shear at the lower end of this die. The small strip of metal *D* is all the waste there is at each end of the long strips. *C* shows where the parting cut comes as the strip is moved forward for the succeeding cups. The dies are of course fitted with proper gages, strippers and necessary means for quickly handling this work.

Having finished the first operation of blank chopping, we leave the press work for a while and go to the cross grade rolling mills, which prepare the stock for what is termed "grading." By this it is meant that the blanks will be stretched to the proper length, as they are only about one-half long enough for the finished spoon and of an even thickness when first cut. We cross-roll both the bowl and handle ends of these blanks, this usually being done one end at a time, but sometimes spoon blanks are of such a shape that both ends can be rolled at the same pass. Our process will be with one end at a time. We first cross roll the part making the bowl. Fig. 2 shows the shape the blank takes in this rolling. The third operation will be that of cross rolling the end which makes the handle, giving the blanks the shape as in Fig. 3. We now have both ends of the blank cross rolled, giving them nearly the proper thickness for the first grading or lengthening process.

The next handling is the first pass of grade rolling, which gives the metal the first stretching operation (see Fig. 4). After this operation the blanks receive their first annealing. Then they are pickled and cleaned and made ready for their final rolling, which stretches them to their required length, giving the various parts their proper thickness. This last rolling leaves the stock as in Fig. 5.

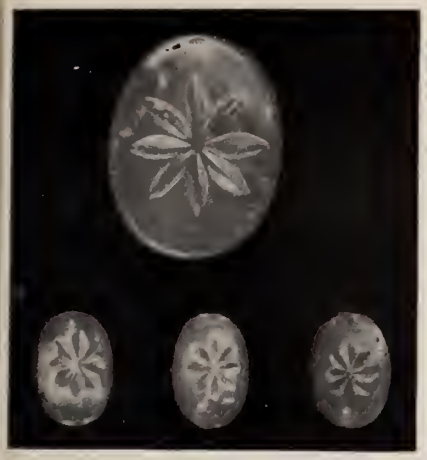
American Machinist

Now we come again to the power press, the blanks having been again annealed and ready for clipping or trimming to shape. This is done by dies and punches. Fig. 6 shows the spoon and the waste around the clipped shape.

This trimmed, spoon shaped blank is next taken to the buffing wheel, where it is made smooth and free from the trimming cutter burrs, or other roughness caused by handling, as a very clean surface is required for the next operation, which is called "stemming." That is the stamping of the handle part only. From the graded blanks, Fig. 5, many different shapes or styles are cut or clipped, and various patterns are stamped on to the handle, that being one of the reasons why the entire spoon is not stamped, bowl and all, in one die. Some designs are made in one blow of the stamping hammer, but they should be very plain. Where the handle stamping is done in a separate die a single bowl stamping die may be used on a great many different stamped handle designs. In this way many expensive dies are saved and still a great variety of spoons may be made. Our spoon now looks like Fig. 7.

The spoon, as we will now call it, is again taken to the polisher, who, with a rather rough wheel, "fins" the edges, or cuts off the roughness caused by the stamping dies. The expert polisher can polish this fin away, leaving the article very smooth.

After this polishing, we take these stamped spoon handles to a small bench foot press which has a suitable set of handle end shaping dies in it. With these the proper end form is given this handle, more for the convenience of the bowling operation than for any other reason. By this means the stamped design on the handle can always be placed into the bowling die the right way up. Were it not for this end shaping which acts as a guide for the stamper many spoons would be stamped the wrong way about, spoiling them.



Now we have the spoon ready for bowling; this is done in a drop hammer. This tool stamping also gives the stem a partial shape which is shown in Fig. 9.

The spoons are now ready for their final polishing and buffing, which is a trade in itself, requiring a great deal of skilled labor, as no hand filing or finishing is done on the german silver goods as usually made. After this last polishing the spoons are placed in a shaping die, which is often made of hard wood (sometimes copper faced), having the exact shape of the finished spoon. * * *

Fig. 10 shows the finished shape of a teaspoon. The next operation is that of stamping the trade-mark or maker's name or branding them with such marks as may be customary for the many different patterns or styles. After this the spoons are ready for silver plating, burnishing, inspecting and packing.

German silver forks are made practically in the same manner as the spoons, only instead of bowl stamping we have what is called the tining operation—that is, cutting the tines into the end of the clipped blanks, as shown in Fig. 11. This fork tining is usually done in a special press for this purpose, which cuts the tines one at a time, cutting the center one first, automatically working the three cuts and then stopping. This is a very ingenious device for the purpose, doing the work with great accuracy and rapidity. The ends of the tines are left tied, to prevent their spreading while the stamping is being done. It also prevents the points of the tines (which would be sharp were it not for this front tie piece) from piercing the operators' hands or tearing the polishing belts. The end tie piece is cut off just before the last tine polishing is done. A small foot press is generally used for this purpose. Sometimes when forks are of a plain pattern they are stamped in a heavy drop, both the handle and tines in one die, with one drop blow (see Fig. 12).

The shapes shown are as they actually appear when taken from the dies in which they are cut or stamped. Sterling silver spoons and forks are made in much the same way, only that more hand work is applied to them; there are several more stamping and trimming operations as well as a great deal of hand filing.

MANUFACTURING JEWELERS, ATTLEBORO, MASS.

A Watchmaker's Romance.

SOME REFLECTIONS OF INTEREST TO JEWELERS IN THE FORM OF A TALE, BY JOHN GRAHAM.

AT dusk, Max Rosenthal put aside the tiny wheels, skeletons of watches, and the tools that littered his work-bench; resting his arms upon it, he watched the passersby, noting that every woman and almost every man paused before the brilliantly lighted window of The Chase Jewelry Co., on the opposite side of the street. Many entered the store, which was at the end of a recently erected business block. Tawdry enough it was with its shingled minarets and wooden scroll work, yet the luster of its blistery paint made the brown cottage where the watchmaker lived and worked appear duller than ever.

Max was an unambitious man, who, after learning his trade, had settled down in his native place. When a few months later his mother's death released the tie that bound him there, he stayed on rather than seek a new and wider field, and by reason of his intelligent and conscientious workmanship, his honest dealing, more than because he was the only jeweler in the town, he had easily made a comfortable living until the new store spoiled his trade.

Even an unaspiring man may not enjoy being driven to the wall, but Max Rosenthal's reflections, there in the empty shop at the close of a dreary November day, were embittered by still another fact. The Chase Jewelry Co. was a woman.

Aroused at last from his reverie to the consciousness that it was long past his usual closing hour, he struck a match to light a single flaring jet, and began to put things away for the night. He had never found it necessary to keep his shop open in the evening, preferring to devote that time to his trade papers and scientific journals. Now, however, either because those things had lost their power to draw him from the dingy scene of his daily labor to the warmth and brightness of his sitting-room, or because observation of his competitor's brisk trade proved more alluring, he lingered over his task, even after the sleek young clerk over the way had turned out the light and drawn down the shades. A few minutes later, Max saw him step out into the street, waiting somewhat impatiently until a slender, cloaked figure came out, locked the door and handed him the key. When she disappeared around the corner, the watchmaker went into his back room, and throwing himself into an easy-chair before the fire, divided his attention between his meerschaum, the beer on the table at his elbow, and an article on escapements in a late publication.

The first snow of the season fell that night, so that Max was out early the next morning to clear off his walk. As he raised a shovelful to fling it into the road, he saw that Miss Chase was draping her window for a new display. Presently she met the mild glance of the big, round-shouldered watchmaker and nodded to him with a smile. His look of surprise changed quickly to one of abashment, while he made her a conspicuously awkward bow at which she blushed and resolved to keep her eyes upon her work thereafter.

At the work-bench, Rosenthal's attention still wandered. Every other moment he glanced up to find some one staring at the opposite window, nor was he astonished that so many should be attracted by the arrangement, which was appropriate to Thanksgiving, even though he never thought of doing more than place a piece or two of silverware, or a few watches within his own dusty, threadbare show case.

"YOU!" SHE EXCLAIMED, AND THEN STOOD MOTIONLESS.

The jangle of the door bell summoned him reluctantly from his point of observation in the screened-off corner to be greeted jovially by an old man standing near the counter.

"My watch stopped yesterday, and I want you to look at it," he continued, drawing a large, old-fashioned timepiece from a capacious vest pocket.

"Cold morning," commented Rosenthal, opening the case and peering in at the works.

"Yes, 'tis. We had quite a fall last night for so early in the season," turning as he spoke to lean his arm on the show case. "Looks like an enterprisin' place 'cross the way."

"Very," assented the watchmaker, absently, busy with his examination.

"My daughter can talk of nothing 'cept the bargain she got there yesterday. I told her she might buy her "gew gaws" there if she liked, but I wanted to be sure I got the worth o' my money."

"Thank you, Mr. Cummings."

"They haven't got a watchmaker, any way, have they?"

"No, I think they are only jewelers, and do no repair work."

"Well? Can you fix it?"

"Yes. I'll have it done in a couple of days."

"All right. I'll stop in, or send one of the boys for it. Good morning."

"Good morning," said Rosenthal, already turned toward his bench.

There were fewer interruptions as the days went on, but his interest in The Chase Jewelry Co. overcame his regret. Besides, his sober judgment bade him rely upon the soundness of his reputation to weather this storm of competition, and a study of the methods of the new concern convinced him that their success would be more or less ephemeral. He told himself it was well to become versed in up-to-date merchandising, yet it was the proprietor, more than the business that engaged his thoughts.

One day she came out of the store, and, raising her neat cloth skirt above her trim ankles, picked her way across the slushy road. Entering the shop without hesitation, and closing the door quietly behind her, she walked directly up to the counter.

"Mr. Rosenthal?"

The watchmaker nodded.

"A customer of mine bought this watch yesterday, and in winding it broke the mainspring. It is to be used for a birthday present to-morrow, so there is no time to send it to the factory. Can you put in another spring?"

"Certainly."

"Then will you do so at once and send it over?"

"Yes."

"Thank you. Make out the bill to The Chase Jewelry Co., please. Good day."

She walked as briskly as she talked, yet without appearance of undue haste.

The work finished, Max slipped on his best coat, and carried it over the way. It was early in the afternoon; no one was in the store except Jimmie Riggs, the clerk.

"How do, Mr. Rosenthal. Miss Chase," he called, turning toward the private office, partially screened from the public gaze by fretwork and portieres.

Max walked the length of the store toward her, as Miss Chase rose to stand by her desk awaiting him.

"I think that will be all right now," he said, putting the small box in her hand. "But you can never count on a mainspring. They may run for years or break in a week."

"Is that so. Then do you charge your customer, Mr. Rosenthal, for replacing a spring that breaks soon after you sell the watch?"

"Not as a rule."

"But why should the loss be yours when the watch is out of your possession?" she asked, laying the box on the top of her desk and turning again to Max.

"It should not be, I suppose, by rights, yet it is hardly worth while, since few people can be made to understand the utter unreliability of springs, to lose a good customer for a comparatively small sum."

"I suppose one has to take that into consideration, but I do not intend to be imposed upon by my customers. When I do them a favor I expect something tangible in return," she answered, smiling, and the brightness of the Winter day shining through a side door fell upon her flashing face.

"Take care of that pedestal," she warned, as Max turned to go. Coming out of the office, she continued the conversation as they walked toward the door.

Two girls, debating the merits of some belt buckles, presided over by the complaisant Riggs, turned sheepishly away when they saw the watchmaker, to giggle and nudge each other after he had passed, but he failed to recognize them.

Much work found its way across the street during the busy season before the holidays, and once or twice Max met Miss Chase in the course of his Sunday ramble. The second time was out beyond Spirit Lake. They walked back together, lingering to watch the skaters until the sinking sun threw long, purple shadows over the snow, and turned the ice patches to opalescent green. They paused again when a flock of snow buntings swung downward in a field nearby, to laugh at them running over the crusted snow from one clump of brown weeds to another.

"Like women in a bargain store," Miss Chase said.

The next week's *Beacon* contained the announcement that The Chase Jewelry Co. had engaged the services of an expert watchmaker from Minneapolis, and an attractive advertisement in the same issue confirmed the information. The new man was a small, wizen-faced Russian, whom Max distrusted at first sight. His advent put an end to the intercourse between the two stores, while the rush of Christmas trade left Miss Chase too languid for her usual walk.

Christmas came on Sunday that year, and the day before was an uncommonly busy one. The farmers coming into market brought their wives and daughters along, and the mill people took that opportunity to spend a week's wages. When, after 10 o'clock, Miss Chase put the proceeds of the best day's business she had ever done in the safe, she was almost too tired to close its heavy door. Jimmie was making short work of putting out the lights and shutting up. All of the watchmaker Isaac Stein, except his nose, had disappeared within his great coat and shuffled away some time before.

Late as it was Max did not go to bed until long after Miss Chase had gone home, yet even then he found himself restless and wakeful. Toward morning he dropped into a light doze, to dream she was being married. The vaulted nave in which he stood was cold and gloomy, but far away on the altar the candles were burning with a golden gleam that fell over the bride's white gown. He struggled to cry out, and in so doing woke up.

Sitting up in bed, shivering with cold, sick at heart, too, as an effect of the dream, he could not believe he was even then awake. At the end of a long vista, similar to that he had seen in his dream, two men, their backs toward him, were bending down in front of an open safe. He gazed about in bewilderment. In the dim light of a waning moon he took account of the bare walls of his room, the deal washstand and the plain chairs; nearer the window was an old-fashioned chest of draws that had belonged to his mother, and above it a mirror in a tarnished gilt frame. Reflected in this were two men, their backs toward him, in the act of robbing the safe of The Chase Jewelry Co.

Max bounded out of bed, and scrambled into his clothes. Catching up his revolver, he rushed down stairs and across the road, but when he reached the opposite side he paused irresolutely. The store was dark; apparently undisturbed. He tried the door over which Riggs had neglected to pull the blind. It was locked. He peered into the dusky interior, wondering if it was all a dream.

Dissatisfied, notwithstanding the peaceful aspect, he walked round to the side door. There, too, all was quiet and obviously in order until he laid his hand upon the latch. The door opened at his touch. Entering cautiously, he glared into the darkness. He listened, but heard no sound. Then he struck a match and examined the safe. It was securely fastened; nor could he find marks of violence on its black polished surface, nor evidence that it had been forcibly opened, though he emptied his match-box in the endeavor. So intent was he that he failed to hear the woman who came in through the door he had left ajar, until he was startled by her exclamation:

"You!"

For a long moment they were motionless; Max kneeling before the safe, and Hilda Chase standing over him, a small lantern upheld in her right hand. Some one fumbled at the front door, a key creaked in the lock, and before Max could get upon his feet, or open his lips to explain, Jimmie Riggs rushed in. Not the dapper young man whose attire and manners won the approval of all the girls, the envy of all his fellows, but a hatless, coatless, disheveled Jimmie.

"I got 'em, Miss Chase," he cried. "At least, Brady, the sheriff, nabbed 'em down by the bridge, and I helped him. It was that "Iky" Stein and a pal of his just as he thought 'twould be when he told you to make it easy for them. They're wanted, too, for another little affair in Duluth. Oh, they're a precious pair, they are."

Then it dawned upon him that there was something unusual in the attitude and expression of the two people before him, and with a hasty word of excuse he bolted.

* * * * * *

"Yes," said Hilda, a few weeks later when she and Max were discussing the matter of life and business partnership, "it would be better to have a watchmaker who had a personal interest in the business, so—yes, I will."

So the name was changed to Max Rosenthal & Co.

Pennsylvania Jeweler's Souvenirs of the Time When Jewelers Pulled Teeth.

W. Edward Koch, York, Pa., has presented the York County Historical Society with two specimens of turnkey tooth-pullers,one used for extracting molars and the other for extracting incisors. He also gave the instruments used in digging out the roots. These old tools were used by his grandfather, Dr. Francis Koch, who practiced medicine in this section from 1820 to 1861. The medicine case and drawers, which were used so many years, are now in Mr. Koch's store.

In the early days many jewelers pulled their patrons' troublesome teeth with these "turnkeys," which was a tool about six inches in length, with a handle like a gimlet in which was placed a steel rod and a clasp at its end. This revolving clasp was placed around the tooth and a cloth wrapped around it, resting on the jaw as a fulcrum. The tooth was then pulled with the turnkey as a lever. If the tooth broke off this instrument could not be utilized in extracting the root, and, as anæsthetics were unknown in early days, a snag often remained in the mouth. An instrument was made later that would dig into the broken root and take it out in small pieces.

The Clock as an Advertising Medium.

Robert Wiesenfeld, Baltimore, Md., is exhibiting an ingenious and interesting advertising device, consisting of an electrically illuminated revolving clock, with a cigar lighter, weather report, railroad time-tables, and street indicator as variations.

The body of the device is an illuminated advertising billboard with four sides, which revolve with the clock, giving each side, with its separate "ad," a chance to be seen. The device creates considerable interest as it is borne through the city. Similar clocks will be installed here, and Mr. Wiesenfeld intends to introduce it in New York.

Another utility for the clock as an advertising medium is seen about the city in the shape of large clocks with a long metal base resting on the pavements. The metal base is olive green, and is covered with "ads" in gilded lettering.

The Latest Patents.

ISSUE ON JAN. 13, 1903. (CONTINUED.)

718,369. DUST-CAP FOR BALANCE-ESCAPEMENTS. PAUL MOOSMANN, Brooklyn, N. Y. Filed May 22, 1901. Renewed May 16, 1902. Serial No. 107,566. (No model.)

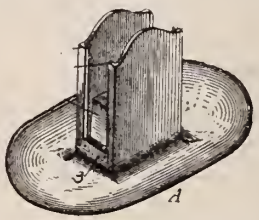
The combination, with a balance-escapement, of a dust-cap for the same, consisting of a cap having an arc-shaped slot, a plate pivoted to said cap and closing said slot, pins projecting from said plate and extending through said slot into engagement with the regulator-arm of the escapement, said plate extending at each side of said pins for a distance equal to the full length of said slot, a balance-wheel and regulator-arm pivoted in the same central line with said plate, a graduated scale, and an operating-lever connected with said plate and movable over said scale.

ISSUE OF JAN. 27, 1903.

718,969. HOLDER FOR POLISH OR OTHER SUBSTANCES. HENRY ALTSHUL, New York, N. Y. Filed March 3, 1902. Serial No. 96,410. (No model.)

A bolder comprising a receptacle open at its top and bottom, an annular rib arranged in said receptacle adjacent to its top, a follower arranged within said receptacle, a flexible, perforated covering disposed over the top of said receptacle, a removable-band arranged upon said receptacle adjacent to its top adapted to inclose the edges of the perforated covering and hold tbe same in position upon said receptacle.

719,064. HAT-FASTENER. JULES UHRY, New York, N. Y. Filed March 19, 1902. Serial No. 98,873. (No model.)

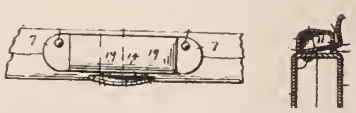


As a new article of manufacture, a fastening attachment for hats, comprising tbe pin having the shouldered inner end and the sharp-pointed and tapering outer end having the screw-thread cut thereon, and the spherical slide loosely engaging the pin, and tbe head threaded to the tapered outer end.

719,165. CIGAR-CUTTER. EDWARD A. WILLARD, New York, N. Y. Filed April 29, 1901. Serial No. 57,948. (No model.)

A cigar-cutter provided with a shell having cutter-blades, a core having a cigar-end-receiving aperture and guides for the cutter-blades, said core being mounted to reciprocate in the shell, a spring reacting between tbe shell and core to hold them normally in the open position, and an automatic latch for releasably bolding them in closed position, said latch consisting of a pin having the bevel-bead *p* mounted in a transverse recess of the core, located between tbe cutter-blade guides, and having the spring *n*, the shell being provided with a corresponding locking-slot *s*.

719,173. MATCH-BOX HOLDER. WILLIAM BERNARD, New York, N. Y. Filed Aug. 1, 1901. Serial No. 70,550. (No model.)



In a device of the class described, a tray having upon its upper side an upwardly-extending rigid receptacle and the outer surface of the receptacle and the upper surface of tbe tray merging into each otber and presenting together an unbroken surface.

719,208. KNIFE AND FORK. GIOVANNI GARDA, Turin, Italy. Filed Oct. 1, 1902. Serial No. 125,499. (No model.)

In a device for the purpose specified, the combination with a hollow handle, having longitudinal guideways, and a plurality of blades mounted slidably in said guideways, of means for simultaneously locking all of said blades when protruded for use.

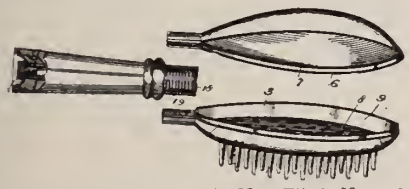
In a purse or hag frame, the combination, with a pair of frame-sections, one of which is provided with a holding-lug, of a holding-catch on the other frame-section, comprising a hox or casing, and an arm integrally connected with the rear side of said casing and extending through said casing and from the front side of said casing, and means on said arm adapted to he hrought in holding engagement with the holding-lug on the other frame-section.



719,267. CIGAR-PERFORATOR. FITZROY M. SLOCUM, Erie, Pa., assignor of one-half to

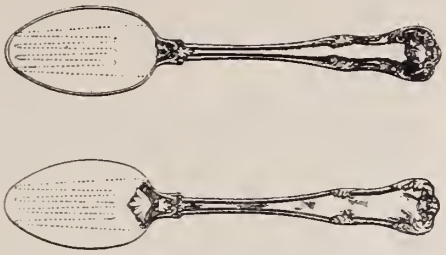
Harry V. Ashby, Erie, Pa. Filed March 13, 1902. Serial No. 98,106. (No model.)

In a cigar-perforator, the combination of the cylinder A; the cylinder B, telescopically arranged relatively to the cylinder A; the cigar-support C, carried by the cylinder B; the nut *c*, arranged on the support C; the thimhle E^1, secured to the cylinder A; the drill D, rotatively secured to the thimhle E^1, and arranged to operate in the nut *c* in the end and longitudinally of a cigar in said support; and the spring F, housed hy said cylinders, and tending to retract the drill.

719,336. HAIR-BRUSH. GEORGE N. HOLLAND, New York, N. Y., assignor to J. F. O'Shaugh-

nessy, New York, N. Y. Filed Nov. 20, 1901. Serial No. 82,966. (No model.)

A hair-hrush, comprising a hollow hack formed of two sections provided with complementary edge flanges and adjoining shoulders for connecting said sections and with complementary interiorly-screw-threaded semicircular extensions at one end, a hollow handle provided with means of connection with said extensions and with means of closing the outer end, and hollow teeth closed at one end and communicating at the other end with said hack.



719,342. GEARING FOR TIMEPIECES. EDMOND KUHN, East Orange, N. J., assignor to Gustav Bunzl and Ernest Bunzl, New

York, N. Y. Filed Sept. 24, 1902. Serial No. 124,695. (No model.)

The combination with the movement-plate of a timepiece, of a hearing-stud rotatively mounted therein and projecting from one face thereof, the head of said stud being larger than the opening in said plate and countersunk therein, and a pinion and a gear-wheel in close contact with one another and fixedly secured on the projecting end of said stud.

DESIGN **36,196.** HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. WILLIAM C. CODMAN, Providence, R. I., assignor

to Gorham Mfg. Co., Providence, R. I. Filed Dec. 26, 1902. Serial No. 136,755. Term of patent 7 years.

DESIGN **36,197.** LAMP-BODY. CHARLES W. BECK, New York, N. Y. Filed Nov. 29,

1902. Serial No. 133,288. Term of patent, 14 years.

SILVER---- SILVER / INSERTED STEEL EDGE
Smith's Patent Inserted Steel Knives never get dull and never rust
E. H. H. Smith. 9 Maiden Lane, N. Y.
IN NICKEL-SILVER AND STERLING

Almost Everybody

in the trade knows that we manufacture the leading line of **STERLING SILVER** toilet goods, manicure goods, fancy spoons and dishes, Nethersole and chain bracelets, etc., but we want to announce our new **"DOLORES" BRACELET,** also our new Sash Pins and Waist Sets, which we are making in **STERLING SILVER.**

Another Thing

that a great many buyers know about to their own advantage as well as ours is the phenomenal success of our new white metal which we call

TRADE STERLIN E MARK.

We have made thousands of Match Boxes, etc., of this metal during the past season, and in 1903 we shall make thousands of other articles of it, as **IT IS NOT PLATED** so has no plate to wear off, **IT WILL NOT TARNISH** but improves rather than otherwise by wear. In fact, as a cheap substitute for Sterling Silver, it is far superior to anything ever before produced. **IT IS NOT SILVER BUT**

TRADE STERLIN E MARK.

and is now one of our specialties as well as **STERLING SILVER and ROYAL COPPER.**

We wish to again remind you that we have the largest, and the **BEST LINE FOR THE MONEY,** of Chatelaine Bags and Purses on the market to-day.

THE JAMES E. BLAKE CO.

ATTLEBORO, MASS.

NEW YORK OFFICE, 37-39 MAIDEN LANE.—SAMPLES ONLY.

BUYERS' INFORMATION BUREAU.

Questions as to the makers of certain lines of goods, where to buy certain lines, where certain kinds of work are done, the owners of certain trade-marks and other matters relating to the buying branch of a jewelry business will be cheerfully answered under this department. The reader cannot ask too many questions. *All queries are also answered promptly by mail.*

TERRE HAUTE, Ind., Jan. 7, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you give me the address of some good firm dealing in art wares? I would like to add an art department to my new large store. Yours, etc.,
S. P.

ANSWER:—The Ullmann Mfg. Co., 338 E. 59th St., New York; the Tabor-Prang Art Co., 10 E. 15th St., New York; Braun, Clement & Co., 249 Fifth Ave., New York, can supply you with almost everything in the line of pictures and art works of that nature.

TRENTON, N. J., Jan. 8, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you favor us by sending the addresses of several different aluminum manufacturing companies or makers of aluminum card cases?
Yours, etc., THE M. P. Co.

ANSWER:—E. A. Fargo & Co. and W. H. Wilmarth & Co., Attleboro, Mass., and the New York Aluminum Co., 142 Worth St., New York, may be able to supply you with such goods as you desire.

ROCHESTER, N. Y., Jan. 6, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
I will be very thankful if you will inform me where I can buy a muffle for enameling.
Very truly, C. K. G.

ANSWER:—You may order this from E. P. Reichelm & Co., 23 John St., New York.

MACON, Ga., Dec. 18, 1902.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Kindly inform me where I can buy a *Vernis-Martin* cabinet. Yours, etc., L. J. S.

ANSWER:—Cabinets of this character are imported by Glaenzer, Frères & Rheinboldt, 26 Washington Pl., New York; Ferdinand Bing & Co.'s successors, 10 Washington Pl., New York, and Geo. Borgfeldt & Co., 3d, 4th and Wooster Sts., New York.

HARTFORD, Conn., Jan. 13, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you give me the address of the parties who manufacture 18 per cent. nickel silver and also manufactures of machinery used for silver-plating? Yours, etc., A. T. E.

ANSWER:—Nickel silver of various grades can be had from the American Silver Co., Bristol, Conn. For silver plating apparatus write to Hanson & Van Winkle, Newark, N. J., or Zucker & Levett & Loeb Co., 526 W. 25th St., New York.

BUFFALO, N. Y., Jan. 7, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Would you please advise us where to buy and also the cost of an Urquart electrical plating and kindred fountain? Yours, etc.,
G. A. R. Mfg. Co.

ANSWER:—The Manhattan Electrical Supply Co., 32 Cortlandt St., New York, can supply you with this article and will furnish prices on application.

CEDAR RAPIDS, Ia., Jan. 9, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Will you please inform us where we can get the tinfoil letters that are cut out to stick on windows? They are put on with a sizing and backed up with a varnish. Yours, very truly,
P. S. J. Co.

ANSWER:—The Crown Gold Letter Co., 65 W. Broadway, New York, can supply you with such tinfoil letters. The Dennison Mfg. Co., 11 Dey St., can supply paper letters, enamel faced, with a gummed back.

LOS ANGELES, Cal., Jan. 6, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Will you kindly inform us the name of some firm making a cheaper line of boxes than the Dennison Mfg. Co.? Thanking you in advance,
Yours, THE R.-W. Co.

ANSWER:—The American Folding Box Co., 465 Greenwich St., New York; Louis Bauer, 343 W. 26th St., New York; the Buedingen Mfg. Co., 396 Broadway, New York; the Union Paper Co., 844 Washington St., New York, may be able to supply you with cheap boxes, such as you desire.

MINNEAPOLIS, Minn., Dec. 17, 1902.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Kindly inform me through your columns where I can buy 12-inch regulator dials, and where can I get sun dials re-enameled after going through a fire. Yours truly, S. D.

ANSWER:—Write to the Waterbury Clock Co., 151-153 Wabash Ave., Chicago, Ill., or 10 Cortlandt St., New York, for the regulators. For re-enameling the dials address the O'Hara-Waltham Dial Co., Waltham, Mass.

BURLINGTON, Ia., Jan. 8, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you give us the address of the Eureka Silver Co.? Very truly yours, E. H. C.

ANSWER:—This name is used by the Meriden Silver Plate Co., Meriden, Conn., who have been succeeded by the International Silver Co.

DREXEL, Mo., Jan. 7, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Will you please give me the address of the firm that puts up an American mainspring, 18 size movement, marked U. J. Robert. Very truly,
C. W. M.

ANSWER:—Hammel, Riglander & Co., 35 Maiden Lane, New York.

SPRINGFIELD, Mass., Jan. 8, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Where can I purchase a punch suitable to punch holes in the end of a French clock mainspring.
Yours truly, J. W. JR.

ANSWER:—The F. W. Gesswein Co., 39 John St., New York, can supply you with a tool such as you desire, which contains three separate punches and dies, each cutting a separate sized hole.

LA CROSSE, Wis., Jan. 12, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you tell us who makes the King Edward pattern in sterling silver flat ware?
Yours respectfully, G. B. R.

ANSWER:—This pattern is made by the Whiting Mfg. Co., Broadway and 18th St., New York, N. Y.

NEWARK, N. J., Jan. 13, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Kindly let us know who are the successors of B. & W. B. Smith, formerly show case makers, late of 28th St., New York. Very truly yours,
Z. B.

ANSWER:—We do not know that B. & W. B. Smith have any successors. Demarest & Eckerson, 437 Seventh Ave., New York, were formerly with them, and make the class of work they formerly made.

C. E. Page, who recently swindled several jewelers in Syracuse, Ill., by purchasing watches and tendering worthless checks in payment for them, was arrested last week in Des Moines, Ia., while attempting to secure railroad tickets in the same manner.

QUERIES BY OUR READERS.

Note.—Questions under this department will be answered as promptly as possible. Some queries require careful investigation before a satisfactory answer can be given; hence such answers are often seemingly delayed. THE CIRCULAR-WEEKLY desires every jeweler to take advantage of this department.

LEXINGTON, Ky., Jan. 10, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
If possible kindly furnish me a correct list of large diamonds, with names and weights. I have an old list of 21 stones, that may not be correct. Kindly give me an up-to-date list and oblige,
Yours truly. F. J. H.

ANSWER:—It is almost impossible to get an absolutely complete list of all the large diamonds of the world, but the following, which has been compiled from various sources, may answer the purposes required: The Jaegersfontein Excelsior (rough), 971¾ carats, known in its cut form as the Jubilee, 239 carats; the Imperial, or Victoria (rough), 457½ carats, cut 180 carats; the Mattam, 367 carats; the Stewart (rough), 288⅜ carats, cut 120 carats; great diamond table of Taveriner, 242¾ carats; the Orloff, 194¾ carats; the Great Mogul, 188 carats (variously estimated, size and weight uncertain); Darya-i-nur or "Sea of Light," 186 carats; the Porter Rhodes, variously reported to weigh from 150 carats to 160 carats; Taj-e-mah or "Crown of the Moor," 146 carats; the Regent or Pitt, 136¾ carats; Florentine, 133 1-5 carats; Star of the South, 125½ carats (rough, 254¼; Tiffany Yellow Diamond, 125⅜ carats; Koh-i-noor, 106¼ carats; Nassac, 89¾; Nassecrecut, 78⅝ carats; the Shah, 86 carats; the Piggott, weight uncertain, quoted as 82¼ and 82½, but according to Mawe 49 carats; Dresden, brilliant, 76½ carats; the Segima, 70 carats; Sancy, 53¾ carats; the Eugenie, 51 carats; White Saxon Brilliant, 48¾ carats; Star of South Africa, 46½ carats; the Hope Blue Diamond, 44¼ carats; Dresden Green Brilliant, 40 carats (some say 48½ carats, others 31¼); the Pasha of Egypt, 40 carats; the Polar Star, 40 carats; the Cumberland, 32 carats. The most noteworthy diamond hitherto yielded by the United States, says Edwin W. Streeter, was discovered in 1855. It weighed in the rough 23¾ carats, and after cutting weighed upward of 11 11-16 carats. This stone has been called after some of its owners the "Dewey Diamond" and the "Morrissey Diamond."

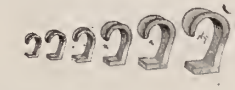
The "Braganza" of 1.680 carats, found in the diamond fields of Brazil and now among the crown jewels of Portugal, is said to be a white topaz. As a critical examination is not permitted, there is no certainty about it.

As to the Orloff, 188 carats, some writers endeavor to show that the "Great Mogul" is the same; others think the "Koh-i-noor" is.

Will H. Beck, Sioux City, Ia., was a recent visitor to the penitentiary at Sioux Falls, S. D.

Allen Powell, who disappeared from his home in Dayton, O., about a month ago, has not yet been heard from, despite the efforts of his wife and friends to find him. It is said that Mr. Powell has a brother, Edward Powell, in San Francisco, Cal., and it was thought that he might have gone to that place, but investigations failed to disclose anything that might lead to his discovery.

PATENTED JANUARY 6, 1903.



No. 717,555.

THE DOVER IMPROVED PIN TONGUE AND JOINT,

Made in all sizes for any article on which a Pin Tongue and Joint is used, in either German Silver, Sterling Silver, Rolled Plate or Electro Plate.

UP TO DATE RETAIL MERCHANDI

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan that they are utilizing in connection with their business.

An Idea for St. Valentine's Day.

THANKS be to the advance in general education, and consequent upon this a more thorough appreciation of things of an aesthetic nature, the American public has been favored with an ever-increasing number of storekeepers who take pleasure in catering to this fine sense. No class of storekeepers is more to be credited for this gratifying advance, than are the jewelry dealers of the land. As a whole they have recognized the opportunities opened for their exquisite wares, and a large proportion of them have been quick to take advantage of these opportunities.

One of the best of these opportunities, is that which is presented by the coming of St. Valentine's Day. It is pleasant to note that simultaneously with the increase and growth of advertising, and indulgence by all sorts and conditions of business men, there is an accelerated desire upon the part of the enterprising continually to add to the attractiveness of their stores. They are inclined to make great displays at all times of the year but no less so, to make special efforts at special seasons. Notably has this become a universally adopted custom almost, by common consent with the oncoming of the Christmas holidays. Less so is it the case with St. Valentine's Day. But to a contingent of storekeepers, toy-dealers, confectioners and stationers, St. Valentine's Day offers a chance which comparatively few take as great advantage of as the day should warrant. But there is still another guild, that of the jewelers, who ought to feel secure that if they take the pains to educate the public, they will be repaid for any effort that they make in display, for that auspicious day.

St. Valentine's Day falls at a time of the year when it ought not to be difficult to make any special effort which is made, fully to repay. The Christmas and New Year festivities are so long past, that the reaction from that festive time ought to be well over, too. As a consequence, the public stomach for display is not cloyed, but rather ripe for another feast. Then the occasion is so different from that of any other holiday, that it calls for a distinctive celebration.

Cupid is the only divinity who is to be enshrined on this day, and almost all the young people of both sexes are ready and eager to pay tribute to this mischievous little god. Therefore, Love should be the keynote of all the displays which are to be made for the day. In order to get all the benefit possible from the occasion, the jewelry dealer disposed to make a display, should show it to the public a week, or even 10 days, before the day itself, and keep it on exhibition through all the intervening time.

There is room and reason for a wide divergence and for great originality in the display to be made. There is equally great scope for originality. Besides the store itself, which can be transformed for the occasion, if the jeweler deems himself warranted to such an extent, and the windows, in which, of course, the occasions are most frequently reflected, the signs can be appropriately draped and ornamented. If the dealer uses an upright show case, this also offers a fine field.

As one suggestion for the occasion which may be deemed apt and pretty, the following should be effective. It is not as expensive as might appear at first blush, for though it involves the employment of two lay figures, it must be borne in mind that these are indestructible, and can be used a thousand times.

Place a figure of Cupid in the show case, and place him in the attitude of shooting an arrow at a corresponding lay figure in one of the windows. This second figure should be made to represent Venus, and the arrow should be pointed direct at the spot where her heart would be. On her breast over this spot, there should be a diamond breast-pin, preferably heart-shaped. If there is not such an article as this in stock, select the next most appropriate one. The figure of Venus should betoken apprehension at the coming stroke. If preferred, the arrow may already have been sped. In this case, Cupid has not yet relaxed from the shooting attitude, while Venus lies back languid, the arrow impaling the breast-pin and protruding from her bosom.

The accessories may vary, according to the resources of the stock or the taste of the builder of the display. But a profusion of the trinkets appropriate for the day should predominate.

Extent of the Jeweler's Responsibility for Articles Left for Repair.

AN error which has become more or less popular is the one regarding the relation between the jeweler and him who leaves an article for the exercise of the jeweler's skill.

Furthermore, this error extends itself to the question of the jeweler's responsibility for the article so left.

The popular belief seems to obtain, that when the jeweler receives an article for the purpose of exercising his skill upon it for hire, he thereupon becomes absolutely responsible for the safe return of the article to its owner, and in the event of the loss or destruction of the article, no matter from what cause, he is liable to the owner to the full extent of the damage caused the owner by such loss.

This erroneous belief comes from an impression that by taking the article, the jeweler agrees to insure it, and that the relation of insurer and insured is established between him and the owner.

The fact, however, is that the relation

Prize Essay Competition—No. 10.

Three prizes, $20, $10 and $5, will be given to writers of essays on the subject:

"How to Develop a Watch and Watch-Repairing Department."

The prizes will he awarded to the writers of the best and most reasonable essays. The ideas expressed, rather than the language used, will he considered in making the awards. The essays will he lettered when received and the judges will not know the identity of the writers until after the decisions have been made.

At the request of several readers of THE CIRCULAR-WEEKLY contestants will be given until Feb. 11, 1903, to forward their essays. Essays must be written on one side of the paper only.

The right is reserved to publish any or all of the essays received. The competition is open to any person connected with the trade.

Grand Hints to Jewelers

thus established between them is not that of insurer and insured, but of bailor and bailee. The bailment thus created is in the nature of a bailment for hire, and renders the jeweler responsible to the extent, and in the manner that such a bailee is responsible and no more, unless a special agreement as to the degree of care to be taken is made.

As such bailee, the jeweler is bound to take reasonable and ordinary care of the article bailed, and to use reasonable and ordinary methods to protect it from loss or injury; having done this, he has done all that the law requires of him, and if the article is nevertheless lost or injured through no fault or neglect of his, he is not liable to the owner therefor. What will be held to be such ordinary care differs largely with the locality and circumstances of the bailment. It would be manifestly absurd to require such a high degree of protection from burglary and fire of a jeweler located in a small country town as might reasonably be expected of one in a large city.

But having provided ordinary and reasonable means for the safety of the article, the jeweler is not liable for its loss or destruction by fire or burglary through no fault, connivance or negligence of his. These things are such as the owner assumes the risk of when he leaves the article unless he makes a special contract to the contrary.

In this connection it may be interesting to the jeweler to know that in cases where through some fault or negligence on his part, he has rendered himself liable for the loss or injury of the thing bailed, he may save himself the costs attending an action at law, by making and keeping good in manner as required by law, a tender to the owner of the amount of his loss. In the event the owner refuses to accept this and sues and recovers less than the amount tendered, or no more than that amount, the costs of the action will fall on him and not on the jeweler.

LORLYS ELTON ROGERS.

EXTERIOR OF OLD STORE OF FRANK RICARD.

An Up-to-Date Store Interior.

THE illustrations seen on this page give two views of the establishment of Frank Ricard, Lowell, Mass., at different periods of his business career.

INTERIOR OF NEW STORE OF FRANK RICARD.

The adjoining view shows the store which he first opened, January, 1894. At this time he had a floor space of only five feet front by 10 feet deep, and, as he says, "comparatively little capital to work with."

The above view shows the development of the business after a few years of judicious advertising, persistency and energy. This latter is an example of a tastefully and attractively arranged interior. On either side of the store there are show cases measuring 24 feet in length, and wall cases of the same length. Two safes, each seven feet in height, one burglar and fireproof, and the other fireproof only, can be plainly seen in the background. Between these two safes are registers of the latest design. Immediately behind the safes are two doors leading to the repair shop, and to Mr. Ricard's private office.

Arranged longitudinally in the center of the ceiling are two rows of electric lights, and on either side of the store, immediately above the wall cases, one row of electric lights, making seventy-eight in all. This mode of illumination shows off the entire stock to excellent advantage.

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. CO., 11 John St., corner Broadway, New York.]

Valentine Advertising.

THE practice of giving small, inexpensive gifts on St. Valentine's Day should be encouraged by the retail jeweler. He should show a lively interest in the occasion, by displaying articles in his window, that would appeal to persons who send tokens of their affection and esteem.

BRASS ETCHINGS
FOR VALENTINES.

These little squares of brass beautifully etched with such subjects as

RIP VAN WINKLE,
THE WAR CRY OF SIAM,
THE NAVY TOAST,
TINY TIM,
CUPID,

and a host of others mounted on neat black frames which are beautiful.

$1.25 Each.

J. B. SAMSON,
322 East Orange St.

There are many such articles remaining over from the Christmas stock, such as novelties in plaster and silver, brass etchings, placques, etc., which would be quite appropriate as valentines.

NOVELTIES
IN
CHINA,
SILVER,
GLASS
AND
PLASTER
for valentines.

Our window display includes many articles suitable for this occasion.

J. B. SAMSON,
322 East Orange St.

Then attention should be attracted to the window display by one or more advertisements inserted in the best newspapers in the community. A few samples of such advertising, which may offer some suggestions to the jeweler, are shown on this page.

Optical Advertising.

IT is a noticeable fact that the opticians, as a class, are doing much better advertising than they ever did before, and this improvement bids fair to continue and become a great source of information for the public concerning the eye and its care.

This free advice, or suggestion, should always be given in a simple and brief manner, so that the reader is not burdened with more than one thought at a time. By intelligently developing one thought at a time the advertisers' fund of information will permit of his writing an indefinite number of advertisements, which will not only interest but will carry the conviction that the advertiser knows his business, and this begets the confidence of the public.

VALENTINE SUGGESTIONS.

Silver novelties are much in favor as valentines by many gift givers.

These articles combine usefulness with beauty and are reduced

1/3

from the prevailing Christmas prices.

J. B. SAMSON,
322 E. Orange St.

Confidence gained, the rest is easy with the skilful optician, for then the patient believes that he can give relief, and both are mutually benefited.

The optician's advertising should be of a refined character, and his best mediums are the newspapers, booklets and personal letters. But there are many other forms of publicity employed, such, for instance, as the accompanying illustration, taken from the *Ledger Monthly*, shows.

In connection with the illustration, the writer states, "that this method of advertising has attracted attention, the business of the advertiser gives ample proof. The shrewd advertiser has a number of men patrolling the streets, bearing signs, on which words are happily associated to advertise both himself and his business." This sign: "If you can't see a little, see Little, he'll see that you see as good as new," the writer states "is one of the best of several used by this successful merchant."

DEFECTIVE EYESIGHT

is one of the chief causes of most nervous disorders. Properly fitted glasses will afford relief in the majority of cases. Examination free.

J. B. SAMSON,
322 East Orange Street.

MANY CHILDREN

are thought to be dull when the real cause of their apparent stupidity is some fault of their eyesight. Better have us correct these troubles at once.

J. B. SAMSON,
322 East Orange Street.

This style of advertising may be successfully employed in large cities, but it is doubtful whether it would be successful in a small town or city. If any of our readers should try this method of advertising, we would esteem it a favor if he would report the results of his campaign to the editor.

As the newspapers are employed by the majority of the optical advertisers, we present the above ads., which may be used as here given, or otherwise.

OPTICAL DEPARTMENT

Technical Optometry.

THE practice of optometry depends upon a systematic and regular method, such as all professional matters demand, so that we come to have two general proeedures, the objective and subjective methods.

The objective method, carried out by means of the ophthalmoscope, both in the direct and indirect methods, together with skiascopy, gives reliable results which can be depended upon.

The subjective method, as finally carried out by means of the trial set of lenses, completes the examination after all other methods have been fully determined upon.

The symptoms of which a patient complains subjectively are blurring while reading and pain in the eyes. Patients who present themselves with these symptoms are in the majority of cases over the 40th year and whose vision may approximate the normal standard, but fail in reading Jaeger's test type when such type is held at the range of 14 inches from the eyes. These patients will require lenses for reading and sewing only at the range of 14 inches, according to the law laid down by Donders.

Patients again present themselves with not only the above symptoms, but complain of pressure at the base of the brain, together with a feeling of compression, as though a hoop was tightly bound about the forehead. Such patients will, in all probability, demonstrate a state, simple or compound, of astigmatism, the correction of which will, in a large measure, relieve the above symptoms. In every instance it will be seen that both the objective and subjective methods are employed, and, whatever the symptoms may be, the error of refraction should always be corrected.

The ophthalmoscope plays an important role in all of our examinations, as by this instrument medical as well as metrical states may be determined upon, so that by the use of the ophthalmoscope those finer ethical relations between lay refractionists and the surgeon may be beautifully adjusted, for upon the first warnings of serious diseases the medical fraternity may assume all responsibility pertaining to that which is purely a surgical case.

A Major Minor Point.

IN the study and practice of optometry, as in all things else, numerous details are extremely liable to escape one's memory, or, perchance, never to come beneath one's notice; too much vigilance, therefore, cannot be exercised in obtaining and retaining any or all of these elusive details, and one dwelling upon these will have expended his power to better and more yielding advantage than in dwelling upon those fundamental principles and work-a-day facts so indispensable, yet, for that very reason, so well known.

Cases in which anisometropic conditions are present are, as a rule, pregnant with difficulties which cause more or less trouble in every instance (presupposing, of course, that we do not include herein those cases having but a slight variation between the refraction of both eyes. This the optometrician knows only too well, but as anisometropia is, taken as a whole, one of those divisions so often treated we will not consider it here in a general way, but select a small section of it, *i. e.*:

In anisometropic cases where the difference between one eye's refraction and that of its mate is marked, does each eye do its share of the work, though the portion of one may be relatively insignificant, or does the less defective organ do all the work, eliminating entirely as an active factor the weaker eye? And how may the truth be determined?

These cases truly are misleading, for, while with its correction each eye may when tested individually be able to perform its function properly, the two eyes when called upon to work in unison will fail to do so. The particular point which the author would bring out is the simple means whereby it can be proven conclusively whether or not the weaker eye figures at all in its proper office.

A girl 16 years old presented marked asthenopic symptoms and the glasses she wore gave no relief whatever, and seemed rather to increase the asthenopia, yet, upon a most careful examination, I found that, so far as refractive error was concerned, she was wearing the proper correction before each eye, namely a three-diopter hyperopic in the right and a half diopter combined with a quarter myopic astigmatic in the left, and, furthermore, each eye read the normal line when so corrected.

What, then, aggravated instead of alleviating this asthenopic condition? Simply this:

One eye remained inert when both were uncovered and uncorrected, yet to correct both eyes made it impossible for them to fuse the images produced upon their retinæ, due, of course, as all no doubt know, to the great difference in size between these two images formed, respectively, by a three-diopter positive and about a half diopter negative lens.

It may appear an undue exaggeration in laying so much stress upon what at first glance seems such a simple point. But is it simple? Think—is it so easy, after all, to tell whether or not one of such a pair of eyes is useless, when both eyes are open? The same old story: "It is easy—when you know how," and if you don't, you had better "know how."

Taking a high degree prism (15° or 20°) and holding it, base out, before the patient's left eye, whose right eye, too, was open, I directed her to gaze steadily at the point of the pencil, which I held 12 or 15 inches away from and in front of her eyes. To make sure that she was looking as directed the pencil was moved from side to side; her eyes moved in accordance with this latter movement, and it was evident that she was looking as directed. This ascertained, she was told to keep her vision fixed upon this point, no matter what else occurred. The next step was to remove the prism quickly and to watch the eye from which the prism had been taken. It remained still for a moment, then, with a decided jump, assumed a new position an eighth of an inch distance from its temporary one behind the prisms and gave proof of its performing its proper function.

Submitting the right eye to the same experiment, it was found to remain stationary even after the removal of the prism, disclosing upon so doing the fact that that eye did not perform its function, because we know that the prism refracted the rays of light emanating from the pencil toward its base, causing the pencil to appear some distance to the side of its real position, and any active eye would naturally (having been ordered to watch the pencil) have moved toward the apex of the prism, so as to fix upon the image of said pencil in its new position, and, furthermore, when the prism was removed, would have jumped back again so as to fix upon the pencil in its true position; therefore, any eye's failure to respond to this prismatic effect is due to a lack of vision in that eye, in which case the eye not seeing the pencil in the first place, fails likewise in seeing any change in its position, and, in consequence, remains unmoved.

The result of this examination and its disclosures was that for the right eye I prescribed a plano slab (instead of the + 3.00 D Sph.) and for the left a — 50 S ⊃ — 25 cyl. ax. 165°, which gave immediate relief from asthenopia and has been worn for four years without change, and without any sign of the return of the asthenopic condition.

Optical Department.

The Manufacture and Sale of Glass Eyes.

AN article which is making the rounds of the daily press and which was recently published in the New York *Times* is appended below. It details with the manufacture, etc., of artificial eyes, and may interest opticians inasmuch as it gives some interesting facts regarding the selection and purchase of them:

For many years all the artificial eyes used in this country came from Germany, and their manufacture included certain picturesque features denied to the latter-day factory. Like the German toys, they were made by families of peasant artisans living in the Black Forest or other remote regions. The secret of the manufacture was carefully guarded and passed down generation after generation. The first family that ever made them was that of the Muellers. There are now two houses in America where they are made. The largest is in New York, but there are not more than four or five employes there. Although the workmen are all Germans, the best eyes still come from Germany, the American operators for some reason or other failing to get the best results. The trouble seems to be in the proper annealing of the glass.

It is a very fascinating thing to watch the manufacture of a glass eye. The artisan takes first a common glass tube, 75 millimeters in diameter, such as is used by an ordinary glassblower. He blows a bulb of plain glass, and into this gradually works a stick of white glass until a pear-shaped ball appears. This is to be the ball of the eye. He then, with sticks of color glass, applies the iris and the pupil, blending the different shades with marvelous art and delicacy. Then, with a stick of red glass, he puts in the tiny red veins in the ball. The ball is then cut off and shaped with a silversmith's burnisher. The shaping is quite as delicate a matter as the coloring, and there is a distinct difference between the right and left eyes. When the thing is done it stares up at one from the slab almost uncannily.

No two pairs of eyes in the world are just alike in shape, size, or color. The largest retail stock of artificial eyes in this country is in a Boston store, which makes a specialty of this line, and caters to customers all over New England. It carries 10,000 eyes, yet not a week passes that an eye does not have to be made to order. The proprietors of one of the best stores in New York state that of all the eyes blue is the hardest to match. There are more shades of blue than of any other color, and they melt into one another with more imperceptible gradations.

There is the "cat" blue eye, the common, pale blue orb, which is, so to speak, the conventional blue eye. Then there is a blue-gray eye, a blue-brown eye, and a blue-green eye. The man who handles the artificial eyes in this store is very skeptical as to that darling of the novelist the violeteyed heroine. That full, deep, rich, liquid blue eye, the color of the loveliest violets, he says he has never seen except in very young children. It pales as the years go by. Hazel and gray eyes are much easier to match. There is no such thing, say the eye specialists, as a black eye. An eye dark enough for a negro is not perfectly black. Persons with one blue and one dark eye are not rare.

Men who deal in artificial eyes declare Americans to be distinctively a blue-eyed race. In spite of the tremendous influx of dark-eyed races in recent years, and in spite of the fact that every fourth person in New York is a Jew, the call for blue eyes overbalances all the rest. Of course, the newer immigrants do not have the same proportion of diseases rising from excessive use of the eye. External diseases, due to infection, are more common than diseases of the optic nerve, and myopia is rare among them. Glasses are almost unknown among immigrants, but in the second or third generation almost as great a proportion of their children will be found wearing them as among the old American stock. Many immigrants, however, may need glasses who do not wear them. Of course, artificial eyes are largely the result of accidents, and thus in demand in the hazardous employments. There is a constant call for them in the mining regions of the far West, where the miners are chiefly Americans and Irish, blue-eyed races. One dealer estimates that 20,000 artificial eyes are in use beyond the Mississippi.

The farmer and the villager rarely have diseased eyes, and the plainsman has a vision like a hawk. But life in large cities, where restricted vision, bad light and indoor life prevail, destroys many eyes. Add to this the excessive use of eyes, caused by the growing strenuousness of life, and one finds the cause of an increasing number of eye operations each year. At the Manhattan Eye and Ear Hospital, which has the largest number of operations, there is an average of five a week, and other institutions are in proportion. In all of them the eye work is increasing, both out of proportion to other lines and to the growth of the population, and there is a constant demand for increase of staff and facilities.

Nine persons out of 10 believe that a glass eye is a solid ball, when it is really a hollow shell. A solid ball would be too heavy for any eye socket to support. Even the shell is too heavy in some cases. Sixty-six per cent. of all removals of absolutely non-seeing eyes are due to glaucoma, which hardens the eyeball. In all such cases there is a sympathetic irritation of the other eye, and the insertion of another hard body continues this irritation.

A bad movement of the artificial eye comes from waiting too long after the operation before the new eye is fitted. The fitting should be made within three weeks. Sometimes a person breaks an artificial eye, and by waiting too long to replace it finds that the eye never recovers its natural movement. An early extirpation, before the eye has become shrunken by disease, is also most important, and naturally often neglected.

One case was known in New York of a little girl who, after a Mule's operation, had an eye movement so natural that even an oculist could not distinguish between the two eyes. This is extremely rare. One runs across many curious things talking to the eye men. For instance, every one knows that the eye is inclosed in a bony socket for its protection, but few know that it also rests in a bed of fat, which is not reduced even in case of death from starvation, nature having apparently cast out special precautions against the wasting of this particular tissue. An artificial eye is always crying, the tear ducts having been rendered abnormally sensitive. It should always be removed at night, as there is a secretion behind it that sets up an inflammation. The acids secreted pit the glass eye, discolor and wear off its polish. In some persons this process goes on much more rapidly than in others. Artificial eyes do not drop out, for they are held in place by the lid and vacuum suction. But they "explode," to use a dealer's term, break to pieces in the socket, so that on the whole they have to be replaced about as often as spectacles.

The necessity for an artificial eye is a painful one, and the dealers encounter many incidents in which the ludicrous and the pathetic mingle. An Irish servant girl went into a New York store to have an eye fitted one day. While the oculist was rummaging for the tray, she burst into a loud wail behind him. He was at his wit's end to quiet her, but at last she sobbed out that she "didn't want to take gas."

One rich woman is a connoisseur in glass eyes. She visits the stores several times a year, and spends hours having new eyes fitted and sitting before the mirror to examine the effect. She seems to regard it as a privilege of wealth to have a change of eyes, and her jewel box must contain enough of them to stock a small store. There have been instances of children thrown almost into spasms of fright at seeing their mother's glass eye removed for the first time. One oculist, from his observations in this regard, has reached the conclusion that every exploring party among savage races should take along a man with a glass eye.

After a successful operation and a good fitting there is not much more discomfort in wearing a glass eye than a set of false teeth. There is not a human eye which cannot be matched absolutely in size, shape and color. A recent development of the art is the manufacture of exact reproductions of diseased eyes for the use of medical schools. This is of the greatest value, since few natural specimens of the kind can come under the observation of any one class, and some of them are very rare. An oculist who regarded the ordinary eye with indifference roused into professional enthusiasm over these glass abnormalities.

"Look at that lovely rupture of the iris," he said, lovingly handling an uncanny thing with a great black band across it. "See that one all bloodshot? That's follicular trachoma. That's a pretty case of iritis. . There a beautiful cataract—beautiful!"

Ben Popenoe, with the Columbian Optical Co., Kansas City, Mo., recently made several short trips to his old home, in Lawrence, Kan.

The New York Optical Co. has established itself in business in Portland, Me., with John Davis in charge of the eye-fitting department.

George Johnston, of the Johnston Optical Co., Detroit, Mich., was recently presented with an eight-pound son and heir.

Optical Department.

The Full Correction of Myopia.

(Paper read by Edward Jackson, M.D., before the Colorado Ophthalmological Society, Denver, Col.)

THE tendency of myopia to increase is not the only thing about it that needs to be combated. Yet myopia is serious just as it becomes, or may become, of high degree. All cases are, at some stage of their history, progressive. Increase of myopia is closely related to those degenerative changes that constitute its other chief dangers. If the tendency to increase of refraction can be permanently checked early, the greatest service that is in our power has been rendered the myopic patient.

The service next in importance that can be rendered him, is to remove in large measure the disability that myopia causes, enabling him to see approximately, as does the emmetrope. For the great mass of myopes both of these services are rendered by fully correcting their myopia and instructing them to wear their correcting lenses for both distant and near vision.

This matter needs to be discussed because the teaching of some very high authorities in ophthalmology, supported by plausible theorizing, but not by any adequate published experience, has done and is still doing great harm to those afflicted with myopia; by deterring their professional advisers from resorting to the measures that would give them the greatest help, and most effectively guard them against the dangers of the future.

In 1891, in a paper read before the Ophthalmic Section of the American Medical Association, I urged: "That for the myopic as for the hyperopic eye, the most favorable conditions for labor that can be imposed on it are, in general, those under which the emmetropic eye works, most nearly brought about by the wearing of the full correction."

This brought out the objection voiced by one of the most respected members of the section, that "it is dangerous to give the full correction in myopia." This led me next year to report to the American Ophthalmological Society all the cases of myopia treated by the constant wearing of the full correction, except when modified for presbyopia, that I had been able to follow and carefully remeasure after a period of three years. At the same time Dr. George C. Harlan reported 13 cases of high myopia, 4 D. and upward, similarly treated, and followed for periods of five years or longer.

I am now able to report on the subsequent histories of some of the cases reported in 1892, and to add to them 35 others. These 62 cases include 123 eyes, one patient having one eye blind with congenital cataract. They have been followed and carefully remeasured after periods varying from three to 17 years; the average being five years and eight months.

Of these 123 eyes, 93 have remained without change in the amount of their myopia, or the increase or diminution in the myopia has been less than 0.50 D. In 10 eyes the myopia increased 0.50 D. In three eyes the myopia diminished 0.50 D. In 13 eyes the myopia increased more than 0.50 D., the average increase being 1.50 D. In four eyes the myopia diminished more than 0.50 D., the average diminution being 1 D. The percentages are:

Stationary.....	75.6 per cent.
Increased	18.7 per cent.
Diminished.....	5.7 per cent.

In but six eyes of the whole series was the acuteness of vision diminished to even the slightest extent; and in none of these cases did the loss amount to more than the perception of one line of letters, as from 4-4ths. to 4-5ths. On the other hand there was marked improvement of the visual acuteness of 16 eyes, under the constant wearing of correcting glasses; and for some eyes the acuteness of vision was doubled.

But it is in early life that myopia is most likely to be progressive. Hence the value of any measure for rendering it non-progressive is best demonstrated by noting its efficiency when applied to young myopes. The adjoining table gives the earliest and latest refraction observed in each eye, of all patients under 20 years of age, with the acuteness of vision obtained.

The first column gives the case number, the second the sex, the third the age of the patient when the constant wearing of correcting lenses was commenced, the fourth the first correcting lens and the acuteness of vision obtained with it, the fifth the number of years elapsed, and the last the final correction and acuteness of vision. For each case the right eye is given first and then the left.

It will be noticed that these patients remained under observation for periods varying from three to 11 years, the average being six years. Of these 35 eyes, 60 per cent. never became more myopic after beginning to wear correcting glasses; and while in 14 eyes the myopia at some time increased more than 0.25 D., in four eyes it diminished more than that amount.

These statistics are sufficiently convincing when compared with those furnished by the non-correction or partial correction of myopia. But they are less striking than the facts brought out by a study of individual case histories. In nearly all these cases the myopia was clearly progressive, immediately before the correcting lenses were adopted. Case 2 had no myopia, and full vision without lenses, for either eye, when I had examined her eyes less than two years previously. After putting on glasses they remained for three years without any change of refraction. In case 13, also, the refraction had been carefully measured three years before he began wearing glasses, and in the interval the myopia had increased 3. D.

The progress of case 16 was extremely instructive. After having been practically stationary for three years, the myopia increased to the amount indicated in a few weeks of profound anemia following a hemorrhage. This patient came of a highly myopic family, and was continuously engaged in close literary work. Yet after regaining his general health and having his

Optical Department.

increased myopia corrected, he had no farther increase of refraction.

In nearly all of the cases that showed any increase of myopia there were periods when it remained stationary. Then after some special strain the myopia would become progressive, and continue so until recorrected, when it would again become stationary.

Not included above, because I did not make the original measurements of his refraction, is a case that indicates how even in extreme myopia the full correction has no tendency to cause increase. This patient believed that at ten years of age his sight was perfect. He began to be nearsighted at 12 or 14. His defect of vision rapidly increased. When 19, and a student at Harvard College, he was given glasses by Dr. Widdifield, the strength of which he never had changed since. He entered the ministry, and remained a voracious reader throughout his life, in spite of the fact that his vision slowly grew worse. He came to me at the age of 49 years. The lenses he had been using for 29 years were: right and left concave 20.D. spherical. His full correction at that time was:

Right -20. sph. giving vision 4/20.
Left -20. sph. giving vision 4/30.

With these lenses he had binocular vision. The ophthalmoscope showed slight striation and haziness of the lenses, and extensive areas of choroidal thinning, pigment deposits, and advanced atrophy.

Here was a man with very high myopia, which had previously been progressive, leading a life that favored the farther increase of myopia, with the choroidal changes to be expected in such a case; and yet after 29 years the myopia remained fully corrected.

The statistics given above are not sufficiently extensive to justify conclusions regarding the exact proportion of myopias that will cease to increase under full correction. But it should be remembered that these are the comparatively few cases, so treated in private practice, that have returned for remeasurement after a period of at least three years. A great many more cases have been treated in the same way, and some of these are known to be still wearing the same correcting lenses after five or 10 years. But they have not returned for remeasurement.

On the other hand, the writer knows of no statistics, even as extensive as these, that can be said to point to an essentially different conclusion. In the *Klinische Monatsblatter fur Augenheilkunde* for March, 1902, statistics of the progress of uncorrected or under-corrected myopia are published by P. Schreiber, of Magdeburg; A. Roscher, of Breslau, and M. Meyerhof, of Bromberg. Their patients were mostly under 20 years of age. The proportion of cases in which the myopia did not increase was found by Schreiber to be less than 21 per cent. among patients under observation an average of six years. Among Roscher's patients, 39 per cent. showed no increase of myopia and among Meyerhof's patients, 38 per cent. showed no increase. But these patients were under observation only about two-thirds as long. These figures may be compared with the 60 per cent. which I found stationary under full correction.

But at the Heidelberg Congress last year still more striking statistics were presented by Pfalz, of Dusseldorf, and Heine, of Breslau. The former presented three sets of cases, 25 that had worn no correction for near work, 18 that had worn an undercorrection, and 38 that had worn the full correction for everything. These patients were all under 20 years of age. Of the 86 eyes that had not worn a full correction, 85 showed some increase of myopia. Of the 76 eyes that had worn a full correction, six showed some increase in myopia. In either case, the eyes had been under observation on an average of about three and one-half years. Heine's patients were all young, with myopia of over 6 D. Of 17 who used an under-correction, five experienced no increase of myopia. Of 31 who used a full correction, 27 had no increase of myopia.

The discussion elicited by the papers of Pfalz and Heine was equally significant. There took part in it Dor, Hess, Wicherkiewicz, v. Hippel, Straub, Schwarz, Lucanus, Axenfeld, Mayweg, Uhthoff, Gullstrand, Fuchs, Wolff and Krückmann, and everyone spoke favorably of the full correction of myopia. This is especially important because it is upon the authority of the older German ophthalmologists that the practice of not correcting myopia has been largely based. Indeed, upon examining the literature of the subject, authority and theoretical considerations appear to be the chief supports of this practice.

Graefe observed that with the effort to accommodate the eye, there occurred increased pulsation of the retinal veins, as observed by the ophthalmoscope. Therefrom he reasoned that accommodation increased the intraocular tension, and must be bad for myopia. But in this observation, which I have often confirmed, accommodation cannot be disassociated from convergence. Even if convergence is prevented, the effort to accommodate is certainly attended with an increased tension of the extraocular muscles, causing heightened tension of the eyeball from external pressure. If the same observation is made upon an eye fully under the influence of a cycloplegic, the same increased pulsation of the retinal veins can be noted. On the other hand, I have encountered one case of ophthalmoplegia externa, in a patient possessing some accommodation; and the strongest effort to accommodate produced no change in the perceptible venous pulse.

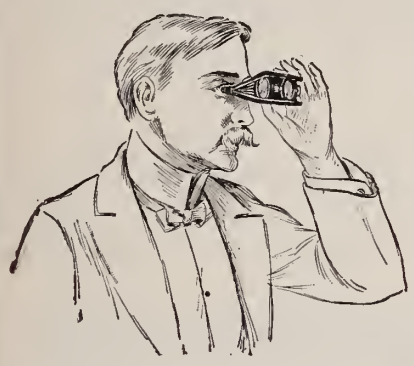
If it be allowable to meet theoretical considerations by theorizing, it can be pointed out that the function of normal accommodation is probably closely associated with the general nutrition of the eyeball. Certain degenerative changes in the choroid are so frequently seen in the eyes of elderly people that they are often spoken of as senile. Very similar alterations are frequently noticed in myopic eyes. In both cases the eyes have ceased to employ normal accommodation. It is true that abnormal accommodation may cause choroidal changes, such as often accompany progressive myopia. But between normal and abnormal accommodation, a clear distinction should be made. It is glaringly incorrect to assume that what is true of the one is necessarily true of the other. Then, too, the myopic eye, uncorrected, is very liable to suffer from abnormal accommodation.

Differences in the distance of the different parts of a line of print from the eye, differences of distance of the same near-point from the two eyes, and differences of refraction between the two eyes, very general in myopia, entail abnormal accommodation.

The most important cause of myopia appears to be the pressure on the globe of the extraocular muscles. This is greatly increased by use of the eyes for near work, and the uncorrected myope can use his eyes for nothing else. To permit and encourage the comfortable use of the eyes for distant vision is the first indication to be met in the treatment of myopia. It is met by the constant wearing of the full correction, and in no other way. This theoretical consideration is fully supported by all published experience, and until opposing experience of quite a different order from any now extant has been brought before us, we are justified in holding that this point in the treatment of myopia has been settled. Of exceptions to the rule of full correction, I have elsewhere written at length. They exist and must be recognized, but do not detract from the importance of the rule.

Motor Balances as They Relate to Nervous and Muscular Action.

RELATIVE to the anatomy of the eye it will readily be perceived that there are five nerves, both of sensation and motion with which we are called upon to deal, namely, the optic nerve and the second pair of cranial nerves.



The optic nerve is a nerve of sensation and transmits impressions from the eye to the brain.

The motor-oculi nerve, the third pair of cranial nerves, is a nerve of motion and controls the movements of the superior-inferior, internal recti muscles and the inferior oblique muscle, through which innervation the eyeball is directed toward the mesial plane. The motor-oculi nerve controls the sphincter iris muscle or the circular fibers of the muscle of accommodation so that the functions of convergence and accommodation are akin, and herein lies the fact that many conditions of convergent strabismus are directly caused by an hyperopic state and divergent strabismus is caused by myopia, so that the symptoms of neurasthenia, such as temporal headaches, a fulness at the base of the brain, a feeling as though a "hoop band" was tightly bound about the head, together with lancinating pains through the eyes and blurring while reading, are all allayed when either the hyperopia, myopia and astigmatism or the compound conditions are corrected.

On the other hand, all and several of the symptoms just enumerated may be produced when an overcorrection or a false correction is given. The effect produced upon the brain with the base of a prism with its base in is to cause the object to appear in the opposite direction, and in the same manner with the base out, up or down, so that, if a double image is seen because of muscular imbalances, either the prism or decentration of the correcting lens, or both, will produce the desired effect by not only removing the troublesome double images, but by also relieving the symptoms of asthenopia.

A Vest Pocket Opera Glass.

HALF AN INCH THICK.

"LA REINE"

is a folding opera glass that may be carried in the vest pocket.

No case is necessary, as the patent cover and arrangement fully protect the lenses.

When opened, all side lights are eliminated—the lenses have remarkable magnifying power, and give a large field of vision.

THE PURCHASE OF A ....

Mainspring

SHOULD RECEIVE CAREFUL CONSIDERATION.

A reasonable expenditure is a safe investment as every dollar you put into a reliable Mainspring will show rich returns in the satisfaction you and your customers get out of it.

The LONGEVAL is the result of steady progress in Mainspring making, reliable to an absolute certainty. These springs you may buy with a confident feeling that complete satisfaction will be the only result.

QUALITY—Springs are made of highest grade Steel, fine in grain, rich in Carbon, and carefully finished by hand.

SAFEGUARDS. The "Best," if not properly safeguarded, is liable to go astray. This is true of Mainsprings as well as of humanity. The methods employed to protect the LONGEVAL leave nothing to be desired, giving protection:—FIRST, against rust, as each spring is wrapped in oiled anti-rust tissue paper, then placed in an individual paper box. SECOND, against climatic changes, as every box containing a Spring is enclosed in tin foil. THIRD, against useless handling. We all know that more Springs are ruined by coming in contact with perspiring fingers or by being exposed to the air than by anything else.

SELECTION IS MADE EASY. Twelve Springs, each in an individual box, are placed in a strong, Sliding Box, properly labeled, showing the contents.

A neatly made Cabinet is furnished gratis with every order for 1 gross of LONGEVAL SPRINGS. These cabinets are built on the principle of the Sectional Book Case, permitting you to build them to any desired size.

Feeling confident that this is an article of the highest order, we submit them to the test of the most exacting critic.

Your jobber will supply you. If for reasons of his own he will not do so, write to the Importers, HAMMEL, RIGLANDER & CO., 35 Maiden Lane, New York, who will inform you of the nearest jobber who will fill your order.

NOTICE.

The importers of these mainsprings are the first to have employed the idea of putting each spring in a separate box, thus protecting them against rust and climatic changes, and to place a number of these small boxes in a box or case.

They have taken expert advice as to their sole and exclusive right to this manner of "dressing" mainsprings, and have been advised that they have a proprietary right thereto.

The trade is hereby notified that any infringement of this manner of "dressing" mainsprings for the market will be vigorously prosecuted.

The "Longeval" Mainspring

FOR AMERICAN WATCHES.

A Souvenir Clock.

BY WILLIAM JOCKIN.

AFTER the description of a family clock, given in THE CIRCULAR-WEEKLY, Sept. 10, 1902, and the interest shown in the matter, it may be appropriate in the present souvenir issue to reproduce an illustration of a souvenir clock. This miniature clock is one of the series of which I promised to speak later. A considerable time having passed since, the interest in miniature clocks may have been forgotten by some of our readers. I will, therefore, try to revive that interest by reproducing something useful to every watchmaker.

An illustration of the souvenir clock in two-thirds size is given by Fig. 1. For the purpose of beautifying and making the picture more useful and attractive, I adorned it with a modern fancy cartel. Being a watchmaker, the idea of beautifying an object by a watch or timepiece suggests itself always and naturally.

FIG. 1.

Desiring to make the souvenir clock as true and charming as the beloved one who listens to its tick, I selected a 16-size American movement, of which the trade price at that time was $3.25. This makes such a souvenir somewhat expensive, but if, for the sake of saving money, a dollar movement were fitted to the picture, the clock would, of course, lose all its charm, because the possessor could never be sure of having the correct time, whilst the abovementioned 16-size movement will keep as good time as the best and most expensive mantel clock. The movement being always in one and the same position, it can consequently be regulated to great accuracy.

Although the different illustrations reproduced here will need hardly any explanation in order to be understood by the experienced watchmaker, a short description of the construction of the souvenir clock, for the less experienced, may not be out of place.

The frame representing the clock is cut out of a thin plate of brass. The hour dial is sunk in the frame. It can be made from an old small hairspring barrel and soldered to the clock frame, or it might be turned out from any other plate of brass. The second dial can be sunk directly in the frame, because this dial does not need to be as deep as the hour dial, since it carries only one hand. Suitable small hands can be had at any supply dealer's store, and the pipe of the hour wheel and cannon pinion can be turned thinner, so as to fit those hands. The ornaments on the frame are engraved and then gilded. Both dials are silvered, and the hours and seconds are written upon them with a small pen and black draftsman's ink.

Before fixing the clock frame upon the picture, the watch movement should be fitted upon a zinc plate, A, Fig. 2, which shows it to be fastened by two screws, *a.a.'*, to the ring which is soldered to the movement case. This ring carries, also, two steady pins, c.c., in order to give greater stability. The movement is fastened in an ordinary screw bezel box, in which they are sold, and in the same manner as in a watch. To do this it is necessary to solder another ring inside of that box in which the movement fits, so that it can be fastened by its two case screws, as can be seen from the illustration, Fig. 2.

The movement has pendant setting, and, because a pendant sleeve could not readily be fixed to the box, I conceived the device, *e*, which can be easily made. The pendant crown not being subject to any friction, like those of watches carried in vest pockets, the pendant spring, *e*, need not be very strong, and, therefore, the pendant can be easily pulled out for the setting of the hands. The brass bracket, *d*, which is provided with a steady pin, like the spring *e*, is screwed to the zinc plate. The screws *aa'*, by which the movement box is fastened, as well as those for *e* and *d*, should have large and flat heads, so as to make the photographs rest close and even upon the zinc plate.

After the movement has been applied as described above, the photograph can be put in place. By pressing its back gently upon the protruding center arbor and second hand pivot, the center point of the small dials will be indicated. The holes for the latter can then be cut through the cardboard of

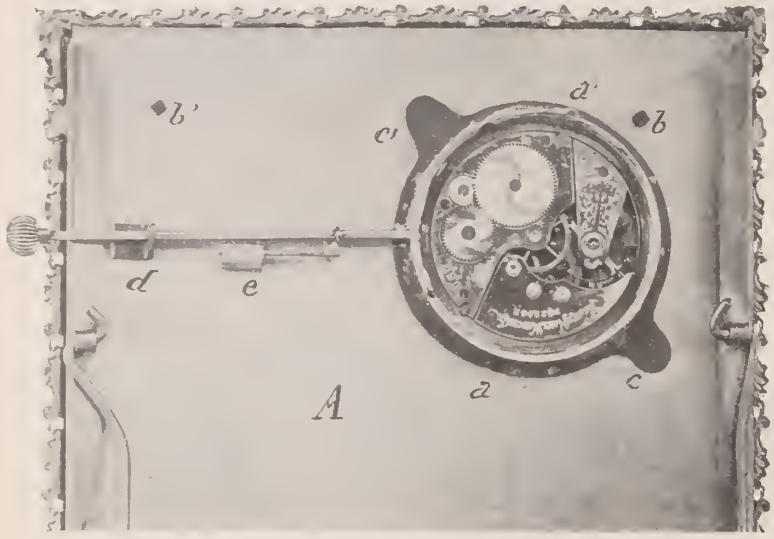

Fig. 2.

the photograph, after which the small clock frame can be pasted to the picture with glue or a shellac solution.

The sunk hour dial will come to a level with the back of the cardboard, and repose hard upon the zinc plate. This plate being

Fig. 3.

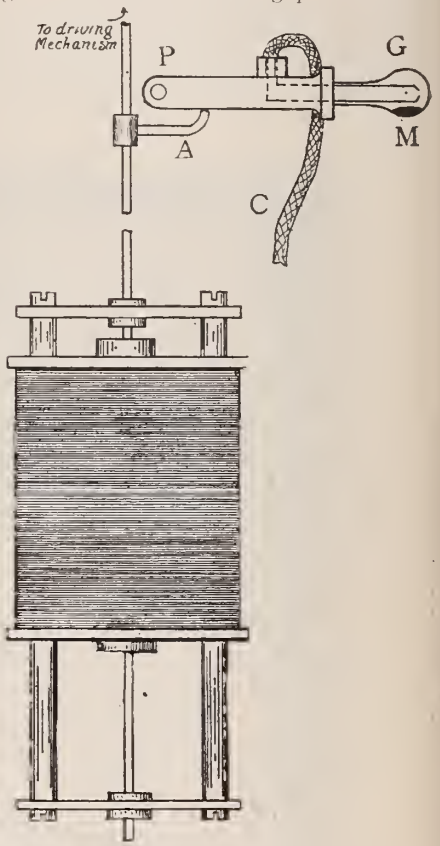
Fig. 4.

Fig. 5.

thinner than the enamel dial, of which it has taken the place, and the thickness of the sunk dial being also very slight, there will be sufficient protruding of the center arbor and the second pivot for the adjustment of the small hands. The photograph is fastened to the zinc plate by four screws, *b*, *b'*, *b''*, *b'''*, the two latter not being visible in the illustration. These screws, like the others, which are fastened from the front side of the zinc plate, are flat headed and covered by the map. The plate being too thin and too weak to be threaded, these photograph screws should be provided with a nut, as shown in the illustration.

A variety of fancy dials can be made, according to one's taste, and to the subject that is to be decorated. A frame clock like that seen in Fig. 3, looks modest and quiet; Fig. 4 is suitable for the decoration of a soldier's picture, and Fig. 5 for those aspiring to a higher standing in society, and, if desired, can be ornamented with pearls and diamonds. The making of a souvenir clock presents nothing difficult, as shown by the illustration and description, and no doubt it will be an agreeable and profitable pastime for watchmakers to make them. A souvenir clock in a show window, with a suitable inscription on a neat showcard, will prove to be a great attraction, and a good advertiser.

In 1898 I made inquiries in Washington, to know whether the device was patentable, which it proved to be, but the lapse of time required for that answer had cooled off my enthusiasm for it, so that in the meantime I had concluded that it would be wise to save the expense of taking out a patent. The clock has never been on the market, and, therefore, I am unable to judge of what success it might have. Not being patented, any watchmaker is allowed to make it.



A Novel Electric Clock.

THE En Holm electric clock, invented and patented by Oscar A. En Holm, was recently described in the *Model Engineer and Amateur Electrician*. As will be seen by the following description, the application of electricity is in supplying the motive power in place of the usual spring. In the base of the clock, concealed from view, are two sealed batteries, whose capacity is 10 ampere hours. In the place of the spring, and running through the center of a solenoid is an armature in the form of a rod of soft iron.

This core is suspended from a lever, which is connected to the gear train by means of a small ball clutch guided by armature at its highest point; its own weight carries it downward and, as it descends, it pulls down the lever with it, which has a sliding motion, ensuring uniform driving power, thus giving the driving power to the regular machinery of the clock.

The circuit of the magnetic or solenoid coil is completed by means of a "switch" of the following construction. This "switch" is composed of a glass bulb, C, fixed to a holder, which is pivoted at P. In the bulb are two wires of metal, not liable to be dissolved by mercury, a little of which (M in the illustration) is also enclosed in the bulb.

The two wires nearly meet one another at one point, as shown, and their other ends are joined to the conducting wires in a light flexible twin cable, C, which emerges from the bulb-holder. The "switch" is supported by the arm, A, attached to the guide-rod of the solenoid core, and the motion of this actuates the arrangement; in its ordinary position the wires are at the top, and the mercury at the bottom. When the core reaches the lowest point in its descent, it allows the bulb to fall until the end with the two wires is the lower. The mercury completes the circuit, the electro-magnet raises the core to its original height, and the bulb assumes its upright position again, thus disconnecting the circuit. By another ingenious device the driving power of the

A NOVEL ELECTRIC CLOCK.

core is not stopped while it is being raised. There is nothing to wear in the mechanism, as the friction is reduced to a minimum.

The weight takes five and a fraction minutes to make the descent, and the amount of time necessary for the electricity to lift it is less than one-third of a second. The capacity of the batteries, as stated above, is 10 ampere hours, or 36,000,000 millampere seconds. Every five and a half minutes the clock requires for one-third of a second 350 millampere seconds. As the electricity is only in use during the one-third of a second in which the core is being raised, it follows, therefore, that the batteries contain enough electricity to run the clock for more than three thousand days. The makers only guarantee it for three years, however.

One important point in favor of this clock is that it has no pendulum or spring, it does away with the necessity of a perfectly horizontal base, and helps to assure correct time.

This clock, it is said, will cost no more than the ordinary spring-driven clock.

The Manipulation of Steel in Watch-Work.

(By John J. Bowman, of the Ezra F. Bowman Technical School, Lancaster, Pa.

AMONG the many industrial arts which benefit by or owe their existence to the truly marvelous properties of steel, none are more indebted to these than is horology. The earlier portable timepieces were made possible by the use of a coiled steel spring instead of weights as motive power, and a balance, actuated by another coiled steel spring, instead of a pendulum.

Later came the need of an accurate portable timepiece. This was supplied by the use of steel in conjunction with brass in the form of a laminated curb. The curb acted on the hairspring in compensating for its varying degrees of elasticity and the changes in the balance, due to the influence of differing temperatures. This application of steel, made first in the year 1736, rendered possible the construction of timepieces sufficiently accurate to enable navigators to determine longitude at sea, and was the germ of the later development of the compensation balance, now universally used in good watches and chronometers.

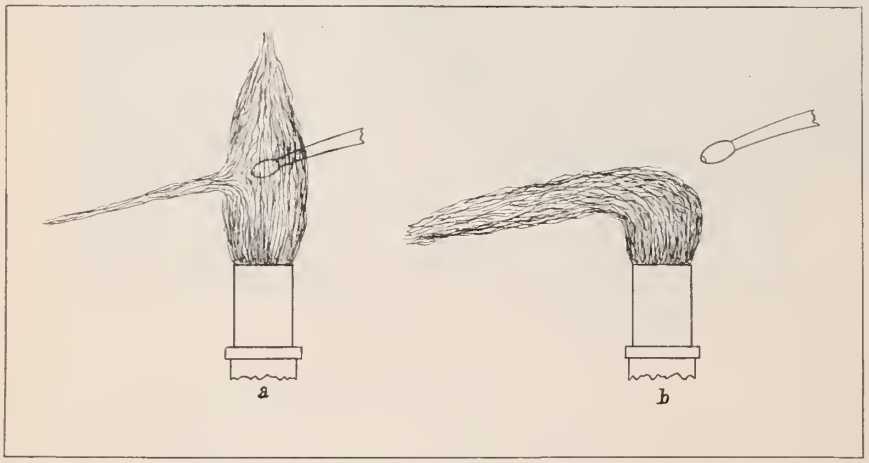

FIG. 1.

It will not be out of place here to call attention to the experiments now being made in Europe, in the use of steel alloyed with nickel for chronometer balances. It is asserted that such use reduces greatly the troublesome "middle temperature error," and this new combination will be watched with great interest in its development. The value of steel in horology is not by any means confined to its use in springs and compensating balances, however, but extends to the no less important parts of timepieces, such as the train pinions, arbors, escapement and winding mechanism. Since this metal plays so important a part in horological mechanism, the following notes on methods of carrying on different operations in working steel, which have come under our observation, may prove useful. Before going into the subject of working methods we will give a summary of the different kinds of steel and how they are made.

Steel is a composition of iron and carbon, in varying proportions, ranging from ¼ per cent. of carbon to 2½ per cent. The hardness of the steel increases with the proportion of carbon used, the amount which can be advantageously absorbed being limited, as with an undue percentage of carbon the steel becomes worthlessly brittle. In making the best steel malleable iron as pure as is possible to obtain is rolled into bars usually two or three inches wide, somewhat less than an inch in thickness, and 10 to 15 feet long. These bars are subjected to a process called "cementing," in which a number of them are packed, each surrounded by ground charcoal, in a furnace which is kept at a glowing red heat, for from a week to 10 days. The heat causes the carbon of the charcoal to penetrate into the iron. At the end of the necessary time the furnace is allowed to cool for about one week, when the bars are taken out. The metal is now in the form called "blister steel" (on account of the appearance of the surface of the bars), and is not of commercial value because the carbon has penetrated unevenly; it is greater in quantity near the surface and diminishes toward the interior of the bars, making them irregular in hardness, elasticity, etc.

The object of the steelmaker now is to work up the bars so as to mix the carbon uniformly through the metal. The cheap method is to produce what is termed "shear-steel," by cutting the blistered bars into short lengths, binding them into bundles, and raising the bundles to a welding heat. They are now subjected to the rapid and repeated blows of a trip hammer until the bars are welded into a solid mass. This is then rolled out into a bar which is cut up again, and the process is repeated until the desired quality is attained. Shear-steel is not fine enough for making the springs and other parts of timepieces. What is required for such use, and for making the fine tools used by metal workers, is what is known as crucible, or cast-steel.

It is a mistake to suppose, when hearing of an article made of cast-steel, that the article in question has been formed of steel by casting it in a mould. This term, "cast-steel," applies only to the method employed in making the steel itself. Instead of the welding process used in making shear-steel, the blistered bars are cut into small pieces, melted in crucibles and stirred until the carbon is thoroughly and uniformly mixed through the mass. Then the steel is poured or cast into ingot moulds, which process is what gives it its name of cast-steel. The more modern usage, however, is to term it crucible steel. The cast ingots are now ready for annealing, rolling into bars and sheets, or drawing into drill-rods or wire, in which forms it is bought for use in manufacturing and repairing watches, as well as in the manufacture of fine tools.

Crucible steel is the most expensive variety for obvious reasons, among which may be noted the comparative slowness of manufacture and the number of crucibles unavoidably destroyed. While it is not of utility in such delicate instruments as watches and clocks, we will mention another variety of steel which is often confused with the finer varieties. What is referred to is "low" or "mild" steel made by the Bessemer process. This steel is very much cheaper to produce than the other varieties, and is used in railroad, bridge and building construction, boiler plates and for similar purposes, for which its value cannot well be overestimated.

It is made by blowing air through molten pig-iron until nearly all the carbon is burned out of the iron, and then adding a compound of carbon with a little iron which enables the maker to gauge the proportion of carbon in the finished product. Some impurities are removed from the iron in this process, but the resulting low steel still contains matter which makes it impossible to carbonize it high enough to be of value except for purposes not requiring an actually hard metal.

Now let us consider the several subjects which have to do with the practical manipulation of steel in watchwork. In all of the following, it will be understood that only cast, or crucible-steel, is referred to; as explained before, the other varieties are not used to any extent in horology.

HARDENING.

The property of steel to which it owes its great value is its capability of being hardened to such a degree as to enable it to cut and shape almost every known substance, including itself in its unhardened condition. This hardening is brought about by bringing a piece of steel to a red heat and plunging it into cold water or otherwise suddenly cooling it. It is not known exactly what causes this change in the character of the metal, although much study has been devoted to the subject by scientists.

The higher the proportion of carbon in the steel, the harder will this heating and quenching leave it. After hardening, the metal is found to be too brittle for most purposes, so it has to be subjected to a tempering process or "letting down" to the proper degree of hardness, according to the purpose intended. This tempering process consists simply in slowly reheating the hard steel and observing by its deepening of color the lessening degree of hardness. The term "tempering" is often used to signify what really consists of the two very different processes of (1) hardening and (2) tempering.

In selecting a medium for quenching the hot steel in hardening, it is our opinion that the workman will do well in general practice to confine himself to clear water at the temperature at which it flows from the ordinary sources of supply. An ex-

ception to this is in the hardening of very small pieces, such as single pivot drills, in which, for the sake of convenience, wax may be used. There are many nostrums in the shape of hardening mixtures, supposed by some to possess peculiar merits, but we have not heard of any cases in which such claims are supported by either theory or practical experience.

We will assume that the piece of steel to be hardened has been filed, turned, or otherwise worked to shape. The size and shape of the piece determines the treatment to be followed. The heating apparatus used by watchmakers is usually a jeweler's gas-burner or large alcohol lamp, with a blowpipe to direct and intensify the heat of the flame. There must also be a bed of more or less incombustible material to hold the piece of steel and catch the heat of the flame.

For small work a flat piece of asbestos held in the hand is convenient, but in heating a long piece of work, for instance. a clock-pinion, or a considerable body of metal, such as a roller for a filing fixture, the best arrangement is to place a piece of flat asbestos on blocks or boxes until it is nearly on a level with the burner; lay the steel on this and with charcoal build up a little furnace by laying a block of it behind and slightly "overtopping" the work, and placing a piece at each end of the crevice thus formed. Then take a blowpipe with a large opening and blow all of the flame into the crevice, until the steel assumes a cherry-red color. Be careful not to let it go beyond a cherry-red. As seen lying amid the glowing charcoal and asbestos, it will appear to be not quite as hot as it actually is, but if heated as above, by the time the charcoal is removed and the steel taken up ready for quenching, the heat will have subsided to what will be sufficient for hardening, without danger of overheating.

Direct the blast of flame so as to heat the piece evenly; maintain an even color over the piece during the entire heating. It is easy to maintain a steady, uninterrupted blast for a time sufficient for heating the largest piece, if the operator will use his cheeks in the same manner as the rubber reservoir on a foot bellows is used, which is not difficult after a little practice.

The idea is to fill the cheeks from the lungs, keeping them distended all the time, and depending on the pressure of the cheeks to force the blast through the pipe whenever a breath is taken and the chest pressure is thus cut off. Correct blowpiping requires an alternate chest and cheek pressure. Two blowpipes should be kept, one with the hole about the size of an ordinary pin, and the other with the hole broached out to somewhat more than a millimeter in diameter. For any purpose requiring a fine pencil of flame, use the pipe with a small hole, putting the tip inside of the lamp flame, as shown at a, Fig. 1. For a broad blast, use the large hole, placed outside and near the flame, and direct the entire flame against the object to be heated (b, Fig. 1).

The operator must use his judgment in applying the flame to the work so as to heat it evenly. If the piece is formed of a large and a smaller portion, blow the flame on the larger part first. The heat will follow to the lighter portion, while if it were directed against the whole, the smaller part would become overheated.

In hardening objects of certain shapes, as long clock pinions, thin flat pieces, etc., there is a possibility that they will to a greater or lesser extent be warped or sprung out of shape in hardening. This can be traced to several causes.

The rod, for instance, from which the pinion was made, may have come from the steelmaker's rolls or drawplate somewhat curved, and force was necessarily used to straighten it. This caused a compression of the molecules on the convex side of the rod and a corresponding tension on what was the inner or concave side of the curved rod. While the finished rod may be perfectly straight, there is a constant interior strain on the part of the molecules to resume their original relations, and through all the work of shaping the pinion this interior strain may continue, although unable to alter the form of the cold steel. As soon as heat is applied, however, there comes the opportunity the molecules have been seeking, of relieving the strain by resuming their original positions, and in consequence the piece is bent. In order to reduce to a minimum this possibility of warping, in the case of large pieces, it is well to carefully anneal the raw steel before working it to the required shape; in this process any tension which may exist is as far as possible removed by heating before the shaping is commenced. The details of this operation will be discussed a little later.

Another cause of warping is lack of care in seating the work before heating. If a long piece is supported at both ends and heated, it will sag in the center. This indicates the importance of supporting the work solidly along its entire length. Again, if a long piece be heated properly and then carelessly thrown lengthwise into the water, the side first striking the water will cool and shrink first, and this will cause the piece to bend. It follows that the proper way to quench a long piece is to dip it end-first, and let the rest follow just as perpendicularly as possible. A thin flat piece is best hardened by clamping it between two substantial plates of brass, then heating and quenching the whole together.

When a rod bends in hardening after all precautions had been taken, it is doubtless due to the releasing of an interior strain in the metal during the heating, and the only thing to do is to straighten it by placing it on a flat stake and striking with a round faced hammer on the concave side, but not, however, until after tempering. This will stretch the inside of the bend until it overcomes the curve of the rod. With such a possibility as this in view, it is well never to work too close to measurement until after the hardening and tempering have been finished, as, in this case, the work may have to be turned or filed to remove the hammer-marks; in many cases a very little turning will suffice to make the work true after hardening and tempering.

Pieces shaped like a short cylinder, or cubical, or of any other compact shape, will not be found to warp appreciably. This applies to balance-staffs, barrel arbors, screws, and the like.

A piece of steel after hardening will be found to be coated with a black oxide. For large work which requires subsequent dressing to size, etc., this is not a matter of great inconvenience; but in hardening small work it is desirable to prevent it by coating the article with moistened soap before heating. This melts over the steel and apparently forms a protecting film; after quenching, the steel comes from the water with a silvery gray surface very easily polished preparatory to tempering. Any small portions of black scale happening to adhere can be removed with a brass wire scratch brush. In order to harden without discoloration or scaling of the metal, the object to be accomplished is the exclusion of air from the surface during heating and quenching.

The use of soap is a very convenient and simple expedient and generally is effective; however, if the article is such as to allow of no risk of a touch of scale and the consequently necessary reduction of size in refinishing, the safest plan is to enclose it in a shell of metal filled with powdered charcoal, then heat the whole to a good clear red and plunge vertically into the bath. This is an excellent method of hardening a number of small pieces at a time—drills, watch pinions and the like. A good tube to hold the charcoal is an exploded 32 or 38 caliber rim fire cartridge shell of copper, with a cover-cap made by cutting off the head of another, leaving about ¼ inch of the body, which is stretched to fit over the open end of the first one.

If possible use powdered burnt bone for filling the tube; where not convenient, however, pulverized wood charcoal will answer quite well. When one end only of a piece is to be hardened, do not plunge it to the end of the glowing portion and then let it rest until cool, but move it rapidly up and down, as otherwise the piece may be flawed or weakened at the part which was on a level with the surface of the water.

A number of methods are in use having as their object the hardening and tempering of steel in one operation. Case-springs, for instance, require a degree of hardness sufficient to retain their form, and yet must possess the greatest elasticity, as the acting portion of the spring is necessarily quite heavy. This requires a "tough" temper which can be produced by heating to a dark cherry red and plunging in sperm or linseed oil. If good judgment is used in heating no further treatment will be necessary beyond cleaning the black oxide from the exposed portion of the spring.

Often it is found necessary to harden or reharden a small drill while using it. Instead of separately hardening and tempering it, which would consume considerable time, the drill may be held in the flame of an alcohol lamp until the point is a clear red, and then thrust repeatedly into a cake of beeswax or lathe wax until it ceases to melt the wax. The drill should be held with tweezers, as a pinvise absorbs too much heat.

The Horological Works of Perron.

(Compiled and translated for THE JEWELERS' CIRCULAR-WEEKLY from *La France Horlogere.*)

PERRON'S name is embalmed in the memory of Besançon watchmakers. He is mentioned as an artist of the greatest talent, but generally little more is known of his work than appears in the *Annuaire*

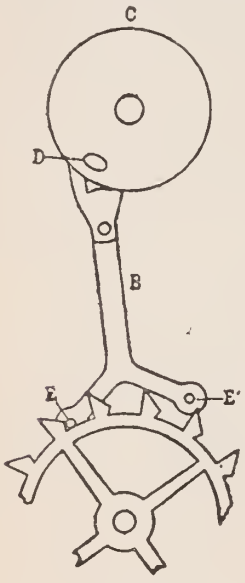

FIG. 1.

[B, Represents Fork; C, Roller; D, Roller Pin; E, E', Pins.]

du Boubs of the year 1820, in a long article on the horology of Besançon and its neighborhood, which thus speaks of the first artist watchmaker engaged in the construction of timepieces of precision in this chief seat of French watchmaking:

"M. Perron is a distinguished mechanician, who works in isolation on works of high character. 'Marching watches' (pedometers) have been ordered by the Russian Government, and he has also made one for his Majesty himself, the Emperor Alexander. He is now occupied in finishing an astronomical clock, which has already demonstrated the accuracy of its construction. The design of this clock and its table for calculation have been sent to the Exposition." This was the Paris Exposition of 1819.

It is useful to draw from oblivion the works of a man who, if he did not make a fortune, was an indefatigable investigator and the first watchmaker at Besançon engaged in chronometry, properly so-called. Previously the manufacture was almost exclusively confined to simple verge watches and repeaters and a few cylinder watches.

Who was Perron? The *Essai de l'Histoire Abregée de l'Horlogerie*, published in 1834 by this artist, reveals a scientific writer of great erudition and exalted intelligence, though it was not by the studies of his youth that he was prepared for scientific labors.

Perron was born at Besançon, Feb. 17, 1779, and served an apprenticeship at watchmaking, at the close of which, in 1793, at the age of 14 years, he arranged and completed seconds watches, indicating the days of the month and of the moon, the days of the week, etc. In 1798 he contrived a detached escapement with inclined planes. In 1808 he composed a plan for an equation astronomical clock, with seconds and moving planisphere, giving the revolution of all the planets. In 1817 he constructed 18 "marching watches" (pedometers) for the Emperor of Russia.

In 1819 he constructed the first marine chronometer produced in this neighborhood. In 1817 he had been occupied with contrivances for correcting the effects of the temperature on the adjustment of watches and had contrived a plan of compensation for the balance spring. In 1820 he constructed an astronomical clock regulated by a compensated pendulum, which figured in the Paris Exposition of 1823. He afterward produced a detached escapement, with constant force, for marine watches; then constructed a repeating chronometric movement and watches of observation for officers of the navy—works which he exhibited at Paris in 1827. These works had previously opened to him the doors of the Academy of Sciences of Besançon.

The following passage from the preface of his book will give an idea of his own laborious life as an artistic watchmaker:

"If artists succeed in attaining some success in their art they owe it to long experience, profound meditation, sustained application and talents, acquired by watching and privation, which not only injure their health, but often destroy it completely. Attracted by the desire of rendering himself useful to his compatriots and colleagues, the artist hesitates at no trouble if he can succeed in his purpose."

Having mentioned Perron's inventions in general, a description of the principal ones may be interesting.

FREE ESCAPEMENT WITH INCLINED PLANES.

This he constructed at the age of 19 years. The 'scape wheel is flat and the full teeth terminated in inclined planes, like those of a cylinder wheel. It was in reality the examination of a cylinder escapement which gave him the idea of his invention. The 'scape wheel, worked by the train, communicated the impulse to the balance by means of a fork, whose extremity struck on a pin carried by the balance staff. The two arms of this fork bore at their extremity a pin, and the inclines of the wheel acting on these pins formed the lift.

A simple examination of the design of this escapement (Fig. 1) will show watchmakers that it is the same as used in the alarm clocks of American pattern, called the detached escapement, and in use during the last dozen years. This escapement is American only in name, since it was constructed in Besançon in 1798. Perron first applied his invention to watches. As it was of easy construction, he had imitators and a "Sieur" Cuenin perfected the system, placing ruby pins on the arms of the fork. This system of escapement was soon dethroned by the jewel cylinder escapement. Later, Perron applied it to regulator clocks.

ASTRONOMICAL CLOCK.

We have seen previously that Perron composed in 1808 the plan of an equation astronomical clock, with seconds and moving planisphere. He submitted this plan to the Besançon Academy of Sciences, and this is an extract from the report of the examining committee:

"Your committee has regarded with astonishment the various mechanisms conceived by the ingenious artist. . . . They have admired the elaborate calculations made by this indefatigable young man for determining with precision the numbers necessary for the wheel ranges. An idea of this work may be formed if we remember that the celebrated Passement, constructor of the splendid clock, with moving planisphere, at the Château of Versailles occupied 20 years in calculating the different wheels of his machine."

These productions had excited the attention of the public authorities, and in 1814 the young inventor was elected a member of the Society of Encouragement of National Industry. It was in 1820 that Perron completed his astronomical clock, which is described as follows:

"This clock indicates the rising and setting of the sun, the phases of the moon, its passage to the meridian, the months, the perpetual date, the entrance of the sun in the signs of the zodiac, its right ascension, the equation of the time, sidereal time, the date of the century, etc. It is regulated by a compensated pendulum; the regularity of its rate is satisfactory; its annual variation is on the average from 20 to 30 seconds."

This clock received the award of a bronze medal at the Paris Exposition of 1823. That was the period of economy in rewards, for Breguet, Wagner and the brothers Berthoud, whose important works were then exhibited, obtained only a silver medal.

"MARCHING WATCHES."

"Marching watches," now called pedometers, are so constructed as to measure the course passed over in a given time, and by deduction the number of paces per minute. In 1817 the Russian Government ordered of Perron 18 of these watches for regulating the marching of troops. At that time there were two kinds of paces—the ordinary pace for parade, and the quick-step for maneuvers or for the march.

Perron's watches gave the parade step at the rate of 75 beats a minute, and a quick-step at the rate of 110 beats. They were designed for the Russian staff. One of them, prepared especially for the Emperor Alexander, served for comparison. They were constructed with the detached escapement of Ferdinand Berthoud for the quick-step and with the duplex escapement for the ordinary step.

(To be Continued.)

C. H. Rhodes, Cold Brook, N. Y., is the owner of a clock said to run three years with one winding. The clock has not been wound since Sept. 8, 1901, and its owner does not expect to wind it again until September, 1904. It is made on the plan of an old English patent-lever watch, but has a pendulum.

$5.00 for an Idea!

The JEWELERS' CIRCULAR-WEEKLY will give a prize of $5.00 to the person who sends in the best suggestion for a real live, up-to-date, interesting article appertaining to horology. The subject suggested must be one capable of holding the attention and interest of watchmakers. Contestants will be given until February 25th to forward the title of the subject. Hence THINK and get cash for your THOUGHT!

Heinrich's Horologica

BEING ANSWERS TO A SERIES OF QUESTIONS ON ADVANCED HOROLOGICAL SUBJECTS.

By H. H. Heinrich.

Copyright, 1902, by The Jewelers' Circular Publishing Co.

The Pendulum.

(Continued from issue of Jan. 14.)

FOLLOWING up this apprenticeship experience, it will be interesting to advanced artisans to enter upon further practical illustrations of the pendulum and

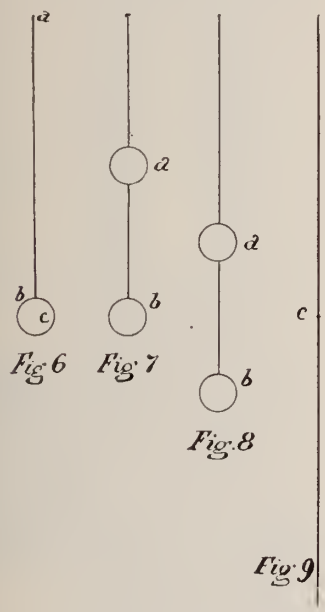

Fig. 6 Fig. 7 Fig. 8 Fig. 9

balance, and the effect of their respective lengths upon the centers of oscillation. The following question might be put here: Where is the center of oscillation of the pendulum? To answer this question suppose a pendulum Fig. 6 to be four feet long; from the center of suspension *a* to the center of the bob *b*, this pendulum is a little longer than that which vibrates the seconds, and which is 39.1017 inches in New York, 39.0958 inches in Washington, and 39.0152 inches at the Equator, at the level of the sea. The four-foot pendulum is taken in order to facilitate the explanation. Suppose the bob to be round, six inches in diameter, and to weigh one pound. If we assume further that its rod is of little or no weight, the center of oscillation of that pendulum would be exactly in the center of the bob *b*. If we place a second bob *a* of the same dimensions and weight as the foregoing *b* in the middle of the pendulum rod as shown in Fig. 7, then we have two pendulums upon the same rod, a short one of two feet length, and a longer one of four feet. The short pendulum will go fast and the long one slow. What can be done to bring them in harmony? To restore harmony, as in many other cases in nature, each pendulum must yield a little, and consequently the pendulum has theoretically become shorter—*i. e.*, the center of oscillation, or percussion, as it is also called, has gone higher up between the two bobs, and has become theoretically shorter in spite of the additional one-pound bob. In order to obtain from that pendulum the same number of oscillations as before, it is necessary to lengthen it by one foot, making it five feet long (Fig. 8).

We have theoretical rules by means of which the exact length of a pendulum and balance can be calculated; such rules and calculations, however, are very intricate, and, as stated in the beginning of these articles, it is the intention of Mr. Heinrich to describe horology in a practical way only, so that any watchmaker may understand the principles of horology, practically.

If we wanted to make the pendulum (Fig. 7) of a simple rod (Fig. 9) without any bob, it would require a length of eight feet and then the center of oscillation will come at about the middle of the rod as in pendulum (Fig. 6), which is only four feet long. This explanation answers the question, where is the center of oscillation, and it shows that it is at the center of gravity of the pendulum, in any case near enough to it to serve for all practical purposes. The center of gravity can easily be found by balancing the pendulum upon the sharp edge of a knife for instance, and at the point of support, the fulcrum, at which both arms balance each other, we have the center of gravity of the center of oscillation of the pendulum—in other words, the theoretical length of the pendulum.

What is the reason that by adding a weight at the center of oscillation of a pendulum it will neither decrease nor increase its number of oscillations—*i. e.*, it

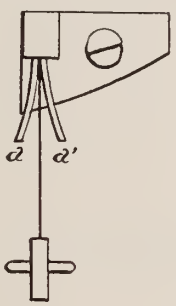

FIG. 10.

will cause neither loss nor gain in time—whilst by adding weight to a balance at any point whatever, it will always cause loss in time?

The oscillations of a pendulum are caused by the natural power of gravitation which does not assist the vibrations of the balance. The small impulse given by the fork to the pendulum is all that is necessary to keep it in motion, and the pendulum will fall back by gravity. The small impulse given to the balance will cause it to fly in one direction from which, however, it would not come back if it were not checked and pulled back by a hairspring. The force of the hairspring must be increased when weight is added to the balance, and the amount of that increased force depends on the amount of additional weight and the distance from the fulcrum where it has been added. The addition of weight between the center of oscillation of a pendulum and the point of suspension, which causes the pendulum to become theoretically shorter, has the same effect upon the balance—*i. e.*, to cause the timepiece to go faster—but, as stated before, the hairspring, having to pull a heavier weight, causes the timepiece to go slower because the hairspring is not strong enough to pull the heavier balance the same number of times through the same arcs of vibration in the same lapse of time. As this latter effect is of greater influence than the former, it follows that the balance will always lose in time when weight is added to it.

The effects produced by the additional bob, Figs. 7 and 8, explain the custom of placing on the rod of a second pendulum a small weight, fastened by a screw, which makes it possible, by moving the weight up or down, to make the pendulum go either slightly faster or slightly slower. This device is only used to correct slight differences in time.

In mercurial pendulums, other means are usually adopted: a small shell placed above the mercury contains fine shot, by decreasing or increasing the number of which, the rate may be respectively decreased or increased, as the center of oscillation is thereby moved down or upward.

Isochronism of the Pendulum.

We will now propound the question, are the large and the small vibrations of a pendulum of equal length of time? The answer must be, no!

We will try to explain this fact clearly and show how one can convince himself readily. Near a regulator, the pendulum of which ticks the seconds, we hang a loose, simple pendulum composed of a thread and a weight (a bob) exactly of the same theoretical length as the pendulum of the regulator, then we can readily see that the large oscillations of our experimental pendulum are not made in the same length of time as its small vibrations, the latter being made in a shorter time.

There are three different causes, which make the pendulum non-isochronal: (1) The large vibrations have to overcome more air resistance than the small ones; (2) at the end of each vibration the pendulum takes a moment's rest before starting on its return trip. This rest is greater in the long vibrations than in the small ones; (3) if the pendulum is kept in motion by a movement, as in a clock, then during the rest of the escape wheel upon the anchor the pendulum cannot vibrate perfectly free. Experience, in fact, has taught that the large vibrations require more time than the small ones.

How can we make a pendulum isochronal? We can make a pendulum isochronal: (1) by means of the suspension spring; (2) by a small lift of the escapement, so as to cause only small vibrations of the pendulum; (3) by making the suspension spring work between two pins, like the hairspring of a watch between its regulator pins; (4) formerly, when it was thought best to let the pendulum make large vibrations, by applying to the suspension two cycloidal pieces, *a, a'*, of metal, as illustrated in Fig. 10, which caused the suspension spring to curve against those round pieces, thus shortening the large vibrations of the pendulum.

(To be continued.)

Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

QUESTION No. 364.—**Elgin Watches.**—*Tell me who manufactures Elgin watch movements besides the Elgin Watch Co.—I mean the Elgin National Watch Co.? Please give the name and address of this firm.* *J. W. H.*

ANSWER:—There is only one Elgin watch factory, and that is located in Elgin, Ill.

QUESTION No. 365.—**Wood Cut.**—*For how many impressions can a wood cut be used?* *W. A.*

ANSWER:—This depends entirely on the kind and quality of the wood and the handling in printing. The number of impressions may vary from 2,000 to 100,000.

QUESTION No. 366.—**Jeweling Tool.**—*I have seen a jeweling tool, which is described in the catalogue like this: "Jeweling tool, consisting of four jewel bezel openers, three closers, one center and handle." This tool is made by H. I. and J. If this tool is used by hand, please explain how it is done, and if it is used in a lathe, kindly give me the best method of using it.* *J. W. H.*

ANSWER:—The jewel bezel openers and the closers are used by hand. The center tool is used with a bow upon the ferrule.

QUESTION No. 367.—**Balance Staff Pivot.**—*I have a German lathe, and have tried to drill a hole in a balance staff that had the pivot broken off, and cannot get it to work. I draw the temper to a dark blue, but cannot get a drill that will take hold of it; the drill chuck seems to be untrue. Please tell me what kind of drill to do this job with, and tell me how to make a chuck to hold the drill so as to be true.* *J. W. H.*

ANSWER:—This question has been thoroughly described, and illustrated with cuts in the following issues of THE CIRCULAR-WEEKLY of 1902. April 23, page 80; May 7 and 21, pages 74 and 76; June 11, page 73; July 2, 16 and 30, pages 69, 71, 72 and 73; Aug. 20, page 76.

QUESTION No. 368.—**Watch Tools.**—*Give me the theory of using all kinds of watch tools.* *J. W. H.*

ANSWER:—We regret that we are unable to satisfy your desire. These columns are intended to give information to practical workmen in the watch and jewelry trade about subjects that might be of general interest. When you have turned over the leaves of your catalogue, you have, without doubt, noticed that it contains more than 1,000 different tools. Hence, to describe them all would be an infringement upon the domain of the watchmakers' school.

QUESTION No. 369.—**Silver Casting.**—*Can silver be cast smooth in brass mouldings?* *J. W. H.*

ANSWER:—For moulding, material is generally used which is the least subject to changes caused by the molten metal that is poured in it, and, therefore, instead of using brass mouldings or any other metal which would be exposed to chemical changes, and consequently give unsatisfactory castings, such materials as sand, loam, bath-brick, marl, cuttle-fish bone and pea flour are generally used. Different kinds of castings require different kinds of sand. For some, it must be porous, yet adhesive; for others, it must be very fine and free from grit, but still adhesive enough to retain impressions of the most minute details of the patterns. For small objects cuttle-fish bone is generally taken.

QUESTION No. 370.—**Drill.**—*I know a man who said he would break a file in two, take one end, make a drill of it, and drill a hole in the other piece of the file without drawing the temper out of the piece. Can you tell me how this is done?* *J. W. H.*

ANSWER:—Screw taps, chisels, saws and files are annealed from a dark straw yellow to a light purple. If your man hardens his drill glass, he might, with patience and care, be able to drill a hole in the other piece of the file. That method, however, is of no practical value.

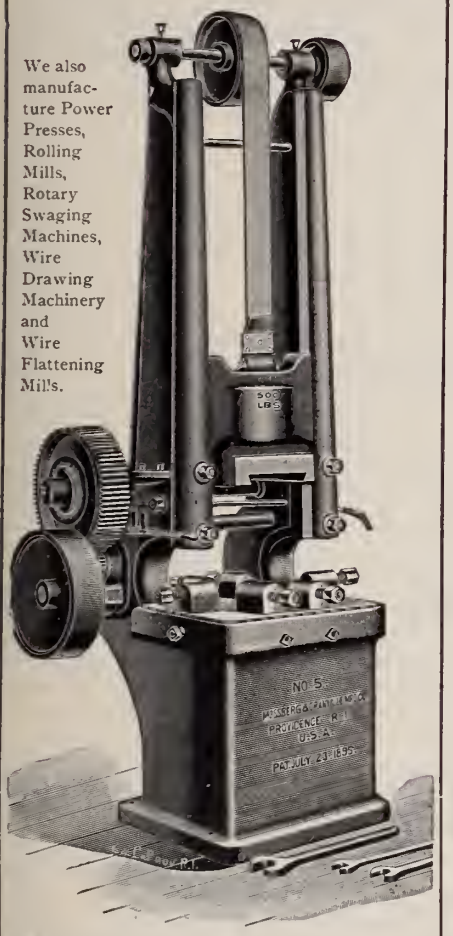
QUESTION No. 371.—**Printing Presses.**—*Where can I obtain box-wood engravers' blocks of usual thickness, 23½ mm.; also the names and addresses of makers of printing presses for cartel plate work, and copper plates on wood blocks for engraving newspaper advertisement cuts?* *W. A.*

ANSWER:—All of the above can be obtained from the Babcock Printing Press Mfg. Co., 38 Park Row, New York, or from Barnhard Bros. & Spindler, their western agents, 183-187 Monroe St., Chicago, Ill.; also from the Chandler and Price Printing Press, of which the western branch house is 203 Monroe St., Chicago, Ill. They might also be obtained from the latter's agent, the Crescent Type Foundry, 346 Dearborn St., Chicago, Ill.

QUESTION No. 372.—**Gasoline Lamp.**—*Please tell me how to make a small tank, and how to generate gasoline out of the same, in order to hard solder. Tell me where I can get a cheap pump to use with the tank; also what kind of a job it will make to inject the air in the tank and to prevent it from coming back in the pump.* *J. W. H.*

ANSWER:—We do not believe in wasting time in describing devices, tools and machinery which can be of no value or benefit to the workman. To describe a good gasoline lamp, which may be safely made by any man, it must first be invented, as the law does not allow one to duplicate those for which patents have been obtained. Up to the present time there have been used more than 286 patents, based upon various forms of burners and general construction. If you want a good gasoline lamp forge, torch or furnace, you can buy one from Chas. A. Strelinger & Co., Detroit, Mich., or from Montgomery & Co., 105 Fulton St., New York, at a lower price than you could possibly make it.

QUESTION No. 373.—**Guinea Gold.**—*I have a watch case which I think is made of Guinea gold. As near as I can find out, the watch came from Ireland; it has a mark on the inside of the case which resembles this: "S. & H., 18 crowned, 42525 D." Would you please answer, in your Workshop Columns, what it is worth an ounce, and what you think the age is; it has an old English movement in it?* *T. C. P.*



ANSWER:—To judge from the crowned 18, the case seems to be of 18 karat gold, which is worth 72 cents a pennyweight, or $14.40 per ounce. The age of the watch or the place of manufacture cannot be learned from the marks which you give us. The letters S. & H. indicate the makers' mark, the crowned 18 probably denotes the fineness of the gold; the figures 42525, the number of file of the manufacturer; D may be a date mark, but cannot be of any utility in giving information, unless it is known where the case is manufactured. If it were made in Ireland, as you think it is, it should bear the following six marks: the figure 18, a unicorn's head, the figure of Hibernia, the date mark, the maker's mark, and the duty mark.

QUESTION No. 374.—**Wood Alcohol.**—*Please tell me whether wood alcohol will burn in a lamp, and from what kind of wood is wood alcohol extracted?* *J. W. H.*

ANSWER:—Wood alcohol, methyl alcohol, wood naphtha, is made by dry distillation of wood, of beet sugar molasses, or of calcium formula. Methyl alcohol is prepared on a large scale from wood which contains various tarry matters, acetic acid, and the methyl alcohol. In the selection of wood for distillation, attention must be paid to its age, hardness and percentage of moisture, as well as to the kind of wood employed and the part of the tree from which it has been cut. The distillates from the wood are allowed to stand for some time, when the tarry, resinous and oily matters precipitate; the supernatant liquid is then filtered through gravel into another vessel, from which it is either distilled at once or after previous neutralization with lime. Large quantities of methyl alcohol are now made by the distillation of residues obtained from the evaporation of the spent wash in the preparation of ordinary alcohol from beet sugar molasses. The distillate contains compounds of ammonia, methylanime, methyl cyanide and methyl alcohol. After incorporating with sulphuric acid, the mixture is evaporated, the vapors being afterwards condensed. These contain methyl cyanide and methyl alcohol; the former is decomposed by rectification over lime, and the distillate, which contains dilute methyl alcohol, is dehydrated by means of lime. Commercial wood spirit contains very variable proportions of the pure alcohol, from as low as 35 per cent. to as high as 95 per cent. It contains acetone, methylacetate, and, often, various empyreumatic bodies; these have considerable influence, not only upon its density, but also upon its solvent powers for shellac and other resins. The purest spirit is always preferred for use in lamps as a fuel, but for the use of the varnish makers and polishers, some of the impurer varieties, containing essential oils, etc., are sometimes chosen. The impurities of commercial woodspirit are small quantities of alclehyde, dinuthylaretal, allyl-alcohol, acetone, methylethyl ketone and higher ketones.

Gift by France to the Society of the Cincinnati.

ONE of the most perfect pieces of French ceramic art ever shown in New York was put on exhibition last week at the store of Tiffany & Co., 15th St. and Union Sq., New York. It is a superb product of Sèvres ware and is a present from the French Government to the Society of the Cincinnati as a souvenir of the sojourn of the members of the French Mission in this country expressing appreciation of the cordial reception extended to them by the members of this patriotic order.

The vase, which was presented by the French Ambassador, was one of the *chef d'œuvres* in the museum collection of the National Manufactory at Sèvres and is one of the most notable pieces of this ware ever sent to the United States. It stands 4 feet 3 inches, is of long, oviform shape, and has a royal blue ground of great beauty and translucency.

Before the vase was received Gen. Brugere, Commander-in-Chief of the French army, sent a letter to Hon. James M. Varnum, of the Society of the Cincinnati, under date of Dec. 11, 1902, a translation of which reads as follows:

The members of the French Mission, of which I had the honor to be the head, were especially touched by the cordial reception extended to them in New York by the members of the Order of the Cincinnati.

They will never forget the charming reunion of May 27, 1902, which showed how close and lasting are the bonds which have united the United States and France since their soldiers fought and shed their blood, side by side, under the leadership of the great Washington.

I requested the Government of the French Republic to do us the favor of sending to the Order of the Cincinnati some object of art as a testimonial of our warm sympathy and profound gratitude, and I am happy to be able to announce to you that my request was favorably received and that the Minister of Foreign Affairs will soon transmit to you, through our Ambassador, a vase from the National Manufactory, at Sevres, which was selected by myself, and which I beg that you will have placed among the archives and valued possessions of your Order, as a souvenir of our too brief sojourn with you.

Manufacture of Glass in Germany.

CONSUL J. F. WINTER reports from Annaberg that the manufacture of glass in Germany has become a thriving industry. The number of factories has reached 400, and they give employment to about 35,000 workmen.

This is a good showing when it is considered that the production of glass is a comparatively new industry for the Empire. During the past 30 years, the imports of glass from Austria, Belgium, England and Italy have not only been rapidly decreasing, but Germany now exports to those countries certain kinds of glass.

SEVRES VASE, PRESENTED TO THE SOCIETY OF THE CINCINNATI.

German manufacturers have, of course, not yet reached the stage where they can compete with Belgium in mirrors or with Venice in fancy-colored glass decorations and vases.

Old Vienna Porcelain Figures.

THE great Austrian porcelain manufactory that existed in Vienna for generations under State control and by the aid of State subvention, was abolished in 1864, as commercially unsuccessful. It was perhaps the leading factor in bringing the ceramic industries of Austria into favor and importance. Upon the closing of this government undertaking, the works were sold piecemeal, and the parts not acquired by the museums were bought by the public.

In addition to the usual table services, the manufactory had made a great variety of decorated china groups which, on account of their beautiful modeling, fine paste, and glaze, as well as rich coloring, gave the works perhaps their greatest fame. On the sale of the molds in which these groups were formed, the most considerable and best portion was purchased by a local factory that made little or no use of them.

Now, after lying idle some 40 years, says Consul-General Carl Bailey Hurst, at Vienna, the molds have been taken up by the chief porcelain and faïence establishment in Vienna, and the manufacture of the old-time groups, originally modeled by celebrated artists, has begun again. This new work cannot rightly be termed reproduction or copy. It is recoinage from old dies—a resumption of discontinued work. Save in age, there is no variation; paste and pigment are identical; and when the touch of time has mellowed the glaze (and incidentally broken some of the more prominent points of the groups), it will be practically impossible to detect the difference between the figures of to-day and those of yesterday, except that the impressed shield on the bottom of each piece is now accompanied by a coronet.

With the dissolution of the former works, the famous mark of a blue shield, commonly looked at reversed and called a beehive, dropped from the category of exclusive property, like Meissen or Sèvres, and became free to anyone that chose to employ it.

Beyond its artistic and historical aspects, this renaissance of a celebrated industry will have a marked bearing on the ceramic trade of Austria.

French Ceramics.

BY ADELAIDE R. HUSTED LONG.

IN the last anniversary number of THE CIRCULAR-WEEKLY, the writer contributed a very general article on "Ceramic Art" in all countries, and to continue with the various famous wares in different localities of the world, those of that most fascinating and charming country, France, will now be taken up. In so doing, it is not the intention to make a special and correct study, individually, of the great wares of the world of different nationalities, as only the space of an entire volume would suffice for an exhaustive consideration of their many different points of excellence.

Taking up the subject chronologically, we shall find, beginning with the earthenwares, majolicas and faiences, continuing with the soft paste, and always ending the discoveries with hard porcelain, that France was some 52 years later than Germany, and 10 years later than Italy in the manufacture of the last named. This was due to the impossibility of discovering kaolin, which is the necessary and distinguishing ingredient of its composition. This was discovered in 1761. Pottery was first introduced into France by foreign influence, as the first pottery was founded by Italians, after whom followed the English.

FAIENCE AND MAJOLICAS.

Credit of the introduction of the manufacture of faience into Rouen is due Edme Poterat. The same as in the Nevers ware, this ware shows the influence of Italy. The styles in the decorations of some of the most beautiful pieces of this ware were copied after laces, embroideries and other materials at hand, which gave good suggestions. This pottery was continued by a son of Poterat, named Louis, who is the potter to whom many give the credit of making the first porcelain in France.

Like all other potteries in whatsoever locality, the conditions and wants of the times made many changes in the industry. During the famine of 1709, at the time of the inundations of the Loire, this pottery was much benefited, as it was also at this time that the King sent his gold plate to the mint for coin, and substituted for it the faience of Rouen, which proceeding, of course, was immediately followed by all the nobility. Complete faience services were immediately made, and many of the antique pieces of this ware contain coats-of-arms, and are decorated in a few colors, mostly in reds and blues. The Persian blues of the Nevers faience were attempted, but did not equal it, in the imitation, and, later on, more colors were used in this ware. The introduction of cheap Staffordshire earthenware ended this manufactory, and brought the decline in faience, which has never been revived.

Among the chief faiences was that of the Nevers, which was made by Italians, and, therefore, followed the Italian faiences and majolicas. The greatest fame of this ware was built upon the success of its Persian blue grounds. So clever was this coloring that it was many times credited to Persia. It is for this one achievement that the Nevers ware became famous.

The origin of the word majolica was in the manufacture of glazed earthenware in Italy, but after this the term was broadened until it is now applied to almost anything with a colored glaze. The manufacture of majolica was begun in Italy, with Luca della Robbia, and to him is sometimes attributed the discovery of the enamel. Urbino was undoubtedly the finest factory, with possibly also Castel-Durante.

The large vases and ornamental pieces of the 16th century are well known. Maestro Giorgio's cups are famous and valuable, and this artist produced such fine lusters that many sent their wares to be lustered by him.

The most famous china-works in Italy were under the King of Naples, and made the now famous Capo di Monte ware. When called to Spain, the King took his china works with him.

The difference between faience and majolica, is that the majolica is the older earthenware with colored glazes, and faience is earthenware with simply a tin enamel. The faience D'Orion of France is a most famous ware, and very costly, of which there are very few, if any, specimens on the market, there being but some 50 odd pieces in existence, of which some are in the Louvre, and others in the South Kensington Museum. The rest are owned by rich families, and are in private collections.

The name of Palissy will almost be immortal in the history of ceramics, because when France had successful potteries this great genius personally made a success of a certain kind of faience, which had never been made before, and has never been made since. At first a glass-painter, poor and uneducated, he educated himself in chemistry, geology and such other studies as were necessary to the knowledge of ceramics. He learned the first rudiments of pottery, and from that studied enamels, glazes, etc. Such discouragements followed that his desire to manufacture faience became a mania. He neglected his family, lost the little he had, burned his household furniture for fuel in his work. It was only when the last stick of furniture was in the kiln, and Palissy was almost insane from discouragement, that he drew forth from the kiln the enamels which attained such success. This Palissy ware since that day has been famous. Vases, plaques and other decorative wares are the articles in which it usually appears.

SEVRES.

The Royal Manufactory at Sevres is the pride of the French nation, as well as the admiration of all the world. This school of ceramics has shown its influence in all directions. The history of the manufactory is most interesting, but as this is not to be as much an historical as a technical discourse, we must not linger too long over mere dates and names, but confine ourselves to different methods of manufacturing. However, we must consider to a certain extent the many ups and downs, or partial successes, followed by many failures, this now far-famed factory has had before it attained the proud position it now holds.

From the starting of the factory at St. Cloud, by the Dubois Bros., in 1740, there is no particular achievement recorded until a vase was presented to the Queen, in 1749. So pleased was Her Majesty with the success of this work (which was supposed to be of white containing three figures), that she sent a duplicate to her father, Frederick Augustus, King of Poland, and Elector of Saxony, to show him that at last this ware was equal to Meissen. At this time there were employed here, at the Sevres factory, several experts, but the capital of the owners was nearly exhausted. Fortunately the Marquise de Pompadour, with some others in the French Court, interested herself, and, therefore, porcelain became quite the rage.

About this time the secret of the paste had become known to others, and rivalry ran so high that there were orders issued forbidding strangers to be admitted to the works, and a fine imposed upon anyone who should hire a former employe. At this time the King took up a large interest in the financial arrangements, and, therefore, assumed the secrets of the composition, making it the "Royal Manufactory." At this time, also, on account of the increasing popularity and success of the ware, the factory was moved to new quarters. It was at this early period that the famous "blue du Roi" and the "Rose Pompadour" grounds were made. These are of great value in whatsoever styles they may be found.

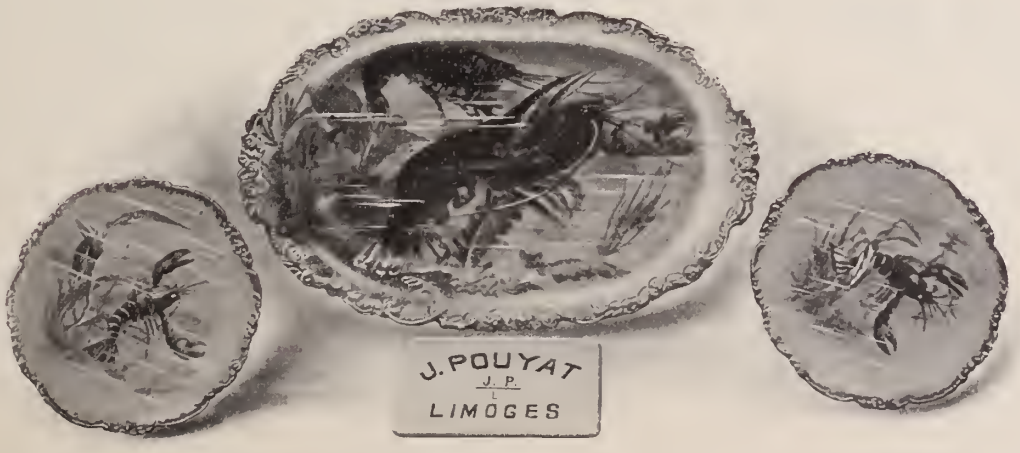
After the efforts of 15 years, it was then not necessary to go to Saxony for all the fine china, but this beautiful Sevres began to be purchased not only at home but also abroad, and it was imported to other countries. Owing to some dissatisfaction of the shareholders, the King became sole proprietor. About this time there appeared in France two Germans from Meissen, who offered to sell the secret of the latter Meissen ware. This information, however, was useless, and the formula could not be carried out, as certain material required was not known in France. A little later, Odolant Desnos, a physician of Alencon, told of kaolin existing in Hestre, this being the missing property necessary in the composition of hard porcelain. The porcelain made with this, however, was not a success, and not until 1768 were the successful beds of kaolin discovered by Madame Darnet. A piece of this kaolin is still preserved in the Museum at Sevres.

Then began the manufacture of the wonderful hard porcelain productions, which are to-day in the Sevres art galleries. Like all works of such value, its financial standing changed materially from time to time, and during the reign of Louis XVI the factory experienced many vicissitudes. After the overthrow of monarchy, and during the Revolution, lotteries were resorted to, with china vases for prizes. Among the fine things produced during this time were "Les Amours" and "The Bathers," by Falconet, the sculptor. The charming hunting scenes, by Oudry, and bisque statuettes from such sculptors as Pajois, Clodion, La Rue, and others, are also notable productions. There were some medium-sized vases of this period in the late Queen Victoria's collection. Other useful things which come from this period are beautiful table-tops and painted plaques, and many beautifully executed plates.

It was at the time Bronguiart took the management, that the large vases were pro-

POUYAT CHINA.
JEWELED CERAMICS.

The artisans of the Pouyat Factory, in the ancient city of Limoges, France, are combining ceramics and enamels in such a manner that they are enabled to produce the most radiant effects that have ever been seen in the world.—*Figaro.*



We invite jewelers who carry a line of China to inspect our Showrooms. Everything suitable for their trade will be found in the most artistic display of POUYAT CHINA ever shown in this country.

duced, some of which were nearly eight feet high, and contained Napoleonic events; life busts of the Emperor and Empress, and painted portraits of Marshals, or views of palaces. Some of the noted *chef d'oeuvres* of the Sevres manufactory were the great plaques, three or four feet in length, upon which the greatest ceramic artists worked, copying the paintings of great masters.

About this time, Louis Robert, who was the head artist in the studios, introduced the *pate-sur-pate*. Although the work has made such a great artistic success in the world, the same cannot be said of it from a financial standpoint. In fact, there is no doubt that the clever imitator, who has manufactured and sold a clever counterfeit, has made more profit on his money than did the whole Sevres manufactory at certain times. Indeed, it takes more than clever judgment to know just which pieces of some styles of the ware are genuine and what are spurious; more especially does this hold good with the *pate-tendre*, or old Sevres. Therefore, in buying or selling this valuable ware, one should know the whole history of Sevres, but if this is not possible, then surely one should refer to, and study the different marks which may be found in any reliable encyclopedia. In this connection, it might be noted that the present mark consists of a circle of two parallel lines, enclosing a monogram of "R. F." in the center, over which is *"Decore à Sèvres,"* or *"Dore à Sèvres,"* and the date. That the mark under Napoleon was the letter "N," over which is a crown with *"Dore à Sèvres"* on either side of the letter. Under the Second Empire, the mark consisted of the spread eagle, with the letter "S" and the figures of the years. Under Louis Phillipe, the monogram "L. P." under a crown, with "Sèvres" and 1848 on either side of same. Pieces for the Royal family at this period were marked with "C. H. Dreux," under the crown, and with a star-pointed circle instead of the two. Under Charles X, two C's were used, sometimes with a *fleur-de-lis*, and again with the numeral X.

Monsieur Drouet is one of the best-known artists in the manufactory, and, as he has been at his post in the same place for many years, he takes a personal pride in all the productions of the factory. He has studied the many branches of the different styles, but excels in figurework. Many of the large panels and plaques of greatest fame bear his signature. To the author, he extended the courtesy of obtaining special permits, from the French Government, to admit beyond the ordinary atelier exhibit, shown to the casual visitor, and also presented a fine specimen of "Vieux Sèvres." One of his plaque designs was produced in this country about two years ago in *The China Decorator*.

BOULLEMIER'S WORK.

Antonin Boullemier, like all other great artists, was not so known or appreciated in America until his death—in England, in April of 1900. Born at Sèvres, he was a student of the manufactory there, after which he worked with Mintons, Ltd., until his death. His drawing, technique and coloring all are so beautiful in execution, one must see to appreciate them. A large and beautiful collection of his works were bought for one house alone, and brought over shortly after his death, since which time they have been sold.

ROYAL MEISSEN COACH AND FIGURES, RESTORED.

DOAT'S PRODUCTIONS.

Pâte-Sur-Pâte was introduced at Sèvres in 1848. This beautiful production has been famous ever since. Its production meant a wonderful combination of chemical and artistic knowledge, the combination of which makes ceramic art what it is. The great productions by Doat are worth knowing and looking for. His courage, skill and unlimited perseverance—that gem-like characteristic and certain indicator of genius—have made his work what it is.

LIMOGES ENAMELS.

The most successful, and, therefore, most famous French enamels are the celebrated Limoges enamels. This work requires the greatest skill—first, in the manipulation of the colors, and, later, in the firing of them many times upon the metal. The variety of articles produced in this ware is very great, as the everlasting durability of the work when finished lends itself admirably to any form of utility whatever, from the merely decorative large and beautiful vases.

plaques, etc., to the most useful and necessary articles, such as ink-wells, trays, bonbonnieres, snuff-boxes, stamp-boxes, work-boxes, jewel-cases, needle-cases, hat-pins, studs and buttons, all pieces of jewelry. Especially beautiful are the miniature brooches, framed with different jewels, which may command prices from $1,000 to $10,000. To the jeweler there is nothing of greater value commercially.

There are no potters who are more careful to guard their secrets of production with greater care, nor any who are more suspicious of visitors (most especially of Americans) than the Limoges Enamel Works. In this, the writer speaks from personal experience, having been shown courtesy and attention and obtained admission to certain interesting stages of the work only by personal introductions from one of their largest London customers, who assured the manufacturers that she was not a dealer. The figure work in this, as in all art work, is of the greatest value, but some of the effects of iridescent floral work is indescribably beautiful, and commands the average high price of the ware. Some idea of the value may be gained from the fact that there are little stamp-boxes, perhaps not more than two by three inches, which sell at prices from $50 to $100, according to the perfection of workmanship they show, and vases from but three to five inches in height, which are worth from $200 to $500.

The methods in this enamel work have varied somewhat from time to time. The finest work produced is said to have been between the years 1530 and 1600, and the celebrated pieces of that period to seek for are by such artists as Nordon, Leonard Limosin, Pierre Reymond, Jean Court (called Vigier), and Courtois.

Next in the importance to enamels comes the cloisonné: the name is derived from the French word *cloison*, meaning a partition, as the ware is made by filling in the spaces of the design between metallic divisions, these being held with strong gum or mucilage until each division is charged with enamel of the color required, after which it is fired. Then it is ground until one material is perfectly level with the other, after which it is highely polished.

Valuable Piece of Royal Meissen Restored After Being Shattered.

A UNIQUE and remarkable piece of art work in ancient ceramics was recently restored to its original condition by Chas. Koehl, a repairer of bric-à-brac, at 223 W. 116th st., New York. Mr. Koehl's ability in this line was mentioned in these columns two years ago, when he repaired a marvelous work in ivory carving of the 18th century, and his later achievement is of no less importance to the art world in general.

The piece which Mr. Koehl recently restored consists of a coach, horses and figures of Royal Meissen, which was purchased for the Crossbaum Art Association, at a cost of $2,000, and was broken during its importation to this country. The piece was manufactured under the immediate directorship of King Frederick Augustus III, in 1773, and is said to be one of the most remarkable and one of the most perfect works of art ever turned from the Royal Meissen, or Royal Dresden factory.

The entire piece, as it rests on the stand, is 18 inches at the base, and about one foot high. The carriage is green and is decorated with Watteau panels, while the wheels and running gear are of maroon. Raised gold ornamentation is prominent throughout. The horses are in white, while the figures of the driver and footman on the coach, and the gentleman standing without, are perfect in every detail, the facial features being clearly delineated, and the costumes being correct in every particular. The pose of the horses, and even of the men, are especially lifelike.

When the piece came to Mr. Koehl, the repairer, it was apparently shattered beyond hope of restitution, the wheels being broken off, the body of the coach separated from the rest of the piece, and many parts of the base, figures, wheels, seat and spring being shattered into small pieces. An idea of the condition in which it came into Mr. Koehl's hands, and the way he succeeded in restoring it, may be had from the illustrations herewith.

About the same time, Mr. Koehl repaired two other valuable works of ceramic art,

one being a large Royal Sèvres vase, made in Paris in 1889, and the other a piece of Khang-he pottery, made some time between 1661 and 1722. The body color of the last piece is a pure white, decorated in a copper color of lustrous green, and having a design done in pale yellow, violet and blue.

The Art of the Potter.

IN the course of an interesting lecture delivered some time ago at Salisbury, England, by Dr. H. P. Blackmore, he referred to the antiquity of potting, and explained that specimens of pottery belonging to the Stone Age show that the vessels made at that remote period were very much like our ordinary pots. Being moulded by hand, they were necessarily plain and rough. He mentioned as a curious fact that over the whole of Australia and the South Sea Islands, and also part of South America, no pottery had been found, and the natives had no knowledge of the art.

According to the lecturer, the early specimens of pottery were unglazed and quite porous, but in Egypt, which Dr. Blackmore described as almost the cradle of civilization, as early as 4,000 B. C. beautiful little figures of idols were made and were covered with a wonderful blue glaze, almost identical with the glaze used by the Japanese for glazing many of their modern pots.

The potter's wheel was known to the Egyptians 4,000 years B. C., and it was believed to have come from the east, but whether from China or India it was impossible to say. At first it was an ordinary hand-wheel, then it was turned by foot instead of the hand, and afterwards it was worked by a treadle and crank. Now the treadle and crank had given place to the driving belt, but the potter's wheel remained the same in principle as it was in the earliest times—simply a piece of board revolving on a pivot.

Just as the wheel had remained the same in principle, so had the kiln in which the pottery was burned. The early Egyptian kilns were dome-shaped, with an opening at the top. Modern kilns were very similar, and, practically, the pottery kiln had remained the very same ever since 2,000 years B. C. Babylon was a great place for pottery, and in Chaldea the art was so highly developed that coffins seven feet in length was made of pottery. Even at that early period the coffins were glazed with a green glaze.

The lecturer sketched the pottery of the Greek and Roman periods, and said wherever Roman remains were discovered a great quantity of Roman ware was found. There was a good bed of clay close to Fritham and there was once a large Roman pottery there. It was a very common practice then to make vessels to be used as banks; one was found at Warminster full of Roman coins, and not many years ago one was unearthed at the back of the close in Salisbury Cathedral containing between 7,000 and 8,000 coins. The coins were put in these vessels and buried for safety; the owner either forgot where he had buried them or went to the wars and was killed without revealing his secret.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NEW IMPORT LINES OF ART WARES.

BAWO & DOTTER, importers of china and fine art goods, 26-32 Barclay St., New York, are now stocking their show rooms with an entirely new line of import samples, the first of which include Venetian goods, Royal Bonn pottery, Bohemian glass, French and English china, and bronzes of many kinds. Many of the samples have already been unpacked, but more are still to be opened, and the show rooms of the concern present a scene of unusual activity. This house has more lines, more varied assortments, and newer and more artistic designs in china, pottery and glass ware than they have ever before shown to the jewelry trade. Some particularly fine pieces of hand-painted Venetian goods, in delicate colors and finely drawn decorations, have just been opened, as has also a new kind of Holland pottery, which comes decorated with scenes of Dutch life, in green, brown and drab shades. The Royal Bonn designs are more varied and more up-to-date than during last season, while the pieces themselves are remarkable for their odd shapes and styles. Like the Holland pottery, they are decorated with the scenes of rural and urban life, and also with figures and floral decorations. One of the main departments of this house is given over to a complete and well-selected line of their own china, generally known as "Elite" ware. Hand painted decorations, showing American beauty roses and scenes from English sporting life, are prominent among the first pieces opened, and are shown in dinner sets, coffee sets and cordial sets. Teplitz pottery, in a variety of new designs and colors, is also prominent.

*

RICH EFFECTS IN BOHEMIAN GLASS.

A MARKED improvement in decorated glass, in Favrille styles, can be seen in this season's import samples, just received by L. Straus & Sons, 42 Warren St., New York. The samples differ materially from those of last year in beauty of acid designs, originality of shapes, colors and iridescent effects. The colors are somewhat more subdued than last year, and the designs are much more pronounced and even. The method of passing the glass through fumes of acid, while the glass itself is in a molten state, has been studied in the Bohemian factories so carefully and so scientifically that the arbitrary fumes of acid can be made to work out almost any design on the glass that the artist has in mind. The shapes of the new pieces this year are also different from those of last year, inasmuch as there are fewer standard styles, and more original ones. The particular form in which this glass shows to best advantage seems to be the crucible shape, which is subjected to a variety of artistic twists and dents, and made suitable for any design and coloring. The present line is sure to be even more successful than

G. D. A. CHINA FOR 1903.

SAMPLES of the fine Limoges china of Gerard, Dufraisseix & Abbott, are just arriving at the concern's American salesrooms, 29 Barclay St., New York. An inspection of the samples that are already on display reveals the fact that old-style shapes are beginning to come in this season, inasmuch as many fine dinner sets are now being made with a raised heel or base, while the general style of most pieces is of a less flat order than usual. The decorations of all the concern's china are practically the same as those of last year, and with the exception already noted, there is hardly any change in the general varieties of the shapes. There is, however, a slight improvement in delicacy of the decorations and designs, but as the china made by this concern is invariably decorated with small and perfect dainty designs, this change will hardly be noticed. The gold and fine pink borders in scroll and floral designs are the same as usual, and are extremely artistic and graceful. The discriminating jewelry buyer, who is looking for fine French china, will find much to interest him in this concern's show rooms. THE RAMBLER.

The New Ruskin Pottery.

THE following description of the new Ruskin pottery, now manufactured by E. R. Taylor, the head master of the Birmingham Municipal School of Art, appeared in the last issue of the *Pottery Gazette*, London, England:

"The Ruskin pottery, as the new ware has been christened, is shown in a great variety of forms, from tiles for fire-grate fittings to dainty little teacups and scent bottles. Every article, from the largest to the smallest, is fashioned upon the potter's wheel, and is free from any mechanical process, and from all imitation of what it is not.

"The decoration is underglaze, and takes the form either of free brush drawing in simple but graceful designs, or of a secret manipulation of the colored glazes and of the firing, which results in some singularly beautiful mottled effects. Many of these resemble the markings of Mocha stones and Madrépores, but are not intentional efforts to mimic these.

"Deep blues and greens, and bluish grays appear to be Mr. Taylor's favorite tints, and these seem specially suitable for grate tiles, for rose bowls and flower vases. The lustrous face of the tiles glows with ruddy reflection when there is a fire in the grate, but when there is no fire the green or blue face affords a cool decoration, while similar colors applied to flower vases afford an effective background to the more vivid tints of the flowers themselves.

"Simple hues are employed for some very delicate *tête-à-tête* tea services. The articles in these instances are not only charmingly shaped, but are very thin, light, and smooth to the touch. Pale apple green and a sort of custard yellow tint are among those which are singularly refined, and with appropriate surroundings no less effective."

THE SILVER SERVICE FOR THE UNITED STATES CRUISER ALBANY.

THE magnificent silver service, presented Saturday to the United States Cruiser *Albany*, by the mayor and citizens of the capital city of New York after which the boat was named, is remarkable, not only for its excellent workmanship, but also for the historical character of its designs. The entire service consists of 66 pieces, and was made by the Meriden Britannia Co. (International Silver Co.'s Successors).

The committee of Albany citizens, having in charge the arrangements for this service, in its letters to the manufacturers competing for the order of making the service, embodied a request that the decorations on the pieces be historical in character, and peculiar to the city of Albany. When the competition was opened, the above-mentioned concern sent their principal designer, S. Stohr, to Albany to study that city, with a view to obtaining a pictorial history of it.

Mr. Stohr spent several weeks in Albany, learning its historical characteristics, and it was the decorative designs furnished by him that enabled this company to obtain the contract in competition with several other houses.

PUNCH BOWL OF THE SERVICE FOR THE CRUISER ALBANY.

The chief features of Mr. Stohr's designs consist of etchings of the old and the new

(*Continued on page* 19.)

The Alvin Silver Deposit Ware

Is solid silver electrically deposited on fancy glassware, which has been thoroughly annealed to prevent breaking, and is engraved by hand. The silver cannot become loose or rattle—it conforms with the curves and model of the glass—and the prices will ensure a ready sale. We have some new effects in French Grey finish on crystal, green and ruby glass that are especially attractive.

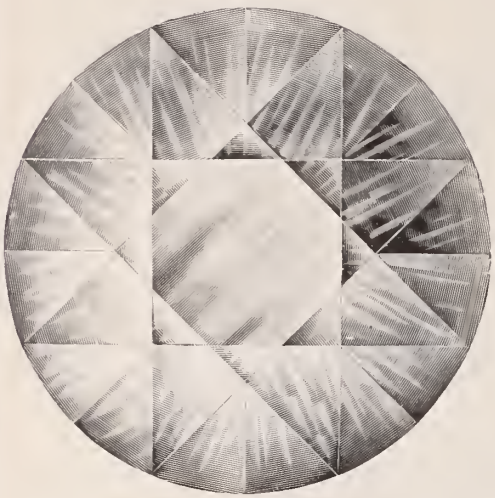
Pieces to suit all occasions, from small colognes to punch bowls.

We also carry a full line of artistic hollow ware, Bon Bon Dishes, Berry Bowls, Bread Trays, Vases, Napkin Rings, etc.

Alvin Manufacturing Company,

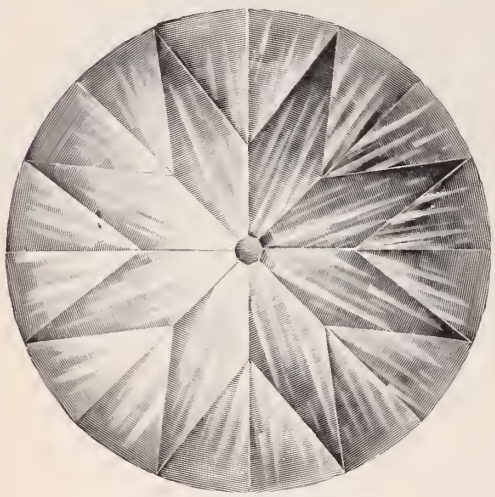
54 MAIDEN LANE, 41 UNION SQUARE,

NEW YORK.



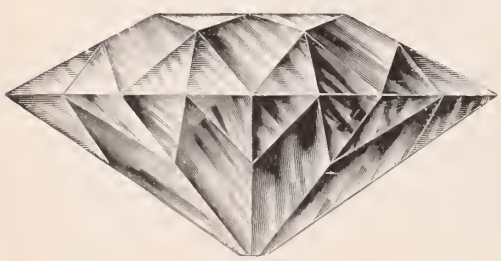
Accuracy in Manufacture

is a prime requisite in the construction of a dust proof case.



Fahys Screw Bezel Cases are both dust and moisture proof. Just the case that a conductor, brakeman, in fact all railroad men, or any artisan whose business brings him in contact with dust or moisture, will buy.

The Screw Case is either a curse or a blessing and the difference is all in the thread. A jeweler who has trouble to get at the movement every time a watch happens to need cleaning or repairing, is likely to say hard things of a screw back watch. If on the other hand he finds that while fully protecting the movement it opens with ease and precision he knows it is a treasure. The difference is in the thread—ingenious cutting of the thread keeps the parts from binding. Here is the secret of the popularity of the Fahys Screw Bezel Case, the thread of the screw—there is something in the way we do it, a trick perhaps, there generally is some little trick in an operation which produces results so uniformly better than what *seems* to be identical in others. But the fact remains that in Fahys Screw Cases the parts never bind.



There are over 1,000,000 Fahys Screw Bezel Gold Filled Cases in use to-day.

Cut shows top of diamond with properly laid facets.

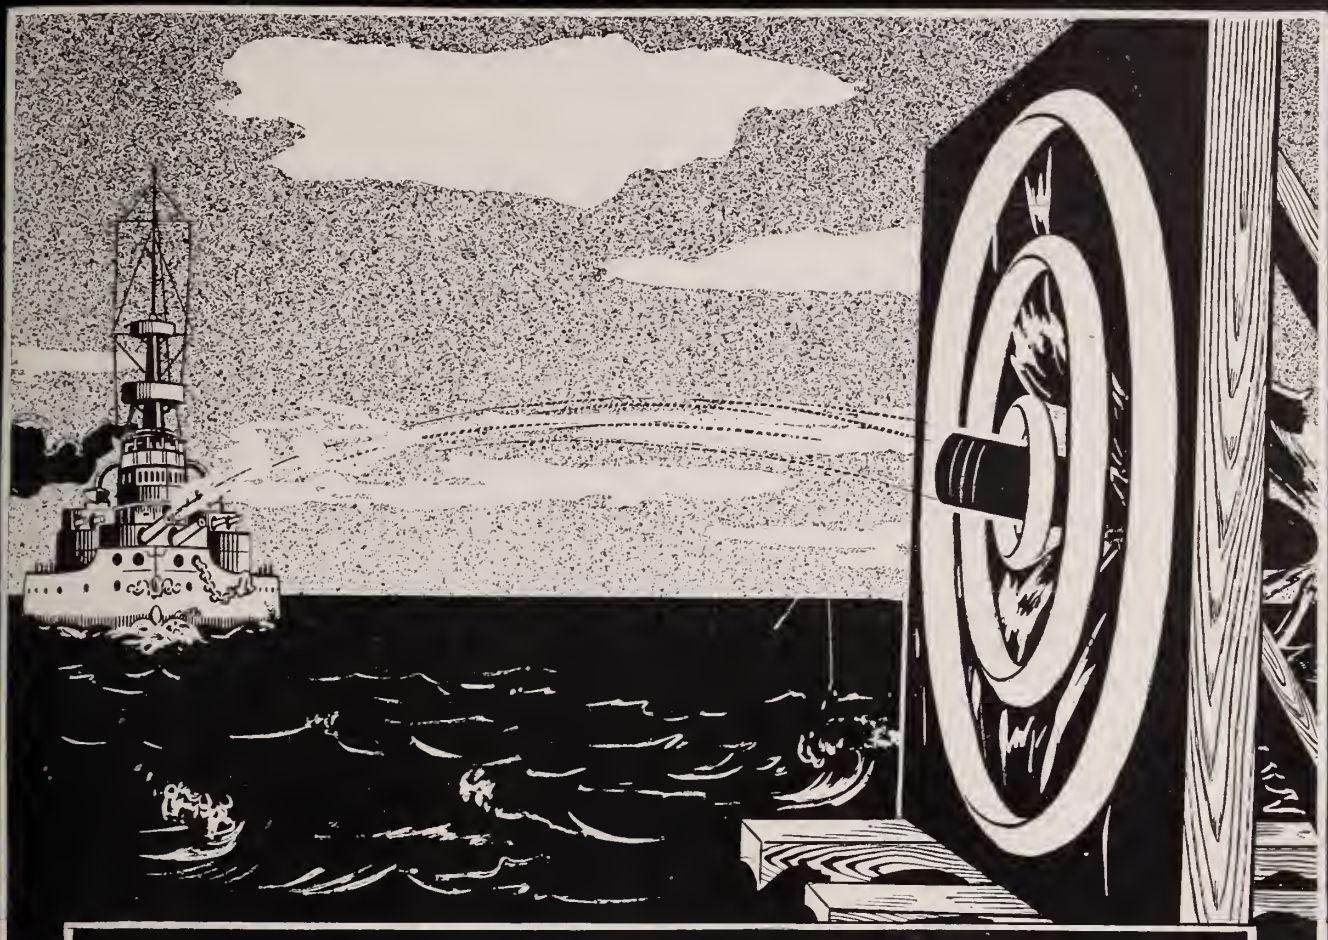
Cut shows bottom of diamond with properly laid facets.

Cut shows side of diamond with properly laid facets and properly shaped diamond.

DIAMOND CUTTING

Brilliancy, brightness or snappiness depends on the cutting of the diamond.

It is light entering from all sides of the stone; the facets deflect it, and it passes out the top of the stone.



If the facets are not properly laid, and the stone not the correct thickness (in relation to the spread) the rays of light do not concentrate and leave the top of the stone at the same angle, and the diamond is not as bright as it should be.

For fuller particulars regarding correct cutting and dimensions of diamonds see our leaflet dated Feb., 1903, which we have mailed. If one has not reached you, send us word.

WE make the only line of high-grade college seals, flags and buttons on the market and sell them exclusively to the Retail Jewelry Trade.

Jewelers in college towns who have discontinued selling flags on account of dry goods, clothing and furnishing goods stores' competition, will find it will pay them to carry our goods in stock, and that their customers will readily appreciate the superior workmanship, finish and artistic merit, as the tendency heretofore has been to cheapen the quality and price of college goods.

The trade has our positive assurance that the standard of the goods and our policy of dealing direct with retail jewelers only, will be strictly maintained.

Jewelers outside of college towns carrying a large or small assorted stock of our college goods have the privilege of exchanging any of the pieces that are unsalable or shop-worn, if not damaged, for other college goods.

Orders for single pieces are also solicited from Retailers who carry no stock.

Special Flags made to order for Academies, Seminaries, Business Colleges, Public Schools, etc.

The Strength of a Chain

FOSTER'S STRONG LINKS.

LINK No. II.—Finish.

In many years of manufacturing vest chains we have learned one thing well. That one thing is how to obtain the maximum of finish with the minimum of loss of gold.

Our 1-20 chain starts 1-20 and ends 1-20. Our 1-10 chain starts 1-10 and ends 1-10. The exact proportions are maintained throughout.

No loss of gold is suffered in the process of manufacture or finishing, and upon the last link of every 1-10 chain we stamp it 1-10, and we mean just that. Every 1-10 gold chain is soldered with gold solder.

You can place these chains before your customers with absolute confidence. They will bring you satisfaction and other orders. Send for our catalogue.

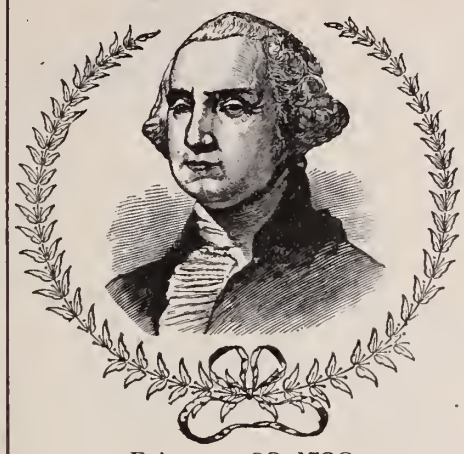
Suit in Antwerp Over American Machine For Cutting and Cleaning Diamonds.

ANTWERP, Jan. 16.—In the Second Chamber of the Court, in this city, the trial of the lawsuits, instituted by one of the large diamond firms of this city, was recently begun. The complainants are suing a number of firms for infringing an American machine to cut and clean diamonds, for which they, the complainants, in order to employ it here, bought the sole rights.

Formerly, when diamonds were cleaned, the cleaners were obliged to follow the wax of the stone, and now, with the new machine, they can divide the stone as they desire.

In the first lawsuit mentioned, the complainants ask 100,000 francs damages from one of the so-called infringers. The defendant says that he imitated nothing to which the complainants had any right, and that the system in question was employed for a long time in New York and other cities in the United States before the purchase of the "brevet" took place here. He asks to be permitted to prove, by examinations of persons, both in Antwerp and in New York, that his statement is absolutely true. He requires, also, security from the firm suing him to the amount of 50,000 francs, to protect him from the effects of an action, which they cannot sustain.



Eight or nine lawsuits are practically stayed, awaiting the outcome of this action.

California Rubylite Put On Exhibition in the National Museum.

WASHINGTON, D. C., Feb. 4.—Most of the gem discoveries of this country are due to efforts of members of the geological, or kindred organizations, and one of the latest contributions has been placed upon exhibition in the Hall of Petrology, in the National Museum, in the form of a large section of grayish rock, veined throughout with pink tourmaline, or rubylite—a recent find in California. Tourmaline ranks among the higher priced gems, and is found in Siberia, Brazil and Maine; the colors being green, pink, yellowish and pale bluish white, the green being far the most valuable, and entirely different from the green of an emerald.

The largest and finest green tourmaline ever found was one now in the National Museum, and was taken from the tourmaline mines of Mt. Mica, in Maine. Not very long ago, some parties who were quarrying for stone in California, found a quantity of infinitestimally small red stones, which they thought were rubies, but which were found, upon examination by the Geological Survey, to be tourmalines of a different color to those found in any other of the known localities, although those found were too small to be of any gem value. These small stones were found in limestone, in veins and clusters, and have an appearance of red frostwork, moss, or ferns upon the grayish white of the limestone, and while not useful as a gem stone, would be very valuable for other purposes.

The building now occupied by C. L. Weidham's jewelry store, Lock Haven, Pa., will shortly be purchased by a large manufacturing concern.

February 22, 1732

February 12, 1809.

Character and Honesty Bring Their Own Reward.

The above truism is as applicable to business concerns as to men. Character, honesty and achievement are as important factors in *our* business as they were in the lives of the great men whom our country delights to honor this month. We, like they, have the reward of appreciation from those whom we have faithfully served.

The work of preparation for another great year is now over and our business moves forward at a steady and increasing pace. Quality—ever our chief distinction—is more predominant than ever before. Never have we been so singularly favored in the matter of new and exclusive stocks of **WATCHES** and **DIAMONDS.** Through our logical business system, the vastness of our stock and long experience we can supply these goods at attractive prices.

We are now ready to replenish your stocks with the all-around satisfaction for which our house is noted.

Consul Dexter Reports on the Silver Trade at Leeds.

WASHINGTON, D. C., Feb. 4.—The State Department is in receipt of an interesting report from Consul Dexter, at Leeds, in the course of which he says that the city of Leeds, with its outlying towns, embraces one of England's largest manufacturing centers, and from these various industries, successfully pursued over long periods of time, there has resulted great accumulations of wealth, distributed among great numbers of the people. As articles of silverware and plated ware for household uses are a necessity in every family, and a large and varied assortment is to be found in a great number of families, the consumption of these articles in that section is very large, and silverware especially has become an important item in every well-to-do household. There are none of these produced in Leeds, and almost the entire production of the country is confined to the cities—London, Birmingham and Sheffield.

Thus far importations have been principally from France and Germany. Occasionally a few articles come in from Russia, China and India, but the total from the last three named countries is very small. The amount coming from France is small and is scarcely worthy of consideration. There is more imported from Germany, the goods being articles manufactured in imitation of old and antique silverware. These products generally are good imitations, but are poor in workmanship, and are usually of articles devoid of artistic merit. The standard of fineness of all the silverware importations from France and Germany is fully 930/1,000, it being fully 5/1,000 finer than the English standard.

In that section of England where Consul Dexter is stationed as yet there are but few evidences of importations of these wares from America. There have been rumors that importations were coming, and it is said that a large shipment recently arrived in London and is supposed to be at Goldsmiths' Hall awaiting the hall-mark.

An obstacle that may prove of much annoyance in the importation of all silverware is in the virtual requirement that each article to be salable in England must bear the hall-mark stamp, the requirements of which have been fully outlined in previous issues of THE CIRCULAR-WEEKLY.

A possible obstacle, which is anticipated in Leeds as a serious one in the earliest importations, is the belief that Americans do not realize the exacting requirements of the tastes of the English people in the styles that may be offered, as any offerings there would be absolutely useless unless the styles of these wares were specially adapted to the tastes of England. This calls for greater simplicity in form and decoration and grace in outline. The dealers in Leeds are aware that to a limited extent these wares, now produced in the United States, are of a higher order, and one which would be accepted in Leeds; but the dealers express their belief that the great bulk of the American production would be unsalable in Leeds.

Of the various products of American wares which can be produced by the aid of machinery and those specialties in American manufacture produced from exquisitely cut dies, tastefully fashioned, none of

which are produced in Leeds, there is in that market an opportunity of great promise.

In the manufacture of the larger articles of these wares, those that require to be drawn up and worked into form by the hand hammer, much of which is termed hollow ware—pitchers, kettles, trays, and most of the articles comprised in sets of dinner and tea service—the competition there would be keen, as there are among the manufactories of the country a great number of artisans highly skilled in the wares of this special character, who work at rates much lower than does skilled labor of the same character in America.

Death of H. K. Chamberlain.

SAN DIEGO, Cal., Feb. 4.—There is much regret expressed here over the death of H. K. Chamberlain, a well-known jeweler, who died in this city Jan. 24, of pneumonia.

Mr. Chamberlain, who was 50 years old, was for many years a leading jeweler of Santa Fe, N. M., and his friends in the trade are legion. The deceased was commodore of the Corinthian Yacht Club, of this city, and was the owner of the beautiful yacht *Navajo*. He is survived by a widow and two sons, whom he leaves in good circumstances.

At the funeral, which took place Jan. 29, D. P. Hoyle, M. W. Jenks, Joseph Jessop and C. W. Ernsting, all jewelers of this city, acted as the pall bearers. The jewelers here also sent a large floral offering, in testimony of their respect to the memory of their dead craftsman.

Meeting of the Creditors of Frank V. Morris To Be Held at Watertown, N. Y.

CARTHAGE, N. Y., Feb. 4.—Referee in Bankruptcy Joseph Atwell, of Watertown, has called the first meeting of the creditors of Frank V. Morris, who filed a petition in bankruptcy last week. The meeting will be held at his office, 16 Washington St., Watertown, at 10 A. M., Feb. 12. Creditors will then file their claims with the referee, and appoint a trustee, who will take charge of Morris's stock and sell it at auction.

The moneys thus received will be distributed proportionately among Morris's creditors, who have claims which amount to $4,596. It is doubtful if creditors will receive over 30 cents on the dollar.

J. M. Jenks & Co., Lancaster, Pa., Dissolved, and Plant to be Moved to Cleveland, O.

LANCASTER, Pa., Feb. 4.—The firm of J. M. Jenks & Co. has been dissolved by mutual consent, Mr. Jenks's former partner's interest having been bought by Scribner & Loehr, Cleveland, O. The plant will be removed to Cleveland in the near future, where Scribner & Loehr are erecting a building, to cost $100,000.

Mr. Jenks has been associated with the jewelry trade in Lancaster for over 20 years, and has been on the road for over 30 years. The new company will continue to manufacture Masonic emblems, special-order work, etc., with the latest improved machinery.

Continuation of the Bankruptcy Proceedings Brought Against Arthur M. Felson.

UTICA, N. Y., Feb. 4.—The business affairs of A. M. Felson, the Gouverneur, N. Y., jeweler, who is now under examination in bankruptcy, are being probed by H. Walter Lee, of Gouverneur, his trustee, and Bankruptcy Referee Tullock, of Ogdensburg. Upon the application of Kunzman & Frankenheimer, New York lawyers, Judge Ray, Monday, granted an order, allowing Samuel Henry, of New York, to be made a party defendant with Felson's trustee, in a suit which has been brought in the Supreme court of New York, to foreclose a mortgage on property at 1743 Park Ave., between 121st and 122d Sts., formerly owned by Felson. Henry holds a $11,800 mortgage on the property.

Felson, so far, has made a poor witness at the examinations before the Referee in Bankruptcy. The bankrupt's principal answer to many queries has been, "I don't remember." Felson will again be subjected to examination to-morrow. There was only one creditor who was secured—Jennie E. Griffith, of Gouverneur, of whom Felson borrowed $600. She took a chattel mortgage on the store fixtures.

Among the 95 creditors who figure in the schedules just filed by Felson, are the following: Aiken, Lambert Jewelry Co., $791; M. J. Averbeck, $641; J. B. Bowden & Co., $330; E. & J. Bass, $512; R. Blackinton & Co., $253; W. B. Bynner, $196; Joseph Daniel & Co., $215; W. C. Demuth Co., $180; Eliassof Bros. & Co., $636; Henry Freund & Bro., $358; R., L. & M. Friedlander, $111; Gorham Mfg. Co., $337; R. H. Ingersoll & Bro., $170; Ketcham & McDougall, $128; Larter, Elcox & Co., $539; J. Lazarus & Co., $255; Mabie, Todd & Bard, $176; W. I. Rosenfeld, $298; Rosenzweig Bros., $1,050; Sperry & Alexander, $257; John W. Sherwood & Co., $600; L. E. Waterman Co., $160; J. R. Wood & Sons, $491; L. Witsenhausen, $343; Hayden W. Wheeler & Co., $381; N. H. White & Co., $1,427; Abelson & Liberman, $635; Adonis, Cushing & Foster, $104; American Silver Co., $127; Berthold Block Co., $247; Block Bros., $123; M. S. Benedict Mfg. Co., $231; Chapin & Hollister Co., $773; W. G. Chaffee, $102; French Mitchell & Woodbury, $399; Gans Bros., $136; Harris & Gips, $167; W. B. Hitchcock, $700; Heintz Bros., $756; International Silver Co., $381; Illinois Watch Co., $275; Jennings Bros. & Co., $122; King & Eisele, $275; C. H. Knights & Co., $363; Levi Levy, $800; Marks & Liberman, $421; C. P. Moser, $119; National Iron and Brass Works, $135; Joseph Nelson & Co., $222; New England Watch Co., $164; New Haven Clock Co., $157; Onondaga Silver Mfg. Co., $231; Parker Pen Co., $228; F. N. Paden, $105; Pierce Mfg. Co., $266; Queen City Ring Co., $162; Reed & Barton, $458; James Redmart, $473; M. Rosenbloom, $617; J. R. Stadlinger, $155; Frank W. Smith, $253; Spalding & Co., $249; A. F. Tucker & Co., $106; Electric City Box Co., $159; W. C. Thiery, $232; Towle Mfg. Co., $383; Van Bergh Silver Plate Co., $430; S. A. Weller, $155; B. G. Parker, $150.

United States Consul's Report on Markets for American Silver and Silver-Plated Wares.

WASHINGTON, D. C., Feb. 4.—Some valuable suggestions for manufacturers of silver and plated ware who desire to enlarge their foreign trade will be found in the following extracts from recent consular reports:

Consul Atwell, at Roubaix, France, says: "Germany leads the countries from which silver and plated wares are imported, but if American firms would adopt German methods there is no reason why they should not secure a fair share of business in this line. In speaking of German methods, I allude to their system of obtaining a market for their goods by personal solicitation of commercial travelers thoroughly trained to the business. These men frequently obtain their preliminary training by working as apprentices in the shops or factories with whose manufactures Germany desires to compete. They thus master the language, learn the tastes and business methods of the people whose custom they seek, and make a study, when they enter upon the field as agents, of catering to the susceptibilities and general tastes of the customers. The superiority of the German method is evident in all fields, as they succeed in gaining a market for goods that are frequently inferior in quality and finish to those of other nations.

"There are no particular methods in business houses in this district dealing in such commodities as silver and plated ware and in general household goods. The commercial traveler visits each house at regular intervals with samples of such wares as he desires to sell, and the sales are made to accommodate the business habits of the purchaser, notes payable in 30, 60, or 90 days."

Consul Man, at Breslau, Germany says: "Imports of silverware into Germany are very limited, the small amount imported being brought here from Southern Austria, on account of quaint and original designs. Gold and silver plated articles are imported from France, Great Britain, and Austria-Hungary in small quantities. While the demand for solid silverware in this district seems very limited, as the old conservative idea still appears to exist that such articles are things of superlative luxury, to which comparatively little attention is given by the average buyer, still there is no reason to believe that American silver-plated ware, owing to its artistic and graceful designs and excellent wearing qualities, might not meet with satisfactory sale here, if properly introduced by firms that would display and advertise it in a sufficiently conspicuous manner."

Consul Moore, at Weimar, Germany, says: "It is not possible to arrive at the value of imports of silver into this district from foreign countries. Last year the largest local dealer introduced English silver with success. Inasmuch as American silver has the high sterling quality and elegant design of the English, it should find a ready market in communities with taste. There are no obstacles here to the extension of American trade in this line. No special packing methods are to be observed."

Conviction of Operators of Cheap Jewelry Scheme, Charged with Using Mails to Defraud.

SPRINGFIELD, Ill., Feb. 4.—Henry Flachskamm and R. W. Reeves have been convicted of using the United States mails for the purpose of defrauding the public in the sale of cheap jewelry. Cora Siegel, who was tried with them, has been acquitted of the charge.

The case, which has been on for several days before Judge Humphrey, grew out of the charge that the defendants had operated in eastern St. Louis, a firm known as the National Mercantile Co., and advertised to give a fur collarette to anyone who would sell eight of their gold and enameled brooches. It was further charged that several thousand people had sent $2 each for the brooches, and after they had sold them, had received, instead of the collarette, a second circular, stating that it would require the sale of $8 worth more of the jewelry to obtain the premium in question.

The defendants were arrested some time ago, and the trial began last week. The case was finally submitted yesterday to the jury, who brought in a verdict of guilty against the two men, and declared Miss Siegel to be not guilty.

N. R. Heath has sold his business in Winfield, Ia., to a concern in Keokuk, Ill., which will continue the business. Mr. Heath will leave for New Mexico where he will take up his residence.

Silver Service for the United States Cruiser Albany.

(*Continued from page* 1.)

City Hall, the old State House and the new Capitol, the old corvette *Albany,* and the new first class cruiser *Albany,* the wood-eating beaver, representative of the early days along the Hudson; the sturgeon, at one time known as Albany "beef," and one of Hudson River's most plentiful food products, and a blossom, known in the early Dutch days as the "pinxter" flower. Mr. Stohr also made use of the Albany coat of arms and the seal of the United States Navy, intertwining among these seals and the "pinxter" flower strands of seaweed, representative of the ocean.

The set consists of a meat platter, a game platter, two jardinieres, two entreee dishes, two vegetable dishes, six bon-bon dishes, six vases, six peppers, six gold-lined salts, six salt spoons, with gold bowls; one punch bowl, gold lined, a punch ladle, with a gold bowl; candelabra, and 24 silver goblets, lined with ruby glass. On the meat platter is an etching of the new City Hall, at Albany, and on the game platter is an etching of the old City Hall, at that city. One of the jardinieres has etched on one side a picture of the new Capitol, while on the other side is etched the new cruiser *Albany,* under a full head of steam. On the other jardiniere is an etching of the old State House and an etching of the old corvette *Albany.*

On opposite sides of one of the vegetable dishes are etchings of the Post Office and the new cruiser *Albany,* while on the other vegetable dish is an etching of the old State House and the old corvette *Albany.* On the covers of the entree dishes are life-like scenes of the beaver gnawing prostrate trees. These scenes are cast and applied in relief on the body of the cover. On all covers in the service is etched the fish net, symbolizing "Tuyck Town," the Dutch name for the old town of Albany.

The borders, feet, handles and base of the candelabra are cast, chased and applied with the "pinxter" flower and with seaweed, worked in together with the sturgeon, the seal of the navy and the coat of arms of Albany. An inscription on each piece of the set reads: "United States Cruiser, *Albany.*"

The sturgeon used in the decoration was designed from a photograph of a fine specimen of this fish, taken in Washington market. The general shape of the pieces in the set follows the lines of the old Dutch styles, while the ornamentation, though of a pronounced character, because of the soft gray finish, appears somewhat subdued.

The service cost $10,000, and was purchased by popular subscription, when it was learned that Congressman Geo. N. South-

wick, of Albany, had succeeded in having the cruiser named after his native town. It was finished nearly a year and a half ago, having taken more than a year in its manufacture; since that time it had been kept in a safe deposit vault, in New York, waiting the arrival of the cruiser at this port.

Mayor Gaus, of Albany, was notified a few days ago by the Assistant Secretary of the Navy that the cruiser was to be at the Brooklyn Navy Yard by Feb. 2. As soon as she arrived, her captain notified the mayor of Albany, who, with a body of citizens and a committee, selected especially for the purpose, came to New York and made the presentation Saturday.

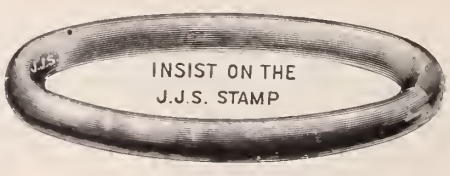
Nervous Ailment Causes William Brossman To Commit Suicide.

OAKLAND, Cal., Feb. 4.—Wm. Brossman, who committed suicide in this city last week, was a jeweler, and had been employed by Shreve & Co., San Francisco. The deceased was 35 years old, and had suffered for some time from a nervous ailment, which is believed to have unbalanced his mind.

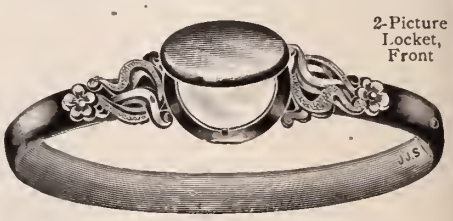
Shortly before his death he told his family he was going to the country, but instead of doing so he rented a flat, and after writing several letters, announcing his intention to kill himself, lay down on a couch, after turning on the gas.

Career of Adolph F. Lindeberg.

GALESBURG, Ill., Feb. 4.—The death of Adolph F. Lindeberg, a well-known jeweler of this city, whose store was at 24 E. Main St., is deeply regretted by his many friends in this vicinity. Mr. Lindeberg's death, which occurred Jan. 29, was the result of a fall which he had sustained about a week before. While returning to his home, he slipped on the icy sidewalk and fell to the street, rupturing a blood vessel in his leg. Within 48 hours the injury grew very bad, and later Mr. Lindeberg was taken to the Galesburg Sanitarium, after an abscess had formed. Although he received the best medical attention, he grew rapidly worse, until the end.



Mr. Lindeberg was born in Sweden, Sept. 10, 1849, and learned the trade of jeweler in his native country. In 1869 he came to America, and first located at Bushnell, Ill., where he spent a few years in the employ of a plow factory, and finally became foreman of the business. He later started a jewelry business in Bushnell, and after conducting a store there for 11 years, came to Galesburg about 1890.



In this city he continued the jewelry trade, building up a good business, and was prominent in mercantile and social life in this place. He was a member of the Swedish Mission here, was influential in its religious work, and was for several years one of the church's trustees.

The deceased was married May 17, 1876, to a Miss Abramson, and his wife and two sons, Neally R. and Ernest W. L., survive him. The business will probably be continued by Mrs. Lindeberg, in whose name it has been run for some time.

Charles Price has closed his repair shop in Amherst, Wis.

PHILADELPHIA
WATCH CASE CO.
RIVERSIDE, N. J.

A Review of United States Commerce, for the Fiscal Year 1901-2.

(*Continued from issue of Feb. 4.*)

Under the classification of articles of luxury we find importations of regalia, gems, statues, etc., for schools, with a value of $132,534.43, in 1901, and $133,522, in 1902. Works of art, for permanent exhibition, show a wonderfully increased value from $257,634, in 1901, to $1,479,105, in 1902. In addition to this the importations of works of art for presentation showed a value of $46,848, as compared with $148,104, in 1901. There was also a decline in the value of imports of art works, statuary, etc., from $487,245.11, in 1901, to $306,880, in 1902. Cabinets of coins and medals show an increase from $6,443.83 to $9,345, while in diamonds, rough or uncut, there has been a decrease from $6,610,667.10, in 1901, to $6,204,985.39, in 1902. All of these articles were entered under the provisions of the free list.

Under the same classification of articles of voluntary use and luxuries, but subject to payment of duty, we find the following items: The imports of manufactures of agate and amber in 1901 were valued at $17,381, on which the duty was $8,615.25, or 49.57 per cent.; in 1902 the value decreased to $14,446.14, and the duty was $7,131.07, or 49.36, practically the same.

The importations of art works showed a material increase from $2,488,406.88, with duty at $427,196.76, in 1901, to $2,874,471.18, and a duty of $496,373.10, in 1902, an increase in the ad valorem from 17.17 to 17.27 per cent.

Bead and bead ornaments, in 1901, had an import value of $814,894.60, on which the duty was $478,669.25, or 58.74 per cent. In 1902 the value increased to $921,323.89, and the duty to $527,264.34. This was, however, only an average ad valorem of 57.23 per cent. There has been an increase of more than 100 per cent. in the importations of manufactures of coral, the returns in 1901 being only $818, while in 1902 they were $1,882.00, the duty in each instance being 50 per cent.

There has been a material decrease in the imports of manufactures of gold and silver, the value in 1901 being $733,333.27, and the duty $357,340.93, or 48.73 per cent. In 1902 the value was only $540,431.31, and the duty $250,712.48, or 46.39 per cent.

The increased use of jet was beginning to make itself felt, as evidenced by a value of $1,122 in 1901, and of $2,320.50 in 1902; duty, 50 per cent. In jewelry and precious stones, not elsewhere specified, there has been a wonderful jump in value, from $16,489,988.51 in 1901, on which the duty was $2,142,731.96, or 12.99 per cent. to a value in 1902 of $19,059,480.81, with duty of $2,492,694.60, or 13.08 per cent. There is also a marked increase in the importations of shell and mother-of-pearl goods: In 1901 the value was $98,720.80; duty, $34,552.27; and in 1902, $107,596.77; duty, $37,658.71, or 35 per cent.

The value of merchandise remaining in customs warehouses on June 30, 1901 and 1902, was, respectively, as follows:

	1901.	1902.
Art works	$46,644	$140,821
Clocks, and parts of	31,306	39,793
Watches, and parts of	29,142	32,576
Diamonds, cut, but not set	.....	.....
Other precious stones, including natural pearls	406	2,740
Jewelry, and manufactures of gold and silver	65,695	65,953

A brief outline of exports shows the following comparisons of the years 1900, 1901 and 1902, as follows:

	1900.	1901.	1902.
Art works, painting and statuary	$263,443	$344,287	$250,069
Clocks, and parts of	1,190,074	1,296,222	1,146,381
Watches, and parts of	787,620	1,044,529	998,109
Curios and antiques	2,564	1,469	8,036
Goldbeaters' skins	750	1,000	1,000
Manufactures of ivory	22,824	18,495	33,664
Jewelers' ashes and sweepings	230,803	225,815	239,969
Jewelry	892,327	1,017,881	1,069,056
Other manufactures of gold and silver	251,311	211,791	269,291
Plated ware	509,776	517,208	595,626
Shells	96,382	53,220	39,315

The exports found exit as follows in 1902.

CLOCKS AND WATCHES.

Port of—	*Value.*
New York	$1,384,650
Baltimore	34
Boston and Charlestown	32,843
Philadelphia	4,047
Galveston	100
Mobile	172
New Orleans	1,263
Puget Sound	3,394
San Francisco	134,011
Buffalo Creek	20,614
Detroit	5,401

The question of source of supply is always one of interest, and hence the following statistics will claim attention:

AGATES.—All the importations of unmanufactured agates were from Germany, and amounted to $1,272. The manufactures of agates were received from eight different sources, Germany having the monopoly with a supply of $11,645, France second with $1,404; Italy, $255; Japan, $116; China, $64; Quebec, Ontario, etc., $48; United Kingdom, $11, and Austria-Hungary, $2.

ALABASTER.—The total value of imports of manufactures of alabaster was $22,823, Italy leading with $21,194; France, $1,174; United Kingdom, $235; Germany, $158; British East Indies, $29; Quebec, Ontario, etc., $19; Switzerland, $11; Denmark, $2; Turkey, $1.

REGALIA AND GEMS.—Total value, $136,308: France, $90,609; Germany, $14,888; United Kingdom, $10,107; Italy, $8,381; Switzerland, $6,363; Austria-Hungary, $2,301; Russia, $1,246; Belgium, $1,127; Quebec, Ontario, etc., $726; Netherlands, $303; Mexico, $75; British Columbia and Cuba, each $50; Japan, $37; China, $35; British Australasia, $10.

WORKS OF ART FOR EXHIBITION PURPOSES.—France, $844,526; United Kingdom, $433,664; Italy, $117,429; Belgium, $51,272; Germany, $42,166; Netherlands, $18,780; Egypt, $14,867; Peru, $3,776; Nova Scotia, $1,991; British Columbia, $1,773; Turkey, $1,087; Sweden and Norway, $482; British East Indies, $421; Austria-Hungary, $246; Quebec, Ontario, etc., $349; British West Indies, $161; Mexico, $156; Asia, all other, $92; Dutch East Indies, $80; British Australasia, $36; Switzerland, $7; Cuba, $5.

BEADS AND BEAD ORNAMENTS.—Germany, $429,018; France, $297,806; Austria-Hungary $136,131;

28 out of 45 PRIZES

were awarded to

PATEK, PHILIPPE & CO.

in the timing contest of the Astronomical Observatory in Geneva, for the year 1901, comprising the First Series Prize, all the three First Prizes, the only Second Prize, four Third Prizes out of six, three Fourth Prizes out of six, four Honorable Mentions out of eight, and twelve Single Mentions out of nineteen.

68 NASSAU ST., NEW YORK. GENEVA, SWITZERLAND.

Strange? No!

Did it ever occur to you that although you have had various and sundry Filled Cases urged upon you on the plea that they were "as good as the Boss," you never heard the claim made for any of them that they were *better* than the Boss?

No, it *isn't* strange. In the first place, such a claim would likely offend you by reflecting on your intelligence—and the salesman doesn't want to offend a prospective customer; secondly, case-making ambition is satisfied if the Case gets within sight of the Boss standard.

But there's a moral in the fact that "as good as the Boss" is thought to be good enough.

Send in your name

We want the name of every jeweler who sells Wadsworth Cases. For this reason: We are advertising

Wadsworth Watch Cases

extensively in the leading magazines, ladies' papers, engineers', telegraphers' and express journals. From this advertising, we are receiving inquiries from all over the country. Inquiries from your locality will be referred to you, if we know you sell our cases. It is a very desirable class of trade; they will buy other things as well.

That is not all

Our advertising department is run as systematically as the other departments. We want to keep in touch with you, tell you what we are doing, and hear what you care to tell us. If you don't sell Wadsworth Cases, ask your jobber about them. It will be well worth your while.

The Wadsworth Watch Case Co.,
Dayton, Kentucky.
11 John St., NEW YORK. Columbus Bldg., Chicago.

Italy, $17,279; Turkey, $13,147; United Kingdom, $9,521; Belgium, $8,245; Japan, $4,417; Switzerland, $2,176; Hong Kong, $618; Quebec, Ontario, etc., $366; British Columbia, $295; Spain, $189; British East Indies, $70; British Oceanica, $42; Netherlands, $36; British East Indies, $21; Sweden and Norway, $12; Egypt, $8; China, $4; Nicaragua, $2; Turkey, in Europe and Mexico, $1 each.

CLOCKS, AND PARTS OF.—Total value, $458,890, received as follows: Austria-Hungary, $2,917; Belgium, $684; Denmark, $93; France, $200,153; Germany, $151,109; Italy, $876; Netherlands, $5,721; Portugal, $20; Russia, $232; Spain, $20; Sweden and Norway, $71; Switzerland, $3,721; United Kingdom, $91,123, making a total from all European countries of $456,740. North American countries sent a total of $1,335, of which $3 was from Bermuda, $55 from Nova Scotia, $1,151 from Quebec, Ontario, etc.; $60 from British Colombia, $41 from Mexico, and $27 from Cuba. Asia contributed $778, of which $184 was from China, $135 from Hong Kong, $459 from Japan, and, with $37 from the Philippine Islands, the list of $458,890 is complete.

WATCHES, AND PARTS OF.—Europe again leads in the supply of watches in this instance. Switzerland leads with a value of $1,627,551, Germany coming second with $137,393, the United Kingdom third with $107,980, followed by the other countries in order of value as follows: France, $73,042; Italy, $53,934; Austria-Hungary, $395; Sweden and Norway, $228; Belgium, $75; Denmark, $40; Russia, on the Baltic, $38; Netherlands, $33; Spain, $8. Only three contributions were received from North America: $375 from Quebec, Ontario, etc.; $180 from Mexico, and $48 from Nova Scotia. Two contributions from South America: $49 from Brazil and $35 from Colombia. Japan sent $11, and $19 from British Australasia.

COINS AND MEDALS.—The coins and medals and other metallic articles received as trophies or prizes were received as follows: Austria-Hungary, $60; Denmark, $22; France, $3,312; Germany, $362; Italy, $97; Spain, $210; United Kingdom, $4,269; Miquelon, $1; Cuba, $8; Chile, $61; Colombia, $600; Venezuela, $3; China, $76; Hong Kong, $45; Japan, $36. Total from all sources, $9,162.

CORAL.—Only four countries sent any manufactured coral: France, $2,400; Germany, $78; Italy, $176; United Kingdom, $101.

DIAMOND DUST.—Five importations of diamond dust or bort were received during the year: $446,633 from the United Kingdom, $243,569 from France, $94,040 from the Netherlands, and $1,405 from Belgium.

DECORATED CHINA.—Under this classification are included all importations of decorated and ornamented china, porcelain, parian and bisque, the total value of which was $8,309,911, distributed as follows:

Austria-Hungary	$642,976

Death of Thomas A. Clarke.

PHILADELPHIA, Pa., Feb. 9.—Thomas A. Clarke, one of the best-known buyers in the trade and manager of the silverware, cut glass, bric-à-brac and china departments of N. Snellenburg & Co., died suddenly Friday at his home, 2324 S. Broad St., of acute pneumonia. He left the store Thursday evening seemingly in his usual health, but during the night he was seized with chills and fever. A physician was hastily summoned and remained with Mr. Clarke all night, but he lapsed into unconsciousness and passed away Friday morning.

Deceased is survived by a son and a daughter. His son, Louis J. Clarke, is in the employ of L. Straus & Sons, New York, and had during his father's illness in November and December temporarily assumed charge of the departments of Snellenburg's store of which his father was the head.

The funeral was held yesterday from Mr. Clarke's late residence, and was attended by buyers from all the large stores in the city and from associates and friends in the trade generally here and in New York, where he was perhaps equally well known and much esteemed. Solemn requiem mass was celebrated at St. Monica's Church at 10 o'clock. The services were attended by St. Vincent de Paul Society of St. John's Parish and Branch 56, Catholic Knights of America, in a body. There was a profusion of floral tributes. Interment was made at the Holy Cross Cemetery.

The death of Mr. Clarke removes from the trade a man of the kindliest and most companionable disposition, who was generous, charitable and of a cheerful, even temperament. It is said of him by intimate friends and lifelong associates that he never had an unkind word to say of any one, and that unless he could speak in a complimentary, friendly way of anyone he would make no comment at all. But he was equally appreciated and esteemed as a buyer of rare judgment and an art connoisseur of unusual attainments.

Mr. Clarke began his commercial career with L. Straus & Sons, of New York, about 40 years ago. He remained with this house a quarter of a century and then was offered the position as head of the bric-à-brac, china, glass ware and lamp departments of Wanamaker's store in this city. Here he remained for 20 years, until 1897, when he took charge of the cutlery, silverware, fine art and china departments of Strawbridge & Clothier's store. He was for a time associated at Strawbridge's with William G. Earle, now in business on 9th St., near Market. In 1902 he left Strawbridge's to go to N. Snellenburg & Co. and assume management of the bric-à-brac, china, cut glass and silverware departments.

Mamie DeChrist, the "Diamond Queen," is at present keeping house for the women prisoners at the State farm, located near Milledgeville, Ga. She was taken from Savannah, recently, by Transfer Agent Ben Pearson, of Atlanta. The prisoner was very reticent about her trial and troubles, but stated that her first mistake was made in lying at Atlanta. She claims that her accomplice, an old sweetheart, wrote the order for the diamonds and she copied it.

Funeral of Henry Hayes.

Associates and Friends Pay Last Tribute To the Memory of the Deceased Jeweler.

NEWARK, N. J., Feb. 7.—One of the most impressive funeral services ever held in Newark, N. J., took place Thursday in Grace Episcopal Church, when the last honors were paid to the memory of Henry Hayes, for 50 years a prominent figure in the jewelry industry of the country, whose sudden death, Feb. 2, was reported in the last issue of THE CIRCULAR-WEEKLY.

The high esteem in which the deceased was held in the jewelry trade of New York and Newark was evidenced by the large attendance of jewelers at the church. Delegations were sent by the Jewelers' Safety Fund Society and the Jewelers' League of New York, of which organizations Mr. Hayes had been president for nearly a score of years. The firm of Hayden W. Wheeler & Co., New York, closed its offices Thursday morning during the funeral and nearly all the employes of the concern, as well as Hayden W. Wheeler, the senior partner of the firm, attended the services in a body. Five seats had been reserved for them in front of the church and they were all occupied.

The delegation appointed by the Jewelers' Safety Fund Society to attend the funeral consisted of the Board of Directors for 1903, and was as follows: Ira Goddard, James C. Aikin, of Aikin, Lambert & Co.; Chas. G. Alford, of C. G. Alford & Co.; Jas. P. Snow, of Snow & Westcott; Louis Kahn, of L. & M. Kahn & Co.; Fred'k H. Larter, of Larter, Elcox & Co.; O. G. Fessenden, of Hayden W. Wheeler & Co.; W. T. Gough, of Carter, Howe & Co., and A. V. Huyler, of N. H. White & Co. They left New York in a body and special seats had been provided for them in the church, where the services were held. Over 50 members and officers of the Jewelers' League were at the funeral and paid their last respects to the deceased.

The services were conducted by the rector of the church, assisted by the Right Rev. John Scarborough, Bishop of the Diocese of New Jersey; the Right Rev. S. Starkey, Bishop of the Diocese of Newark; the Rev. Dr. George M. Christian, former pastor of Grace Church; Archdeacon W. R. Jenvey, of Hoboken; the Rev. Louis Shreve Osborne, rector of the Trinity Episcopal Church; the Rev. H. F. Saumenig, of Nutley; the Rev. Noble Starr, the Rev. Dr. W. T. Webb, of Irvington; the Rev. John Keller, of Arlington; Professor Richey, of New York, and a number of curates.

The body of the deceased was carried to the church early in the morning and deposited at the head of the main aisle. At 6.15 o'clock a requiem was celebrated by Rev. Wm. H. H. Hall, and two hours later the same service was repeated by Dr. C. C. Edmunds, rector of the church. At both services the church was crowded to its utmost capacity. Many clergymen and prominent professional men of Newark and vicinity, as well as from New York, filled the church.

The casket was opened at 9 o'clock, for those who cared take a last look at the deceased, and the line passed around it for nearly an hour.

The funeral services proper began at 11 o'clock. The full surplice choir of the church sang the hymns which had been selected for the occasion, after which services the body was taken to Woodland Cemetery. The honorary pall bearers were as follows: William R. Alling, of Alling & Co.; Hayden W. Wheeler, head of the firm of which Mr. Hayes was for many years a member; J. A. Young, New York; Alfred Mills, Morristown; H. F. Cook, of Jos. Fahys & Co.; Colonel E. A. Stevens, Hoboken; the Rev. Dr. Holley, Newark; John S. Darcy, Charles Grummon, of Newark, and George C. Frelinghuysen, Morristown.

Mr. Hayes's death has been the cause of universal mourning in the jewelry trade the past week. A card in memoriam has been sent out by the Jewelers' League to all its members, and memorial resolutions are being prepared by both the Jewelers' League and the Jewelers' Safety Fund Society. The former has appointed the following committee to draft its resolutions and report at the regular monthly meeting of the association; Abel Crook, O. G. Fessenden, Max Lissauer and Geo. W. Street. These resolutions will be embossed and sent to the family of the deceased and incorporated in the records of the organization.

An auction sale, which is to continue until no of the finest stocks of jewelry in Atlanta, Ga., is disposed of, is going on at C. W. Crankshaw's store, 37 Whitehall St. When the stock is sold, Mr. Crankshaw will move into his handsome new quarters in the Century building, with an entirely new stock.

Lease of John St. Property Will Cause Removal of New York Jewelry Firms.

Ludwig Nissen, of Ludwig Nissen & Co., 18 John St., New York, has leased the three buildings belonging to the Cheseborough estate, at the s.e. cor. of Broadway and John St., New York, for a term of 10 years, commencing May 1. The three buildings comprise 182-184 Broadway and 4, 6, 8 and 10 John St.

The principal building, on the corner, is now occupied by the Seventh National Bank, Alfred H. Smith & Co., Jno. R. Greason & Co., and the New York offices of Krementz & Co. These tenants will all have to vacate on or before the 1st of May, as the buildings are to be thoroughly renovated, both inside and outside. As soon as they are again in condition for occupancy, Ludwig Nissen & Co. will move into the offices on the second floor, for so many years occupied by Alfred H. Smith & Co., and the latter will move to the second floor of the Broadway-Maiden Lane building, where they will occupy the Broadway side, and have larger, more commodious quarters and better facilities than ever before. With the exception of the Seventh National Bank, the other concerns have not yet decided where they will move.

Mr. Nissen's lease was obtained primarily for the Oriental Bank, of which he has been vice-president for several years. Of late years this bank has grown rapidly, and decided a short time ago to move its headquarters downtown, and retain its Bowery quarters as a branch office. With this object in view, Mr. Nissen secured the lease of the property already described, having previously learned that the Seventh National Bank is soon to be merged with the Broadway and Mercantile banks, and that the lease now held by that institution would expire on May 1.

Because of his connection with the bank, the officers of that institution desired that Mr. Nissen move his business into the building, and the offices on the second floor were selected by him. The basements of the building will be entirely rebuilt and renovated, and after May 1 will be occupied by the bank, as well as the street floor. The sidewalk will be graded up and rebuilt, as will also the exterior and interior of the three buildings. The work on these improvements will be begun in the near future.

Arrest of Man Accused of Robbing Washington, Pa., Jeweler.

WASHINGTON, Pa., Feb. 6.—The sweetheart of John J. McGlone unwittingly got her lover in the toils of the law at McKeesport yesterday, and he was brought here last night and lodged in jail to await a hearing on the charge of stealing several watches and other jewelry from George V. Brady, a Washington jeweler.

The young man was formerly employed in a glass factory here and shortly after his alleged robbery he disappeared and his whereabouts was unknown until yesterday. Then the officers secured his address from his sweetheart without her knowing the reason for their wanting it. McGlone was employed in the steel works at McKeesport when arrested.

An Effort to Corner Rogers Silverware.

To the Trade:

Do you know that the Trust bought and controls "9 Rogers Trade-Marks" on silver-plated ware?

It is to your interest to patronize an independent concern which will keep prices down where they belong.

When legitimate competition is killed, up go prices.

We are not in the Trust.

Our patterns are new and up-to-date. We sell at living prices, and guarantee our goods to strip as much silver as any Rogers brand on the market.

ONEIDA COMMUNITY,

NIAGARA FALLS, N. Y.

New England Manufacturing Jewelers and Silversmiths' Association Elects Officers.

PROVIDENCE, R. I., Feb. 7.—The annual meeting of the New England Manufacturing Jewelers and Silversmiths' Association, held in Tillinghast's parlors last evening, was a very enjoyable affair. About 16 members were present, and discussed informally, trade conditions prior to the taking up of the regular business of the session.

The meeting was under the direction of the president, Frank T. Pearce, who made a short speech, in which he congratulated the association on its prosperity during the past year, and also on the general good condition of the trade. He urged the necessity of every member striving to get new members to join the association, and laid great stress on the value such an association holds for a member of the trade.

After Mr. Pearce's remarks, the association elected officers for the ensuing year, as follows: President, Frank T. Pearce, Providence; vice-presidents, O. C. Devereux, Providence; A. A. Bushee, Attleboro, and W. H. Reiley, Attleboro; secretary, S. A. Baldwin, Providence; treasurer, S. H. Manchester, Providence; executive committee—Roswell C. Smith, Providence; Frank B. Reynolds, Providence, and S. O. Bigney, Attleboro; membership committee, Theodore W. Foster, Providence; J. Perry Carpenter, Providence, and Charles M. Robbins, Attleboro; advisory committee, John M. Buffinton, Providence; Nathan B. Barton, Providence, and William C. Greene, Providence.

The date for the annual banquet was fixed for Feb. 27, at the Trocadero. After the transaction of routine business, a light luncheon was served.

B. J. Prissman, Baltimore, Md., Files Voluntary Petition in Bankruptcy.

BALTIMORE, Md., Feb. 5.—B. J. Prissman, 811 W. Baltimore St., yesterday filed a voluntary petition in bankruptcy. His liabilities are $5,185.31, and assets $2,291.14.

The liabilities are divided among 50 creditors, and the assets include stock in trade, appraised at $1,700.

Mr. Prissman is a young man, and was formerly a member of the firm of Prissman & Lehman, who commenced business in 1899, and dissolved partnership about the beginning of the year 1902.

Death of James C. Orr.

Jas. C. Orr, who conducted an establishment for enameling on precious metals at 75 Nassau St., Manhattan, for more than 30 years, died last week at his late residence, 140 Weirfield St., Brooklyn, after an illness of more than a year.

Mr. Orr was born in New York, Dec. 17, 1837; is a veteran of the Civil War; was a former member of Grand Post No. 327, G. A. R.: Bushwick Council 1327, Royal Arcanum, and Court Bushwick No. 123, Foresters of America. As a member of Company G of the 21st Regiment of the Volunteers of the State of New Jersey, the deceased went through the entire war of the Rebellion, and took part in many battles.

The primary cause of his death was heart disease, but he had been in failing health for some time, and his demise was not sudden. The deceased is survived by a widow, two sons and a daughter.

The funeral was held from his late residence, Wednesday, and the interment was in Evergreen cemetery.

Nels S. Nelsen, Hutchinson, Minn., has secured the services of David Albrecht, son of Rev. J. Albrecht, of Acoma.

Englehart C. Ostby was recently elected one of the directors of the Swan Point Cemetery Corporation.

Hugh Mulvey, well known in local jewelry circles, has been appointed inspector of the Pawtuxet river by Commissioner Smith.

That the growth of the jewelry workers' union is rapid cannot be denied. At the last meeting, 28 new members were taken in, and the total membership is now said to reach near the 1,000 mark.

Following in the train of the financial troubles of Edgar I. and Oscar M. Coombs has come a suit against them by the Lederer Realty Corporation, for a balance of $300, alleged to be due on book account.

The J. A. Foster Co. recently connected its store with the Rhode Island Electric Protective Co.'s service. The ringing of the bell, as it was being tested the other day, attracted a big crowd to the corner of Weybosset and Dorrance Sts.

Henry Green, alias William H. Davis, is the latest young man to be taken into custody by the police, on the charge of the theft of silver from the Gorham Mfg. Co. Green, or Davis, was in the employ of the company, and was charged with the larceny of $15 worth of silver. He was adjudged guilty and punished.

The funeral of William Mackenzie Patt, formerly well known as a manufacturing jeweler in this city, was held at his late home, 358 Cranston St., last week. Mr. Patt had lately been associated with the Florence Sewing Machine Co., in Florence, Mass., but there are many in this city among the members of the trade who remember him as a well-known manufacturing jeweler. Interment was at Pocasset cemetery.

The Payton & Kelley Co. have been sued by the J. C. Hall Co. for damages to the amount of $5,000. The plaintiff company asserts that by reason of defective plumbing in placing a filter in the defendant's shop there was a sudden downfall of Pawtuxet water, with the outcome that goods of the plaintiff, including office equipment, were damaged. The plaintiff claims that the particular job in question was faulty, weak and not in accordance with the city ordinance.

Mary Saunders, in behalf of James B. Saunders, a minor, has entered suit in the Common Pleas Division of the Supreme Court against George J. Kirby and Charles J. Grout, doing business as George J. Kirby & Co., claiming damages of $5,000. The plaintiff claims that the young man was working on a drop press; that his right hand was caught between the hammer and bed of the machine, and so badly crushed that four fingers had to be amputated. Plaintiff asserts that the youth was not properly warned of the dangerous nature of the work he was doing.

Tuck & McAllister, jewelers of this city, were plaintiffs in an interesting suit against the Earle & Prew Express Co., which went to trial Monday morning. The plaintiffs sent to H. Havener, Haverhill, Mass., in December, 1900, a box containing six diamonds, valued at $651.39, with instructions that the consignees select such as they desired to purchase, and send back the remainder. One of the stones was taken, and in its place was put a check representing its value. The stones and check were sent by the American Express Co. to Boston, thence to this city by the Earle & Prew Co. As the package was not promptly delivered to the plaintiffs, they made inquiry at the office of Earle & Prew, and found the diamonds among heavy merchandise, they say. The envelope was broken, and four of the five diamonds were missing. The plaintiffs asked for restitution for the four diamonds missing, laying damages at $482.64. The defendant admitted willingness to pay $50, but pleaded that it was not liable beyond that amount, for, in the express receipt, the words "no value given" were written. The Judge ordered a verdict for the plaintiff for $50 and costs. G. A. Littlefield represented the plaintiff, and Arnold Green, the defendant.

C. F. Morrow, formerly with the Illinois Watch Case Co., Elgin, Ill., will be a candidate for the office of City Clerk, of Springfield.

Attleboro.

Willis Coates, Brockville, Ont., called in town last week, and placed many orders.

H. L. Thurber & Co. removed their factory, Friday, from the Bates building, Union St., to the new factory of the Attleboro Mfg. Co., Hazel St.

The annual recommendations of the board of fire engineers given to the public last week included a fire alarm box for the new factory of H. W. Williams & Co.

A civic improvement league, comprising all the leading manufacturers, and headed by Charles M. Robbins, of the Chas. M. Robbins Co., is to be organized to-day.

Jas. E. Blake, of the James E. Blake Co., with his wife, left Tuesday for Palm Beach, Cuba, and Puerto Rico, to be gone several weeks, on a health and pleasure trip.

Edward P. Claflin, of Fontneau & Cook; N. Justin Smith, late of G. A. Dean Co., and Joseph L. Sweet, of the R. F. Simmons Co., have been entrusted by the Universalist Church with the quarter century celebration the last of the month.

The Attleboro Mutual Fire Insurance Company elected, as directors, last week: Raymond H. Horton, of W. E. Richards & Co.; Herbert A. Clark, of the Horton, Angell Co.; Harold E. Sweet, of the R. F. Simmons Co.; George H. Herrick, of G. H. Herrick & Co., and Fred L. Torrey, of the Torrey Jewelry Co.

The Grand Jury last week found indictments against Robert Tilton, Arthur Maloney, Frank Maloney and Clarence Struck, who were first tried in the Attleboro District Court for alleged breaking and entering and larceny at the jewelry factories of Riley, French & Heffron, and the W. & S. Blackinton Co.

Frank Mossberg, of the Frank Mossberg Co.; James E. Blake, of the James E. Blake Co.; John M. Fisher, of J. M. Fisher & Co., Charles H. and William C. Tappan, of the D. F. Briggs Co., and other jewelry manufacturers attended a public hearing of the Attleboro selectmen last week, to advocate granting a franchise to an electric road, which wishes to operate a mammoth trolley park in town.

Reed & Barton, at their big silver plant, in Taunton, Saturday, carried into execution the first step of a large and costly scheme for adding to the power and lighting facilities of the factory. The concern purchased the abandoned Hopewell mill, a half-mile below, on Mill river. The big silver plant is operated by water power, and the same water has long been wasted as it fell over a shelf at the old Hopewell works below. The privilege was too good to be lost, so Reed & Barton purchased the place, and will operate there an electric generator plant of considerable size.

A mass meeting was held in Armory Hall last Friday night, at the call of the public library trustees, who are raising $50,000, to erect a library on the site given to the town by Joseph Lyman Sweet, of the R. F. Simmons Co. The money must be secured within a very short limit of time. Major Everett S. Horton, of the Horton, Angell Co., presided, and Louis J. Lamb, of C. H. Allen & Co., acted as clerk. It was the second meeting of the kind within a few weeks, and standing room in the hall was at a premium. Every contribution was welcomed with applause, especially that of $1,000 from Mrs. Sweet, wife of the donor of the land. The list of jewelry firms whose employes sent in lump sums, and of the individual jewelry manufacturers and their wives who gave is as follows:

W. H. Wilmarth & Co., $33; P. J. Cummings & Co., $25.75; Attleboro Mfg. Co., $25; C. H. Eden Co., $19; Bristol Mfg. Co., $68; S. O. Bigney & Co., $232.25; F. H. Sadler & Co., $3; R. F. Simmons Co., $301.25; J. M. Fisher & Co., $175.50; C. A. Marsh & Co., $72.50; D. F. Briggs Co., $27; Carter, Qvarnstrom & Remington, $25.75; Bliss Bros. Co., $53; Torrey Jewelry Co., $17; D. E. Makepeace Co., $5; Bates & Bacon, $7.20; George L. Brown & Co., $31; C. H. Allen & Co., $58.25; Horton, Angell Co., $57; J. T. Inman & Co., $40; D. A. White & Co., $7; Fontneau & Cook, $50; A. L. Leavitt & Co., $7; F. W. Weaver & Co., $13.50; Dunbar, Leach, Garner Co., $7; C. H. Stearns, $5; Everett B. Bliss, $200; Mace B. Short, $100; Mrs. Nancy B. Short, $100; Peter Nerney, $100; Charles E. Bliss, $100; Irene T. Hill, $25; Charles C. Wilmarth, $10; P. Joseph Cummings, $100; Edward L. Gowen, $50; Louis H. Cooper, $50; Mr. and Mrs. E. E. Richardson, $50; Louis B. Jones, $25; Ezekiel Blake, $25; W. F. King, $5; Charles H. Allen, $100; Mrs. Henry Wexel, $25; Winthrop F. Barden, $25; Mrs. J. L. Sweet, $1,000.

North Attleboro.

Percy Clap, of New York, has been the guest of his father, Harvey Clap.

Charles Peckham, salesman for W. N. Fisher & Co., has returned from a six weeks' trip.

Donald Le Stage, western representative for H. D. Merritt & Co., has returned from a short trip.

The employes of V. H. Blackinton & Co. recently surprised their shopmate, Arthur Boyce, with a gift on his 34th birthday.

Theron I. Smith, of the T. I. Smith Co., has gone to the south, accompanied by his wife, and will be away for the balance of the Winter.

The power at the Robinsonville shops was stopped last week, owing to accident, and most of the employes were temporarily thrown out of work.

Frank M. White, for many years bookkeeper for F. L. Shepardson & Co., has the sympathy of many friends on the recent death of his mother.

Eminent Commander Henry H. Curtis, of Bristol Commandery K. T., delivered an eloquent address at a big Masonic function, at Foxboro, last week.

Charles W. Hempel has severed his connection with Sandland, Capron & Co., after 11 years of service as western representative, and will travel hereafter for the Corey Mfg. Co.

The North Attleboro Road Drivers' Association was formed last week. Edward M. King, a well-known die sinker, was elected president of the association. Fred S. Gilbert is secretary and treasurer. Charles R. Draper, of the O. M. Draper Est., is one of the directors.

W. B. Ballou, of R. Blackinton & Co., is a candidate for re-election as school committeeman. George K. Webster, of the Webster Co., will be re-elected water and electric light commissioner. Dr. E. E.

The Simmons Co-operative Proposition for 1903

The Simmons Co-operative proposition for 1903 is a logical extension of our long-fixed policy of co-operating with the jeweler in advertising his store and Simmons Chains.

Supplying him with the chains is the *jobber's* part. Our part is to make the chains the best that can be made and to help the retailer sell them.

The co-operative advertising policy that we inaugurated last year was several steps in advance of anything that had ever been done in this direction.

This year we have planned a still broader and more liberal campaign to further the sale of

Simmons Chains

WE have on the press an elegant booklet containing full details of the Simmons Plan for 1903, besides other matter of particular interest to jewelers. We want you to have and to read this booklet. To insure that our mailing list will include your name, write at once for the "Simmons Prospectus."

R. F. Simmons Company,
Attleboro, Mass.

Hale, of the O. M. Draper Est., may have a contest on the Board of Health. Albert Totten, Fred. S. Gilbert and Frank L. Shepardson, three well-known jewelry men, will, without doubt, be returned to the board of selectmen.

Fred B. Brigham has returned from a successful western trip, in the interests of Cheever, Tweedy & Co.

George D. King, one of the best known die forgers in this section, is confined to the hospital, and his condition is considered serious.

Metamocct is suggested as a suitable name for North Attleboro. It is the Indian name of King Philip, the noted chief, who made the Attleboros a part of his stamping grounds. The name Jewelboro is also suggested.

Boston.

The many friends of H. P. N. Dahl, Maynard, Mass., were glad to see him in Boston again last week, after an illness, which has confined him to his house five weeks.

Alfred and Wilfred A. De Veuve, of 97 Boylston St., Jamaica Plain district, Boston Mass., have on exhibition in their show window, an English watch 200 years old. The days of the month are on the dial, the change of date being indicated each day.

William B. Tilton started out last week on his first trip in the interests of Smith, Patterson & Co., covering the same territory which for the last 11 years he had visited for D. C. Percival & Co. Mr. Tilton associated himself with his present employers Jan. 1.

A. S. Hirschberg, dealer in diamond mountings and gem settings, will, on March 1, move into the Jewelers' building annex, now nearing completion, and will occupy practically the entire eighth floor. Mr. Hirschberg has been at his present location, 406 Washington St., for the last seven years.

Charles G. Swenning, who during the last four years has been buyer for the watch department of Bigelow, Kennard & Co., has severed his connection with that firm, and will leave the jewelry business to enter a new field. Monday, Mr. Swenning associated himself with the Hollar Lock Inspection and Guaranty Co., Philadelphia. In his new capacity, Mr. Swenning will act as inspector and general traveling agent. Mr. Swenning carries with him the best wishes of his many Boston friends. No successor to Mr. Swenning, at Bigelow, Kennard & Co.'s, has been appointed as yet.

A. S. Hirschberg, of 406 Washington St., celebrated his fifth wedding anniversary last week at his home, 83 Waumbeck St., Roxbury district. The home was handsomely decorated for the occasion, and the host and hostess were assisted in receiving the many presents by the Misses Leah, Esther and Pauline Nurenberg, sisters of Mrs. Hirschberg. During the evening, an exceptionally fine vocal and instrumental entertainment was furnished by the guests. The latter part of the evening a fine collation was also enjoyed. Mr. and Mrs. Hirschberg received many handsome and valuable gifts from their friends.

Philadelphia.

Louis Atkinson, 726 Chestnut St., is still critically ill.

John Lang, 725 Sansom St., made a business trip to Washington last week.

J. C. Sheldon, watchmaker, has accepted a position with C. Leonard, 426 S. Broad St.

John H. Merz, of Hopewell, N. J., was in town last week buying from local jobbers.

Wm. C. Williams, with C. H. O'Bryon, 735 Chestnut St., became a Mason Friday night.

Samuel J. Schless has succeeded to the business of Mrs. Paulina Schless, at 14 and 138 N. 8th St.

John A. Pue, Gloucester, N. J., has moved into a handsome new store, which he recently purchased.

Wm. Fulton, assistant buyer of Lit Bros.' jewelry department, has recovered from an attack of tonsilitis.

J. H. Knerr, 443 Kaighns Ave., Camden, N. J., has returned from a brief vacation at Lakewood, N. J.

Al. Galleschick, watchmaker, has accepted a permanent position with J. M. Parker, Jr., 12th and Sansom Sts.

A. M. Hodgson, watchmaker, has resigned his position with J. M. Parker, Jr., and returned to West Chester.

A. N. McKennie & Son, 2333 N. 32d St., contemplate removing to larger quarters in the immediate neighborhood.

A window of the store of John Demmert, 1602 Market St., was broken by thieves last week and goods valued at $20 stolen.

Wm. H. Long, 1629 South St., sailed from New York on the *Kaiserin Maria Theresa* Saturday for an extended European trip.

L. P. White and J. Warner Hutchins went to Harrisburg Friday, where they joined Harry Oliver and Charles Duffy, of New York.

Harry Toplis, watchmaker for the trade, 8th and Sansom Sts., who has been ill with a slight attack of typhoid fever, has completely recovered.

Chas. W. Scott, watchmaker, has resigned his position with the Reading Railway Time Service Bureau and will probably return to Hoover & Smith.

Edward Roberts, the inventor of the watchman's clock and other unique appliances, died recently at the age of 82 years at his home, 240 S. 12th St.

The stork visited the home of F. W. Schuler, president of the Horological School, Broad and Somerset Sts., last week, and brought a bouncing boy.

Riggs & Bro., 310 Market St., one of the oldest houses in the city, have admitted into the firm Clarence, Robert and Judson Riggs, younger members of the family.

James Bathgate, manager of Strawbridge's jewelry department, who was temporarily domiciled in the city all of last week, has again reopened his country home at Glenside.

Wm. J. Sutor, brother of Fred. G. Sutor, 1120 Chestnut St., will shortly sever his connection with the firm and will return to his home in Austin, Tex., to embark in business there.

P. Korn, proprietor of Korn's Watch Stores, of which there are two in New York, has leased the property at 833 Market St. and will open a jewelry store there about Feb. 20. The local branch will be under the management of S. Iskowitz.

Louis J. Beitel, who recently purchased the property of Morris Herzberg, 2951 Kensington Ave., is having the store remodeled and when finished it will be one of the most attractive in that section of the city. Mr. Beitel was for 18 years head watchmaker for Wm. T. Rae & Co., Newark, N. J.

The sudden death recently of Edward R. Strawbridge, head of the firm of Strawbridge & Clothier, was received in the jewelry trade generally with genuine regret. The employes of the firm were sincerely and deeply affected. He was known generally to business men in this city and New York and held in the highest esteem. He was buried Feb. 3, and out of respect for his memory the big store was closed all day.

While in the store of Blair & Crawford, 804 Chestnut St., last week, James McCrossin, who had gone there ostensibly to have a watch repaired, but really, the police assert, to steal, was arrested. Later he escaped from a cell in the City Hall and was pursued amid great excitement through the corridors by about fifty policemen. He was eventually recaptured. McCrossin is accused of stealing two pairs of diamond cuff buttons from Blair & Crawford and one pair of similar articles from J. E. Caldwell & Co., on a previous occasion.

A musicale and dance was given at Mercantile Hall last week by the Keystone Watch Case Beneficial Society and hundreds of the employes of the big factory had a royal time. At the musicale John Ranson, George H. Lukens, George Spiel, Lawrence Sharkey and H. Todd were the chief entertainers. Lawrence Sharkey's German recitation merited the vehement applause with which it was received. John Ranson's humorous monologue created much amusement. The committee in charge of the dance consisted of Joseph J. Hoey, chairman; Hugo Rushton, Chas. Haas, Edward Bodenstein, Wm. M. Gallagher, Norman Monigar, H. P. Landis, B. Gebhard, Jos. Lewis, Wm. G. Ackerman, Edward Thompson, Thomas Supplee, Edwin Myers, John Estell, Wm. H. Fizer, A. Millieto, Edward Harkins, Daniel Powers, David McKeown, Wm. J. Craver, Frank Griffith, Harry Walton, Thomas Gorman, John Wipf, Chas. Bailey, John McCoach, Horace Hayden, Samuel Lyons, Charles McNaulty, Frank Gray, Geo. Esrey, Vincent Yarger, Geo. Davis, Chas. Shields, John Collins, H. R. Grover and Wm. Page.

Albany.

Harry Ward, of the Julius King Optical Co., New York, visited relatives in Albany during the past week.

The jewelry store of John Fuhrman, 99 N. Pearl St., has been made very attractive by many improvements installed during the past week, among which should be mentioned several large French plate wall mirrors and cases.

Again the flags, announcing auction sales, are in position outside of Albert Sachs's jewelry store. The auction sales were resumed during the past week. Shortly after the holidays, Mr. Sachs discontinued the

The kind of wear

Most any gold filled or rolled plate chain will wear 20 years if it is put away in a bureau drawer six days of the week, and worn by the owner on the seventh day only. But—put it on a railroad engineer who not only wears it the whole seven days of the week but exposes it to the hardest kind of wear, where dust and grit and perpetual motion combine to attack the surface, and this chain might not "make good."

The guarantee that goes with Blackinton's Old Reliable W. & S. B.★ Chains is based on the hardest kind of continuous wear and is the only brand of gold filled chains that have "made good" for thirty-eight years. Insist on getting them from your jobber. Did you receive a copy of our booklet entitled "A Chain of Circumstances?" If not, write us for one.

W. & S. Blackinton Co.,

New York, 14 Maiden Lane.

Factory, NORTH ATTLEBORO, MASS.

BLACKINTON "OLD RELIABLE W. & S. B. ★"

sales of jewelry by auction, and it was announced that in the future he was to conduct a retail business. Last week, when the auction flags were displayed at this store, the Albany jewelers were more than surprised. Auction sales have been a cause of annoyance to the local jewelry trade for some time, and the supposition was that this nuisance was a thing of the past when Isaac Brilleman abandoned his auction sales a few weeks ago.

The Geo. Bell Co., Denver, Col., has been compelled to seek other quarters in order to make room for the Colorado Midland railroad, which will fit up a railroad office in that location.

Atlanta.

Dealers are all making particularly attractive displays just now in their show windows.

Moses Greer, formerly manager of the Greer Jewelry Mfg. Co., has accepted a position in Macon, Ga. His family will remain in Atlanta.

Miss Louise Du Bose, who has been authorized by Governor J. M. Terrell to raise a fund for a silver service for the battleship *Georgia*, now in course of construction at the government navy yards, is progressing rapidly in her work. Miss Du Bose has been in correspondence with the leading silversmiths of the United States, and she now estimates that it will require between $4,000 and $5,000. She hopes that the bulk of this amount can be secured on Georgia Day—Feb. 12.

The annual banquet of the Chamber of Commerce will be held at the Kimball House, Feb. 17, at which the Greater Georgia Association will take part. This association has been organized to advertise Georgia. Several of the jewelers are interested in this movement, among them being J. P. Stevens, who has been made chairman of the committee on location for a permanent exhibit for the Atlanta Manufacturers' Association. He has secured large floor space for his engraving and lithographing department.

Syracuse.

Mr. and Mrs. Harry Benedict left, Friday evening, for a week's trip to New York and Boston.

A. H. Pond has taken possession of his new home, at 115 College Pl., which was recently completed.

In the Surrogate's court, Thursday, there being no objection, the will of M. Stuart Benedict was admitted to probate. Harry S. Benedict and Wm. P. Goodelle are the executors.

The Spitz Co., of this city, has been incorporated with a capital of $5,000, to manufacture and deal in jewelry. The directors are: Isidor Spitz, J. R. McGowan and Mark E. Conan, of Syracuse, and Morris Spitz, of St. Louis, Mo.

It is reported from Lyons, N. Y., that County Treasurer James D. Bashford, Dr. Louis W. Smith, George T. Getman and Clyde W. Knapp, as a committee of the Board of Trade, are soliciting subscriptions to raise $10,000, to be invested in the capital stock of a cut glass corporation, which desires to remove to Lyons, with a force of 50 hands.

Dr. D. S. Chamberlain, president of the Lyons National bank, announces that in case the International Silver Co. does not reopen the Manhattan Silver Plate factory, in Lyons, the plant will be operated by a syndicate composed, in part, at least, of Lyons capitalists. Doctor Chamberlain is, however, of the opinion that the International Silver Plate Co. will reopen the plant.

Washington, D. C.

The Castelberg National Jewelry Co. has secured a judgment for $27.50 against J. M. Perreard.

Justice Hagner, sitting in the Bankruptcy Court, has awarded to Orme Bros., jewelers, a final discharge in bankruptcy.

The Illinois Watch Co. has secured a judgment for $50.75 against Joseph Drukker, a jeweler, who recently filed a petition in bankruptcy.

James Reilly, alias John F. Richards, alias James Robinson, who was convicted last week of stealing $3,000 worth of diamonds from the jewelry store of Gerome Desio, has been sentenced to three years in the New Jersey Penitentiary, where District of Columbia prisoners are now confined.

Connecticut.

Robert W. Morris, of Chicago, is visiting friends in Wallingford.

Cephas B. Rogers, who has been confined to his home in Meriden by illness, is reported considerably improved.

Geo. H. Wilcox, Samuel Dodd and G. M. Curtis have been re-elected directors of Manning, Bowman & Co., Meriden.

F. A. Wallace, G. N. Hallenbeck and C. D. Morris have been elected vice-presidents of the Wallingford Poultry Association.

Alexander Harper, with the American Silver Co., Bristol, left Feb. 5, for a three weeks' business trip through New England.

Irwin Chambers, formerly in business in South Manchester, died last week at the Hartford Hospital of valvular lesion of the heart.

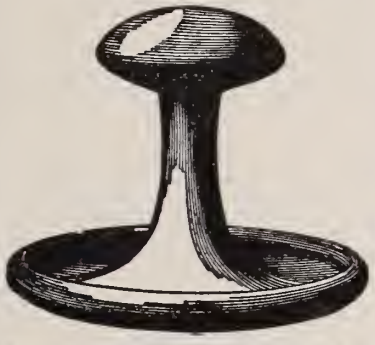
Chas. Botsford, for 54 years in the employ of the Seth Thomas Clock Co., Thomaston, last week celebrated his 75th birthday at his old home in Milford.

A bill authorizing the New Haven Clock Co. to increase its capital stock from $600,000 to $1,000,000 was recently introduced in the Connecticut General Assembly.

T. B. Walker and wife, Waterbury, left Feb. 7 for a tour of California. Mr. Walker, who recently retired from the superintendency of Holmes, Booth & Haydens' factory, intends to be gone until June 1.

Stanley W. Searles, who, for the past month has been studying watchmaking at the Waltham Horological School, Waltham, Mass., returned to his home in Seymour, Feb. 7, after completing his course at the school.

An increase of wages of from 20 to 30 per cent. has been granted to britannia burnishers in factory "E," International Silver Co. The increase is the result of a request made during the past month by a committee of the union.



Philip and Andrew Corbin have become interested in the jewelry manufacturing firm of Porter & Dyson, New Britain, which was recently formed into a stock company. F. W. Porter, president of the company, and M. G. Porter, the secretary, have both resigned. Philip Corbin has been elected president, and G. H. Dyson, secretary, treasurer and general manager.

The directors of the Landers, Frary & Clark Co. held their annual meeting at 4 o'clock Saturday afternoon and re-elected the following officers: President, Charles F. Smith; vice-president, Francis B. Cooley; secretary and treasurer, George M. Landers. The directors are Francis B. Cooley, Pliny Jewell, James L. Howard, Henry E. Russell, C. F. Smith, George M. Landers, Henry C. Judd, Lucius A. Barbour and Andrew J. Sloper.

Consul Albert, at Brunswick, Germany, says: "The consumption of silverware in the Duchy of Brunswick is estimated to be yearly between $125,000 and $150,000. All the silverware is of German manufacture. Plated ware, if sold at all, is sold in only a limited quantity. The people here have no idea of the artistic taste and variety displayed in American plated ware, and I believe there would be a market for such goods, and no prejudice against them."

The Giant of Collar Buttons

IN QUALITY
IN SALES

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the year of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

NEWARK, N. J.

Selling Agents to Jobbing Trade.

A New Stamping Law.

Bill to Compel Stamping of Imitation Gold or Silver, or Plated Jewelry, Introduced in New York Assembly.

ALBANY, N. Y., Feb. 5.—Assemblyman Edward Rosenstein has introduced a bill in the lower house, to amend the penal code in relation to the manufacture and sale of jewelry. The object of the bill seems to be to classify different kinds of jewelry, by having them stamped by words, letters, figures or characters, and to stop the practice of having imitation gold and silverware passed off for the genuine article. Persons failing to be governed by the provisions of the measure will be guilty of a misdemeanor.

The bill is entitled: "An Act to Amend the Penal Code in Relation to the Manufacture and Sale of Jewelry," and reads as follows:

Section 1. The penal code is hereby amended by inserting therein a new section, to be section three hundred and sixty-four-j, and to read as follows:

Section 364-j. Restrictions on the sale of jewelry.—Any person who makes or sells, or offers to sell or dispose of,

1. Any article of jewelry plated with gold or silver, unless the fact that such article is plated is plainly indicated by a mark or stamp thereon; or

2. Any article of jewelry composed of a metal or substance so nearly resembling gold or silver as to be liable to deceive, unless such article is plainly marked or stamped with the name by which the metal or substance of which it is composed, is commonly known; or

Any article of jewelry not composed of gold or silver, but so marked or stamped with words, letters, figures or characters as to convey the impression that such article is composed of gold or silver;

Is guilty of a misdemeanor.

Section 2. This act shall take effect immediately.

A representative of THE CIRCULAR-WEEKLY interviewed Assemblyman Rosenstein in regard to his bill, and in explanation Mr. Rosenstein made the following statement:

"The practice of deception in the way of selling fake jewelry has become so prominent during the past few years that I have been prompted to introduce a bill making it a misdemeanor to sell plated articles in jewelry unless it is so classified. I have considered and made a study of this matter for some time, and feel it my duty to protect the public from paying exorbitant prices for inferior articles. Evidence of this has been manifested in my own district, where I have learned that many people have been fooled by these goods. The poorer class are the ones who will be materially benefited by the proposed measure; it is they who patronize the stores at which this fake jewelry is sold. If my bill becomes a law persons can go into any store and purchase the genuine goods or that which will be stamped otherwise. The bill will be a deathblow against the sale of fake jewelry and the practices of the unscrupulous dealer, who sells a plated article as gold or silver when he has the opportunity to do so. The other members of the House think well of the bill, and have assured me of their support in having it become a law. I will urge the passage of the measure at the earliest possible time."

Jobbers and manufacturers of plated jewelry ware in New York are much opposed to the bill introduced by Assemblyman Edward Rosenstein, printed in full above. A copy of the bill was shown a number of concerns Friday and Saturday by a CIRCULAR-WEEKLY reporter, and the clause in the bill to which they object is that which provides that, "The person who makes, sells or offers to sell or dispose of any article of jewelry, plated gold or silver, unless the fact that such article is plated is plainly indicated by a mark or stamp thereon, is guilty of a misdemeanor."

The manufacturers say that the word "plated" is too inadequate to mean anything, and will only serve to upset the whole jobbing and manufacturing industry in the State, without accomplishing any good. They say that anything from a filled article to a cheap gold wash may be gold plated, and that one factory may turn out a very cheap plated product, and another one may make goods almost as rich as solid gold.

If the word "plated" must be stamped on all of them, the manufacturers claim that the products of all would be leveled in the eyes of the public, and that not only confusion, but an extremely unfortunate condition would result.

Solid gold manufacturers are rather in favor of the bill, as they claim that it cannot harm them in any way, and is quite likely to do them a world of good.

Retailers who sell only the best class of jewelry are also in favor of the bill. All those who sell cheaper goods are adverse to it, claiming that the word "plated" stamped on any article of jewelry makes it embarrassing for persons who wish to buy that class of goods for presentation purposes.

PROVIDENCE, R. I., Feb. 9.—The act recently introduced in the New York Legislature relative to the stamping of goods resembling silver or gold with the name of the metal promises to arouse no little attention among the manufacturers in this city. That the act is far sweeping in its provisions is generally recognized by those manufacturers of plated goods who have seen a copy of the act, but what course will be taken by the local manufacturers remains to be seen.

From THE CIRCULAR-WEEKLY the Manufacturing Jewelers' Board of Trade received a copy of the act. Immediately recognizing the important character of the proposed legislation and the bearing it would have on manufacturers in this city, as well as other places where jewelry is manufactured, the Board, with its usual care to keep its members posted on matters that may affect them, caused the bill to be printed. The printed copies of this act will be finished the early part of this week and will be sent out to the members of the Board in this city and the Attleboros. That they will be perused with interest is certain in view of the attention shown by manufacturers who have already seen the bill.

One prominent local manufacturer remarked, when shown a copy of the bill by a CIRCULAR-WEEKLY representative: "Well, all that I can say is that I think they had better leave well enough alone. This bill, so far as I can see from a hurried perusal of it, is altogether too sweeping. We know that manufacturers who are honest and who are willing to stand by their goods are now paying a guarantee to the State of New York, and we give up our little money every year. To those to whom sterling means sterling anyway, the present law is sufficient and if the law is changed there are plenty of ways for a smart lawyer to get around it.

"Now, take this very bill, for instance. Look in Section 2 and you read, 'unless such article is plainly marked or stamped with the name by which the metal or substance of which it is composed is commonly known.' Now, what does that mean? Does it mean that if I take a lot of German silver and accidentally get a little silver in it and call the stuff 'glistenine' or anything else that may deceive the general public, that I am coming within the provisions of the act? It seems to me that under the provisions of this act a man might get together almost any kind of a combination, call it something, fix the name on it and let it go through, still being within the provisions of the act."

Another man prominently identified with jewelry interests said when shown the bill: "Why, the whole thing is impracticable. It is the rankest nonsense. I don't know whether we manufacturers will take any action on this measure or not, but it doesn't seem to me that the State of New York is going to pass any such measure as that. Why, under the terms of this act, how is a man going to mark a watch chain? So far as I can see, the only way out of it is for him to mark every link. It wouldn't do to mark only the swivel, for that can be removed. Nor would it be policy to mark simply the bar. And then, again, how would a man mark a scarfpin? To keep within the proposed act, every individual part of a piece of jewelry would have to be marked."

Still another manufacturer said: "It seems to me that this bill is along the same lines with other movements that have been made to get protection for both the manufacturer and consumer. There is no denying that words have been affixed to an inferior quality of goods that were intended to deceive the purchaser by their similarity to the names used for commercial purposes in the disposal of goods of known merit. It is a question in my mind if this proposed bill can result in any betterment of conditions along these lines. There are some manufacturers who are making goods of an inferior quality, which they are trying to sell for a first-class product. If they can get rid of them by a little deception they will do so. The present law is just as efficacious in dealing with cases of this kind as this proposed one would be."

Others who were seen expressed themselves in about the same terms as those quoted. There is a possibility that the matter may come up at the annual dinner of the New England Manufacturing Jewelers and Silversmiths' Association, to be held the latter part of this month. So far as can be learned the manufacturers have not decided to try to do anything in New York as yet. What they may do after all have perused

the act and thought upon its provisions cannot be foretold.

ATTLEBORO, Mass., Feb. 9.—A number of the Attleboro jewelry manufacturers who chanced to be assembled at a public library mass meeting were shown a copy of the bill introduced into the New York legislature by Assemblyman Rosenstein, which seeks to make it a misdemeanor to offer goods for sale with any marking calculated to deceive, or without a mark indicating the metal of which they are composed. None could be persuaded to discuss the bill seriously, as they one and all declared the practice of devising ingenious names for metals of which the goods are made is rapidly going out of vogue in the Attleboros.

All had an eloquent condemnation of the system, and declared unanimously that they are willing to sell their goods for just precisely what they are. All said that the cheap goods made in these two towns are known by the purchasing public to be of inexpensive material, and owe their ready sale, not to deception, but to their low prices and their novel or pretty styles. The good goods can be marked as just what they are, and if a maker is placing on the market plated goods, he would not hesitate, if necessary, to mark them so.

There was a general feeling that if the bill be passed, few or none of the local houses will experience any appreciable inconvenience from it.

NORTH ATTLEBORO, Feb. 9.—Assemblyman Rosenstein's bill, which is now before the New York Legislature, has been called to the attention of local jewelers and has in the main been favorably regarded. The manufacturers seem to be perfectly willing to mark their goods and welcome the passage of the bill. The general sentiment seems to be that none but the dishonest manufacturer can lose by the passage of the law, and the jewelers who are making honest goods will gain in the long run, as they will be relieved of the competition of the people who are misrepresenting their goods and cutting prices as a result of the deception. All to whom the bill was shown were appreciative of the watchfulness of THE CIRCULAR-WEEKLY in presenting it to their notice.

John P. Bonnett, the leading electrometallurgist of the country, spoke emphatically in favor of the bill, and hoped that it would pass. He said: "If you could have the frauds in jewelry brought to your notice that come to my office every week you would be as much in favor of this legislation as I am. Only last week I had a cane head brought to me that had been purchased for solid gold at a cost of $40 and I had to tell the parties that it was nothing but cheap plate. These incidents are of such frequent occurrence that I know the public is being imposed upon. The honest manufacturer is always willing to tell the truth about his goods, and such men will welcome the passage of the bill."

One manufacturer said that his concern would be glad to mark all the goods that it puts out, and, in fact, does so on many of them now. He certainly should not oppose the bill and doubted if there would be any local opposition to it. Another said it had been one of the traditions of the house to back up the goods, and when that could not be done they would go out of business. He would welcome the passage of the bill, and held that no concern doing business on an honest basis could lose by it, but would gain materially.

The general opinion, as gleaned from these and other interviews, was that gold shops would gain, the plate shops would be relieved of "brass" competition, and the same conditions would apply to the silver shops. In the latter branch of the trade, it is pointed out that large quantities of brass, plated thinly with silver, are being sold throughout the country at prices lower than the value of the silver, and yet are unblushingly sold as sterling. To the credit of North Attleboro, it can be positively stated that no such goods ever came from this town.

Bill Forbidding Orders of Arrest in Suits for Less than $50.

ALBANY, N. Y., Feb. 5.—A bill, ostensibly designed to protect the poor from abuse of process by installment dealers, has been introduced in the lower branch of the Legislature by Assemblyman Ulmann, and in effect forbids the issuance of an order of arrest in actions for conversion of personal property, where the amount in suit is less than $50.

This is similar to the bill introduced last year that was fought so strenuously by the installment jewelers, who claimed that it was unconstitutional and practically put a premium on dishonesty. The bill is practically an amendment to Section 549 of Article I., Title I. of Chapter VII. of the Code of Civil Procedure, relating to orders of arrest, and to the present law adds the following:

But an order of arrest shall not be granted or an execution against the person be issued in an action to recover a chattel with or without damages for its detention, or in an action for the wrongful taking, detention or conversion of personal property, where the value of the chattel, or the damage for the wrongful taking, detention, or conversion of personal property is less than $50, and the chattel has come into the possession of the defendant or has been received, taken or detained by him under a lease, agreement to sell, conditional sale or other agreement whereby possession of the chattel has been given to the defendant and the title to the chattel remains in any other person until certain payments or rentals have been paid or made or until the happening of any event or contingency. And an order of arrest shall not be granted or an execution against the person be issued in any action to foreclose a mortgage or vendor's lien, where the amount of the indebtedness secured by such mortgage or vendor's lien is less than $100 dollars.

This act shall take effect immediately.

ALBANY, N. Y., Feb. 4.—A bill, which may hit at manufacturing jewelers who supply small articles for premium purposes, has been introduced by Mr. Fitzgerald in the Senate, and is now being considered by that body. This bill prohibits any firm or corporation from giving tickets or coupons in connection with a sale of cigars or cigarettes, where such coupons or certificates may be exchanged for a gift or premium of any kind. Violation of the act is punishable by a fine of not less than $10, and not more than $50, and the act is to take effect upon its passage.

R. G. Thompson has removed his stock of jewelry from Callaway, Neb., to Broken Bow, Neb.

Death of Edward C. Keer.

Edward C. Keer, who was engaged in the manufacture of jewelry in Newark, N. J., for more than 15 years, died at his late home, 53 Crawford St., in that city last week. The deceased was 59 years old, was a veteran of the Civil War and was highly respected in business and private life. He is a Prussian by birth, but came to this country when a small boy.

Mr. Keer learned the jewelry manufacturing business with T. W. Adams & Co. and in 1884 began business for himself under the firm name of E. C. Keer & Co. The firm was succeeded a year later by Keer & Keitlinger, which dissolved March 15, 1887. Mr. Keer then formed a partnership with Jabez Feary and the concern again became known as E. C. Keer & Co. The next year the concern was changed to Keer & Briggs, two years later was changed to Keer, Stein & Klein, and in 1892, Stein & Klein withdrew, and Mr. Keer formed a new partnership with J. E. Kingsland, under the style of Keer & Kingsland. The latter retired in February, 1897, Chas. F. Robinson purchased his interest and the firm became known as Keer & Robinson. In 1898 Mr. Robinson withdrew from the firm and Keer continued alone until about two years ago, when he retired from active business life.

Mix Appraisers File Reports on Yalesville Estate.

MERIDEN, Conn., Feb. 7.—The appraisers on the estate of G. I. Mix & Co., Wallingford, filed their report with Referee H. G. Newton, in New Haven, this afternoon.

The personal property amounts to $28,150.03, and the real estate $30,492, a total of $58,742.03. This includes everything. The liabilities are in the neighborhood of $7,000.

"Several out-of-town parties are negotiating for the purchase of the G. I. Mix Co.'s plant in Yalesville," recently declared Wilbur H. Squire, receiver of the defunct concern. Nothing can be done about accepting offers until the courts shall have taken final action. Mr. Squire thinks there will be a new company running the factory before very long, and the village people will be employed again.

Mr. Squire does not think the shop will be closed long. He has received a number of propositions, and will consider them when some disposition is made of the company's affairs.

Fight Against Trading Stamps Being Waged in Pennsylvania.

HARRISBURG, Pa., Feb. 7.—Representatives of a Chicago trading stamp concern have been operating in various portions of the State. At Williamsport some of the merchants secured signatures to an agreement not to use the stamps and pledging the signers to forfeit $25 for each violation of the agreement.

The use of trading stamps in Williamsport was discouraged by Former Chief of Police Wise, who began prosecutions against the concerns under the statute prohibiting gambling.

A big effort will be made to pass the anti-trading stamp measure recently introduced in the House of Representatives.

WALTHAM WATCHES.

The Best Four 18 Size Railroad Watches.

HUNTING OR OPEN FACE.

VANGUARD; Nickel;

23 diamond, fine ruby and sapphire jewels; both balance pivots running on diamonds; raised gold settings; jeweled main wheel bearings; jewel pin set without shellac; double roller escapement; steel escape wheel; exposed pallets; compensating balance in recess, adjusted to temperature, isochronism and five positions; patent Breguet hairspring, hardened and tempered in form; embossed gold patent micrometric regulator; tempered steel safety barrel; exposed winding-wheels; elaborately finished nickel plates with gold lettering; steel parts chamfered; double sunk dial. The Vanguard is the finest 18 size movement in the world.

VANGUARD; Nickel;

21 diamond and ruby jewels; both balance pivots running on diamonds; raised gold settings; jewel pin set without shellac; double roller escapement; steel escape wheel; exposed pallets; compensating balance in recess, adjusted to temperature, isochronism and five positions; patent Breguet hairspring, hardened and tempered in form; embossed gold patent micrometric regulator; tempered steel safety barrel; exposed winding-wheels; elaborately finished nickel plates with gold lettering; plate and jewel screws gilded; steel parts chamfered; double sunk dial. The Vanguard is the finest 18 size movement in the world.

CRESCENT ST.; Nickel;

21 fine ruby jewels; gold settings; jewel pin set without shellac; double roller escapement; steel escape wheel; exposed pallets; compensating balance in recess, adjusted to temperature, isochronism and five positions; patent Breguet hairspring, hardened and tempered in form; patent micrometric regulator; tempered steel safety barrel; exposed winding-wheels; double sunk dial.

APPLETON, TRACY & CO. PREMIER; Nickel;

17 ruby jewels; gold settings; jewel pin set without shellac: double roller escapement; steel escape wheel; exposed pallets; compensating balance in recess, adjusted to temperature and five positions; patent Breguet hairspring, hardened and tempered in form; patent micrometric regulator; tempered steel safety barrel; exposed winding-wheels; double sunk dial.

Open Face Vanguard, Crescent St. and A. T. & Co. Premier movements are supplied either Pendant Setting or Lever Setting.

A New Stamping Law.

JEWELERS of the Empire State will be deeply interested in the bill published in full in another column, which was introduced into the lower branch of the Legislature last week by Assemblyman Edward Rosenstein, of New York. This bill, which amends the Penal Code by the addition of a section to be known as 364 J, seeks to make it a misdemeanor for anyone to make or sell, or have in his possession to sell, any article of jewelry made in imitation of the precious metals or plated with gold and silver, unless the name of the substance of which the article is composed, or the fact that it is plated, is plainly stamped thereon.

While there is little doubt that the purpose of the introducer of the bill was a good one, and that those who drafted it intended to give protection to the public by putting a stop to the sale of spurious articles as genuine gold or silver jewelry, nevertheless the bill is so crudely drawn that its opponents will have strong arguments in their fight against it. A careful perusal of the provisions will show that the proposed law is most drastic and if enacted and strictly enforced would do more than could possibly have been intended by its framers.

One of the objections raised against the law is that it does not distinguish between the various kinds of plated ware and would compel all to be stamped "plated," no matter whether the article was of the cheap fire gilt or electroplate variety sold by the dry goods and furnishing houses, or the finest rolled plate sold by the jewelers. This, say some manufacturers, would tend to establish an equality, in the eyes of the public, among all kinds of plated ware, and would work injury to the retail jewelers, as well as the manufacturers. Another objection made to the bill is that under its provisions manufacturers of New England could sell unmarked goods in other States, while those in New York could not. A third objection is that the bill compels every article to be stamped, even articles like pins, which manufacturers claim are so made that it would be impossible to put a mark upon them.

If these objections can be properly met by amendments or additions to Mr. Rosenstein's bill there is little doubt that he will have the great majority of the jewelers of the Empire State behind him in his fight to protect the public by having spurious imitations of gold jewelry properly stamped.

Importers Win Suit Over Duty on Agate Under the Tariff Act of 1883.

Judge Wheeler, of the United States Circuit Court, at New York, handed down a decision Saturday sustaining the protest of Rud. C. Hahn & Co. on a quantity of goods classified as manufactures of agate. The case was protested under the Tariff Act of 1883 and the point to be decided has been before the courts since 1894.

The goods, consisting of manufactures of agate, were assessed for duty under Section 4 of the Tariff Act of 1883 at 20 per cent. ad valorem, and the protestants claimed that they were dutiable at 10 per cent. ad valorem under paragraph 454 of that act, as "precious stones cut and not set."

The protest was argued before the Board of Classification of the United States General Appraisers several years ago and was overruled. On appeal to the United States Circuit Court the Board was overruled and the case then went to the United States Circuit Court of Appeals. This Court reversed the decision of the Court below.

Another case was then tried, with the same result; another similar case was dismissed by the United States Circuit Court because of the wording of the protest; but a fourth case, tried before the Court some weeks ago, resulted in the decision handed down Saturday by Judge Wheeler.

This decision, unless it is appealed to the United States Circuit Court of Appeals and reversed, will affect only those importations of manufactures of agate which were entered under the Tariff Act of 1883. The Tariff Act of 1897 places a tax of 50 per cent. ad valorem on manufactures of agate, so that, as far as this decision goes, manufactures of agate recently imported will not be affected. The case was conducted for the importers by Albert Comstock.

Frank Hillelson Files Voluntary Petition in Bankruptcy.

TOLEDO, O., Feb. 4.—Frank Hillelson, a member of the defunct firm of Hillelson Bros., jewelers of this city, Monday filed a voluntary petition in bankruptcy in the United States Court. According to the schedules filed with this petition, his liabilities are $20,909.06, and his assets $11,-849.20.

The stock of Mr. Hillelson's old firm, as already told in THE CIRCULAR-WEEKLY, has been in the hands of R. W. Barton, as receiver, the appointment having been made at the instance of the National Bank of Commerce. Hillelson and others have been under examination before Judge Pugsley, in proceedings brought by the creditors to replevy goods sold to the firm.

What effect the bankruptcy petition will have upon the proceedings already taken was not stated by the attorneys.

Surrogate Refuses To Release John H. Collins From Jail.

The friends of John H. Collins, brother of the late Daniel M. Collins, the Brooklyn jeweler, whose estate he is alleged to have mismanaged, are now seeking to have him released from the Raymond St. Jail, Brooklyn, where he has been confined for the past three months for contempt of court in failing to turn over to the widow of the late jeweler the sum of $5,000, which he was ordered to pay by Surrogate Church, and which sum he is alleged to have appropriated to his own use while administering his brother's estate.

An application was made to Surrogate Church Wednesday for Collins's release by Jas. W. Ridgway, Collins's attorney, and was opposed by Hamilton & Becket, counsel for Daniel M. Collins's widow. Surrogate Church flatly refused to allow Collins to be released from imprisonment, and couched his refusal in the most scathing terms. Collins's excuse to be released was that he had no money to pay the sum of $5,000, as ordered by the Surrogate. Despite this claim, however, the Surrogate was inclined to accept the statement of the detectives who arrested Collins, last September, which was to the effect that the prisoner claimed at that time that he had $10,000 "put away" and that his creditors "could go dig for it."

The bankruptcy proceedings against Collins, under the direction of Frank Yawger, attorney for the United States Guarantee Co. and for Collins's creditors, is progressing slowly and a dividend will probably result in a few weeks.

Watches, Clocks and Jewelry Shipped to Alaska, Porto Rico and the Philippines.

WASHINGTON, D. C., Feb. 6.—Of considerable interest to the trade are the following figures, compiled by the Treasury Department, showing the commerce of the United States with its noncontiguous territories:

Alaska—Clocks and watches to the value of $568 were shipped to Alaska during December last, while for the six months ending December, the value was $5,434. During these periods the value of the shipments of jewelry and manufacturers of gold and silver was $12,544 and $20,760, respectively.

Porto Rico—Jewelry and manufactures of gold and silver to the value of $1,023 were shipped to Porto Rico during December, as against $80 for the same month of 1901; for the 12 months ending December, 1902, the value of these shipments was $15,002, as against $2,284 for the same period of 1901.

Philippine Islands—The shipments of clocks and watches to the Philippines during December last were valued at $410, as compared with $1,964 for December, 1901; during 1902, however, the shipments aggregated $38,399, increasing from $30,-620, in 1901.

Herbert Ward, Bridgeport, Conn., has accepted a position with Clark & True, Middletown. F. H. Bartlett, for a number of years with Clark & True, has gone with Dow Bros., Woodsville, N. H.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

A. Gerber will open a new store in Edwardsville, Ill.

Porte Hall has opened a watch repairing establishment in North Freedom, Wis.

Charles Wilhite, formerly with M. M. Kime, Petersburg, Ind., has opened a repair shop at Oakland City, Ind.

The Automatic Time Switch Co. has just been organized at Augusta, Me., to deal in clocks. The capital stock is $500,000. The officers are: President, G. P. Gannett; treasurer, Horace Colburn, both of Augusta.

J. W. Mahan, formerly with the Chas. Otero Jewelry Co., Pueblo, Col., will shortly open a new jewelry store in Pueblo at 175 N. Union Ave.

A. C. Hahn, formerly watchmaker for Emery, Bird, Thayer & Co., Indianapolis, Ind., has commenced business for himself in that city at 216 E. 12th St.

The Harrington-Monnett Co. was recently incorporated in Decatur, Ill., to manufacture and sell jewelry, watches, clocks, silver and china. The capital stock is $60,000, and the stockholders are J. C. and W. Harrington and J. J. Monnett.

Trans-Atlantic Voyagers.

TO EUROPE.

Fred J. Essig, New York and Chicago, sailed last week on the *Saxonia*.

Wm. H. Long, Philadelphia, Pa., sailed Saturday on the *Kaiserin Maria Theresa*.

Henry Untermeyer, of the Untermeyer-Robbins Co., sails to-day on the *Oceanic*.

S. B. Ross, of Joseph H. Fink & Co., New York, sailed Wednesday on the *Teutonic*.

A. Leger, with Josiah Wedgwood & Sons, Ltd., England, will sail Saturday on the *Ivernia*.

FROM EUROPE.

Irving Baum, New York, and Sanford Spitzel, of Leopold Spitzel & Bros., arrived Tuesday on the *Finland*.

" 4	107,678.41
" 5	46,311.09
" 6	20,613.93
" 7	10,484.82
Total	$337,817.34

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

6 Rue de Mesley, PARIS *Telephone, 2183 Cortlandt* *17 Maiden Lane, NEW YORK*

New York Notes.

M. J. Averbeck, 19 Maiden Lane, left Friday for Youngstown, O., where he will spend a week's vacation.

A judgment for $36.72 in favor of F. B. Morgan, as receiver, was filed Thursday against the Montana Diamond Co., of America.

David H. Fisher, of Eliassof Bros. & Co., who manages that concern's Albany branch, was in New York last week visiting his friends and calling on the trade.

Louis Montagnon, who for the past four years has been with Eliassof Bros. & Co., has accepted the position of secretary and treasurer of the Solidarity Watch Case Co.

A show window in the jewelry store of Oscar F. Lingvall, a jeweler at 326 Smith St., Brooklyn, was smashed by a thief last week, and a gold watch and two chains stolen. The police are investigating the case.

The fourth annual ball of the International Jewelry Workers' Union, No. 1, will be held to-night in the Manhattan Lyceum, 86 E. 4th St. A large number of tickets have been sold and a very pleasant time is expected.

The Wm. W. Hayden Co., goldsmiths and silversmiths, Newark, N. J., has opened a branch office and sample rooms in the Bank of Metropolis building, Union Sq. and 16th St., where it will be pleased to welcome customers and show them a complete sample line of goods.

Solomon Schisgall, manufacturer of watch chains at 139 Elm St., against whom an involuntary petition in bankruptcy was filed Nov. 11, 1901, in the United States District Court, was discharged from his debts in bankruptcy Wednesday. Mr. Schisgall's liabilities were $9,493.

Eliasoff & Pearlin, formerly 51 Maiden Lane, have dissolved partnership, and Mr. Pearlin, who continues the business at the same address, will assume all the liabilities of the old concern. Mr. Eliasoff retires from the firm to reengage in the manufacture of rings and diamond mountings at 80 Nassau St.

Ludwig Nissen, of Ludwig Nissen & Co., 18 John St., contributed a full page article "On the Business Development of Association Work" to *American Industries* of Feb. 1. Mr. Nissen treated the subject in a clear and forcible manner and believes that associations of business men ought to be organized for their own protection and for the good of the Commonwealth.

August G. Schmitt and Wm. J. Frey, who composed the firm of Schmitt & Frey, manufacturers of jewelry at 239 Fourth Ave., have dissolved partnership by mutual consent, Mr. Frey retiring from the business. Mr. Schmitt and Christian F. Groth will continue the business of the old concern at the same address under the firm name of Schmitt & Groth, and will liquidate the business of the old concern.

Frank Karst, said to be a jeweler, who lived alone at 7 Union Ave., Williamsburg, was badly burned Wednesday by the upsetting of a lamp in his bedroom. The lamp was burning on a small table beside his bed. He was taken to the Eastern District Hospital, where it is said he will probably die. The fire was caused by the sudden overturning of the lamp, which saturated the bed clothing with oil and then ignited it.

The schedules of Wm. L. Pollack, diamond broker of 41 Maiden Lane, against whom an involuntary petition in bankruptcy was filed Jan. 5 in the United States District Court at New York, were filed Thursday by Felix B. Rothenburg, a creditor for $900. In his affidavit with the schedules Mr. Rothenburg stated his inability to find Mr. Pollack. He declared that the amounts were obtained from the books of the bankrupt and from the reappraisement of his stock now in the possession of Robt. C. Morris, receiver. The liabilities are given as $34,460 and the assets as $3,199, consisting of stock $700, notes $2,479 and cash $20. Among the creditors for amounts of $100 or more are Mount & Woodhull, $9,500; A. J. Kahn, $4,500; Fred W. Lewis & Co., $4,250; Herman Levy, $6,000; Oppenheimer Bros. & Veith, $460; L. M. Sachs, $1,700; Jacob Strauss & Sons, $3,800; Henry Lessler & Co., $600; H. Z. & H. Oppenheimer, $650; I. J. Roe, $2,000, and Ingomar Goldsmith & Co., $100.

Herman Herden, a former employe of Chas. P. Goldsmith & Co., who was arraigned in the Centre St. Police Court Jan. 13, on a charge of grand larceny, has been exonerated by the courts and declared innocent of the charge. Owing to a clerical error in the stamping of the papers in the case on file in the District Attorney's office, Herden has been kept in jail since his first arraignment. When he was arraigned in the Court of General Sessions Wednesday, it was shown that he had never been indicted, but that his case had been ordered dismissed by the Grand Jury. Foreman Cudahy swore in an affidavit that the papers had been tampered with and that the word "dismissed," having been erased, he signed them, not knowing what case it was. When this was told to the Court by Mr. Cudahy, Herden was discharged. His counsel was considerably incensed over the unlawful holding of his client, and stated that although Herden was absolutely innocent in the eyes of the law, he had been kept in prison several weeks by a mere clerical error. The District Attorney stated that by some unexplainable error the indictment was stamped as a "true bill" instead of "dis-

DIAMONDS AND PRECIOUS STONES,

DESIGNS AND ESTIMATES FURNISHED. **65 Nassau St., Prescott Bldg., New York.** MEMORANDUM ORDERS SOLICITED.

missed." He said that the report that the word "dismissed" had been scratched from the indictment was nonsense.

N. B. Eltinge, with Jung, Staiger & Klitz, manufacturing jewelers, 1 Maiden Lane, left New York Monday for a short trip to Philadelphia, Baltimore and Washington.

Camerden & Forster, 253 Fifth Ave., have leased for 21 years the premises at 450 Fifth Ave., and have begun alterations on the property. These alterations are expected to be completed by May 1, when the building will be occupied by this firm.

The annual Saturday and Sunday hospital collection is being taken up in the jewelry trade. It is hoped that the amount collected this year will be larger than ever, and all members of the trade are urged to contribute. The names of the committee in charge of the collection, and of the contributors will be published next week. Checks for contributions may be sent to THE CIRCULAR-WEEKLY.

The Manufacturing Jewelers' Association, of New York, held its annual meeting Thursday, and elected officers for the ensuing year, as follows: Chas. R. Jung, of Jung, Staiger & Klitz, president; Thomas F. Brogan, of the Thomas F. Brogan Co., secretary; E. O. Belais, of H. & E. O. Belais, treasurer, and H. Bauer, vice-president. The bill recently introduced at Albany by Assemblyman Rosenstein, relative to the stamping of gold and silver plated jewelry, was discussed briefly by the association, most members expressing themselves in favor of it.

William Barthman, 174 Broadway, cor. Maiden Lane, has leased the cigar store of Greenbaum & Hyams, next door to his establishment, for a long term of years. On May 1 he will begin tearing down the partition between this store and his present establishment, will put in large plate glass windows on the Broadway side, and will make the entrance of his jewelry store in the center of the building. By the addition of this store, Mr. Barthman's floor and wall space will be much increased, and he will have one of the largest and finest retail stores in the jewelry district.

Max Wolf, a jeweler at 231 Myrtle Ave., Brooklyn, had a peculiar experience with a customer last week. The customer was a girl about 13 years old. She asked to look at some rings, and after Mr. Wolf had showed them to her she expressed a desire to see something more expensive While Mr. Wolf turned to get them he glanced in the mirror behind him and saw the girl place a turquoise and diamond ring in her mouth. Before he could stop her, he alleges, she swallowed it. The girl gave her name as Katie Lyons, 78 Raymond St., Brooklyn. She was taken to the Flushing Ave. police station, where she was carefully searched, but the ring was not found. She was turned over to the custody of the Children's Society, to which institution she was committed Saturday in the Myrtle Ave. Police Court.

The contest over the probate of the will of the late Morris Prager, the diamond merchant who died Nov. 8, has been withdrawn. The former protestants have made a satisfactory arrangement with the executors under the will, and when the case reached Surrogate Fitzgerald last week, the counsel for the objectors asked to have the contest dismissed. Under the terms of the will anybody who contested it would be cut off without a penny, and Morris Hirsch, attorney for the executors, stated that it was this clause that induced the protestants to withdraw their suit, after they were assured that if they would do so the clause in the will would not be enforced against them.

The silver service given to the cruiser *Albany* by citizens of Albany was presented Saturday afternoon at the Brooklyn Navy Yard. Mayor Gaus and his party arrived in New York at 11.10 o'clock, and proceeded at once to a car in waiting, and were taken as guests of E. E. Olcott to the 42d St. dock. Lieut. Falconer and Midshipman Brown of the cruiser *Albany* and Congressman George N. Southwick met the party at the dock. The navy yard tug, *Traffic*, was in waiting, and conveyed the party to the cruiser. Admiral Barker received the Mayor and presented him to Commodore Rogers, who then escorted the visitors to the poop deck where the service was displayed. The poop deck was canopied with the flags of various nations and otherwise decorated. When the party had all arrived Bishop Burke, of Albany, made an eloquent prayer, after which Mayor Gaus made an eloquent address. Judge Franklin M. Danaher told of the history of the silver service. Congressman Southwick also spoke on behalf of the committee. Commodore Rogers replied to Mayor Gaus, after which Wm. Barnett, a member of the party, proposed three cheers for the *Albany* and crew, which were given with a will. Then the party was taken over the ship and later served with luncheon in the main dining room.

Eric Anderson has closed his business in Wilmot, S. D., and moved to Arizona.

ford, Pa., to close their stores every evening at 6 o'clock, except Saturdays and B. R. & P. pay days, went into effect Feb. 2.

President Hurlburd, of the Elgin National Watch Co., Elgin, Ill., recently entertained, at the watch factory, Prof. Davenport and 11 students from the University of Chicago.

Oscar Trilsch, Whitestone, N. Y., has just awarded a contract for a new factory building, where he will manufacture jewelry boxes and other fancy articles. The plant will employ about 50 workmen.

E. C. Kern, Montclair, N. J., has put in an electric motor to take the place of the gas engine to run his lathes and other machinery. Electric lights will also be substituted for gas in his optical parlor.

G. E. Stevens, Middlebury, Vt., recently lost a large amount of stock by a fire which swept over that place and destroyed 13 blocks. The loss of Geo. E. Marshall & Co., of the same place, is said to aggregate $20,000.

The lock of Julius F. Young's jewelry store, Owatonna, Minn., gave evidence of having been tampered with recently, as it failed to respond to the key. No indications, however, were found that an entrance had been gained.

The establishment of J. S. Sellers, Bear Creek, Ala., was destroyed, Feb. 5, by a fire, which wrought damage in that town to the extent of about $50,000. Mr. Sellers will resume business just as soon as he can secure desirable quarters.

J. J. Sweeney and Gus. Fredericks, Houston, Tex., doing business under the name of Sweeney's Loan Shop, have dissolved partnership. The change will not affect the jewelry business, which is conducted under the firm name of Sweeney & Fredericks.

F. D. Kernochan, Middletown, N. Y., is showing a useful and novel electric attachment for clocks, consisting of a small electric light, which may be turned on from any part of the room, illuminating the clock dial, so as to enable one to tell the time without getting out of bed.

The man recently arrested at Freeport, Ia., for looting the store of N. A. Speck, Monroe, Wis., has confessed that his real name is James Mitchell, and that he escaped from the penitentiary at Burke, Tex., where he had been sentenced to six years imprisonment, for robbery.

Oles & Spencer, Newark, N. Y., have dissolved partnership. Fred H. Oles, the senior member, has sold his interest to his partner, and the business will hereafter be conducted under the firm name of Roy R. Spencer & Co. Mr. Oles will go on the road representing a wholesale jewelry firm.

Joseph A. Kern, Terre Haute, Ind., last week, was commencing to suspect burglars of stealing nine diamond rings valued at $300, when some one suggested that the rats which infested his store, might have carried them away. He investigated the space beneath the display window and there found his rings.

The W. F. Main Co., Iowa City, Ia., brought suit against Lewis Elliott, of York Springs, Adams Co., to recover the amount of a sale of jewelry to the defendant, who refused to receive the goods

after he had countermanded the order. The jury found for the defendant at the trial in Gettysburg last week.

Robert Helmer has discontinued his business at Hutchinson, Minn.

A. C. Curtis has sold his interest in the Bayless Jewelry Co., Little Rock, Ark.

C. A. Coates, foreman of the gold-filled department of the American Optical Co.'s shops, Southbridge, Mass., has removed, with his family, to Providence, R. I.

Seven jewelers were recently arrested in Milwaukee, Wis., because, contrary to the dictates of the law, they failed to report the purchase of second hand jewelry. Those arrested include Chas. Kuesel, A. Puls, Lewis Kuesel, Henry H. Zwengel, L. A. Van Ess, Geo. J. Gretzer and Rudolph Steller. Mr. Steller pleaded guilty, and was fined $10 and costs. The others asked for jury trials. The law requires that the purchase of second-hand jewelry be reported by jewelry dealers.

Suit has been entered in the Jefferson Circuit Court, of Pine Bluffs, Ark., by D. M. Rinaldo, Hot Springs, against the Pacific Express Co. and M. Gottlieb, a jeweler of Pine Bluffs, for the recovery of two solitaire diamond rings, valued at $372. The plaintiff declares that he forwarded the rings at the request of Gottlieb, who ordered them for a customer. Gottlieb claims the rings proved unsatisfactory, and that they were returned to the express company, with instructions to return them to Rinaldo. This the plaintiff says was not done.

The court at Des Moines holds that in order to set aside an assignment or conveyance made within four months of bankruptcy proceedings, it is incumbent upon the petitioner to prove three points: First, that the debtor was insolvent at the time of the conveyance; second, that a preference was established to one or more creditors at the time of conveyance, and that the party securing the conveyance knew, or had reason to believe the debtor was insolvent. The case involved was that of the Morgan Jewelry Co., which had given a mortgage, previous to insolvency proceedings, to the Des Moines Savings Bank. The bank wins the case, as the three points were not proved.

Newark.

Herman Eberly, a journeyman jeweler employed by Moore & Sons, manufacturing jewelers, at 22 Greene St., was placed under arrest Saturday, charged with stealing gold from the firm to the amount of $500.

The business of Whiteside & Blank was incorporated Saturday at Trenton, with a capital of $100,000. The incorporators were Newton E. Whiteside and Elizabeth Whiteside, East Orange; Henry Blank and Phoebe Blank, Newark. The concern is to manufacture jewelry.

Geo. A. Scheller, a retail jeweler at 286 Market St., has purchased from the Carl Ammann estate the property at 250 Market St. The price is said to be $40,000. The lot has a frontage of 75 feet on Market St., with a depth of 110 feet. Mr. Scheller, it is said, does not contemplate many important alterations in the buildings.

Canada Notes.

Reg. Broadhead, Ottawa, has retired from business.

Geo. Stevenson, Manitou, Man., was recently burned out.

The Hemming Mfg. Co., Toronto, is removing to Montreal.

I. Raphael, Toronto, has issued a writ for $400 against the Royal Jewelry Mfg. Co.

P. W. Ellis & Co., Montreal, have issued execution against R. A. Dickson for $865.

M. S. Brown & Co., Montreal, have issued executions against F. C. Fansey, Montreal, for $110.

C. Bachly, missionary of the American Watch Case Co., left, recently, on a trip to Manitoba and the northwest.

The wife of C. J. Maughan, traveling representative of the Goldsmiths Stock Co., Toronto, died suddenly Jan. 31.

W. T. A. Proctor, late of A. E. Burgess & Co., Toronto, has accepted a position with J. J. Zock & Co., as city traveler.

Gordon McLaren, with P. W. Ellis & Co., Toronto, is on his way to the Pacific coast, with a special line of silverware

Joseph Edward Beeton, father of Edward Beeton, representing the Elgin National Watch Co., died, recently, in Toronto, aged 76 years.

Thomas J. Assaly, Montreal, dealer in jewelry and dry goods, assigned, recently, on demand of Nageeb Yared. The liabilities are about $4,000.

Francis C. Tansey, Montreal, has filed consent of assignment on demand of Fred. A. Mansfield, secretary-treasurer of the Smith, Patterson Co., Ltd.

At the recent annual meeting of the American Watch Case Co., Toronto, W. K. McNaught was appointed manager and treasurer, and John McKnight, secretary.

Levy, Bros. Co., Ltd., Hamilton, Ont. are adding another story to their factory, and Adolphe S. Levy has left for Europe, where he will place extensive orders for the Summer trade.

John A. McEwen, representing Ryrie Bros., Toronto, leaves for New York next week, on a purchasing trip. Harry Ryrie will leave shortly, for a few days' sojourn at Clifton Springs, N. Y.

J. Frank Quinn, with Ryrie Bros., Toronto, left last week on a business trip to Washington, New York and Philadelphia, in search of novelties in high-class stationery. The concern is putting in a complete copper-plate printing plant, in connection with its stationery department.

Tariff Decisions & Regulations.

Judge Wheeler, of the United States Circuit Court, handed down an opinion, Friday, sustaining the protest of Ferdinand Bing & Co.'s Successors on several invoices of goods classified as statuettes. The protest was originally filed in November, 1900, and the Board of Classification of the United States General Appraisers rendered a decision overruling it May 9, 1901. It was then appealed to the United States Circuit Court and was argued several months ago.

The goods in question consisted of statuettes decorated and ornamented in colors. They were assessed for duty at the rate of 60 per cent. ad valorem, under paragraph

95 of the Act of 1897, as "decorated earthenware." They were claimed to be dutiable at 35 per cent., under paragraph 450, as "plaster of paris."

Part of the evidence in the case were affidavits offered by experts showing the composition of the material from which the statuettes were made. Examination of these component parts convinced the Court that the goods were not made from earthenware or gold, but were in substance plaster of paris, and therefore should be dutiable at 35 per cent.

The Board's decision was overruled.

The case was argued by Albert Comstock for the protestants, and Henry C. Platt for the Government.

Members of Gladding & Coombs Bros. File Voluntary Petition in Bankruptcy.

PROVIDENCE, R. I., Feb. 9.—A failure that was not wholly unexpected was recorded Saturday, when Oscar M. Coombs and Edgar I. Coombs, who have been doing business under the firm style of Gladding & Coombs Bros., filed a voluntary petition in bankruptcy in the United States Court. That some such move as this has been anticipated for some little time has been already recorded in THE CIRCULAR-WEEKLY. The bankrupts were located at 100 Stewart St.

The total amount of the liabilities, as shown by the schedules filed Saturday, reaches the sum of $10,475.59, and the total assets are $7,127.67. The principal creditor is Uriah R. Colwell, of this city, who holds a chattel mortgage for $3,440. He also has claims for notes amounting to $4,375, and book account of $100.

The business was started in 1883, and in 1898 F. G. Gladding withdrew. Since that time the business was continued under the old style by Edgar I. and Oscar M. Coombs.

H. A. Byers, has moved from Decatur, Mich., to Pe Ell, Wash.

J. H. Mixon, Des Moines, Ia., has given a chattel mortgage for $125.

VOL. XLVI. CHICAGO, WEDNESDAY, FEB. 11, 1903. No. 2.

Chicago Notes.

E. Eimer, Muskegon, Mich., was a trade visitor last week.

J. D. Bergen, of J. D. Bergen Co., arrived in this city Saturday.

Mrs. E. Wehmhoff, Burlington, Wis., was here last week on a buying trip.

I. Goldsmith, of Goldsmith Bros., returned last week from an eastern pleasure trip.

F. R. Beswick, Racine, Wis., called on his old friends in the trade during the past week.

George Gubbins, with the Illinois Watch Case Co., is expected to return from the east to-day.

G. M. Landon, Chicago manager for the Homan Silver Plate Co., leaves this week for a western trip.

Samuel Swartchild, accompanied by his wife, returns this week from a two weeks' trip through the east.

G. V. Dickinson, general agent of the Elgin National Watch Co., returns this week from the west.

Paul Serwich, with Wm. A. Rogers, Ltd., has returned from a five weeks' pleasure trip through the south.

J. Milhening returned Thursday from a two weeks' vacation, which he spent traveling through the south.

P. M. Vermaas, western representative for the Van Bergh Silver Plate Co., left Sunday night for an extended western trip.

Fred Allen, western representative for D. Wilcox & Co., "rode the goat" through the third degree in Masonry last Wednesday night.

Herman Huesgen, Devil's Lake, N. D., was in Chicago last week, buying new fixtures and placing large orders for his Spring stock.

G. W. Bleecker, western manager for Martin, Copeland & Co., who has been seriously ill with appendicitis, has returned to the office of the company.

Max Ellbogen, of the Stein & Ellbogen Co., left Thursday, accompanied by his wife, for an extended vacation, which they will spend visiting the principal points of interest in California.

After making a generous contribution on their own behalf, Goldsmith Bros., the assayers and refiners, secured the names of 26 of their employes as contributors to the "Famine fund" for the relief of the impoverished people of northern Sweden and Finland. Sprochnle & Co. were also contributors to this worthy cause.

M. H. Berg, of Hyman Berg & Co., left Thursday night for Birmingham, Ala., at which place he will meet his wife, and, together Mr. and Mrs. Berg will journey to Florida for a five weeks' pleasure trip.

The Watson & Newell Co. has secured quarters at Wabash Ave. and Monroe St., which it will occupy in April. The new space is much larger than that which the company at present occupies in the Masonic Temple.

W. J. Miller, western manager for the Seth Thomas Clock Co., was detained at his home last week through a severe cold. G. W. Payson, with the same company, left Monday for an extensive trip through Wisconsin and Minnesota.

Roy K. Hitchens, western representative for Simeon H. & George L. Rogers Co., has moved his office from 84 Wabash Ave. to the Silversmiths' building, where he has secured larger quarters and will carry a complete stock.

A. C. Becken, accompanied by his wife and two children leaves this week for a month's pleasure trip, which will be spent traveling through California. "Bob" Procknaw, manager for Mr. Becken, left Friday for a pleasure trip to Minneapolis.

C. P. Dungan has assumed charge of the interests of the Meriden cut glass line of the International Silver Co. in this city. W. F. Adams and H. E. Vincent, representing factory "L" of this company, left for their territories in the early part of the week.

New arrangements have been made between A. L. Sercomb and the Meriden Cutlery Co., and as a result a full line from that factory will be carried by him in the future. J. R. Payne, a representative of this factory, was in Chicago last week to assist the local office in the rearrangement of the line, of which R. C. Demarest is to have charge.

A. C. Becken has leased an entire floor in the Powers building, at Monroe St. and Wabash Ave., of which he will take possession in the early part of April. In making this move Mr. Becken almost trebles his former capacity. Every branch of the business will be enlarged, new fixtures are to be installed, and when finished the store promises to be one of the finest in the west.

The hearing of J. F. Nelson and P. Sullivan, the two men who smashed the plate glass window of Keil & Hettich's jewelry store, 94 State St., on the morning of Jan. 9 and made away with several trays of jewelry, as reported in THE CIRCULAR-WEEKLY Jan. 14, came up before Judge McEwen Friday. Nelson pleaded guilty and was sentenced to an indeterminate term in the penitentiary. Sullivan pleaded not guilty and his trial will occur later in the same court before a jury.

Frederick J. Essig sailed last week on the *Saxonia* for Europe, where he will spend his time between London and Paris. Mr. Essig has taken with him a fresh water pearl necklace 15 inches long, valued at $18,000, made up of 46 pearls, the largest of which weighs 32 grains. The total weight of the pearls in the necklace is 735 grains. This necklace and an exceptionally fine collection of pearls and other precious stones which he has taken with him Mr. Essig intends to dispose of in Europe.

Eastern representatives in Chicago during the past week: Joe Frank, representing Sussfeld, Lorsch & Co.; M. H. Shiman, representing Potter & Buffinton; Ernest Block, representing Louis Stern & Co.; Ed. Luther, representing F. H. Sadler & Co.; F. R. Krugler, representing H. A. Kirby Co.; Mr. Kahn, representing Van Gelder, Kahn & Co.; Horace D. Sherrill, representing Sinnock & Sherrill; Jules Franklin, representing L. Tannenbaum & Co.; J. Bernstein, M. Baum, representing Rothschild Bros.

A fire started in the jewelry store of M. D. Vorce, Beulah, Mich., last week, and destroyed several thousand dollars worth of stock, of which part was covered by insurance.

C. W. Teetzel, Benton Harbor, Mich., has leased the quarters in the Graham building recently vacated by Morrison Bros., which is one of the most desirable locations in the city.

Kansas City.

TRADE CONDITIONS.

The weather, which had been very pleasant, in fact, just like Spring—warm, bright and sunny, during the last few days, has turned very cold, stormy and snowy, making shopping difficult. This has caused a temporary lull in an otherwise very good retail trade. The jobbing and manufacturing trade is very brisk.

Mr. Chapman, watchmaker, with J. R. Mercer, is confined to his home by illness.

H. J. Norton, of the C. B. Norton Jewelry Co., is in Oklahoma, on a business trip.

Louis Meyer, of the Meyer Jewelry Co., expects to make a business trip to Oklahoma this week.

Sol Marks and wife and little daughter are taking part in a play given by the Elks, at Lawrence, Kan.

Walter Starcke, Junction City, Kan., passed through this city on his way to Chicago, last week.

Mr. Gilbert, of the Jaccard Jewelry Co., has just recovered from a severe cold and resumed his business duties.

S. C. Lee, formerly engraver for the Streicher Watch & Jewelry Co., is now with T. J. Dunning, Dallas, Tex.

E. H. Lane, formerly with the C. B. Norton Jewelry Co., has been appointed watch inspector for the Santa Fe Railroad.

Harry Gee has resigned his position with Gurney & Ware, and gone to Salt Lake City, Utah, to work for the J. H. Leyson Co.

Morris Blitz, son of a pawnbroker and jeweler of this city has been convicted of grand larceny and sent to the penitentiary for five years.

R. W. Boyle, formerly engaged in business at 2525 E. 6th St., has gone to Oklahoma where he will engage in the jewelry business.

H. E. Wuerth has completed his plans for the construction of a 10-room stone and frame residence, at 37th St. and Baltimore Ave., to cost about $6,000.

Calvin B. Norton and wife announce the marriage of their daughter, Fanny Amelia, to Ward Moffitt Lewis. The marriage ceremony was performed yesterday in this city.

H. F. Shomo, formerly city salesman with the Edwards & Sloane Jewelry Co., has left the employ of that concern and accepted a position with the Poindexter-Whitzel Mercantile Co.

H. B. Carswell has made a contract with the Fidelity Trust Co., of this city, to wind, keep in repair and take care of the large clock in the tower of the old Government building, which the Fidelity Trust Co. has just purchased.

The following out-of-town merchants visited this city last week: E. Freeman, Paola, Kan.; J. B. Bear, Liberty, Mo.; A. Rosenfield, Leavenworth, Kan.; M. C. Rosenfield, St. Joseph, Mo.; B. Hoffman, Leavenworth, Kan.; J. A. Schmidt, Leavenworth, Kan.; Otto Burkland, Osawatomie, Kan.; Wm. M. Rowe, Lawrence, Kan.; F. Hester, Lawrence, Kan.; J. Coffman, Polo, Mo.; S. M. Coffman, Braymer, Mo.; A. W. Thistlethwaite, Tonganoxie, Kan.; F. L. Clawson, Clinton, Mo.; F. M. Miller, Chillicothe, Mo.; W. E. Tayne, Marceline, Mo.

TRADE CONDITIONS.

The wholesale business has been quite good, and orders from traveling men on the road are very satisfactory. In fact the wholesale dealers are perfectly satisfied with the condition of trade thus far. The retail trade is very quiet, according to the reports of the various jewelers, but they do not expect heavy business at the present time.

A. Hafner, Jr., De Soto, Mo., was here last week, combining business with pleasure.

H. C. Nicolai has moved to a new store at 4844 Easton Ave., where he has more elaborate quarters.

Invitations to the annual dinner of the Retail Jewelers' Association of Missouri will be issued this week.

Part of the ceiling in the store of Frank W. Baier, president of the Retail Jewelers' Association of Missouri, fell down last week, slightly damaging the stock.

There were few out-of-town jewelers in the city last week. Among them were: A. Blanton, Paris, Mo.; J. E. Mitchell, of the J. E. Mitchell Co., Ft. Worth, Tex.

Louis Polick, a jeweler, was arrested, last week, charged with knowingly receiving stolen watches, which have been disappearing from the store of Solomon Ruby.

J. C. Armstrong, Ottawa, Kan., ex-president of the Kansas Jewelers' Association, last week attended a meeting of the stockholders of a zinc mine company in this city in which he is interested. He also renewed his acquaintanceship with several of the jewelers here.

The 12 striking plate printers formerly with the Mermod & Jaccard Jewelry Co. have issued a statement to the effect that the trouble was caused by the firm's employing a non-union workman, who refused to join their organization. They claim that wages are lower in St. Louis than in most large cities. Up to the present time they say they have been unable to effect a settlement.

The Federal Jury in the case of H. Flachskamp, R. W. Reeves and Cora L. Siegel, of East St. Louis, charged with using the mails for fraudulent purposes, returned a verdict, last week, finding the two men guilty and acquitting the woman. It is said that they cleared over $10,000 in three months by advertising to give a fur collarette to any one selling eight gold brooches. The sellers were obliged to deposit $2 for the brooches, which were said to be worth about 25 cents each.

Suit has been filed in a Justice Court here by the Mermod & Jaccard Jewelry Co. against a prominent business and society gentleman to recover an account which, it is alleged, the debtor refused to settle. The following is the itemized account: One diamond engagement ring, $250; one plain wedding ring, $8.50; 250 wedding announcements, $35; one set gold studs, $4.50; engraving crest on ring, $8; one engraved plate and 100 engraved cards, $3.50; 100 cards, $1; one check perforator, $2.75; one bon-bon dish, $4.50; one purse, $5.75; one pie server, $2.50, and one knife, $2.50. The whole amount of the bill is $328.50, and the amount paid on account is only $10.

Montana.

TRADE CONDITIONS.

Business here in the jewelry trade in Butte is affected with all other trades by the prevailing depression that has existed for the last few months in that section. Since the November election there has been considerable uneasiness and unsettlement in political affairs here which are so intimately connected with the large mining enterprises on which the city depends. A large number of men who, when at work, earn good wages and spend them freely, have been out of employment and money has been very scarce. This will probably last for a month or two longer, but there is a general feeling that, as the early Summer months appear, trade will be livelier, and in this improvement the jewelers will have their full share. The optical business since Christmas has been brisk and looks to be one of the most remunerative professions in the west.

Two men, named Connor and West, have been arrested at Great Falls, charged with attempting burglary at two of the jewelry stores in that city. Their method was to place a large sheet covered with molasses on the plate glass and then to break the window with a rock. Fortunately in both attempts they were disturbed before they were able to take any goods. Both men are confined in the county jail.

In the report of Agriculture, Labor and Industry, in Montana, that will appear next month, the following statistics as to the watch, clock and jewelry repairing trade for 1900 in the State will be given: The number of establishments in the State where such work is done is given as 36; the proprietors of the same number 38; the total capital employed amounts to $87,382, being divided as follows: land, $20,900; buildings, $10,650; machinery, tools and implements, $24,725; cash and sundries, $31,107. The number of salaried officials is given as four, with a total salary of $2,536. The average number of wage earners is stated to be 29, with a total salary of $27,934. For the city of Butte the following figures are given. Establishments, 7. Capital, $44,595, divided as follows: land, $18,000; buildings, $7,000; machinery, tools and implements, $7,900; cash and sundries, $11,695. Proprietors, 11; salaried officials, two, with a salary of $1,100. Average wage earners, eight, with a salary of $10,324.

Indianapolis.

Julius C. Walk & Son began their annual spoon and fork sale, Feb. 2, when all odds and ends of sterling goods were sold at bargain prices.

The Business Men's Association, of Princeton, Ind., will soon have control of the Princeton Clock Co. The association will take 200 shares of stock at $30 a share, and with the money thus raised will pay off

the indebtedness of the concern. Numerous improvements will be made, and within a short time electricity will take the place of the present steam plant. The factory now employs about 200 persons. The present superintendent is John Murray, who built the burnishing, drilling and assembling machines.

Columbus.

R. N. Whitford, general manager of the Hofman Jewelry Co., is again at his post of duty, after having successfully undergone an operation at Dayton, O.

The engineers, secretary, superintendents and employes of the State Board of Public Works of Ohio presented a watch to the Hon. Frank A. Huffman, a member of this board, yesterday. The watch has a $300 Patek, Philippe & Co. latest model movement and was purchased from Andrew Morden.

Attorney Stauffer, who secured from Referee Rogers an order to examine the stock in the jewelry store of W. S. Tussing, went over the stock with Mr. Morden, early last week. They succeeded in finding several hundred dollars' worth of watch cases belonging to New York jewelers, but not a diamond was found in the stock.

The name of the Hofman Supply Co. has been changed to the Hofman Jewelry Co., the change taking effect yesterday. This departure involves no change of ownership of policy of the company, but is made for the purpose of expressing in a more intelligent manner the nature of the company's business. When the house first began operations, a number of years ago, its line was confined to jewelers' tools, materials and supplies, and, while this branch of the trade still continues to be an important feature, it has long since become subordinate to the company's activities in jewelry proper in all of its departments. Although its operations have always been confined strictly to the jewelry trade, its name was in a measure misleading. The increasing annoyance resulting therefrom with the growth of the house made the change herewith announced a very desirable one. The action was authorized at the annual meeting of the company's stockholders on Jan. 7, at which time other plans were passed upon looking to a general extension of its business.

Amber in mineralogy is known as succinite, and is distinguished from other fossil resins chiefly by the five to eight per cent. of succinic acid it contains. Amber occurs abundantly along the coast of the Baltic Sea, and sparingly on the east coast of England. In the Royal Museum at Berlin there is a mass of amber weighing 18 pounds. Amber and similiar fossil resins are of vegetable origin, altered by fossilization.

Cincinnati.

Mayo Loeb, the young son of Lee Loeb, of Herman & Loeb, started out on his maiden trip this week up through Ohio.

Wm. Pfleger, of Jos. Noterman & Co., has recovered from an attack of tonsilitis and will be able to make his trip next week. John Osthoff will also start out for this firm about the same time.

Victor Gebhardt, of Gebhardt Bros., has returned from his trip to New York, where he went to buy new machinery for their factory. James G. Reeves, a new salesman, has been secured to represent this firm on the road.

Max Radunsky, a watchmaker at 409 W. 6th St., has asked the Probate Court for permission to change his name to Max Rudin. He says his customers have such difficulty in pronouncing and spelling his name that it injures his business.

J. Thelan, a retailer jeweler, 5th and Smith Sts., had his show window smashed, last week, by a thief, who stole a $4 clock and some jewelry. The plate glass was not insured. The store of Mr. Thelan's son, on Central Ave., also recently suffered from a window smasher.

A protest against the erection of the proposed clock of the traction company at the east end of Fountain Sq. was received by the Board of Public Streets; last week, from George H. Kattenhorn and others. They request the board to reconsider its action, by which it granted a permit for the erection of the clock.

George H. Newstedt, 404 Walnut St., secured the order for the cut glass and bronze electric ornaments for the new Majestic Café on Vine St. The Duhme Jewelry Co. installed the beautiful silver-bronze electric fountain in the establishment and the order for the flat ware was given to Reed & Barton.

The thief who flim-flammed the Cincinnati jewelers a few months ago, stealing diamond rings by substituting bogus ones in their places and got away without detection, has been located in the Albany (N. Y.) Penitentiary, where he is known as Charles S. Sloan. His picture was sent here for identification and the jewelers all recognized him.

Owing to the fact that the structure at 107 and 109 E. 4th St., in which Loring Andrews & Co. are located, is to be torn down to give way to a new skyscraper, this house has secured quarters at 117 and 119 E. 4th St., a few doors east of the present establishment. As a good many improvements will have to be made in the new quarters, the removal will not take place

before June 1. Loring Andrews & Co. now occupy four floors, but the new quarters will be much larger than the present owing to the extreme length of the building.

The rumors that Fox Bros. & Co. and Lindenberg & Fox, who are in the Braunstine building, would probably have to look for other quarters owing to the sale of that building to the Fourth National Bank have been denied by members of these firms. The new owners will not dispossess the present tenants, but will make only such improvements in the building as are necessary to accommodate the bank, which will occupy the first floor.

The employes of the Gustave Fox Co. held a meeting last week and organized their base ball team for the coming season. Harry Elwert was elected captain, Joe Maitre, manager, and Wm. Hauck, assistant manager. The team will begin booking games for the coming season in a few weeks.

Detroit.

Ralph A. Foote, a member of the firm of Foote & Furniss, jewelers and druggists, Nashville, Mich., died last week at Grand Rapids, Mich.

Grace Ellis and Fern De Marr were recently sentenced to three years in the Detroit House of Correction for the theft of a $75 brooch from Wright, Kay & Co.

A peculiar fact about the Thomas block, at the cor. of Main and Jefferson Sts., is that it has been in continuous service for 33 years as a jewelry store. This record is now to be broken by the new bank, which is to be put in about April 1. The new institution will make three of the four stores on this corner.

Thomas Burns was arrested Friday, charged with being a member of a gang of "stone getters," who reached Detroit last week. Two of them entered several Detroit jewelry stores, but were suspected, and they left town before the police could arrest them. Burns attempted to steal a diamond pin from a traveling man, while another member of the gang held a newspaper before the victim's face. They are supposed to be responsible for robberies in Toledo and other Ohio cities.

San Francisco.

TRADE CONDITIONS.

The trade with few exceptions is unusually quiet. There has been a long siege of rainy days and the downpour has been so great as to materially injure the retail trade. A few wholesalers say that it is liable to do more damage than good in some parts of the country. Everybody is expecting a great impetus to trade as soon as the fine weather begins.

L. Klodt, Seattle, Wash., is spending a few days in this city.

James P. Alverson, Tulare, Cal., was in town last week making purchases.

R. F. Allen started north last week, on his regular trip for the Morgan & Allen Co.

B. Padgham, of J. H. Padgham & Son, Santa Ana, Cal., was a visitor to this city last week.

A. A. Ritter has made extensive improvements in the exterior of his store at 237 Kearny St.

Harry Silver, J. Hoeslech and G. Beninghausen, all of Seattle, Wash., are spending a few days in this city.

William H. Hyde, Jr., San Francisco agent for Joseph Fahys & Co., has removed to the Thurlow block on Kearny St.

Geo. R. Dodson, Spokane, Wash., was in this city, last week, en route to Pasadena, Cal., where his family is spending the Winter.

G. Marcus, with the California Jewelry Co., is expected home from his diamond purchasing trip to Europe during the latter part of this month.

There was an explosion, last week, in the nickel plate factory at 3 Hardie Pl., in which a number of workmen were injured, one of them fatally.

W. Fulton, agent for the Roy Jewelry & Optical Co., recently enjoyed a successful duck shoot on the hunting reserve of Mr. Carrau, of Carrau & Green.

Col. W. J. Leavenworth, treasurer of R. Wallace & Sons' Mfg. Co., Wallingford, Conn., who is making a pleasure tour of the coast, visited San Francisco last week.

G. Ward, formerly with the W. K. Vanderslice Co., has returned from his trip to the Philippines and will resume work with that company. Charles L. Maxwell, formerly with this company, has left for a year's sojourn in Arkansas, on account of ill health.

Henry M. Abrams has sold out his interest in the firm of M. L. Levy & Co. to M. L. Levy and in a few days will leave for the east to make factory connections. He will continue in the trade. Mr. Abrams has been in the jewelry business on the coast for 21 years and has been connected with M. L. Levy & Co. for 14 years.

Pacific Coast Notes.

W. S. Reed, Winters, Cal., has moved into new quarters.

W. F. Wooster is now in charge of the jewelry store of L. Katz, Sutter Creek, Cal.

The second-hand jewelry store of J. Laventhal, Los Angeles, Cal., was looted early on the morning of Jan. 25 by a burglar who gained entrance by breaking a glass in the rear of the building. He secured a few cheap watches and a number of plated rings and pins.

Fred Stanley, alias Burrell, alias Earl, recently arrested in Santa Rosa, Cal., on a charge of grand larceny, and the woman with him, who passes as his wife, are both wanted in San Francisco for the theft of $1,000 worth of jewelry and valuables from a house on Turk St., where they had been rooming. The offenders were brought to this city a few days ago for trial.

A deposit of green tourmaline is reported to have been found in the hills northeast of Tripp Valley in the San Jacinto Mountains in Southern California. The common tourmaline, black and closely resembling jet, is very common in all California mountains. The pink and green varieties are rarer and more valuable gems. Samples of the find have been sent to a New York jewelry house for a thorough examination and test.

H. E. Fox has remodeled and refurnished his store on the ground floor of the Flournoy building, Albuquerque, N. M., and now has one of the finest stores in that part of the country. The walls and ceiling of the store are finished in old gold with white trimmings. The furniture is of black walnut. The store is brightly il-

luminated by electric lights and four powerful arc gas lamps.

A burglar recently entered the second-hand jewelry store of J. Laventhal, Los Angeles, Cal., by breaking a glass in the rear of the building. He secured a few cheap watches and several phony rings and pins.

The department store of Weinstock, Lubin & Co., Sacramento, Cal., which carried a large stock of jewelry, was totally destroyed by fire on the morning of Jan. 31, entailing a loss of $500,000, with an insurance of $312,700 on the stock and and $113,000 on the buildings.

Pacific Northwest.

TRADE CONDITIONS.

Business conditions remain unchanged. Several traveling men have been in Portland, Ore., during the past week and many more are on the way. Stocks generally are at low ebb, but are being filled up rapidly. There seems to be a considerable demand at present for jewelry novelties.

A. H. Davis, Red Lodge, Mont., has gone to Chicago, where he will spend about six weeks taking treatment for his eyes. During Mr. Davis's absence Fred Doelz will be in charge of the jewelry store.

There is on exhibition in G. H. Krogh's store, Everett, Wash., a handsome enameled chatelaine watch which will be given Feb. 16, by the management of the La Petite Theatre as the result of a contest being held by them.

L. A. Kerr, Kendrick, Idaho, recently visited Pendleton, Ore., where he attended the big shooting tournament, which was held there. Mr. Kerr is a candidate for State Game Warden and Chief Warden for Idaho for the League of American Sportsmen. He will also attend the meeting of the National League, which will be held in St. Paul to-day.

Several arrests were recently made at Baker City, Ore., of persons who have been systematically robbing some of the rich gold mines in that territory. Miners at the Columbia, North Pole, Red Boy and Golconda mines were in the habit of secreting the richer samples of ore in their clothing and selling them for $10 per pound, although much of the ore was worth from $50 to $60 per pound. During the past three years about $10,000 worth of the gold is reported to have been sold to Portland and San Francisco jewelers.

Minneapolis and St. Paul.

R. G. Pearce has resigned his position with C. Horwitz, Minneapolis.

Walter Stendahl, with the Reed-Bennett Co., Minneapolis, is reported ill.

Miss Rosa Marks, with Lewis Finkelstein, St. Paul, has returned from a visit to Chicago.

Fred Arndt, with the Paegel Jewelry Mfg. Co., Minneapolis, is convalescing from a recent illness.

Cassius H. Bagley, with F. D. Day & Co., Duluth, Minn., was a visitor to the Twin Cities last week.

Jacob S. Cohen & Co., St. Paul, have engaged in the manufacture of fancy belts.

M. M. Cohen has returned from his trip to the southwest and has set out for the west. The house has added N. A. Jacob, of Chicago, to its traveling force. He will cover Southern Minnesota and South Dakota.

Edward Halstad, Fessenden, N. D., is visiting in the Twin Cities, preparatory to taking a course in optics.

A second attempt to raid a jewelry store show window in Minneapolis was made a short time ago, when some one threw a large piece of anthracite coal through the plate glass window of J. B. Hudson's store. The crash of breaking glass attracted the attention of the officer on the beat and his arrival frightened away the thieves before they succeeded in looting the window.

Among the out-of-town dealers in St. Paul and Minneapolis, last week, were: Mr. Eenkema, Clara City, Minn.; A. O. Banks, Michigan, N. D.; Charles Wessalie, Waconia, Minn.; J. W. Larson, Northfield, Minn.; A. E. Nordquist, Braham, Minn.; Fred Green, Buffalo, Minn.; James J. Bill, Madelia, Minn.; Gust Swedburg, Monterey, Minn.; Philip Perlman, Washburn, Wis.

The Johnson Jewelry Co. has succeeded to the business of Ownby & Johnson, Logan, Utah.

Charles Myers, formerly with Ludwig & Hunziker, Walla Walla, Wash., has gone to Pendleton, Ore., to take charge of the store of Louis Hunziker, who is going east.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

Practical Course in Adjusting

COMPRISING

A review of the laws governing the motion of the balance and balance spring in watches and chronometers, and application of the principles deduced therefrom in the correction of variations of rate arising from want of isochronism, change of position and variation of temperature.

ELUCIDATED AND DEMONSTRATED

by original experimental researches in the actual problem, never before published, showing the causes that are operative in the variation of rate, and leading to correct remedies. To which have been added chapters on

How to make a Balance Arbor with Modern Appliances; How to Clean a Watch Properly; and, the Lever Escapement—Some Current Defects in it and How to Remedy Them.

By THEO. GRIBI

PRICE, $2.50.

250 pages, including 18 diagram plates; Fine Paper; Large Type; Clear Illustrations; Systematically Arranged; Solid Binding.

THE JEWELERS' CIRCULAR PUB. CO
Publishers,
11 John St., cor. Broadway, New York.

Pittsburgh.

The Standard Jewelry Co. has rented a room in the Central Hotel block, and will open a new store there April 1. This will be the second store that the company has in this city.

Morton Morganstein, representative of Emanuel Grafner & Co., started Monday for his regular Spring trip through western Pennsylvania and the eastern part of Ohio and West Virginia.

John Segelman, aged about 15 years, son of Mrs. Segelman, a jeweler at Homestead, died Sunday. Mrs. Segelman's husband died some time ago and ever since his death she conducted the jewelry store with the aid of the deceased.

The high waters in the Allegheny river Thursday caused Heeren Bros. & Co. considerable trouble. The storage room in the basement of their store on Penn Ave. let in the water, and it was necessary to keep a force of men employed there all day pumping the water out in order to save the goods from damage.

J. W. Best, 107 6th St., has secured a four years' lease on the room on Smithfield St. and will move into his new quarters early in March. Mr. Best will remodel the room and construct a modern front with large display windows. He is compelled to leave his present location, as a theatre will be erected on that site.

J. & I. Kornblum, opticians, have opened quarters in the new Arrott building, Fourth Ave. and Wood St., that will be devoted exclusively to the testing of sight and the fitting of glasses. The new rooms occupy half of the second floor, fronting on Wood St., and are most comfortably furnished. Fronting on Wood St. a large apartment has been set aside for a reception room. In the rear of this room is the factory for grinding lenses and manufacturing artificial eyes. It is announced that J. & I. Kornblum will employ no assistants in their optical work, as all testing of eyes and fitting of glasses will be done by themselves.

Baltimore.

A large number of jewelers are busy taking stock, and have been selling at a discount.

A. G. Linnbaum, who disappeared three weeks ago last Sunday, as already stated in THE CIRCULAR-WEEKLY, has not yet been heard from by his wife and friends. No clew has been gained by the police department which would lead to the belief of foul play or to any reason for his disappearance. As the jeweler was a man of exemplary habits, his continued absence is rendered all the more mysterious. Mrs. Linnbaum has been visited by three different persons who state that spiritualists had told them the jeweler had wandered to Washington and was being retained there for a reward.

One of the largest sales of rough diamonds that has been made for some time by the London Syndicate, controlling the output of the De Beers Mines was recently made to Stern Bros. & Co., New York.

Optical Notes and Briefs.

(*Additional Optical News on page 75.*)

Walters, S. B. Kirkpatrick, H. T. Corson, Kansas City, Mo.; Mrs. M. E. O'Neill, Denver, Col.; W. C. Sellers, Medicine Lodge, Kan.; Frank L. Abbey, Ph.G., M.D., Newton, Kan.; O. L. Davis, Kansas City, Mo.; Miss Jessie N. Davis, Kansas City, Mo.; Arthur West, Odell, Neb.; G. W. Potter, Sterling, Kan.; Miss Beulah E. Middleton, Kansas City, Kan.; Geo. H. Kelly, Carrollton, Mo.; C. O. Lynch, Chandler, Okla.; L. E .Hendrickson, Osage City, Kan.; Frank L. Reid, Grenola, Kan.; L. O. Kunze, Jr., Harrisonville, Mo.; Thomas M. Conboy, Kansas City, Mo.; E. M. Heitman, Kansas City, Mo.; J. B. Bear, Liberty, Mo.; John E. Watkins, D.D.S., Tonganoxie, Kan.; Charles Hoyt, Kansas City, Mo.; J. E. Cloyd, Kansas City, Mo.; Wm. I. Kiddler, Lamar, Col.; Miss L. Gertrude Day, Winchester, Ill.; Miss Vesta V. Kelly, Concordia, Kan.; Lehi Owen, Kansas City, Kan.; Edward Parker, Gilman City, Mo.

Towle & Winterhalter, Butte, Mont., have secured the services of an expert optician.

Fred A. Fiedler & Co., Milton, Pa., have fitted up a private optical parlor adjoining their store.

George Pierce, with the Bay State Optical Co., Attleboro, Mass., is now in San Francisco, Cal., visiting his friends in the trade.

Mr. Rosenberg, formerly in business in the east, is in San Francisco, Cal., making purchases preparatory to establishing an optical store there.

Hugh Montgomery, with Andrew J. Lloyd & Co., Boston, Mass., will act as manager of the company's Boylston St. store in the Back Bay district.

J. S. Leo, formerly manager of the Montreal Optical Co., has been re-elected corresponding secretary of the American Federation of Zionists.

H. W. Cameron, druggist and optician, Montreal, has sold out his drug department and hereafter will devote his entire time to the optical business.

The Columbian Optical Co., with a capital of $100,000, has been incorporated, in Omaha, Neb., by D. G. Agnew, A. U. Agnew and Floyd F. Brower.

L. J. Dutton, optician, formerly in business in Chicago, Ill., and Lincoln, Neb., has opened optical parlors in Pueblo, Col., where he will reside permanently.

F. W. Nichols, son of S. T. Nichols, who recently became a member of the firm of S. T. Nichols & Co., Indianapolis, Ind., has been appointed manager of the optical department.

Dr. J. F. Fisher & Sons, opticians, have gone into business in Cedar Rapids, Ia. The firm consists of Dr. J. F. Fisher and his two sons, all of whom are graduate opticians.

Thomas T. Cummings, editor of the *Photo Era*, will be the speaker at the February meeting of the New England Association of Opticians, to be held Feb. 17 at Young's Hotel, Boston, Mass.

Fred. A. Barber, son of A. G. Barber, treasurer of the Globe Optical Co., Boston, Mass., has gone to Manchester, N. H., to take charge of a new optical store recently opened by the New England Optical Co.

Prof. J. H. Caruss, formerly engaged in the optical business in Stamford, Conn., now makes weekly trips to Port Chester, N. Y., where he has headquarters at Andrew Clark's jewelry store.

Andrew J. Lloyd & Co., opticians, Boston, Mass., have taken a 20 years' lease on a portion of the adjoining property, known as the Snow building, thus giving them a large additional and much needed space for the transaction of their business.

Miss Stella V. Rogers, Indianapolis, Ind., will remove her optical business about April 1 to Indiana Ave. The move from N. Illinois St., where her father's jewelry store has been located for over 25 years, is made necessary by the Union Traction Co. purchasing the site, upon which a union station will be erected.

At the annual meeting of the Globe Optical Co., Boston, Mass., held Feb. 3, at the company's office, 403 Washington St., the former board of directors were elected, including Edwin P. Wells, Andrew G. Barber and Charles A. French. The stockholders elected Mr. Barber as treasurer, and F. J. H. Mansfield, clerk. The directors will meet later and elect a president.

Alabama.

TRADE CONDITIONS.

Birmingham is just now doing a big business in precious stones, a fact which is surprising to the trade. Several drummers have been in this way lately and all report January business dull. This is not an unusual condition, however, for during that month trade is nearly always inactive.

The Maxwell-Raiford Jewelry Co., Tuskaloosa, has taken a big part in the organization of a board of trade there.

News comes from Mobile that Maj. E. O. Zadek has taken stock in some of the oil search movements in South Alabama.

C. L. Ruth, Montgomery, was in Birmingham last week, where he took a leading part in a Masonic meeting which conferred the 33d degree.

E. S. Cummings, with E. W. Bromberg, Birmingham; surprised his friends a few days ago by getting married. His bride is Miss Eloise Goldwire, daughter of a well-known real estate dealer.

Inquiry among the jewelers develops the fact that there are no prospects of an auction in Birmingham. This is gratifying, for all have had a fine Winter trade and as everything is moving along smoothly it is hoped nothing will be done to mar the pleasure of it.

The handsome silver service which the people of Alabama will give to the battleship *Alabama* is now on exhibition in the store of the E. O. Zadek Jewelry Co., Mobile. The presentation will be made at Mardi Gras in the city of Mobile. The big vessel will not be able to get up to the city.

John Duff, Butler, Mo., recently lost most of his stock by a fire which destroyed four frame buildings in that city.

Extensive improvements have just been made in the store of the Gale Jewelry Co., Norfolk, Va., including the erection of a large electric sign. The interior has been entirely remodeled, while the exterior has been handsomely enameled in white, trimmed with gold.

Harrisburg, Pa.

Frederick Rohm will shortly open a jewelry store at No. 1302 N. 6th St.

Dr. Henry Helfrich, Allentown's oldest resident, who died a few days ago in his 100th year, was a son of Henry Helfrich, famous as a watchmaker in his day.

The store of George A. Hutman, 803 N. 3d St., was closed a portion of the week on account of the death of Mr. Hutman's mother, who died Wednesday, after a brief illness, from paralysis of the brain, aged 73 years.

Friends of William H. Denny in this city were shocked to learn of his death at the Arlington Hotel, Richmond, Ind., last week. Mr. Denny was for some years foreman of the machine department at the Hamilton Watch Co.'s factory in Lancaster. He was about 50 years old.

Before being taken from Lebanon to Norristown to await trial for robbing the jewelry store of Henry W. Reiff in Lederachville, that county, an overcoat stolen at the time of the robbery, was found stuffed into a sewer pipe in the cell of John Lockley, in the Lebanon jail. It had been concealed there by Lockley.

There is remarkable activity in Market St. real estate matters just now, and efforts are being put forth to buy the building, 204 Market St., owned by W. P. Denehy, with some prospect of success. The Wyeth building, in which the jewelry store of C. Ross Boas is located, has been sold, and it is reported that options are being sought on the Wagner building, at 4th and Market Sts., in which H. C. Claster's jewelry store is located.

Miss Plack, a niece of Wilhelm Plack, of 119 S. 2d St., who was clerking in the latter's store, when the bold robbery of about $3,000 worth of gems took place there one evening last Fall, has recognized one of the two pictures of the men arrested recently in Newark, N. J., and received by Chief of Police Hutchison, as one of the men who were in the Plack store on the day the window smashing took place. The picture identified was that of John Smith, alias "Williams," who, with another man is awaiting trial at Newark, N. J., for a similar offence. Miss Plack failed to identify the other man.

The death of Domer W. Thompson, a jeweler of N. 6th St., occurred at the home of a sister in this city Thursday evening. Deceased, who was about 28 years old and unmarried, had been suffering from pulmonary trouble for some time, and had not been able to attend to business for the past six weeks or more. He was a native of Thompsontown, Juniata County, and came to Harrisburg a few years ago to engage in business. Last Fall Mr. Thompson went to a Philadelphia hospital for treatment, but returned very little benefited. His body will be taken to Thompsontown for interment.

Washington Police Endeavoring To Capture Another of the Trio Who Robbed Gerome Desio.

WASHINGTON, D. C., Feb. 4.—Following the trial of James Reilly, who, as told in THE CIRCULAR-WEEKLY of last week, was convicted of robbing the jewelry store of Gerome Desio, at 1107 F St., in March, 1897, the police department has sent out 3,000 copies of a circular, giving the photograph and description of William Devlin, alias Whitten, one of the two men said to have been Reilly's accomplice at the time of the robbery.

PROFILE AND FULL FACE OF WM. DEVLIN, ALIAS WHITTEN.

As has been told many times in the columns of THE CIRCULAR-WEEKLY at the time of the robbery, one man engaged Mr. Desio's attention, a second inquired about an article in the store, and a third came in and stood by the door. After the men had gone, Mr. Desio discovered that a tray of diamonds, valued at $3,000 was missing. Reilly was run down by Mr. Desio and his son, who are anxious to obtain the conviction of the other members of the trio.

The illustration on this page is said to show two portraits of Devlin, or Whitten, whom the Washington police are now endeavoring to find. The portraits were taken in 1899. In the circular sent out by the Chief of Police Richard Sylvester, of that city, the man is described as follows:

William Devlin, alias Whitten, white, 25 years old, five feet six, medium build, medium complexion, brown hair, blue eyes, scar over left eye and on left forearm. Bertillon measurements: Height, 67.5; outer arms, 75.0; trunk, 88.1; head length, 18.4; head width, 15.6; right ear, 6.3; left foot, 25.5; middle finger, 11.3; little finger, 9.0; forearm, 45.0.

Lancaster, Pa.

Oliver Mentzer, foreman of the factory of L. C. Reisner & Co., has been confined to his home for the past week, with la grippe.

Among the out-of-town jewelers who visited the trade in Lancaster last week were: Ray Bingham, with E. L. Daron, Steelton, Pa.; L. R. Herrick, Lyons, N. Y.; Charles Keim, with Wallace H Miller, Uniontown, Pa.; H. F. Andrews, Strasburg, Pa.; Jesse D. Paul and Henry Frick, Waynesboro, Pa.; C. Lee Mellinger, with Scottdale Jewelry Co., Scottdale, Pa., and C. B. Kern, Mt. Joy, Pa.

M. F. Warren, Colorado Springs, Col., has announced his acceptance of the candidacy of the Aldermanic nomination of the Republican party from the Third Ward of that city.

RETAIL MERCHANDISING

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan that they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

AFTER a location is decided upon, and your sign swung to the breeze, a clean work bench and well selected tools are necessary. Then your presence at all times is necessary so that when a customer calls, you can be found at your post, in a firm, but gentlemanly manner, in other words, a strictly business manner.

This is necessary, for the customers who assist in building up a business, are usually business men themselves. The young men whom you would naturally claim as your friends, are not in a position to build up your business. Their influence doesn't run exactly in the right direction.

Now, when a customer comes in and hands you a watch to examine, first find out from him how it had been running previous to the time it stopped, and whether it received any unusual jar, fall, etc., for all this will help you to diagnose the case accurately.

After you have decided upon, or located the trouble with the watch, name your price, and don't be afraid of charging, for reasonable prices tend to elevate the trade. Then should the watch be left with you, tell your customer that it will be ready for him at such and such a date, always giving yourself ample time to do the necessary repairs, including the running of the watch, so as to regulate it.

Now comes the back bone. You must do the job correctly; if you can't do it yourself, you should send it to some one who can, for good work is absolutely essential to the building up of a thriving business. It is better that it be said that you are high-priced, but that your work is first-class, than that your prices are lower than those elsewhere, but the work bad. Reasonably high prices rarely ever drive a customer away from a good workman.

Never try to show your customer how smart you are, by showing him how quickly you can put in a mainspring, or clean a watch, but keep all the short, paying jobs within the bounds of the trade, leaving the outside world to believe that a work such as putting a watch in order is beyond the comprehension of the ordinary man. Again, refrain from telling a customer that his watch needs cleaning unless the dirt is quite apparent to the naked eye, for, generally speaking, the average quack usually says first of all that "your watch needs cleaning," the customer may have just paid some botch for cleaning, and there is no end to what it may lead to. Rather lay the trouble to the escapement, adjustment, etc., something the customer, and, I might say, a number of so-called watchmakers, know nothing about.

Use the best of material. If you haven't got it, send for it, but don't patch—it isn't good judgment. When your customer calls for the job, have it ready for him, and when he takes the watch, see that you get the money, for watches, both new and repaired ones, run better and give better satisfaction when they are paid for. They seem to know they have a duty to perform, and they do it, generally speaking. As your customer is about to leave, ask him to drop in regularly for a few days so that you may see how the timepiece performs, and when he comes back to see how it is, be just as gentle and accommodating as you were when he paid for the repairs to the watch.

Suppose, when he returns, the piece is a minute or so "out." Then relieve him of the watch and say, "we will try and have it do better." Set it and move regulator, and show him, in a gentlemanly and courteous manner, that you are pretty busy and resume your work. Never, under any circumstances, allow yourself to be found idle. You can do a thousand and one things that will be profitable to you, even though you should not have an unfinished job in the house.

Moreover, you should soon discover how easily your customer is satisfied, and learn, for instance, whether he carries a fairly good watch, as the 17 and 21 jewel American, and is satisfied with a minute's loss or gain a week.

Satisfy him and then stop. Don't try to educate him, for you might spoil him, and in your honest efforts to enlighten him, you might make a crank out of him. Say as little about your ability as you can, for the time will come when you will have to prove it in many ways. Never run down your competitors, it matters not what cause you have, for your time is too valuable on the bench. Never argue with a customer. State facts which can be substantiated, and then shut up. Never allow your judgment to be criticized; keep it to yourself unless you get paid for giving it in one way or another.

Be honest with your customers, tell the truth about your work, and sooner than you think they will have confidence in you, and when you gain that you can then make money, and if you don't keep it, it's your own fault. I have had my say as to the repairing department, and now a few words on watches—new watches.

In selling a customer a new watch, be sure that you do not misrepresent the goods, if you have a line of the different makes. Try to find out his choice and don't try to sell him something which he does not want (of course, here is where good judgment comes in). But if your stock is limited, and you have to order, get the customer a good watch, of a good make, say the ————, or whatever in your judgment is best for the money, and always charge a reasonable profit. See that the watch is in perfect order before allowing it to leave your store. Of course all this takes a little time, but you know "Rome was not built in a day."

At the close of my essay, I would say, honesty, sobriety, promptness and business courtesies on the one hand, and good workmanship on the other, are the requisites for success in this line, for a good workman rarely has to compete with a poor one very long, and a cheap workman is but a poor workman. D. G. H

A New Source of Profit for The Jeweler.

MORE than one tendency of the present day is to the advantage of the jewelry dealer. In the first place, it is a matter of general, if not universal knowledge, that year by year more money is spent on jewels and precious stones. Not only is this increase in step with the advance in general wealth—proportionate with it—it is largely in excess of that proportion.

As a fact, also, more and more people wear jewelry. For a long time there seemed to be a prejudice on the part of a large contingent of the wealthy, leisure class against the wearing of jewelry. These were pleased to assume that the wearing of ornamentation of any kind smacked of vulgarity and tawdriness. They were inclined to the severest asceticism in this respect. Accordant with this frame of mind, their garmenture, even in both sexes, ran "to sober suits of solemn black." Accompanying these Puritanic tendencies, even their faces

Grand HINTS to JEWELERS

wore a look of patient resignation, and when they relaxed sufficiently to laugh, the unwonted indulgence, no doubt, cost these people considerable pain.

Thanks be to common sense, the cult, a survivor of the pharisaic spirit which gave us "the blue laws," has entirely disappeared. In its place there has grown a large spirit of tolerance. People with the best taste feel and know that they are not required to abjure display. Each is a mentor to himself, and few exceed the bounds of good taste in donning jewelry.

But there is another tendency which brings an ever-increasing sum of money to the jeweler. This is the growing custom among society women of making their jewelers custodians of their gems. This is a natural outgrowth of the greater amounts of jewelry which ladies acquire. "Appetite comes with the eating" in this matter, and the more jewelry a woman has, the more she wants.

This is natural. Consequently, it is just as natural to feel that these goods are far safer in the vaults of the jeweler than at the homes of their possessors. As these individual collections generally are worth thousands of dollars, and from that ranging up to fabulous amounts, one can readily believe that their owners feel safer when they know their gems are in charge of the responsible jeweler than under the home roof.

Here they can be called for, individually or collectively, when or as wanted, and returned as promptly when they have served the end called for. This is the main purpose the system serves, as can be attested any day upon the nights of which there is to be a grand social function.

On such a day, all day long, carriages in great numbers will call at the jewelers. From these ladies will step, repair inside, select from their collections the special gems they desire, and return home with them. The next day the process will be reversed, and the gems returned. Besides this the jeweler can better keep all these valuable objects in perfect repair. Altogether, the system, not a new one, but never so generally practised as now, makes for the jewelry trade.

THE ONLOOKER.

A Retail Jeweler's Experience with "The Chronic Grumbler."

IT is a well known fact among jewelers that the general public always has an exaggerated idea of the value of any old jewelry which they own. Sometimes, as in the case of presents, it has a value distinct from its intrinsic worth. Again, perhaps the articles really cost considerably more 20 or 30 years ago than they would at the present time.

All jewelers have this experience when they buy up "old gold." The party offering it for sale is not satisfied with the price the jeweler offers, which is really all it will weigh up. In the case of a chain, which originally cost quite a sum of money, after deducting the price of the workmanship on it, the actual gold value is much less. When the jeweler makes his offer for it, the party often feels aggrieved at the smallness of the sum, and frequently denounces the jeweler as a robber, etc.

A jeweler of Kansas City, Mo., tells this story about one of his customers:

In a certain small town a burglar broke into a jewelry store, and stole a number of articles. Among others was a watch about 20 years old, which had been left with the jeweler for repairs. The jeweler, who had a record of its movement, etc., of course had to "make good" when the customer came after the watch. He offered the customer the choice of a certain line of new watches, of the value of the one lost. It was a new watch, and worth just that much more than the old one, although its selling price was less than that of the lost watch when new, owing to the fact that watches are much cheaper now than they used to be.

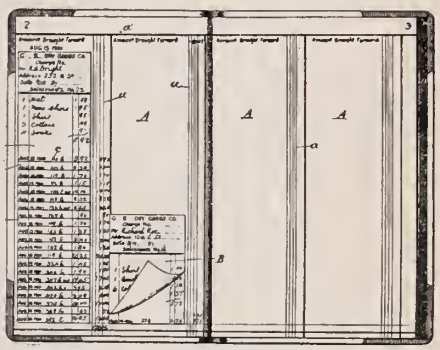
The customer, however, did not recognize that fact; he took the watch offered, and went away grumbling and declaring he had been "swindled." He talked considerably about the transaction to various people in the town, and as is usual in a small place, many persons were found ready to carry this around. Therefore the story was not long in getting back to the jeweler's ears. It made the latter feel quite badly on account of the injustice done him, besides hurting his reputation.

The thief was captured, but had hidden his booty under a sidewalk in front of a church. Not being able to prove him guilty, the authorities allowed him to go and, needless to say, he lost no time in leaving town and never returned.

About a year after, in making some repairs, the sidewalk was taken up and the box of jewelry found. Then the jeweler sent for his customer and returned to him his old watch.

This did not suit the customer either. When too late he recognized the superiority of the new watch, and grumbled again. But the jeweler told him to be off and to say nothing.

Moral: It is impossible to please some people.



P. A. Staples, Portland, Ore., has a card in the Portland street cars, calling attention to his stock of engagement and wedding rings.

A New System of Recording Sales.

A SYSTEM for recording sales, for which Miles A. Stone, of Little Rock, Ark., was recently granted a patent, is illustrated herewith. This system may be of interest to jewelers seeking an expeditious method of accounting during the Easter season, etc.

The advantages claimed for it as laid down in the text of the patent grant are as follows:

In a system of recording sales, duplicate sale-slips of uniform size showing the itemized and total amount of sales in any case with the total amount of sales and date carried to the lower margin of said slips, a sales-book the leaves of

A NEW SYSTEM OF RECORDING SALES.

which are provided with extension or account columns, the original of the sales-slips being secured to the leaves of the sales-book and overlying each other with the lower margin exposed to show the total amount of sales on said slip adjacent the extension or account column of the sales-book into which the totals only are transferred, substantially as described.

In combination, a sales-book having extension or account columns on the pages thereof dividing the said pages into blank columns, sale-slips of uniform dimension secured in the blank columns one over the other with the lower margins exposed and with the side edges of said slips adjacent the account or extension columns, said sale-slips containing an itemized account of sales footed to a total at the bottom exposed margin of the slips and which total is carried into the account-column adjacent the total on the exposed margin of the sales-slips, whereby the original sale-slips may be preserved and itemized copying avoided, substantially as described.

Ideas and Schemes.

S. W. TASCH, a jeweler of Danbury, Conn., recently enlivened business by holding a sale of 25 cent packages. Each package contained an article worth 25 cents or more. One of the packages contained a diamond ring, valued at $15.

Chas. Renner, Arcata, Cal., has just concluded a novel guessing contest. A medium sized squash was placed in his show window, and each purchaser of $1 worth of goods got a chance to guess the number of seeds contained in the squash. A prize of $5 was given to the one making the best guess.

BUYERS' INFORMATION BUREAU.

Questions as to the makers of certain lines of goods, where to buy certain lines, where certain kinds of work are done, the owners of certain trade-marks and other matters relating to the buying branch of a jewelry business will be cheerfully answered under this department. The reader cannot ask too many questions. *All queries are also answered promptly by mail.*

FRANKLIN, Pa., Feb. 3, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you tell us who makes the Pompeian pattern in sterling flat ware? R. L. K.

ANSWER:—The Whiting Mfg. Co., Broadway and 18th St., New York.

NORWICH, Conn., Jan. 30, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Kindly inform us of the maker of the "Horton Fountain Pen," and oblige, THE P.-C. Co.

ANSWER:—The Horton Fountain Pen and the new Lincoln are made by Frazer & Geyher Co., 22 Thames St., New York.

FRANKLIN, Pa., Jan. 30, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Please let me know where I can buy blank steel blocks for stationery embossing. By giving this your prompt attention you will greatly oblige, R. L. K.

ANSWER:—Such blocks are sold by the New York Steel and Copper Plate Co., 233 Classon Ave., Brooklyn, N. Y. They come in packages of one dozen lots, and average about 10 cents a square inch.

WASHINGTON, D. C., Jan. 29, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
A mantle clock, made by Isaac Rogers, London, was left with me to be repaired. The owners would like to know when the clock was made. Can you give me the desired information? Yours truly, GEO. W. SPIER.

ANSWER:—This clock was made by Isaac Rogers, White Hart Court, Grace Church St., London, England, who was in business from 1750 to 1794.

NEW HAVEN, Conn., Jan. 31, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Let me have one or two addresses where I may get a cheap second-hand letter press, 5 x 8, to print my own cards, circulars, etc. G. E.

ANSWER:—Conner Fendler & Co., 56 Beekman St., New York; Damon & Peets, 44 Beekman St., New York, and F. Wesel Mfg. Co., 82 Fulton St., New York.

ROCKLAND, Me., Jan. 25, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Is the Camm Watch Case Co. in business now, and if so where is its factory? C. E. D.

ANSWER:—The Camm Watch Case Co. is out of business, and has no successors.

SCRANTON, Pa., Jan. 28, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
I want to find the address of a manufacturer who makes what they call "grandfather's" clocks, that is, one that stands up from the floor about six feet. I want a cheap clock for scheme purposes with cigars, for a customer. Trusting to hear from you, I am very truly yours, W. W. W.

ANSWER:—For cheap clocks of this character, you may address Warner & Co., 578 Washington St., New York; Waterbury Clock Co., 10 Cortlandt St., New York.

NEW YORK Feb. 3, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Will you please give me the name of some one who makes and handles parts of small machinery, engines, dynamos, etc.? I wish to get some parts, such as pipe gauges, etc. D. S. M.

ANSWER:—We would suggest that you write to the American Steam Gauge and Valve Manufacturing Co., 26 Cortlandt St., New York; Ashton Valve Co., 110 Liberty St., New York; Brown & Sharpe Mfg. Co., 136 Liberty St., New York; Standard Supplies Co., 123 Liberty St., New York, and the Frasse Co., 38 Cortlandt St., New York.

ROCK CRYSTAL.—Objects made of rock crystal are always attractive, and if they are highly wrought, the art and labor involved makes them appeal to anyone. In one of the large jewelry shops in New York there is now displayed a great variety of objects made of rock crystal, cut, engraved and polished, and so mounted on carved wood or metal bases as to set them off in the best manner. A novelty is in the form of a plain tumbler, not hollowed out, and so beautifully polished is the clear quartz as to appear as if filled with limpid water. Another represents a vase with a small hole bored near the edge, in which is the stem of a rose, with flowers hanging over the edge. Large crystal balls, plain and faceted, are shown in profusion. These objects are as costly as they are beautiful.—*Popular Science News.*

MIGHTY MEN O' THE HAMMER.

The services of the two best-known auctioneers at the cost of one.

It's Sales That Count!

True credentials of sales made, results and honest references are of more value than glowing word pictures of a man's ability. We have to our credit a greater number of sales, higher aggregate of goods sold and a better percentage of profit on each sale made than any other auctioneer in the business.

Some recent sales: We have just closed a four weeks' engagement at Norfolk, Va., selling out the Gem Jewelry Co. and conducting the largest and most successful sale ever made in that city. Just before, we made a most successful sale for Geo. Winder, Troy, N. Y., after another firm of auctioneers had made a failure. We are now selling out the stock of Jos. Brown & Co., of 176 E. Madison St., Chicago, which was damaged by the recent fire in the Lincoln Hotel. One success has followed another.

Jewelers desiring our services must write months in advance, as our time is booked for several months.

Acquired Astigmatism in Old Age and the Ophthalmometer.

BY GUSTAVUS KAHN.

THERE are quite a number of old people, who, after a certain age, mostly that beyond 70, gradually acquire astigmatism, which is usually hyperopic and against the rule, amounting in some cases to as much as two diopters.

That such astigmatism must be acquired by senile degeneration of the crystalline lens is self-evident, and may be easily ascertained from the history of the following case:

Mr. Baker, an old and retired merchant, whose eyes I examined recently and found simple hyperopic astigmatism, requiring a + 1.75 cyl. ax. 180° in either eye; vision without lenses, $\frac{2}{60}$ but could read $\frac{5}{40}$ fairly well with both eyes. The cylinder raised vision in both eyes to $\frac{20}{30}$.

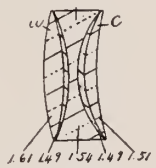
Mr. Baker states that he never had any trouble in his life with his vision, which, in his younger days, was remarkably keen. He was quite a marksman up to a few years ago, when his eyes began to fail, and since that time he never could find reading lenses which would be as comfortable as they used to be, and he further states that his last pair of spectacles (which I found to be O. U. + 2.50 sph.) served him for nearly 20 years with the best satisfaction, and as he has been a constant reader since his retirement from business, he should be competent to judge for himself how well his glasses served the purpose.

But, as already stated, a few years ago his distant vision commenced failing, and his old glasses became almost useless, while with stronger lenses which magnified the print, he was obliged to hold the reading uncomfortably near, and otherwise could get no satisfaction with them whatever; furthermore, there would be spells of blurring with the glasses, and an inability to do any reading by lamp light.

After furnishing him with O. U. + 2.50 sph. ⊃ + 1.75 Cyl. ax. 180° for reading purposes, he remarked that with these lenses he was able to read as well as formerly, and was greatly pleased with them. Mr. Baker has always enjoyed the best of health; was never sick a day in his life; never suffered from headache, and always felt perfectly well.

An examination with the ophthalmometer revealed a corneal astigmatism with the rule of + 0.75 P, 0.75 D, which goes to prove that the subjective astigmatism + 1.75 D against the rule is entirely lenticular, and, furthermore, must have developed in recent years, which the history of his case shows, because he could not possibly have used his reading glasses with any degree of comfort for nearly 20 years, O. U. + 2.50 D spherical, with astigmatism amounting to + 1.75 D. His excellent distant sight and marksmanship is a further indication that his eyes could not have been astigmatic to any appreciative degree, while the freedom from headache all through his life finally furnishes the clinching evidence of the absence of astigmatism.

In recent times I have made it an object to investigate all such cases, and up to the present writing have met with about a dozen similar ones; but before I am able to give a more explicit opinion, I would wish to continue the investigation until the number of cases amounted to several hundred. However, with the limited number, similar to Mr. Baker's, to judge from, I have come to the conclusion that astigmatism against the rule, which suddenly makes its appearance in old people's eyes, is acquired and lenticular in nature and has nothing to do with the curvature of the cornea or the action of the accommodation in the crystalline lens. It is nothing but static lenticular in nature; and, because it develops at an age when all accommodation is gone, is no proof that it previously existed either in the lens or cornea, and was in any way compensated for by the action of the accommodation.



Should this be proven in a sufficiently large number of cases, it would tend to discredit some of the extravagant claims put forth as to the efficiency of the ophthalmometer in detecting cases of latent astigmatism. But I will not say that there is no corneal astigmatism which is not partially compensated, for a time, by the action of the accommodative power of the crystalline lens, or that there is, and must be, neutralization of the corneal astigmatism by an opposite static lenticular kind, and if the latter proposition is proven to be a fact, I don't see where the claim of the precision of the findings of the ophthalmometer for the proper axis for the correcting cylinder comes in as an infallible sequence in all cases, because the lenticular astigmatism may not always be at a meridian at right angles to that of the corneal.

It stands to reason that while corneal astigmatism may have its axis at any meridian, there is no proof that lenticular astigmatism may not be similarly endowed, and, because in the largest number of cases it is found that the one kind of astigmatism is either at right angles or parallel with the other, it does not follow that this is true in every instance.

A New Lens System.

EDWIN LOHMANN, Greenville, O., has received a patent on a lens system which is claimed to possess many desirable advantages. The patent was filed some time ago, and is described as follows:

A quintuple lens system composed of a

biconvex lens of highest refractive power, biconcave lens of next highest refractive power and an outer positive meniscus lens of lower refractive power than the biconcave lens, the outer biconvex and positive meniscus lenses being separated from the middle biconcave lens each by a positive meniscus lens of lower refractive power than either of the inclosing lenses.

Optical Notes and Briefs.

Dr. W. A. Meyers, optician, York, Neb., has purchased the business interests of J. E. Meyers, of that place.

Chas. Sheldon, secretary of the Merry Optical Co., Kansas City, Mo., has just returned from his wedding trip.

J. S. Noland has added an optical department to his establishment, at Athens, Ga., and accepted the agency for the eyeglasses made by A. K. Hawkes, Atlanta, Ga.

The Columbian Optical Co., Kansas City, Mo., last week entertained A. I. Agnew, Omaha, Neb., and M. Parr, Denver, Col., both of whom are managers of the company's branch houses at those places.

C. H. Rudd, 111 E. Broad St., Richmond, Va., chairman of the executive committee of the Virginia State Optical Association, has issued circulars announcing that the society will hold a special meeting Feb. 19, at Murphy's Hotel, Richmond. There will be an afternoon and evening session, and the members will discuss a bill now pending in the legislature, which, it is said, will greatly affect opticians in the State of Virginia. The meeting promises to be one of extraordinary interest.

The following are recent graduates from the South Western Optical College, Kansas City, Mo.: J. J. Jones, Emporia, Kan.; F. L. D. Carr, Kansas City, Mo.; John M. Comegys, Ashgrove, Mo.; D. W. Miller, Indianola, Neb.; Mrs. L. V. Davis, F. C.

(Additional Optical News on page 64.)

Optical Department.

Ocular Headache.

(Paper read by Edgar J. George, M.D., before the Illinois Hom. Med. Association.)

TIME and time again facts are fully demonstrating that headaches, cranial neuralgia, and other reflex conditions are caused by eye strain. The object of this paper is to explain in a limited manner the source, reason for, and importance of correcting errors of refraction, as well as those of the ocular muscles. With every movement of the eye several of the extrinsic muscles are called into action at the same time, both eyeballs are moved simultaneously in all directions with perfect harmony and visual parallelism; in other words, there is always maintained in health an exact muscular equilibrium.

Individuals who suffer most from ocular headaches are of a neurotic temperament, highly sensitive, energetic, and active. In spirits they are either up or down, according to their moods and surroundings.

Headaches from eye strain may appear in early childhood, when first entering upon school work, or may not be present until later in life. Patients having enjoyed previous good health can become neurotics from persistent eye strain, physical debility or mental disease, after which headaches may develop.

Defects that cause headaches are hypermetropia, all forms of astigmia and heterophoria or muscular insufficiency. With hypermetropia and astigmia the ciliary muscle is never in a state of rest, even when, as with the normal eye, the individual is looking at a distance. Distant vision should be the rest period, consequently there is a persistent muscular strain with defective eyes while the individual is awake, aggravated by over exertion when the accommodative power is called into use for near work; thus it can be seen how headaches do occur as well as other reflex symptoms from over muscular taxation.

With defects of the motor muscular system, the strain is equally persistent, and, like ocular defects, there is no relief except during sleep. The patient is unconsciously and continually making an effort to keep the visual lines parallel, consequently, as in hypermetropia and astigmia, there is persistent waste of nerve energy from muscular strain.

For better understanding, let us take up the nerve distribution briefly and solve the problem how eye strain can cause headaches. The long and short ciliary nerves that supply the ciliary muscle arise partly from the nasal branch of the ophthalmic, a branch of the fifth nerve (a nerve of not only motion, but sensation), and partly from the ophthalmic ganglion. The ophthalmic ganglion not only receives a sensory root from the nasal, but also a sympathetic from the cavernous plexus and a motor from the third nerve.

Irritation from over taxation of the ciliary muscles is carried through the long and short ciliary nerves to the ophthalmic ganglion and nasal branch of the fifth. The sympathetic is disturbed through the sympathetic root from the cavernous plexus.

The fifth nerve gives off the frontal branch that divides into the supratrochlear and supraorbital, the latter terminates in muscular, cutaneous and pericranial branches. The corrugator supercilii and occipito-frontalis muscles are furnished with common sensation by these branches. The cutaneous branches supply the integument of the cranium as far back as the occiput. They are at first situated beneath the occipito-frontalis muscle, the inner branch perforates the frontal portion, and the outer branch its tendinous aponeurosis. The pericranial branches are distributed to the pericranium over the frontal and parietal bones.

The sympathetic is irritated by the way of the cavernous plexus through the Gasserian ganglion, to which are connected four other ganglia that form the cephalic portion of the sympathetic: the ophthalmic, the spheno-palatine, the otic and the submaxillary. All four receive sensitive filaments from the fifth nerve, and motor and sympathetic from other sources. These ganglia are also connected with each other, and with the cervical portion of the sympathetic. As the cavernous plexus communicates with the third, fourth and fifth nerves, and a filament forms one of the roots of the ophthalmic ganglion, it can be readily understood how co-ordination of the extrinsic and intrinsic muscles take place, and how a disturbance in the muscular balance of the motor muscles can produce headaches and other reflex conditions.

Headaches from eye strain may be local or general, the most common seat of pain is the frontal, temporal and occipital regions. In some cases a heavy dull pain on the crown of the head is complained of. Frequently headaches are localized either on one side or the other, especially if there is a tendency to neuralgia. With occipital headaches the pain may extend down the cervical region, and sometimes as far as the dorsal. I have seen a very severe and annoying pain in the sacral region entirely disappear by the correction of a muscular defect.

In most cases, the headaches are not severe in character, the sensations are dull, with a heavy feeling, which gradually increases in severity, according to the tax upon the eyes. The scalp is often sore and sensitive to touch, so much so that ladies complain of the weight of the hair. The head feels sore, as if bruised, and the brain may seem as if pressed against the skull when the head is turned from side to side. The headaches may begin gradually and increase in severity until the patient is compelled to take to the bed. Nausea frequently accompanies severe attacks. Such headaches always follow use of the eyes, either directly or remotely, sometimes they do not appear until the next day after the eyes have been strained.

Many cannot attend church or entertainments without resultant headaches that are often attributed to the bright lights. Being in crowds, shopping, witnessing processions, etc., where the accommodative power is constantly changing, always causes great distress to those who are afflicted with eye strain.

Car sickness, as well as headaches occurring while traveling, is indicative of eye strain, more especially a muscular defect.

The indicated remedy in many cases of cranial neuralgia will only relieve and no cure, until an existing optical defect has been corrected.

As to the relief and cure, ocular defects require a most careful correction. It is absolutely essential that this be done in the most painstaking and precise manner.

Refraction is now an exact science when certain rules are carried out; the most important one of these is the use of a mydriatic, as its action puts the accommodation at rest and enables accurate measurement of all ocular irregularities. For the purpose, I cannot too strongly recommend the use of an atropin solution, four grains to the ounce, dropped into the eyes four times a day for three or four days. While under its influence, several examinations should be made until the full defect is accurately determined.

The use of atropin is necessary not only to cause complete relaxation of the ciliary muscle, that no other mydriatic is capable of doing so thoroughly, but on account of its long duration of effect it gives the oculist more time and a better opportunity for measuring the defect. The hypertrophied ciliary muscle of a hypermetrope quite often does not relax under the influence of a quicker or milder mydriatic, as homatropin and scopolamin, but can be made to do so by the persistent use of atropin.

It is true that a mydriatic causes dilatation of the pupil, intense photophobia, loss of accommodation, and diminution of vision for distant and near objects. This is distressing and inconvenient to the patient for the time being, yet this is only of short duration compared with the period of suffering that can be relieved by an accurate and certain correction.

Ocular defects are not progressive, except myopia and presbyopia; therefore, if a careful correction is made and a record is kept, all future changes of lenses can be made without a recorrection.

The balancing of the ocular muscles is also of the greatest importance. In mild cases weak prisms are used, combined with the correcting lens.

Benefit has been obtained by gymnastic prism exercise, but high degrees require correction by graduated or complete tenotomies.

When an optical defect exists, correcting glasses should be worn constantly. It is as essential to keep the eyes corrected for distance as well as for near, and it should be borne in mind that only the young and middle-aged suffer from ocular headaches. Old age, by loss of the elasticity of the lens, removes all eye strain except that from the extrinsic muscles.

Spectacles are the most suitable form of glasses; they maintain a more accurate position of the lenses. Nose glasses are unreliable, as their position is constantly changing; therefore, the lenses are easily misplaced, and good results cannot be obtained from their use.

It is the eye specialist's duty to watch and care for the patient's glasses, and not trust them in the hands of a careless optician, for when lenses worn for the correction of astigmia become misplaced, there will be a return of the symptoms, and dissatisfaction

on the part of the patient. Oculists have been credited with doing poor work, when the fault was with improperly adjusted glasses.

Rules and instructions as to the wearing of glasses and their care ought to be carefully laid down, and if these precautions are taken, bearing in mind that it is the little things that require our most careful consideration, we may be assured of good results.

Heterophoria.

(By Melville Black, M.D., in the *Ophthalmic Record.*)

CASE 1. Miss A., aged 35, stenographer, consulted me February 2, 1901, complaining that she had been unable to follow her occupation because of headaches, vertigo and pain in the eyes. She has an astigmatism of O. D. + 1. ax 70°. O. S. + 1. ax. 135°, with manifest hyperphoria O. S. of 5°, and esophoria of 5°. She was given the above cylinders with a 2° prism over each eye, right base up and left base down. She wore this correction for two months with great relief, when increasing discomfort began. She then manifested 8° exophoria and 5° left hyperphoria. A tenotomy was now performed upon left superior rectus with complete correction of hyperphoria. In a few days' time she manifested a righ hyperphoria of 2° with exophoria of 7°. A tenotomy was now performed upon right external rectus, the capsule being cut more below than above. The result next day showed orthophoria. Four months later only 2° exophoria remained. She is now wearing her astigmatic correction and is doing active work as a stenographer without discomfort from her eyes.

Case 2. Miss M., age 24, consulted me the 6th of last March, complaining of incessant headache for two weeks, with dizzy spells and double vision. Has also palpitation of the heart. Her error of refraction was + .25 cyl. ax. 15° in both eyes. She manifested a right hyperphoria of 2½°, exophoria 10°. She was given Gould's method of exercising the interni in my office once daily for 16 days, during which time she wore, with her cylinders, a 2° pr. base down over right eye.

Seven days after beginning the exercises she manifested right hyperphoria 5½°, with exophoria of 7°. She was now given a 3° pr. base up over left eye, making 5° vertical prism correction, and the exercising continued for the interni. At the expiration of 16 days of the exercise she could overcome with interni 40° of prism, and yet with red glass over one eye she had a crossed diplopia of 10°, and a vertical diplopia of 5°. I then tenotomized the right superior rectus, leaving no hyperphoria, next day no hyperphoria. The fourth day after operation she had a left hyperphoria of 2°, with exophoria of 10°. Two days later I tenotomized left externus, leaving no exophoria. On April 14 she manifested 4° left hyperphoria and 1½° exophoria. She had diplopia in the external left field.

On May 3 left hyperphoria 2°. I tenotomized left superior rectus, leaving no hyperphoria. This operation put an end to all diplopia. Shortly after she went east and did not return to see me until Sept. 6. I now found exophoria 8°, no hyperphoria, and, as she was having a great deal of headache still, I tenotomized the right external rectus, leaving esophoria 3°. I have seen her several times since and find she is now orthophoric and free from her former symptoms.

Case 3. July 3, 1902, Miss B. W., aged 19, consulted me for attacks of very severe pain in head, numb hands and feet, with inability to say what she wants to. Examination of eyes showed a small error of refraction, + .50 ax. 180° in each eye, with a manifest exophoria of 8°. The cylinders were prescribed with 3° prisms over each eye bases in. She reported a month later that she had been much better, and that only within last few days had she had one of her attacks of megrim. She now manifested exophoria 9½° and accordingly her prisms were increased to 4½° over each eye, bases in.

A week later she manifested exophoria 16°. I then tenotomized the left external rectus, leaving orthophoria. Two days later exophoria 8°, and ten days later exophoria 7°. The right externus was now tenotomized, leaving esophoria 1°. The next day exophoria 2°, and two days later orthophoria. I have not seen this patient since, as she does not live in Denver, but reports from her are that she is having no more attacks of megrim.

Case 4. August 8, 1902, Miss J. E., age 20, consulted me because of lately having terrible headaches, and has double vision. She has worn glasses for five years. Thinks eyes have always been weak. She has an error of refraction of + 0.50, with a manifest left hyperphoria of 6°. After several tests, and finding this amount of hyperphoria permanent I tenotomized the left superior rectus, leaving 2° of left hyperphoria. At present writing she has a left hyperphoria of 1°. She is fairly comfortable and I shall await further developments before doing anything more.

Case 5. Miss O. M., aged 16. Aug. 28, 1902, she consulted me because of almost continuous headache. Does not know if use of eyes aggravated it. She is emmetropic, and manifests 14° exophoria. Five days later a tenotomy was performed upon left external rectus, leaving 6° exophoria. Six days later she manifested 8° exophoria, when tenotomy was performed upon the right externus, leaving esophoria 3°. Five days later she had exophoria of 3°, and at present writing exophoria 4°. She is not having headache and I shall not do anything more until further symptoms warrant it.

Case 6. Miss A. K., aged 24. Jan. 23, 1902. She is a seamstress but has had to give up sewing because of eyes aching and blurring. She has a manifest esophoria of 7° and left hyperphoria of 1°, with a refractive error in each eye of + .75 ax. 90. She was given this correction with 3/4° prism base up over right eye and 4° prism, base out, over left eye. These gave partial relief for a short time. In two months her esophoria had reached 13°, with left hyperphoria still 1°. I then tenotomized right internal rectus, leaving no esophoria. The next day she had esophoria of 11°, with left hyperphoria of 2°, and three days later esophoria 9°, and left hyperphoria of 1½°. I now tenotomized the left internus and cut more of the capsule below the above, leaving orthophoria. Three days later orthophoria still remained. Five months later she had esophoria of 4°, and was having no trouble with eyes.

Case 7. Mrs. W. P. M., aged 24. March 4, 1899. She had a miscarriage at the sixth month in February. Complains of vertigo, vomiting and headache. She can scarcely retain anything on her stomach. She carries her head downward and to the left to avoid diplopia, and most of the time keeps one eye closed. She has an error of refraction of + .75 in O. D., and + 1.25 in O. S., with esotropia of 22°. She was given wall to wall exercises every morning for 10 minutes, and the Faradic current to eyes for five minutes. Internally 1/30 gr. strychnia, t. i. d. and her hyperopic correction given. In 10 days she could maintain single vision with a red glass over one eye, and had instead of esotropia, an esophoria of 12°. Improvement was rapid from this time on, and on the 20th day after beginning the exercises she had only 3° esophoria, and was free from her former symptoms, and had gained 20 pounds in weight. Her improvement was permanent. She has ceased wearing her glasses and has now no trouble whatever.

(To be continued.)

New Glasses For the Far-sighted.

DR. E. RIBARD, a well-known optician of Paris, has invented an eyeglass that is causing considerable stir in the French capital, says an exchange. These glasses are simply oblong lenses, being practically the middle third of an ordinary lens.

Persons who are near-sighted will not need them, but the far-sighted will immediately appreciate the theory on which they are built.

The ordinary far-sighted man is constantly taking off and putting on his glasses, as he wants to look at an object near or at a distance. This not only irritates the nose, but soon weakens the framework and the springs by which the glasses are held in place.

Dr. Ribard acknowledges that he is indebted to Benjamin Franklin for the hint on which he has founded his new invention. Franklin, who was far-sighted, replaced the upper third of his lens with a piece of ordinary glass, but this was only a partial solution of the problem.

When he wanted to look through the plain glass it was necessary for him to lean his head forward and look up, and when he wanted to look at the ground he had to remove his glasses.

Dr. Ribard's invention is intended to overcome these defects. He has tried to exclude all that is useless and, instead of using plain glass, uses no glass at all where the eyes require no assistance. So, too, he has cut away the lower part of the lens so that far-sighted persons may see objects in close range without troubling to remove their glasses.

He has also cut the lenses at such an angle that it is not necessary to bend the head to see above or below them. This angle is such that, when one wishes to read or write, the lenses are on the line of vision. Whether or not these glasses will become as popular as some papers predict remains to be seen, as they have not as yet been introduced among opticians in this country.

A Phenomenal Success.

The "Longeval" Mainspring

FOR AMERICAN WATCHES

has exceeded our most sanguine expectation. It is now acknowledged the only mainspring to carry in stock. Our method of packing, and our guarantee with every dozen, absolutely protects the watchmaker from all loss. It is proof against rust and climatic influence. If it breaks within a year your jobber will replace it.

Every watchmaker should carry the "LONGEVAL" and only the "LONGEVAL" in stock, and protect himself against loss, and give his customers the best.

The Reasons why the "LONGEVAL" Mainspring is so successful: Because it is the best spring, made from highest grade steel, carefully finished down by hand, high in carbon and best of temper, ensuring uniform pulling power, and made by the best maker in Switzerland.

It is packed separately, each spring wrapped in anti-rust paper, packed in an individual box, and wrapped in lead foil, excluding all possibility of dampness. Only one spring has to be handled at a time, instead of a full dozen as heretofore.

If you have not sent in your order for a sample dozen, write your jobber at once.

If for reasons of his own he will not supply you, write to the Importers, HAMMEL, RIGLANDER & CO., 35 Maiden Lane, New York, who will inform you of the nearest jobber who will fill your order.

Nothing but Satisfaction from The "Longeval."

NOTICE.

The importers of these mainsprings are the first to have employed the idea of putting each spring in a separate box, thus protecting them against rust and climatic changes, and to place a number of these small boxes in a box or case.

They have taken expert advice as to their sole and exclusive right to this manner of "dressing" mainsprings, and have been advised that they have a proprietary right thereto.

The trade is hereby notified that any infringement of this manner of "dressing" mainsprings for the market will be vigorously prosecuted.

The Horological Works of Perron.

Compiled and translated for THE JEWELERS' CIRCULAR-WEEKLY from *La France Horlogere.*)
(Continued from issue of Feb. 4.)

MARINE WATCHES.

IT was in 1819 when Perron devoted himself to the construction of watches of precision, adjusted to temperatures, and designed for measuring the time at sea.

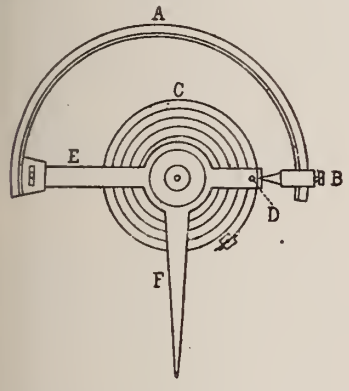


FIG. 2.

[A represents metallic arc; B, slide; C, balance spring; D, pin; E, index arm; F, index.]

The first had the Berthoud escapement with detached vibrations. The balance turned between six rollers, and carried three compound plates for compensating the effects of temperature and three regulating masses of platinum. He applied to his chronometers an ingenious system of compensation on the spring, represented in Fig. 2.

A bi-metallic arc is fixed to the index by one extremity; the other extremity is free and is terminated by a slide, which slips along the arc for adjusting the compensating effect. The wire of the spring passes between the pin, D, and the point of the slide, without being pressed tight between them, so that in the vibrations of the spring it butts alternately against the pin and the extremity of the slide. When the temperature acts on the metallic arc this is opened or closed, according as it is warmer or colder, and the outer end of the spring has then more or less play between the pin and the point of the slide.

One of the chronometers, which he constructed for the Exposition of 1827, was a repeater. He also presented at this exposition a marine watch having detached escapement and constant force. In this system of his invention the motive force serves only for winding by means of the train, the power which puts the escapement in action. The 'scape wheel acts on a detent 150 times a minute and winds a cylindrical spring fixed on the arbor of this detent, one of whose arms strike the regulator every time that the spring is wound. The force with which the regulator is struck being constantly the same, the arcs described by the balance are therefore isochronous.

REGULATING CLOCK WITH FREE ESCAPEMENT AND INCLINED PLANES, WITH THE PERRON COMPENSATOR.

This regulator was constructed in 1833 and is now in the collection of the Horological School of our city. Fig. 3 presents its arrangement.

The pendulum is compensated by a system, also original with Perron, of which Fig. 4 furnishes a sufficient explanation.

Although this system of compensation is not as practical as others, and therefore has not come in use, it nevertheless exhibits the ingenuity of the author.

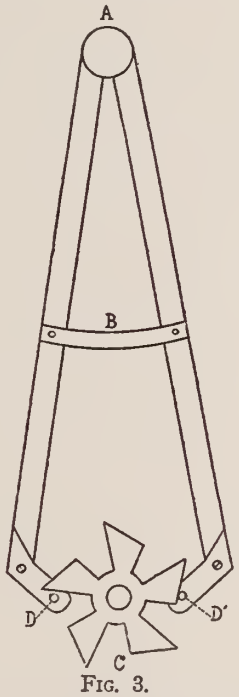

FIG. 3.

[A represents center of oscillation; B, separating piece; C, 'scape wheel; D, D, movable rollers.]

It is evident that Perron's apprenticeship was under the direction of some watchmaker of great skill. It is now certain that, before the arrival of the Swiss horological colony at Besançon, in 1793, there were master clock makers of talent here who seem to have been principally concerned in the construction of the *pendule de luxe;* it is probable that Perron served his apprenticeship with one of these. This was four years before the arrival of the Swiss artists.

In his *Essai* on the isochronism of the vibrations of the balance by the spiral spring Perron gives a short account which throws some light on previous inventions of this kind.

"Huygens in 1674 was the first to investigate the isochronism of the oscillations of the balance by the spiral spring, which he substituted for the spring of the Abbé Hautefeuille, consisting of a straight plate. Fifty years later, Sully, an English watchmaker, utilizing Huygens's invention, constructed a marine watch and sought to render its spring isochronous. Iodin, a watchmaker of Saint Germain-en-Laye, dilated upon this question of isochronism by the spring in 1754 in a treatise on escapements, in which this appeared:

"'The increase of the motive force is applied to operate the largest arcs of the balance, but the isochronism of these unequal arcs has its seat in the spiral spring, as in the free pendulum.'"

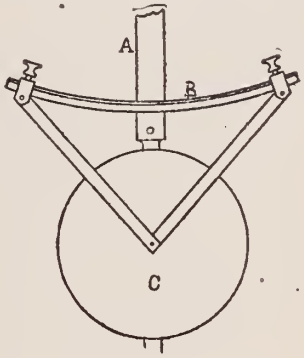

FIG. 4.

[A represents pendulum rod; B, bi-metallic plate; C, bob.]

If, therefore, Ferdinand Berthoud and Pierre Leroy disputed the glory of the discovery of isochronism, Sully and Iodin were the first to perceive the change in the duration of the oscillations of the balance by the great or the small arcs.

Perron's inventions offered valuable ideas to his followers, while he himself derived from them but little personal profit.

$5.00 for an Idea!

The JEWELERS' CIRCULAR-WEEKLY will give a prize of $5.00 to the person who sends in the best suggestion for a real live, up-to-date, interesting article appertaining to horology. The subject suggested must be one capable of holding the attention and interest of watchmakers. Contestants will be given until February 25th to forward the title of the subject. Hence THINK and get cash for your THOUGHT!

The Manipulation of Steel in Watch-Work.

(By John J. Bowman, of the Ezra F. Bowman Technical School, Lancaster, Pa.

(*Continued from issue of Feb. 4.*)

IN stating in the foregoing the color to which the metal should be heated, the terms "cherry red," "clear red," etc., have been used, and we must say here that as there is a variance of color perception in the eyes of different persons, the same shade of color in the metal may appear differently, so the terms used can be only comparative. To attain skill in hardening steel actual experience is necessary; discussion of the subject is of course valuable, but there can be no absolute rules; one must learn by combining his own experience with that of others.

TEMPERING.

Now we have come to the subject of tempering, or lessening, to suit our purpose, the degree of hardness the piece of steel has acquird from the heating and quenching. A fact which should be mentioned here is that steel will harden to different degrees by using metal holding different percentages of carbon—the more carbon the greater the hardness with the same degree of heat. We believe manufacturers furnish steel of great uniformity for known purposes, such as the drill-rods watchmakers use, so that this "percentage of carbon" question need not be considered in working.

The same piece of steel may become very hard with great heat and less so with a lower heat. In this matter of heating, experience must teach the happy medium between overheating and underheating. Always try your work for hardness with a file of rather fine cut. If underheated the steel may come out of the bath softer than it was before heating. Overheated or partially "burnt" steel becomes coarse-grained and brittle. If not too far gone it may be restored by heating to a good red and cooling slowly, but it will never again be fully as good as before.

There are several methods of gauging the changes in the hardness of a piece of steel undergoing tempering. The two most generally used are (1) by observing the change in color of the steel, and (2) by noting the action of the heat on oil or tallow with which the steel is covered. It has been claimed that the oil method is the better, as being more certain than the color method because of the difference in color appreciation in the eyes of different persons. This opinion does not seem to take into consideration the fact that ignition and smoking will take place at different temperatures in different oils; the certainty of both methods would appear to be about equal, and as the color method is cleaner in operation and more convenient, we always favor it when possible.

There are cases, it is true, where the oil tempering is advantageous—for instance, when the workman has a number of watch pinions or arbors to temper. In applying this method, cover the articles with oil in a vessel large enough to hold all; sperm or linseed oil may be used, or melted tallow. In tempering a single piece in this way it may be held on a piece of binding wire, dipped in oil or tallow and held above the lamp flame. The following table will serve as a basis from which to work in tempering by either method:

Color and temperature.	*Effect in oil.*
1. Pale straw, 420° F.	Vaporizes
2. Straw, 450° F.	Begins to smoke
3. Yellow, 480° F.	Smokes freely
4. Brown, 500° F.	Dense smoke
5. Purple, 530° F.	Black smoke
6. Bright blue, 580° F.	Flashes if fire is applied
7. Deep blue, 590° F.	Burns continuously
8. Light blue with greenish tinge, 640° F.	Is burnt away entirely

In this table No. 1 is the temper adapted to tools for cutting steel and iron; No. 2 and 3 for shaping brass; No. 4 for woodworking tools; No. 5 for ordinary cutlery; No. 6 for staffs, pinions, arbors, mainsprings, winding work, etc.; No. 7 for hairsprings; No. 8 for case springs, wood saws and the like.

Before proceeding to temper an article by color it is imperative that it, or at least a portion of it, be thoroughly clean—an emery stick of rather fine grain is good for the purpose. The cleaned surface must not be touched with the fingers nor anything greasy until after the coloring is finished. Put the article on a plate or in a pan of brass or copper, which will help to temper the piece evenly. An alcohol lamp of sufficient size is very good for heating. Where practicable keep the piece rolling over the heated surface to insure evenness of temper. A convenient tool for bluing screws is an old mainspring barrel with a number of holes drilled in the bottom or cap to hold the screws. The cap is left on and a handle of steel wire, tipped with wood, fitted.

Remove the steel from the heat as soon as the desired color is attained. In tempering large pieces, as soon as the color is reached, throw them into water, else the heat in the piece will carry the softening further than was intended.

To remove the blue color, a mixture of muriatic or other acid and water applied with a splint of wood may be employed; wash the article thoroughly after using the acid and immerse it in alcohol. The safest plan is then to scour with rouge or diamantine on a piece of pith; this is necessary anyhow in some cases, where the acid does not remove all of the oxide.

In the manufacture of steel springs, etc., in large quantities, methods of hardening and tempering are used which, while not applicable to the needs of the workman who has a constant variety of different shapes and sizes to treat, are nevertheless interesting to watchmakers.

MANUFACTURE OF HAIRSPRINGS AND MAINSPRINGS.

In making hairsprings the quality of steel used is necessarily of the highest, as any unevenness of texture would make trouble in the adjustment of the watch. The steel is carefully annealed and rolled or drawn into wire of the shape it is in the finished spring. The cheaper grades of springs are simply rolled as hard as possible, then coiled and blued by heating. The rolling is liable to produce minute cracks or flaws in the wire, which impair the timekeeping qualities of springs made of it.

All of the best springs are coiled soft, then hardened and tempered in two separate operations. For coiling the wire a shallow box is used, generally of brass or copper, which may be likened to a small mainspring barrel, with several slots cut into the sides from top to bottom. These openings are cut nearly at a tangent, to lead the wire in without bending it. The box has a detachable, flat cover, central holes through both cover and box, and a piece somewhat similar to a barrel arbor, which can be passed into the box, and revolves concentrically. This arbor has several slits sawed through it, all passing through the center and the center is tapped out for a screw.

The wire is cut into spring lengths, passed through the openings in the rim of the box and into the slots in the winding arbor where the ends are secured by the screw. The number of wires wound together depends on the space desired between the coils, the greater number of wires wound together, of course, leaving the greater distance from one coil to another of each of the finished springs.

The arbor is revolved carefully until the box is filled with the coiled steel, then the screw is taken out and the arbor removed, the cap screwed tight and the openings in the box closed with soap or some other paste to protect the steel inside from the air while hardening. The box of soft steel coils is now ready for hardening. It is heated either in a bath of hot lead, hot melted cyanide, or in a charcoal fire, then quenched in water. Next, the box is opened and the hardened coils carefully removed and shaken apart, cleaned in diluted acid and blued on a heated plate.

For Swiss watches, and many American watches, Breguet hairsprings are made by simply taking a flat coiled spring of suitable length and then turning up the terminal curve with tweezers. American watch factories now use a speedier and more certain method called "hardening and tempering in form." By this is meant that the terminal curve is formed before hardening, and hardened and tempered at the same time as the flat portion of the spring. To accomplish this the coiling boxes are cut with grooves continuous with the tangential openings, and curving upward and inward, in which the ends of the wire are tightly coiled after the flat coiling is completed and fastened in position. Thus the overcoil is produced as similar to the model spring as is possible, with greater uniformity and less expense than in the former method of bending it up by hand.

Another subject which is of interest to watchmakers is the manufacture of mainsprings. As in the case of hairsprings, the steel used in making the finer grade of mainsprings is of the best quality and doubtless expensive experiments were necessary to determine the exact amount of carbonization required to afford the maximum of elasticity, together with the least liability of breakage.

The steel is received from the manufacturer in long strips a little thicker than the spring is intended for. These strips are run through a shearing machine which cuts them into narrow ribbons a trifle wider than the finished springs are to be. These ribbons are wound on spools and next passed through sets of rolls of great accuracy, one at a time, to render the thickness as uniform as possible throughout their length. The next operation is the rounding of the edges, which is done, as is most of the work in the American manufactories of mainsprings, by an automatic machine. Now

he ribbons are ground and polished on their at surfaces, and hardened and tempered. A gas furnace is employed for this purose, as being capable of the most uniform eat. Now follows the final polishing of dges and sides, after which the strips are ut into spring lengths.

Let us explain here what is often misnderstood in the matter of the color of a nainspring. They are put on the market n all shades from deep blue to light straw, nd sometimes perfectly white; this gives ise to an idea that these colors signify the emper to which the spring has been drawn, which is a mistake. They are all drawn to a blue, and then if it is desired to give the spring a lighter color the blue is cleaned off and the spring redrawn; the temper, however, remains as first drawn, at the degree indicated by the blue color.

Following the cutting of the springs into their lengths the ends are annealed and punched for the tip and the hole in the arbor end of the spring. Next comes the coiling, in which the strip is wound tightly and on being released has taken the form of the finished spring. The springs are gauged for thickness and width and are then ready for use.

(To be continued.)

Why a Left-Handed Woman's Watch Would Not Go.

"WOMEN don't deserve to own watches," recently remarked H. F. McClannahan, a jeweler of Philadelphia, Pa. "They don't know how to take care of them. They seldom remember to wind them, and the consequence is they are always being brought back for repairs. A woman bought a watch from the firm of which I am a member, recently, and I gave her strict orders to wind it every 24 hours and always at the same hour, as nearly as possible. Two days later she came back with it, said it had stopped and wouldn't go.

"Well, I found it had run down and hadn't been wound up again. I told her this, but she insisted she had wound it. Two or three days later she came back with the same complaint, and again I tried to impress her with the necessity for winding it. Again she insisted she had done so and went away miffed.

"The third time she came I asked her to show me how she had wound it. Then I made a peculiar discovery. The woman was left-handed, and in attempting to wind the watch she had been winding it the wrong way. I've had peculiar experiences with customers, but that beats all!

The clocks at Sandringham do not recognize Greenwich as a supreme authority by which to be guided, but keep the time entirely on their own account, which is always half an hour faster than the official time at Greenwich. It is always understood by people who are honored with an invitation to shoot at Sandringham that 10 o'clock in the morning means really 9.30. His Majesty enjoys a long day's shooting and so do his guests, for the sport at Sandringham is always of the best, and in the Winter months when the days close in early the extra half-hour gained by an early start is much appreciated by both the King and his guests.—London *Tatler.*

More Than 900 Missing Watches Advertised in New York in a Year.

IT has always been a fad with me," said a New Yorker, "to glance over, every day, the 'Lost and Found' and 'Reward' columns in the papers. A year ago, Jan. 1, 1902, I began to keep a daily record, and I continued it till Jan., 1903, of things lost and found.

"To accomplish my purpose without too much labor, I got a scrapbook, and every evening I carefully pasted in it the advertisements that had appeared that morning. Alongside of them I classified the lost goods, so that at the end of the year I could make up a grand total.

"After three months I found that my classifications had become so numerous that I had better eliminate a large number and bring the record down to precious stones, jewelry and valuable parcels, as I discovered that the things advertised were chiefly in that line. However, being a great admirer of dogs, I let the dog have a column of his own.

"Here is the result, classified from my record for the year just closed:

Watches	915	Diamond pins	710
Lockets	224	Diamond studs	175
Earrings	168	Chains and fobs	458
Bracelets	485	Pocketbooks	873
Brooches	376	Necklaces	64
Diamond rings	312		

"Among other valuable things lost were a bag 'containing slippers,' a diamond garter buckle, a gray kitten 'with a yellow spot on his head,' a dog that answered to the name of 'Whiskey,' and a diamond-studded watch, 'lost at a wedding' in a church.

"Judging from the wording of most of the advertisements, the articles that were lost or stolen went their mysterious ways in the evening, a large proportion of them in the Winter months.

"The 'found' articles were few and far between, about 1 to 200 to the 'lost.' Strange to say, one of the found articles which the honest finder announced that he would deliver without reward was an umbrella, and he declared, too, that it was a handsome one.

"In view of the small number of the 'found' it seems a mystery what became of the great number of the 'lost.' It may be that many of them were quietly returned to the people who lost them, and said, in nine cases out of 10, that they would pay a liberal reward and ask no questions. The chances are, however, that most of them were, the very day after they were lost, deposited in the pawnshops.

"One thing is certain from a study of the circumstances, briefly specified by the losers, under which the goods were lost, and that is that the average New Yorker who has expensive jewelry is a downright careless individual."—New York *Sun.*

An astronomical clock, over 100 years old, and said to be valued at $1,000, was recently repaired by Samuel W. Allen, Port Chester, N. Y. The top of the clock is a panoramic arrangement, showing a ship at sea, moving backward and forward as if affected by the waves. Over the ship an angel is seen hovering, as though protecting it.

Use of the Watch as a Compass.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY.)

TO find the meridian of a place, it is sufficient to trace the shadow of a post set in the ground in an exactly vertical position one or two hours before noon, and again one or two hours after noon, and to bisect the angle thus formed. This operation can be more conveniently performed by a watch.

The sun makes the apparent revolution of the earth in 24 hours; the small hand of a watch makes the revolution of the dial in 12 hours, so that the small hand goes twice as fast as the sun in its apparent movement. When the small hand indicates three o'clock, it will have passed over a fourth part of the dial, while the sun will have made only one-eighth of its daily course.

If the watch were divided into 24 hours instead of 12, the hour-hand would pass over in one hour the same part of the circle as the sun passes over in the celestial vault. There would then be a perfect correlation in their rates of going. In this case, if the watch were placed in such a way that the shadow of the small hand would be exactly covered by the hand itself, it would result that the noon-midnight line would be in the plane of the meridian, and, consequently, would indicate the direction of the meridian. But as the small hand goes twice as fast as the apparent movement of the sun, the result is that it is not the 12.06 o'clock line which indicates the meridian, but the bisection of the angle formed by this line with the small hand.

The divisions of the watch will always allow of determining the bisecting line. If the observation is made at 3:20 P. M., the small hand will have gone beyond three o'clock by nearly two divisions. In this case the small hand being considered as exactly on the 17th minute, the half will be taken, and we will have the bisecting line which will be determined by the line through 8½ m. and 38½ m.

Too much importance must not be attached to this method of determining the meridian, and the conclusion formed that one can thus measure the angle which a line makes with the meridian. All watches are adjusted for mean time. It will be necessary, for the complete success of the operation, after having ascertained the correctness of the watch, to take account of the equation of the time and to increase or diminish the bisecting line by the half of the equation. This can be considered as a method of ascertaining the direction of the north at any hour of the day when the sun shines. It will be useful for troops on the march, or for lost hunters.

The maximum error that may be committed concerning the equation of the time is not very great; it cannot exceed 16 m. more or less. The small hand has, during these 16 m., passed over a division and one-third of the second division; consequently, under the most unfavorable circumstances, the real bisecting line would differ from the one obtained, only 8 m., which represents two-thirds of a division of the small hand. The approximation is, therefore, sufficient for the purpose proposed.

Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

QUESTION No. 375.—**American Ruby.**—*Please inform me through your very valuable* CIRCULAR-WEEKLY, *what the enclosed natural mineral is.* *T. B. S.*

ANSWER:—Mr. Fox, of Fox & Co., the well-known lapidary, of 22 John St., says that it is an American garnet, generally called American ruby.

QUESTION No. 376.—**Plaster-of-paris Figures.**—*How can I repair broken plaster-of-paris figures?* *S. L.*

ANSWER:—For this purpose, make a paste by dissolving pieces of celluloid in ether. When dissolved, pour off the ether, and a viscous sediment will remain. This sediment, or paste, must be applied immediately, as it will harden very soon. The contact of water will not loosen the pasting.

QUESTION No. 377.—**Gilding by Dipping Process.**—*Can you give me a method of making a cheap gilding without battery; some kind of a dipping process would suit me best?* *C. S.*

ANSWER:—Dissolve in one litre of distilled water, and in the following order: 80 grams of crystallized pyrophosphate of soda, 8 grams hydrocyanic acid (12 percentage) and 2 grams of crystallized chloride of gold. Bring the mixture to a boiling heat. The articles to be gilded, when previously thoroughly cleaned and suspended to a copper wire, are simply dipped in this boiling solution, which will give the desired gilding.

QUESTION No. 378.—**Rubber Goods.**—*How can rubber articles be preserved in a good flexible condition?* *T. K.*

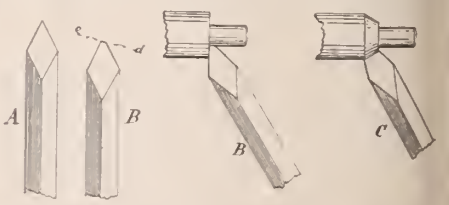
ANSWER:—*Das Allgemeine Journal der Uhrmacher Kunst* advises keeping the rubber articles for a day or two in a moderate solution of alum and water, which will return suppleness and flexibility to articles which have become hard or brittle. It is well, in general, to keep rubber goods in clean water, or to wash them often, in order that they will remain soft. *Neuste Erfindungen u. Erfahrungen* says that the hardening and brittleness of rubber articles can be prevented by laying them for a while in a three per cent. solution of carbolic acid. In this way, rubber hoses, rubber corks, etc., have been kept flexible for years.

QUESTION No. 379.—**Repairing Meerschaum.**—*Can you let me have a receipt for repairing meerschaum which the nicotine will not affect? I have tried several receipts, but they give no satisfaction.* *S. D. L.*

ANSWER:—To mend or make meerschaum pipes, make the following composition: Dissolve caseine in silicate of soda, and stir into the cement fine calcined magnesia. By the addition of meerschaum powder a close imitation of meerschaum in the mass can be made. Having put together and cemented the broken pieces, keep them in place till the cement dries. Another receipt which is much simpler, but which is probably not as good as the foregoing, consists in spreading pulverized shellac upon the broken parts, then holding them over a charcoal fire and pressing the pieces together. This is a receipt taken from an old book on meerschaum preparing and repairing. It might do to repair a pipe stem, but if the bowl has to be repaired, the heat of the first smoke would certainly undo the repairing again.

QUESTION No. 380.—**Mucilage.**—*How can I keep mucilage from drying up before half the contents of the bottle are used? I have heard of such a receipt, but do not remember it.* *T. K.*

ANSWER:—Only a small part of the gum-arabic solution necessary in every store, office, etc., is used up for pasting. Most of it dries up or spoils in some other way. The cause of this is the bacteria of all kinds, which are always present in the air. For these, the mucilage is an excellent ground for subsistence, but the growing of the bacteria destroys the adhesive power of the gum. This may be prevented by a sure and simple remedy. All that is necessary is to put a small piece of camphor in the bottle. Camphor vapors are thereby generated over the mucilage, and these vapors kill all the bacterial germs which may have entered the bottle. Since neither the vapors nor the solid piece of camphor injure the gum in any way, the latter maintains its adhesiveness to the last.



QUESTION No. 381.—**Glass.**—*Is there any cement or glue with which to mend broken or cracked glass? I would be pleased if you could give any information regarding same.* *C. C. O.*

ANSWER:—The mending of glass is, in most cases, much the same as that of broken crockery or porcelain. "The cement made from mastic or mastic combined with sturgeon's bladder, or, generally, silicate with whiting, is the proper adhesive," says Leland. A silicate of soda is simply liquid glass, and can be employed to fill spaces or to mend glass, but, owing to its sticky nature, it is hard to manage. It can be handled best by first preparing a layer of soft paper, on which successive coats of silicate are laid. When dry, the paper can be washed away. There are three kinds of soluble glass: (1) the soluble potash glass, 45 silex, 3 charcoal, 34 carb. potass.; (2) soda glass, 100 pts. quartz, 60 cal. sulp. soda, 15 charcoal; (3) double soluble glass, 100 quartz, 22 cal. soda, 28 carb. potass., 6 wood coal. Water glass combines well with any "indifferent" powder, such as powdered glass, to make a strong cement. To powder glass, heat it red hot, drop it into cold water, and pulverize it. It will become as fine as flour, and, in this state, combines with gum-arabic or glue, or gums, to make a powerful glass mender. Mixed with powdered glass, oxide of zinc or whiting, powdered marble, calcined bone or plaster of paris, water glass can be worked like putty. Mixed with colors, it is used for stereochroine painting, a kind of fresco. Missing pieces of glass, such as leaves from a chandelier, can be easily replaced with water-glass, and all cracks or defects glazed over with it. A great deal of glass mending and restoring can be effected by means of the blow-pipe and spirit lamp or gas-flame.

Difficult as this may sound, it is not only an easy, but also a very curious and interesting occupation. The following are receipts for repairing glass. Take finest powdered glass, best mastic, with equal parts of white resin and distilled turpentine, and melt all well together. To use, gradually warm it and then apply. (2) Quicklime and white of an egg intimately rubbed into one another on a flat surface, make a good cement for ordinary glass or pottery. (3) The cement of gum-arabic is much stronger when made as follows: Take gum-arabic and dissolve it in acetic acid (vinegar) instead of water. It must be melted in a hot place, as it will in that case be much better. The finest quality of sheet-gelatine makes a transparent glue, invaluable where color is to be avoided. To mend a cracked glass bottle, heat the bottle, pressing in the cork, till the hot air within expands the cracks, which must be at once filled with the liquid glass. Then, as the water-glass is driven in by the pressure of the outer air, the cracks are closed with the gradual cooling of the bottle.

QUESTION No. 382.—**Miscellaneous.**—*I have a lot of more questions to ask, and will be grateful for a correct answer.* (1) *Can silver rings be cast in brass moulds; and how can that be done.* (2) *I studied out a way to take a watch apart without taking any of the screws out of their place, and sent the drawing to the editor in 1901. He told me if I would send him the drawing that he would tell me whether it would pay to patent it. I sent for a book on staff making and pivoting, by Eugene E. Holl, at the same time, but did not receive any information. I received the book a long time after that. Any information that you can give me will greatly oblige.* (3) *Show me the best make of gravers, with which to turn balance staffs, and who is the maker of same.* (4) *Can I make charcoal to melt gold with, or should it be purchased? If it must be bought, kindly tell me where to buy it.* *J. W. H.*

ANSWER:—(1) We answered this question under No. 369. (2) We have never seen nor heard anything of your invention, and consequently are unable to give any information about it. We have not heard that any such device has been patented, consequently you may still be able to obtain a patent. (3) Lozenge and square-shaped gravers are used for that purpose. They are sharpened as shown in the illustration. From the answer to question 309, you may learn how to handle them. Good gravers are made by Vautier and Grobet. (4) We think you could make this charcoal, but it is better to buy it. The charcoal which is used for melting gold alloy should be exceedingly pure and free from any kind of grit or coke dust. It can be bought from jewelry material dealers, or from wholesale druggists.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

NEW PATTERNS IN CUT GLASS.

A LARGE line of new cut glass for this season has just been put on display by the J. D. Bergen Co., at their salesrooms, 38 Murray St., New York, where samples of all the cuttings of the concern may now be seen. The company, during the past few months, has been more enterprising than ever in trying to produce new shapes and designs, and in this has been very successful. One of the most distinctive features of the present stock consists of a new lines of vases, different, both in shape and in general cutting, from anything heretofore placed on the market. They have a base somewhat similar to the base of a water bottle, while the tops are exceedingly broad and flaring, many of them measuring as much as 10 inches in diameter. They are ornamented with a prism and sunbeam cutting, and the two are combined in such a way as to give a very artistic effect. Another feature of the new line is a two-piece rose center, which has a cutting somewhat similar to the new vases. Other new cuttings can be seen in ice-cream trays, comports and celery dishes. These pieces show a tendency to square forms and outlines, while the cuttings are extremely fine and ornamental. One particular variety of ice-cream platter has the figures 1903 cut fantastically but clearly on the bottom of each piece.

*

NOVELTIES IN GLASS, BRASS AND BRONZE.

THE largest and most complete line of foreign art goods ever carried by Geo. Borgfeldt & Co. has just been opened in the art departments of their building, 3d, 4th and Wooster Sts., New York. The lines embrace fine bronze, hammered copper, and metal goods; high-art pottery, Austrian, French and German china; Venetian goods, and marble busts and figures; clocks, decorated glass and bric-à-brac of all descriptions. Many of the samples were obtained with the view to catering to the finest jewelers of the country, and jewelry buyers will find the assortment replete with samples of all the articles demanded by buyers of most exclusive pieces. Among the samples mentioned is a full line of whiskey, claret and cordial sets, which consists of a wooden tray mounted in metal, silver, brass, copper and Kayser Zinn, and cordial pitcher of glass, mounted with the same material, and accompanied by six or 12 tumblers in similar ornamentation. Another line, now popular, consists of a variety of peculiar shaped pieces of polished brass, enameled in colors. The colors are red, green, blue and brown, and are worked on the surfaces of the pieces, in curious antique designs, set off in relief. These decorations appear on a background, consisting of a broad oxidized border extending around the ware in various directions. The electroliers carried by the concern are in more varied shapes and designs than ever before, many of them being fashioned after the style of insects, animals, *art nouveau* figures, and other odd shapes.

*

NEW LAMPS AND LAMP SHADES.

SINCE their removal from Church and Warren Sts. to 46 Park Place, New York, S. B. & C. B. Clark, manufacturers' agents, have added many new lines to their stock of samples, and are better prepared than ever to sell to the jewelry trade. Among the new goods added is a complete line of glass and metal mounted lamps, manufactured by J. D. Boyd & Co., Trenton, N. J. These lamps come in all the newest shapes, and are decorated with up-to-date designs, in colors, some of which are incrusted and some painted. With this is the new line of art glass lamp shades, mounted in Japanese bronze, copper and metal, in Japanese and French designs, and studded with knobs of ruby and emerald colored glass, edged with a beaded fringe; these shades are particularly rich in appearance, and can be fitted to any lamp. Many of the designs made by the metal on the art glass are extremely grotesque and striking. The general shape of the shades is that of a polygon, or a flaring cone. Where the polygon shape occurs, the panels of the glass composing the sides of the polygon are ornamented with huge bugs, insects and grotesque figures. In many cases the metal completely covers the glass, and is cut away only in small figures on each glass panel. These figures represent stars, crescents and other objects.

THE RAMBLER.

When the case of P. J. Whelan, against the Jewelers and Trademen's Co., was called before Judge Edwards, in Common Pleas Court No. 1, in Scranton, Pa., recently, it was discovered that the action had not been instituted within the six months' time limit specified in the policy; therefore, a non-suit was granted, and also a rule to show cause why it should not be stricken off the calendar. Whalen sought to recover $300 life insurance from the company.

English Porcelain and Pottery.

THIS was the title of a paper read on April 9, at the Museum, Portsmouth, before the members of the Municipal Association of St. Thomas's Ward, by W. H. Saunders, the curator. Mr. Saunders drew upon the resources of the Museum for the purpose of illustrating his paper, and very wisely avoided technicalities as much as possible.

The term pottery, said the lecturer, is supposed to be derived from the word *Poterion*, the drinking cup of the Greeks, and the art of pottery making in China is said to date back as far as 2599 B. C. Porcelain is supposed to be derived from *Porcelana*, an obscure Portuguese word, while what is known as "hard porcelain" is said to have been invented in China about 185 B. C. During the Middle Ages, Staffordshire was found to be rich in the varied clays suitable to the potter's art and the making of tiles and pipkins, and the early makers of the country were called potmakers. Delft ware was imported at an early date, while the first precise information relative to porcelain was obtained by that enterprising old traveler, Marco Polo; this ware being brought back by him after his travels in China. After some interesting information concerning the early English ware, the lecturer told of Josiah Wedgwood, who did so much to advance the art in this country, and some of whose productions so pleased Queen Charlotte that the ware was called Queen's ware. Up to this time the elegant productions of the Continent were for the rich alone, but Wedgwood changed all this, and the reasonable price of his articles caused them to be so much sought after abroad, that it was said that a traveler could journey from Calais to St. Petersburg, and at every town dine off Wedgwood. Wedgwood's success was the result of experiments and trials, conducted with persevering industry on scientific principles, and it might be truly said of him that he called into existence the spirit of Greek art. His productions were made of English clay, by English workmen, without State aid or subsidy, without foreign inspiration, and, as his epitaph recorded, he converted a rude and inconsiderable manufacture into an elegant art and important part of national commerce. Mr. Saunders having told how a gentleman named Felix Joseph interested himself in the Portsmouth Museum, then destitute of samples of ware, went on to deal with punch-bowls, and told how the largest amount of punch was said to have been brewed in 1649 by Admiral Russell, then in command of the Mediterranean Fleet at Alicant. This gigantic brewing consisted of four hogsheads of brandy, one pipe of Malaga, 20 gallons of limejuice, 13 hundredweight of sugar, five pounds of nutmegs, 3,000 toasted biscuits and eight hogsheads of water. It was served in a great marble fountain, while in a small boat, built for the purpose, a ship's boy rowed around to assist in filling the cups for 3,000 people. In the "good old days" punch-bowls were used as baptismal fonts. —*Pottery Gazette.*

Jos. Noterman & Co., Cincinnati, O., are finishing the largest and most attractive line of mountings which they have ever shown. Their travelers will, on their Spring trip, in addition to these mountings, carry loose and mounted diamonds.

The New York Credit Men's Association held an interesting banquet recently, at the Drug Club, New York, at which William A. Pendergast, secretary of the National Association of Credit Men's explained the work that had been done on behalf of the Ray Bankruptcy Bill and its amendments.

THE JEWELERS' CIRCULAR

THE HOROLOGICAL REVIEW,

WITH WHICH ARE CONSOLIDATED THE JEWELERS' WEEKLY. THE JEWELERS REVIEW

Copyright 1903 by THE JEWELERS' CIRCULAR PUB. CO.

Corbin Building, 11 John St., Corner Broadway, New York.

Entered as second-class matter at the New York, N. Y., Post Office.

35TH YEAR. NEW YORK AND CHICAGO, WEDNESDAY, FEB. 18, 1903. VOL. XLVI. No. 3.

JEWELED CROWNS MADE FROM VOTIVE OFFERINGS.

TWO noteworthy examples of the goldsmith's art to which particular interest attaches because of the ingenuity displayed in fashioning brilliant ecclesiastical pieces from odds and ends of old family jewelry, plate and heirlooms, sentimentally interesting, but intrinsically of little value, were shown in the window of Z. J. Pequignot, 1322 Chestnut St., Philadelphia, Pa., recently. They attracted quite as much attention from the trade as from the general public, and served to emphasize the fact that the Quaker City trade has every reason to be proud of the attainments of its goldsmiths.

These two pieces, which are illustrated herewith, are solid 14-karat gold crowns, encrusted with precious and semi-precious stones, and were placed on the shrine of Our Lady of Victory, in St. Peter Claver's Catholic Church, at 12th and Lombard Sts., Philadelphia, on the occasion of the dedication and blessing of the new shrine, at special services held by Archbishop Ryan, Jan. 25.

The jewelry and money for the crowns was donated by parishioners of the church and wealthy Catholics throughout the city. It was the custom of the faithful, in making novenas and pilgrimages to the church, to leave at the foot of the statue of Our Lady of Victory, either money or jewelry, and sometimes both. This had been going on for several years, until about $5,000 in money, jewelry and precious stones had been collected.

Then the money and jewelry was turned over by the rector of the church, Father C.

(Continued on page 11.)

ECCLESIASTICAL GOLD CROWNS STUDDED WITH GEMS, MADE BY PHILADELPHIA JEWELER.

What is More Acceptable to a Lady

Than a handsome Jewel Case? And the Alvin patterns offer a wide variety from which to choose.

We make them in three sizes and three shapes, Round, Oval and Heart Shaped. They are velvet lined and finished in the most handsome manner. The one illustrated is one of our new Patterns—never shown before.

We also have a large line of Cologne Bottles and Atomizers and Toilet Articles to go with the Jewel Cases and complete the ladies' dressing table.

Alvin Manufacturing Company,

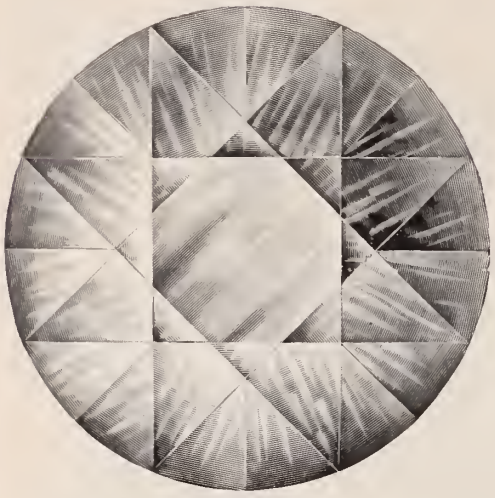
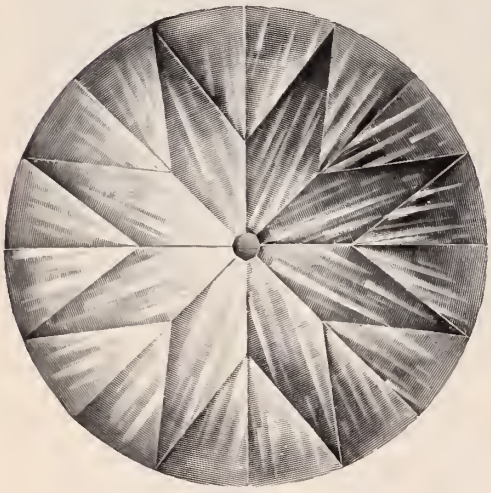
NEW YORK.

Right to the Second!

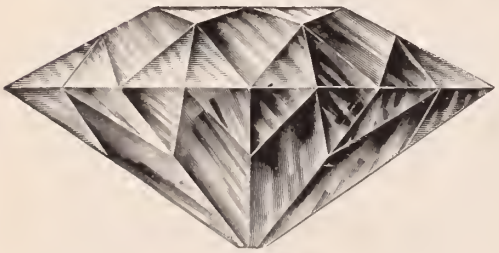


"My watch keeps perfect time, because it is kept free from dust."



This is the universal verdict of all who carry Fahys Screw Bezel Cases, which are absolutely dust and moisture proof, such an essential feature in a watch case to those whose business exposes them to dust and moisture. But to be absolutely dust proof a watch case must not only have the back and bezel screwed on but the pendant should have a dust proof cap or covering.

Have you ever stopped to think how many pleased customers you could make in your town by recommending a Fahys Screw Bezel Case?



These cases protect the movement, the name of Fahys protects the buyer.

Cut shows top of diamond with properly laid facets.

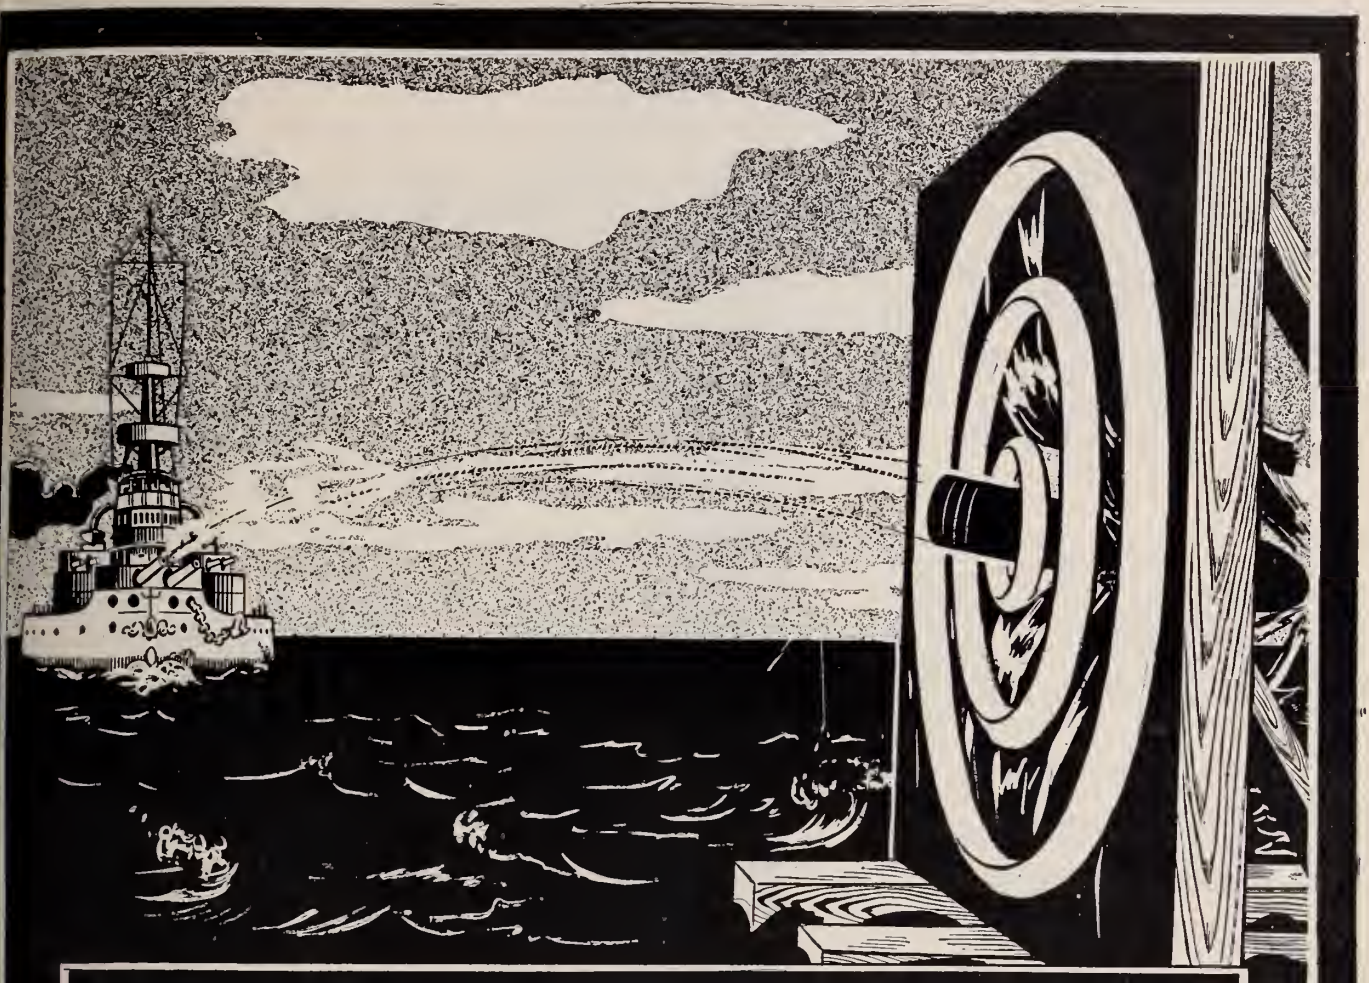
Cut shows bottom of diamond with properly laid facets.

Cut shows side of diamond with properly laid facets and properly shaped diamond.

DIAMOND CUTTING

Brilliancy, brightness or snappiness depends on the cutting of the diamond.

It is light entering from all sides of the stone; the facets deflect it, and it passes out the top of the stone.



If the facets are not properly laid, and the stone not the correct thickness (in relation to the spread) the rays of light do not concentrate and leave the top of the stone at the same angle, and the diamond is not as bright as it should be.

For fuller particulars regarding correct cutting and dimensions of diamonds see our leaflet dated Feb., 1903, which we have mailed. If one has not reached you, send us word.

The Strength of a Chain

FOSTER'S STRONG LINKS.

LINK No. II.—Finish.

F&B TRADE MARK REGISTERED

In many years of manufacturing vest chains we have learned one thing well. That one thing is how to obtain the maximum of finish with the minimum of loss of gold.

Our 1-20 chain starts 1-20 and ends 1-20. Our 1-10 chain starts 1-10 and ends 1-10. The exact proportions are maintained throughout.

No loss of gold is suffered in the process of manufacture or finishing, and upon the last link of every 1-10 chain we stamp it 1-10, and we mean just that. Every 1-10 gold chain is soldered with gold solder.

You can place these chains before your customers with absolute confidence. They will bring you satisfaction and other orders. Send for our catalogue.

Jeweled Crowns Made From Votive Offerings.

(*Continued from page* 1.)

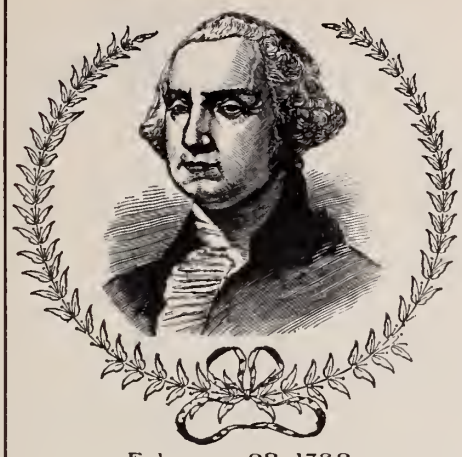
J. Plunkett, to Z. J. Pequignot, who is also a prominent Catholic, and who, having on previous occasions designed ecclesiastical pieces, was entrusted with the work of fashioning the old antique jewelry into beautiful golden and jeweled crowns; and how well he succeeded in a measure is proved by the accompanying illustrations.

These heavy gold crowns were made without the use of a particle of solder, each part being separate and connected by minute screws, tiny bolts and nuts, all of solid gold. All the scrolls are also separate pieces.

The bands of the crowns are set with two rows of fine large white stones, creating a brilliant effect. In the center of each band is a large topaz and amethysts, and the scroll work is encrusted with precious stones of every description. The crosses surmounting each crown are studded with diamonds, all of which were contributed by the parishioners. The center of each cross contains an amethyst.

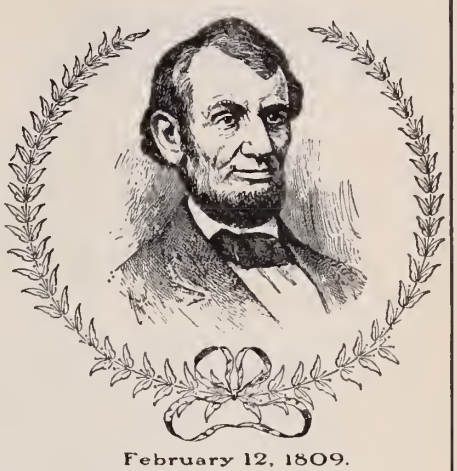
Altogether, the effect of the crowns is very brilliant, particularly under the soft rays from hundreds of candles, lighted on the altar of the quaint old Catholic church.

Hearing on Massachusetts Bill To Compel Jewelers To Report Purchases of Old Gold and Silver.



BOSTON, Mass., Feb. 12.—A hearing of interest to local jewelers was held at the State House yesterday, on the petition of John W. Blaney, of Lynn, and others, that a law be passed to compel reports by jewelers and dealers in old gold and silver, of any purchase they may make of second-hand jewelry, etc., and that such articles be retained upon the premises for at least one week after the purchase or receipt thereof.

Mr. Blaney put on Chief Inspector Watts, of the Boston Bureau of Criminal Investigation, who stated that after several attempts to find stolen jewelry, it was discovered on the premises of a jeweler, where, in one case, valuable stick pins were in the window, marked "for sale." He said the police often find that stolen articles have been sold to jewelers, gold beaters, refiners or dealers in dental supplies, where they have been melted up or worked over. As a consequence, the Boston police department decided that jewelers come under the ordinance relative to pawnbrokers or junk dealers, and a notice was issued that they must secure licenses. Since that time the ordinance has proved of great assistance in recovering property.



"Many jewelers hold out inducements," said Chief Watts, "to people to bring in their old gold and silver, by placing placards in their window, 'Old Gold and Silver Bought,' and in other ways." Certain jewelers denied that they come under the junk dealers' ordinance, and four test cases are now pending in the courts.

D. L. Smith appeared for the remonstrants, and asked that the hearing remain open until he could produce witnesses.

B. B. Case, Comanche, Ind. T., recently suffered a fire loss.

February 12, 1809.

Character and Honesty Bring Their Own Reward.

The above truism is as applicable to business concerns as to men. Character, honesty and achievement are as important factors in *our* business as they were in the lives of the great men whom our country delights to honor this month. We, like they, have the reward of appreciation from those whom we have faithfully served.

The work of preparation for another great year is now over and our business moves forward at a steady and increasing pace. Quality—ever our chief distinction—is more predominant than ever before. Never have we been so singularly favored in the matter of new and exclusive stocks of **WATCHES** and **DIAMONDS**. Through our logical business system, the vastness of our stock and long experience we can supply these goods at attractive prices.

We are now ready to replenish your stocks with the all-around satisfaction for which our house is noted.

New York, N. Y.

300,000

A Review of United States Commerce, for the Fiscal Year 1901-2.

(Continued from issue of Feb. 11.)

Glasses for Optical Use.—Only four contributions were received of glass plates or disks for optical use, that is, those that were imported in a rough-cut and unwrought condition. Germany was the leader with $80,437 to its credit, France second with $55,874, the United Kingdom, $54,727, and a very small contribution from Belgium valued at $51.

Glass Enamel.—Five importations were received of white glass enamel for watch and clock dials, the largest in value, $5,228, being from France, $1,336 from the United Kingdom, $376 from Germany, and $85 from Austria-Hungary.

Gold and Silver Sweepings.—Only $9 worth of gold and silver sweepings were imported from Europe, and they came from Germany; the remainder was from North America: Nova Scotia, $1,055; Quebec, Ontario and Manitoba, $45,860; British Columbia, $330, and Mexico, $20.

Goldbeaters' Molds and Skins.—Austria-Hungary, $56; France, $72; Germany, $6,486; United Kingdom, $36,968.

Ivory, Animal.—Belgium, 125,926 pounds at $224,122; France, 759 pounds at $1,361; Germany, 48,276 pounds at $120,280; United Kingdom, 104,887 pounds at $242,915; British Columbia, 12,921 pounds at $5,600, and from Aden, 27,408 pounds at $68,405.

Jet.—Only three sources of supply: Austria-Hungary, $1,587; France, $452; Germany, $469.

Diamonds, Uncut.—The importations of diamonds, uncut, including miners', glaziers' and engravers', were valued at $6,154,853. Of this value, $5,498,992 were shipped through the United Kingdom. Netherlands, $543,241; France, $61,167; Belgium, $10,355; Germany, $2,161, and Switzerland, $203, making a total of $6,116,119 from European countries. Of the remainder, $1,050 came from British Columbia, $206 from Mexico, $20 from Brazil, and $37,458 from British Guiana.

Diamonds, Cut.—The total value of cut diamonds imported during the year was $12,732,670: Austria-Hungary, $2,856; Belgium, $1,247,877; France, $2,490,571; Germany, $122,068; Netherlands, $5,994,209; Switzerland, $1,974, and the United Kingdom, $2,865,724; Quebec, Ontario, etc., $7,379; Hong Kong, $12.

Other Precious Stones, Uncut.—France, $11,522; Germany, $5,747; Switzerland, $4,090; United Kingdom, $35,068; Miquelon, $16; Chinese Empire, $11; British East Indies, $329.

Precious Stones, Cut, Unset.—Total value, $4,403,919:

Austria-Hungary	$18,703
Belgium	5,283
France	1,979,844

From the above it will be seen at a glance how widely American clocks are distributed. One of the noteworthy features is that the preponderance of all shipments was made to some part of the British possessions.

(To be Continued.)

Consul Johnson Reports on the Silver Trade at Santos, Brazil.

WASHINGTON, D. C., Feb. 11.—After many inquiries and a trip to Sao Paulo, Consul Johnson, at Santos, Brazil, informs the State Department that he finds that a large quantity of silver plated ware is sold in Santos, Sao Paulo, and other towns and cities in his consular district, most of which is manufactured in France, Germany and England, have built up some trade, but the trade of the United States is quite limited. Not a great deal of solid silverware is sold in Brazil. Consul Johnson found it rather difficult to get a line of the retail prices on plated goods, but after talking with a number of men in the trade, he says it is safe to say that they get at least three times as much for the same articles in Santos as they do in the United States.

The jewelers and some of the china merchants carry silver-plated ware, and some of the jewelers carry solid silverware. There is nothing of the kind manufactured there, and in Consul Johnson's opinion, a plant devoted to this branch of manufacture would pay well there. On most of the silver-plated knives and forks seen in Santos, the name of a prominent French manufacturer appears. Some of the Sao Paulo merchants claim that the designs gotten up in Paris are greatly preferred to any others, and they also claim that Paris sells its goods cheaper.

Our manufacturers should note the fact that France and Germany are working hard for the Brazilian trade, by sending traveling salesmen with samples through that country, but Consul Johnson has not seen or heard of any from the United States. He saw two traveling salesmen a short time ago—both from Germany. Both carried a number of trunks and cases of samples, and claimed to be doing a good business. Consul Johnson has no doubt but that a good trade could be worked up there if good salesmen, with a nice line of samples, were sent out. Proper packing and wrapping is very essential, for the salt atmosphere affects most all kinds of goods if not properly wrapped and packed. Brazil is a good country to do business in. The merchants get enormous profits on their goods. Santos and the surrounding country is very healthy. The principal firms in that city are Wolff & Co. (German), S. Daniell & Co. (French), Eugenio de Oliveira (Brazilian) and A. Klinkert & Co. (German). A great deal of advertising matter is being distributed through the country from the United States, but the Brazilians are more or less suspicious of the "Yankees," and prefer seeing the goods.

W. L. Knight has removed his stock of jewelry from Grove, Ind. T., to Tahlequah, Ind. T.

New Officers Elected.

Annual Meeting of the Philadelphia Jewelers' Club Largely Attended.

PHILADELPHIA, Pa., Feb. 15.—The annual meeting and election of officers of the Philadelphia Jewelers' Club was held last night at the clubhouse, 1225 Chestnut St. It was one of the best attended meetings in the history of the club, and considerable enthusiasm prevailed during the balloting.

The election resulted as follows: George W. Read, of Wm. B. Kerr & Co., New York, president; "Mat." F. Stratton, vice-president; Wm. H. Long, treasurer, and W. S. Quinn, secretary. The governors, consisting of a board of five members, are: Archie Rutherford, New York, and J. Warner Hutchins, T. J. Mooney, John Lehman and Joseph E. Cadwalader, of Philadelphia.

Although the only candidate for president, a heavy vote was polled for Mr. Read. Out of 200 possible votes, comprising the entire membership of the club, he received 175. Although representing a New York house, Mr. Read is a Philadelphian and resides at Oak Lane. M. F. Stratton defeated Newton Eltinge for the vice-presidency. Wm. H. Long and W. S. Quinn were unopposed for their respective offices. There were 15 nominees for the board of governors and the balloting for them was very spirited.

The report of the retiring treasurer, Wm. F. Parry, Jr., showed the club to be in excellent financial condition.

Plans for the annual banquet were informally discussed, but the only point settled was the date and place, it being decided to give the dinner in Horticultural Hall, Wednesday evening, March 11.

Resolution to Present Battleship Pennsylvania with Silver Service, Introduced in Pennsylvania Legislature.

HARRISBURG, Pa., Feb. 11.—Senator Grady, of Philadelphia, has introduced a joint resolution in the State Senate, creating a commission, to consist of Gov. Pennypacker and Senators Quay and Penrose, to select an appropriate silver service, to be presented to the new battleship *Pennsylvania,* soon to be launched at the Cramp ship yards, in Philadelphia, and appropriating $25,000 to defray the expenses of the commission, or so much of the same as may be necessary. The resolutions also provide for the appointment of a committee consisting of five members of the Senate and 10 members of the House of Representatives, to arrange for and participate in the presentation exercises.

The resolution was immediately acted upon in committee, and favorably reported; it will encounter no opposition in either house. It is proposed to make the presentation of the silver service and launching a memorable occasion in the history of Pennsylvania.

Death of Joseph C. Carson.

LIVINGSTON, Ky., Feb. 11.—Joseph C. Carson, who died in this town last week, was a jeweler, and was quite well known in this section.

His death, which occurred at his store, was sudden, although he had been suffering some time from a complication of diseases. The deceased was 45 years old. The interment took place at Crab Orchard.

The stock of W. H. Nelson, Afton, Ia., has been closed out.

Death of John H. Thorn.

ALBANY, N. Y., Feb. 16.—John H. Thorn, son of the late Robert P. Thorn, whose death a short time ago cut short one of the most active and successful careers in the jewelry trade in this part of the State, died at his home, on Willett St., Wednesday night. Mr. Thorn, although ill for about a year, died suddenly. He attended closely to his business, although in bad health, until very recently, and his death came as a great shock to his family and friends. To his

THE LATE JOHN H. THORN.

aged mother, who has hardly recovered from the loss of his father, and to his sorrow-stricken wife and family, the warm sympathy of their many friends is extended.

Mr. Thorn was a business man of exceptional ability, and the honorable methods that always characterized his dealings, placed the firm of R. P. Thorn & Sons among the most permanent business houses in this city. Of a genial disposition, possessing a nature firm, but gentle, he drew about him scores of friends who will mourn his demise. He was a charter member and a director of the Central Young Men's Christian Association, a prominent member of the First Lutheran Church and the Christian Endeavor Society, and an active member and director of the Albany Chamber of Commerce. Mr. Thorn, during his life, took an active part in all matters pertaining to the welfare of his native city, and worked zealously for the betterment of the Y. M. C. A. and the church of which he was a member.

Mr. Thorn was born in this city, and received his education in the local public schools. After graduation, he entered the employment of his father, whose place of business was then on Beaver St. Years later, when this business concern was located on Green St., Mr. Thorn, with another brother, who died about eight years ago, was admitted as a member of the firm. John H. Thorn displayed considerable business ability, and was always on the alert for the elevation and advancement of the interests of the firm. The firm later moved to State St., where it was located for several years. The growth of the business became so great, that some time later the firm moved to its present quarters, on N. Pearl St. The deceased looked after the detail work at the store for the past three or four years. At the death of his father, he assumed the whole responsibility of the business.

Mr. Thorn is survived by his widow, his mother and two sons, J. H. Thorn, Jr., and C. G. Thorn. The church and societies, of which Mr. Thorn was a member, have held special meetings, and adopted appropriate resolutions, expressing their appreciation of the deceased and their sympathy for his family.

The funeral took place at 2.30 P. M. Saturday from his late home, 100 Willett St. The services were conducted by the Rev. Charles W. Heisler, pastor of the First Lutheran Church, and the Rev. Amber H. Lucas, pastor of the Trinity M. E. Church. The pall-bearers were Henry Hoffman, Henry Streibert, David Caswell, Frank McNeill, William B. Jones and Edward Wentworth. The burial was in the rural cemetery.

Thieves Loot Another Jewelry Store at Latrobe, Pa.

LATROBE, Pa., Feb. 13.—Latrobe was the scene of another daring robbery last night, when thieves visited the jewelry and clothing store of Levinson Bros., and carried off jewelry and valuables worth $500. Besides several dozen watches which were taken, a number of timepieces were smashed with a hammer and thrown upon the floor.

Entrance was gained to the store by breaking the glass in the front door. It is thought this was done while a freight train was passing the building.

The robbery last night adds another act to the long criminal record in this city. Several jewelry stores have been entered within the past few months, but so far the perpetrators have not been captured.

Geo. B. Deyen, Dyersville, Ia., was married lately to Miss Margaret Grawe.

Annual Meeting and Dinner of the Boston Jewelers' Club.

BOSTON, Mass., Feb. 11.—At the Hotel Essex, last evening, was held the annual meeting and dinner of the Boston Jewelers' Club, in whose membership is included many of the most prominent men in the trade. The business meeting began at six o'clock, and dinner was served an hour later.

The election of officers for the ensuing year resulted in the folowing being chosen: President, William A. Thompson; vice-president, E. A. Bigelow, of the E. Howard Clock Co.; secretary and treasurer, Charles W. Lawton, of Harris & Lawton; executive committee, A. Barker, L. S. Stowe and George W. Hutchinson.

WILLIAM A. THOMPSON, PRESIDENT-ELECT.

These present at the dinner included: William A. Thompson; James S. Blake, of Kettell & Blake; Henry W. Patterson, of Smith, Patterson & Co.; John B. Humphrey; Woodbury Melcher; Charles O. Lawton, of Harris & Lawton; F. R. Hollister; George W. Hutchison; L. S. Stowe, Mr. Schofield and Mr. Porter.

It is almost needless to state that the dinner was most thoroughly enjoyed by the guests, as the Boston Jewelers' Club is composed of men who are accustomed to the good things of this life, and intend to have them when possible.

Sioux Falls, S. D., Jeweler Commits Suicide by Drinking Poison.

SIOUX FALLS, S. D., Feb. 11.—Anton Kleiser, a jeweler of this city, was found dead in his apartment, in the rear of his shop, early Monday morning.

An examination of the body in the room led to the belief that he committed suicide by drinking a quantity of poison. An inquest was held yesterday. After a thorough examination, the coroner gave a verdict that the deceased had died from cyanide of potassium poisoning, administered by his own hand.

It is believed that Kleiser was insane at the time of the deed, as he left letters which indicated that his mind was deranged.

An Effort to Corner Rogers Silverware.

To the Trade:

Do you know that the Trust bought and controls "9 Rogers Trade-Marks" on silver-plated ware?

It is to your interest to patronize an independent concern which will keep prices down where they belong.

When legitimate competition is killed, up go prices.

We are not in the Trust.

Our patterns are new and up-to-date. We sell at living prices, and guarantee our goods to strip as much silver as any Rogers brand on the market.

New York Jewelry Salesman Commits Suicide at New Orleans.

NEW ORLEANS, La., Feb. 12.—I. L. Friedman, a traveling salesman for the manufacturing jewelry house of L. Adler & Son, New York, was discovered badly wounded in his bed, at the Cosmopolitan Hotel this morning, after he had attempted to commit suicide by cutting his throat.

Mr. Friedman arrived in this city last night, and it was evident that he had been drinking heavily. He made one visit in the trade, upon Wm. Frantz & Co., and then went to his hotel, retiring about 11 P. M. About 1 A. M. there came a call from Friedman's room, and in response to the salesman's demand that Clerk Rutledge come immediately, the latter sent the night watchman. When the watchman turned on the electric light in the room, he was horrified to discover Friedman's night clothing covered with blood, and a blood-stained razor lying on the floor. The proprietor, Mr. Voegth, was immediately called, and Friedman told him that everything had gone wrong with him, and that he was tired of life. Dr. Max Levy was summoned, and he advised that the wounded man be taken to the Carondelet St. sanitarium, and this was done. After his arrival at the hospital, Friedman was put on the operating table, and died within a very short time.

Friedman, at the time of his act, had with him between $15,000 and $20,000 worth of samples and stock, and these were taken in charge by a representative of Leonard Krower & Co., who also took charge of Friedman's remains and effects, in accordance with a request made by the dead man's employers.

The deceased was 36 years old, and had been traveling throughout the middle west and the south for about 12 years. He was one of the best known jewelry salesmen in this territory, and his death will be the cause of sorrow to a great many of his old customers.

Friedman began his business experience with the old firm of Odenheimer & Zimmern, for whom he traveled eight years. When the firm of Zimmern, Rees & Co. was formed, he represented that concern on the road in the middle west and south. Three years ago he went with L. Adler & Son, and had traveled for them ever since.

The deceased left New York, on his present trip, about the 17th of January, and had had a fairly good trade.

L. Adler & Son were seen Friday and to a CIRCULAR-WEEKLY reporter Mr. Adler said he knew no reason why Friedman should have committed suicide. How his accounts stood, Mr. Adler did not know but he thought it would be found that they were all right. He said he received a telegram from New Orleans stating that Friedman was dead, but how he came to his death he did not know.

Friedman was a native of Cincinnati, O., and his remains were sent to that city for burial. He was unmarried, and had relatives in New York.

Frank Stewart, Westbrook, Minn., has gone to Chicago.

New Members of the Jewelers Security Alliance.

The regular monthly meeting of the executive committee of The Jewelers' Security Alliance was held Friday, the following members being present: President Sloan, chairman Butts, Vice-President Wood, Treasurer Karsch, Secretary Noyes, and Messrs. Alford, Abbott, Brown and Stern, of the executive committee.

The following new members were admitted to membership:

Best & Co., Niagara Falls, N. Y.; Best & Co. and Gillett & White, Buffalo, N. Y.; Martin Hacker, St. Louis, Mo.; Emil F. Kvasnicka, Chicago, Ill.; Giles L. Marsh, Sr., Pattonsburg, Mo.; Schrader-Wittstein Co., Steffeck & Willimovsky and Stein & Ellhogen Co., Chicago, Ill.; E. R. White, Buffalo, N. Y.; H. H. Hooper, Whittier, Cal.; J. H. Birnbaum, Los Angeles, Cal.; W. D. Gould & Co., Great Bend, Kan.; Scofield & De Wyngaert, Newark, N. J.; C. F. Vanderpool, Rochester, N. Y.; Joseph B. Bechtel & Co., Philadelphia, Pa.; George H. Churchill, Amsterdam, N. Y.; Theodore F. Gerlach, St. Louis, Mo.; John Lang, Atlantic City; N. J.; D. Marx's Sons, St. Paul, Minn.; J. M. Orr, Philadelphia, Pa.; J. W. Phillips, Chanute, Kan.; Barrners & Jacohi, New York; C. H. Coles, Sandwich, Ill.; Cary A. Head, Ada, O.; Jahnke Bros., Richmond, Va.; W. E. Lineback, Monroe, N. C.; Julius L. Cohen, Reading, Pa.; G. B. Jenison, Blaine, Wash.; John M. Kennedy, Waynesburg, Pa.; Kerper & Custer, Pottstown, Pa.; Theodore C. Kremer, Phoenixville, Pa.; Joseph Mayer & Bros., Seattle, Wash.; Mrs. C. D. Silverthorn, Lynchburg, Va.

Senator R. H. O'Neill has disposed of the jewelry business, which he formerly conducted in Lincoln, Neb., for $5,000. The purchaser was O. E. Rector, who will continue the business in connection with his other store.

The kind of wear

Most any gold filled or rolled plate chain will wear 20 years if it is put away in a bureau drawer six days of the week, and worn by the owner on the seventh day only. But—put it on a railroad engineer who not only wears it the whole seven days of the week but exposes it to the hardest kind of wear, where dust and grit and perpetual motion combine to attack the surface, and this chain might not "make good."

The guarantee that goes with Blackinton's Old Reliable W. & S. B.★ Chains is based on the hardest kind of continuous wear and is the only brand of gold filled chains that have "made good" for thirty-eight years. Insist on getting them from your jobber. Did you receive a copy of our booklet entitled "A Chain of Circumstances?" If not, write us for one.

CHARLES E. HANCOCK CO., Providence, R. I.

Creditors of W. S. Tussing Elect Trustees in Bankruptcy and File Claims.

COLUMBUS, O., Feb. 11.—The first meeting of the creditors of the missing jeweler, W. S. Tussing, was held by Referee Rogers, yesterday, and elected A. L. Thurman trustee. There were two candidates, A. L. Thurman and the receiver, Frank Hubbard. The former secured the most votes in number, and the latter the most in amount. Mr. Thurman's bond was fixed at $5,000.

The meeting was adjourned at noon, to give dilatory creditors an opportunity to cast their vote. Thirty-six claims were filed, and others in the possession of the attorneys present brought the total liabilities of the bankrupt up to nearly $61,000. Other claims, however, may be filed later. The law allows a year for such filing, but usually all the claims are filed within a few weeks.

The claims filed follow: Bishop & Brokaw Co., $46; O'Harra & Sims, $26; William Solomon & Co., $797; Gressler & Kraut, $75; B. H. Davis & Co., $474; Frank E. Elliott, $144; Rees & Yankauer, $105; C. Edward Born, $4,350; S. Friedlander, $1,498; Shafer & Son, $501; L. P. White, $12; Heeren Bros. & Co., $145; Henry A. Newland, $82; Fred C. Blenkner, $78; William L. Gilbert Clock Co., $218; Dennison Mfg. Co., $30; Jos. H. Fink & Co., $120; I. Ollendorff, $403; Bracher, Becker & Barnett, $422; Hayden W. Wheeler & Co., $1,070; Morris May & Co., $232; L. Adler & Son, $307; Heyman & Kramer, $632; Charles L. Power & Co., $621; Bonner & Co., $278; American Silver Co., $40; J. R. Wood & Sons, $822; Non-Retailing Co., $1,034; New Haven Clock Co., $40; Ira Goddard, $1,136; Miller Jewelry Co., $1,359; Freudenheimer Bros. & Co., $3,105; David Marx, $3,382; Columbus Edison Light Co., $28.

Elijah Steitler, Former Jeweler, Files Petition in Bankruptcy.

OWENSBORO, Ky., Feb. 12.—Elijah Steitler, who several years ago was in the jewelry business in this city, filed a voluntary petition in bankruptcy in the United States Court yesterday. The schedules filed with this petition place his liabilities at $6,197.31, but show no assets.

Many of Mr. Steitler's creditors are jewelry firms of Cincinnati and vicinity; among them being the Queen City Silver Co., $50; Standard Optical Co., $100; Louis H. Hendricks, $351; Oskamp, Nolting & Co., $86; Clemens Hellebush, $4,243, and S. A. Weller, Zanesville, O., $101.

Dynamite Explosion Shatters Windows of Portage, Pa., Jewelry Stores.

PORTAGE, Pa., Feb. 11.—The jewelry stores of Alexander Wright and Silverman & Goodman were badly damaged by an explosion of dynamite, which occurred in the heart of this town early Monday morning.

The explosion occurred in the fruit store and home of Tony Pasquello and wife, in which 23 Italians were asleep. Pasquello and his wife were killed, and a dozen persons were injured. The jewelry stores of Mr. Wright and Silverman & Goodman are located near the fruit store, and the concussion shattered the show windows of both storerooms.

The Royal

(20 year Filled Case)

is

Feb. 21.

George Washington's father always regretted that the Royal had not been discovered in his time. It would have been such a handy birthday gift for his boy. Instead, he gave him a hatchet—and lost a cherry tree. There's a moral in this.

PHILADELPHIA
WATCH CASE CO.
RIVERSIDE, N. J.

Death of Capt. L. A. Bachus.

LOUISVILLE, Ky., Feb. 11.—Capt. L. A. Bachus, one of the most prominent jewelers and opticians in this city, died suddenly last night of heart disease at his home, 2115 W. Walnut St. Death was entirely unexpected, and Mr. Bachus was not thought to be seriously ill until he was seized with pains around his heart while seated on a sofa. Physicians were immediately summoned, but the jeweler was dead before they arrived.

Capt. Bachus was for many years prominent as a merchant in this city, and his store was at 511 W. Market St. The deceased was born in Frankfort, Ky., Feb. 22, 1837, and spent his boyhood in Lexington, in which city he learned the trade of jeweler and silversmith. At the breaking out of the Civil War he enlisted in the 20th Kentucky Infantry, and won promotion for gallantry until he attained the rank of captain. At the end of the war he returned to his old business, becoming a manufacturing jeweler, and continued in that line until his death.

The deceased was a member of the Grand Army of the Republic and was a founder of the association known as the "Knowledge Seekers." He is survived by a widow, two sons and two daughters.

The funeral services, which will be held to-morrow in his late residence, will be conducted by Rev. G. C. Waller of St. John's Episcopal Church. The interment will be in Cave Hill cemetery.

B. H. Stief Jewelry Co. Win Suit Over Valuable Pearl.

NASHVILLE, Tenn., Feb. 11.—Chancellor Allison yesterday decided a case involving the title to a fine pearl found in the Cumberland river, near Clarksville, by a party of Nashville fishermen. The judge held that there could be no recovery against the B. H. Stief Jewelry Co. of this city, to whom the jewel was sold by Mrs. Joseph Farrell.

The pearl was found by R. R. Harley, who was one of a party of five, and Harley sold his interest in the gem, which was estimated to be worth between $500 and $1,000, to the other four, who turned it over to Jos. Farrell, one of the party, who in turn gave it to his wife. Mrs. Farrell sold the pearl to the B. H. Stief Jewelry Co. for $580.

The other members of the party sought to recover from the jewelry company, on the ground that Mrs. Farrell had no right to sell it. Chancellor Allison, in deciding the case, held that there was not sufficient proof to show that the stone was owned in partnership, and that it was not affirmatively shown that the complainants had any interest in the gem in question.

Bill to Suppress Trading Stamps in the Pennsylvania Legislature.

HARRISBURG, Pa., Feb. 13.—In the House of Representatives to-day, the Wittig bill, which was introduced Feb. 10, passed its first reading. It is an act to suppress trading stamps, and reads:

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met and it is hereby enacted by the authority of the same, that any merchant, manufacturer, importer, retailer or dealer doing business within this commonwealth who shall offer, give or sell, or authorize or permit any agent salesman or employe to offer, give or sell any purchaser or customer any ticket or tickets, check or checks, trading or premium stamps or other token or memoranda entitling such purchaser or customer to demand or receive money or any article of value from any person, firm or corporation, shall be deemed guilty of a misdemeanor, and upon conviction shall be sentenced to pay a fine of not less than $100 nor exceeding $500, or suffer imprisonment not exceeding 90 days, or either, or both, at the discretion of the court.

Sec. 2. All acts or parts of acts inconsistent with the provisions of this act be and the same are hereby repealed.

Trading stamp concerns, which are flourishing in this and other cities of the State, will fight the passage of this measure in the Senate. One local trading stamp concern announces that it proposes giving 25 gold watches to patrons, in addition to regular premiums.

The plate glass window of the jewelry store of B. H. Rounds & Sons, Owensboro, Ky., was broken at an early hour Wednesday morning and rings valued at $100 were stolen.

We beg to announce that on and after

FEBRUARY 16th, 1903,

Mr. Simon Goldsmith and Mr. Frank E. Harmer will be the sole representatives of this Company in the disposal of its products to the trade.

Any favors shown to them will be fully appreciated.

Death of Charles D. Peacock.

CHICAGO, Feb. 14.—Charles D. Peacock, a pioneer retail jeweler of this city, died at his home, 1713 Indiana Ave., about 1 A. M. Thursday. An attack of la grippe, followed by pneumonia, was the cause of death. Mr. Peacock was in good health until about two weeks ago, when he was taken with a severe cold, which developed into the illness which resulted in his death.

The deceased was a native of Chicago, and was born in 1838. He came of a family of English gold and silversmiths; his great-grandfather, grandfather and father having been engaged in that line. The name of Peacock adorned a jewelry store at Chester, England, 200 years ago, and probably will continue to do so in Chicago fo many years to come, as Mr. Peacock's business will be continued as formerly, with his sons in control, the eldest in a managerial capacity.

THE LATE CHARLES D. PEACOCK.

Chas. D. Peacock was a mere boy when he started to work in the jewelry store of Elijah Peacock, his father, on Lake St. This store was a small room, 10 by 20 feet, and young Peacock built the fires, ran errands, delivered articles to the pioneer settlers of those days, and tinkered at the work bench, cleaning the watches and clocks, etc. Elijah Peacock continued in the jewelry business until the great fire of 1871, after which he devoted much of his time to buying and selling real estate. C. D. Peacock then started to renew the business of the burned jewelry store, at Randolph and Franklin Sts. He went to 96 W. Madison St., where he remained during the reconstruction period following the fire. He made considerable money, and with this capital moved to State and Washington Sts., where he opened business on a large scale. The site of the Peacock store remained here for nearly 25 years, when an increased trade demanded a removal to the present location, 199 State St.

Mr. Peacock devoted most of his life to his business, though at one time he took an active interest in politics and public affairs generally. When "Long John" Wentworth was a mayoralty candidate for a second time, in 1860, Mr. Peacock managed his campaign, and Wentworth was elected. Four years later, in 1864, Mr. Peacock was elected to the City Council from the First Ward, but a year of this office satisfied him that he had no desire to continue as a public office holder. He belonged to only a few clubs, among them the Chicago Athletic Association and the Tolleston Gun Club.

Mr. Peacock's survivors are his widow, formerly Miss Mary A. Smith, of Montreal, and six children—Charles D., Robert E., Walter C., who were associated with him in the conduct of his business; Mrs. Brode B. Davis, Mrs. Edgar D. Smith, and Miss Ella Peacock, all of Chicago.

Through the efforts of the following committee, Benj. Allen, A. L. Sercomb and Harry Hyman, appointed by Chairman M. N. Burchard, at a special meeting of the Chicago Jewelers' Association, held Thursday, a large number of wholesale and retail jewelers and traveling representatives met at the association rooms, Saturday morning, and repaired in a body to the Peacock residence, to pay their last respects to the dead jeweler. Interment was at Oakwood cemetery.

Honorary pallbearers were selected from among the older friends of Mr. Peacock, many of whom had known Mr. Peacock since his boyhood. They were: Benjamin Allen, W. T. Johnson, F. A. Howe, Arthur

Dixon, Peter Schuttler, C. H. Blair, John Knickerbocker and Albert Ebert. The active pallbearers were all employes, some of whom had been in Mr. Peacock's store for more than 25 years. They were O. F. Engwall, Arthur Nethercotte, John Schaub, Walter Buffington, William La Rue and Eugene Cappelle.

Gold Stamping Law Introduced in Massachusetts Legislature.

ATTLEBORO, Mass., Feb. 16.—A new bill was introduced last week into the Massachusetts House of Representatives, which, if passed, will affect the jewelry trade of this State, especially the manufacturers. It is intended to add to the safeguards given the purchasing classes against any fraud on the part of makers of goods from precious metal, and is part of the movement which inspired the new Rosenstein bill in New York. At present, this new bill is in committee, and no comment on its future is at present possible, although many legislators expect it to pass. The bill reads as follows:

Any manufacturer, dealer or other person who makes or sells, or offers to sell or dispose of, or has in his or her possession with intent to dispose of, any article of merchandise marked, stamped or branded with the words "gold" or "solid gold," or any other number of karat not less than 10 in fineness, or wrapped, incased or inclosed in any box, package, cover or wrapper, or other thing, in or by which the said article is packed, wrapped, incased or inclosed, or otherwise prepared for sale or distribution, having thereupon any engraving, label, stamp, imprint, mark or trade-mark, indicating or denoting by such marking, stamping, branding, engraving or printing that such article is solid gold, or of any other number of karat of not less than 10 in fineness, unless the component parts of which the said article is made are in the following ratio: If 18 karat, there should be 18 parts of pure gold and six parts of alloy; if 14 karat, there should be 14 parts pure gold and 10 parts of alloy, and other quantities in the same proportion with 24 karats as the standard of pure gold by which the article is marked, stamped or branded, shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be sentenced to pay a fine not exceeding $100, or undergo an imprisonment not more than three months, or both, in the discretion of the court.

Davis & Freeman, Atlanta, Ga., Recover Their Stolen Rings.

ATLANTA, Ga., Feb. 16.—Five of the six diamond rings stolen some time ago by Dr. R. H. Thomas, who is now serving a term in the penitentiary, have been recovered. They are all in the possession of Davis & Freeman, who own three of them. The two others belong to the Calhoun Jewelry Co., Birmingham, Ala., who are still short one ring.

It appears that the rings were forwarded to Athens to the wife of Dr. Thomas by unknown persons and she turned them over to attorneys who went after them. The attorneys say Mrs. Thomas is innocent of any wrong.

Mr. Davis, of Davis & Freeman, stated that the connection of his firm with the affair has ended, now that he has recovered the property. He said, however, that he would like to know who has been holding the rings. Detectives had been at work on the case since last November.

N. M. Barber, New York, has leased quarters in Wilkes Barre, Pa., and installed a stock of jewelry, watches, silverware, Oriental rugs and vases.

Traveling Salesman Gets Jewelry on Bogus Orders and is Declared to be Insane.

CINCINNATI, O., Feb. 16.—John A Shambaugh, of Xenia, O., who at various times represented A. G. Schwab & Bro., Jos. Mehmert, the Jewelers Co. and the Herman Keck Mfg. Co., was arrested last week, at the instance of the John Holland Gold Pen Co. for irregularities in business dealings.

Shambaugh recently applied at the Holland company for a line of goods to carry with him on the road, and the company were arranging to put up an assortment, which he was to sell on commission. He mentioned that he was going to carry a big line of rings, and told the shipping clerk that he was expecting a box of rings from Heintz Bros., Buffalo, and asked him to receipt for them from the express company. The box arrived, addressed to the John Holland Gold Pen Co., was receipted for, and when Shambaugh came in he opened them throwing away the wrapper; he took out some of the rings and put the box away. He came in during the afternoon, and said he was looking for another box of rings from the east.

Meanwhile a letter came in the mail for the John Holland Gold Pen Co., from the Ostby & Barton Co., Providence, saying their order had been received and would command immediate attention; this fell into the hands of James Holland, cashier, and he waited for Shambaugh to come in again, and showed him the letter asking what it meant. He also found out, by investigation, that a box had been received down stairs, from the Buffalo concern, and Shambaugh had taken away some of the rings. He compelled Shambaugh to remain in the store until he sent for a detective, and when Shambaugh would not talk or tell anything about the matter, he was turned over to the police.

Some of the rings and three gold pens were found on his person after his arrest, but he still refused to talk until his letter to one of the firms, written on the Holland company's letterhead, signed with its name, and giving an order for about $2,000 worth of rings, was shown him; he then acknowledged writing it. The package from the Ostby & Barton Co. arrived the next day, and it was locked up in the safe of the John Holland Gold Pen Co., with the other box, awaiting orders from the senders, who had been notified that the goods had not been ordered.

A number of Shambaugh's friends arrived from Xenia, as did, also, his physician, who pronounced him unbalanced, and responsible for his actions. The friends declared that the prisoner had been mentally unsound for several years, and that physician was treating him for paresis.

The firms interested agreed not to prosecute Shambaugh, after the evidence of insanity was shown, and the case against him was dismissed, and Shambaugh was then taken in charge by his friends, and sent to the asylum at Dayton, O.

A. M. Felson Makes Offer of Settlement at 25 per cent. at Creditors' Meeting in New York.

A meeting of the creditors of A. M. Felson, the Gouverneur, N. Y., jeweler, who is now under examination in bankruptcy proceedings, was held Thursday afternoon in the office of Rosenthal & Brown, 404 Grand St., New York. Felson was present at the meeting, and was questioned sharply in regard to his transactions in real estate in New York, and also as to the large jewelry purchases he is alleged to have made just prior to his failure. The bankrupt did not make a good witness, and his answers to many of the questions put to him were vague and uncertain.

There were seven or eight creditors present at the meeting, including Charles L. Gray, of the Jewelers Association and Board of Trade, New York, which represents a large amount of the indebtedness. Immediately after his failure, Felson made an offer to settle with his creditors on the basis of 40 per cent., 10 per cent. in cash and the balance in notes. The efforts of the creditors at this meeting were to get him to stand by this original offer. This the bankrupt refused to do, stating that his financial condition was not as strong now as it was then, and that the value of his real estate could not be determined, since he was being threatened with foreclosure proceedings on the mortgages. The bankrupt was then asked what offer of settlement he was willing to make with his creditors at the present time, and he said he would be willing to pay 25 per cent cash.

There seemed to be a strong feeling among the creditors that Felson was able to pay more than this amount, and no willingness was shown to accept his offer on this basis. With no definite understanding as to what was to be done in the future, the meeting adjourned. The 25 per cent. cash proposition is being sent to the bankrupt's creditors by the Jewelers Association and Board of Trade, however, with a view to getting their opinions of the offer.

SAN FRANCISCO OFFICE, 206 Kearny St.

Providence.

After a trip of several weeks in the West Indies, Nathan B. Barton, president of the Ostby & Barton Co., has returned to his home in this city.

Gyllenberg & Hultman, die cutters, are now located at 26 Fountain St., having removed there from Melrose St. Henry J. Geer is now located at the cor. of Point and Chestnut Sts.

A fire on the fourth floor of the Boston Store created some little excitement one day last week, but automatic sprinklers extinguished the blaze before any damage of consequence was done.

With their customary liberality, members of the jewelry trade have responded to the appeal of the Young Women's Christian Association for aid for the fund for the erection of a new and better equipped building.

James T. Hunt, who was at one time interested in a local jewelry concern and who was convicted of embezzlement and assault with a dangerous weapon, is anxious for new trials in both cases. The Court's decision in the matter has not been made public.

Mrs. Celia E. Blackinton, who was at one time a bookkeeper for the W. & S. Blackinton Co., and who was up to within a short time connected with the J. G. Fuller Co. in a similar capacity, was married Wednesday to Dr. Clifford H. Griffin, police surgeon for the municipal police department.

Two bowling teams representing jewelry shops are included in the Manufacturers' Tournament, now in progress. They are the "Dovers" and the "Ostby & Barton" teams. The Dovers stand in third place and the Ostby & Barton team is fifth. Up to date the Dovers have won 16 games and lost six, while the Ostby & Bartons have won seven and lost 14.

The Manufacturing Jewelers and Silversmiths' Association intends to make its annual Winter banquet, which comes on the night of Feb. 27, a memorable affair. It is expected that the list of speakers will include men whom the members will be glad to hear and who will have something of interest to present. The Governor and the Mayor are among those who are expected to be present.

George E. Adams, who was at one time a well-known jeweler here, died last week at Saranac Lake, N. Y., where he had gone in the hope of benefiting his health. Mr. Adams left this city about 15 years ago and had since been in business at Hartford, although last August he was compelled to leave there and go to Saranac Lake. He was 55 years of age and leaves a widow and three children. Pulmonary troubles caused death.

James A. Foster has been made the defendant in an action of trover and conversion brought by Warren H. Tillinghast, of this city, through his attorneys, Tillinghast & Murdock. The articles of which possession is sought consist of jewels valued, it is said, at $6,000. The jewels named in the papers are one blue-white diamond of three carats, one ruby of three carats, one pink pearl of 24 grains. Mr. Foster declined to make any statement for publication, stating that the suit was one of comparatively little importance and of no public interest. Mr. Foster is at the head of the James A. Foster Co.

An article which has attracted much attention at the fair of the Church of the Sacred Heart, Pawtucket, is a solid gold reproduction of the famous Tara brooch, the original of which was one of the prized insignia of royalty in Ireland during the sixth and seventh centuries. The original is one of the treasures of the Dublin Museum, and the reproduction, a miniature, was presented to the pastor of the church, Rev John Harty, by personal friends in Ireland.

Samuel J. Hirsfield, a 17-year-old boy, was arrested last week by detectives on the charge of larceny. The boy worked in the jewelry plant of E. Brown & Co., 71 Peck St. It is alleged that he stole 80 rings, valued at $25, from his employers. It is also claimed that he took various goods from department stores. When arraigned in the Sixth District Court the lad pleaded not guilty on the charge of larceny of the rings and was bound over to the Grand Jury in $200 bonds. On two other charges he pleaded guilty and on each was fined $3 and costs.

No new trial will be given Willis H. Payson in his suit against the J. W. Grant Chain Co. The latter concern was given a verdict of $442.70 against Mr. Payson, who was at one time a traveling salesman in its employ. The company claimed that he converted to his own use a quantity of samples. His defense was that while on a western trip he got out of funds for paying expenses and the company, failing to send a check in time, he sold his samples. The jury failed to see the force of the argument presented and found for the company the sum mentioned. Then Mr. Payson asked for a new trial, which has just been denied by a rescript handed down in the Appellate Division of the Supreme Court, and the case is remanded to the Common Pleas Division for judgment on the verdict.

TRADE CONDITIONS.

Business conditions in this town are generally considered quite satisfactory for this time of the year. Hardly a concern has started to run on short time and many are driven to the limit of their capacity to fill orders. The prevalence of large orders at this time of the year is regarded as a very good indication of the volume of business to be expected throughout the Spring.

C. H. Clark, of W. G. Clark & Co., is now at home, but will soon start out on the road.

Harry E. Hull, of W. H. Bell & Co., is able to be out again after a severe attack of illness.

Everett White, an employe of the Webster Co., was recently hurt while exercising a spirited colt.

Alfred Sweet, New York representative for J. F. Sturdy's Sons, spent a few days in town last week.

C. L. Cabot has taken the position with Sandland, Capron & Co. made vacant by the resignation of C. W. Hempel.

Robert L. Tilton, Arthur and Frank Maloney and Clarence Struck, the four young men who have been on trial for stealing jewelry from Riley, French & Heffron, were al

found guilty in the Superior Court a Taunton. Frank Maloney was released o probation, but the other three were sen tenced to the Concord Reformatory.

George D. King, a well-known die forger is able to be about again, and states that hi condition was not as serious as at first re ported.

G. Herbert French, of Riley, French & Heffron, is reported as making some remarkable scores on the golf links at a Florida Winter resort.

The employes of the W. & S. Blackinton Co. recently raised the sum of $40 for John Bramford, their fellow employe. Mr. Bramford was injured in Providence some weeks ago.

Frank O. Coombs, a well-known engraver, is recovering from the severe injuries he recently sustained in a fall at his home. The progress made is not as rapid as his friends had hoped for at first, but he is now convalescent.

The indications point to a re-election of the present Board of Selectmen for a third term. The board includes Albert Totten, of Thomas Totten & Co.; Fred S. Gilbert, and Frank L. Shepardson, of F. L. Shepardson & Co.

The Paye & Baker Mfg. Co. has a number of its men at work and expects to have the whole force ready for work shortly. A good sized addition has been added to the Gorton factory, which the concern has recently purchased.

Attleboro.

Frank P. Daughaday, of Freeman, Daughaday & Co., left with Mrs. Daughaday, last week, for a combined business and pleasure trip through Canada. They planned, Feb. 12, to have a modest celebration at Niagara Falls, of the first anniversary of their wedding.

Everett S. Capron, a retired wealthy jewelery manufacturer, now residing in Southern California, wired last week a gift of $500 toward the town's new public library building. J. Perry Carpenter, of Ford & Carpenter, Providence, who once lived here, voluntarily gave $100. Ernest D. Gilmore, of E. D. Gilmore & Co., gave $100.

Utica, N. Y.

P. F. Darrigrand & Co. are to remove to a large store, located at 166 and 168 Genesee St.

The C. J. Wells Co. furnished the diamond ring recently presented by the employes of the Mohawk Valley Mill to their retiring superintendent.

The members of the Common Council presented President Reagan with a gavel last Wednesday evening. The Geo. E. Wheelhouse Co. did the mounting in silver, and the engraving.

The police of Rochester, N. Y., were notified last week of a robbery perpetrated upon Frank A. Kennedy at 108 West Ave. The thief, who was but a boy, while looking at some watches in the jewelry store suddenly grabbed a gold-filled case and ran out of the store. He has not yet been captured.

Boston.

Max Posner is disposing of the stock and xtures of Keene's jewelry store, 1301 Washngton St., South End. Mr. Keene, who is ow retiring from business in Boston, start-d here in 1881.

J. S. Martin, formerly with the Wood-an-Cook Co., is now on the road for D. C. Percival & Co., Inc., covering western Massachusetts, Connecticut, Rhode Island nd New York.

Charles H. Pearson, proprietor of the Chelsea Clock Co., whose Boston office is at 6 State St., is a candidate for re-election his year to the Board of Selectmen of Brookline, Mass., said to be the richest own in the world.

Frank P. Mosher, 24 years old, was ar-ested here Wednesday on the charge of lar-ceny of a diamond ring, valued at $50, from Robinson & Son, 388 Main St., Springfield, Mass. Mosher was taken to Springfield by an officer from that city.

Willard Harwood, the surviving member of the firm of Harwood Bros., 386 Washington St., has been confined to his home by illness, for the past 10 days. Mr. Harwood's many friends and business associates hope for his speedy recovery and return to business.

J. C. Sawyer, 383 Washington St., is conducting a sale preparatory to his removal to his new location at 10 Summer St. The new quarters are being prepared for occupancy as rapidly as possible, and Mr. Sawyer hopes to do much toward his removal on the holiday of Feb. 22.

Inspectors attached to Chief Inspector Watts's office arrested Friday Lorenzo J. Mindock, 26 years old, of 106 W. Concord St., South End, on the charge of larceny of jewelry valued at $220 from F. G. Butler & Co., 406 Washington St. The alleged larceny occurred Thursday.

A. Paul & Co., now at 377 Washington St., expect to move into their new store on the second floor of the Jewelers' Building Annex about March 1. The new store has been arranged for their business according to their own desires, and when completed will be one of the most attractive stores in the city.

The marriage of Roswell Douglas Gordon, Boston, and Grace Geer Howard, Brockton, occurred Wednesday. Mr. Gordon is a member of the jewelry firm of Gordon & Burgin, of this city. Mr. and Mrs. Gordon went to New York on a short honeymoon trip and will return to Boston to sail for Jamaica, Feb. 25.

Hardly a day passes without inquiries being made as to the whereabouts of Ezra E. Rubin, the missing jeweler, who was for so long in business at the corner of Washington and Hanover Sts. Various stories are heard, but no definite information as to his present location or his reason for going away so mysteriously has yet been made public.

Buyers in town last week included E. D. Howard, Ware, Mass.; W. F. Newhall, Lynn, Mass.; J. H. Hanson, Peabody, Mass.; H. S. Hewitt, Brockton, Mass.; F. S. Scales, Winchester, Mass.; C. S. Tyler, Ipswich, Mass.; N. C. Nelson, Concord, N. H.; C. A. Trefethen, Manchester, N. H.; John A. Williams, Canton, Mass.; J. S. Stanley, Wakefield, Mass.; F. A. Thompson,

George F. Garland, representing E. A. Cowan & Co., started out Monday on his regular trip.

The firm of Vorenberg & Hecht, 15 Winter St., has been dissolved by mutual consent, Mr. Hecht retiring from the jewelry business and Mr. Vorenberg continuing at the same place.

George A. La Mothe, a young French-Canadian, was sentenced to the State prison at Charlestown, Friday, for a term not less than three years or more than four years. La Mothe was arrested in January for breaking into a Roxbury jewelry store, as told in THE CIRCULAR-WEEKLY at that time.

Atlanta.

The Kyle Art Glass Co. has opened a branch house here at 64 Peachtree St., under the management of W. B. Eckhart.

John L. Moore & Sons had a half-page write-up of their establishment in the Atlanta *Constitution*, Sunday of last week.

S. L. Solomonson and wife last week celebrated the 25th anniversary of their marriage. Mr. Solomonson, who is the oldest jeweler in the city, has been a resident of Atlanta for 36 years.

A number of handsome trophies were donated for the progressive euchre tournament which was held last week at the Kimball House. A piece of Tiffany glass, donated by Charles W. Crankshaw, was the object of much admiration.

Porter Beale, who had been associated with his father in the jewelry business in Monticello, died last week of pneumonia after a short illness. He is survived by his father, four brothers, and two sisters. The remains were taken to Madison for burial.

All of the jewelers here are interested in the movement to advertise Georgia, which movement is now being pushed by the Chamber of Commerce. A banquet was held last week at the Kimball House and among those present was noticed a large delegation of jewelers.

Denver.

W. W. Hamilton & Co. have moved to the Jacobson building.

L. C. Cornwell has accepted a position with E. F. Whittemore.

Chas. Roth, an old time jeweler of this city and later of Leadville, has bought an interest in Henry Lubelski's business, and thus re-entered the jewelry business after an absence of about a year.

Among the out of town jewelers who visited this city during the past week were: W. H. Brannan, of Brannan Bros., Loveland; J. G. Raine, of the Raine Jewelry Co., Cripple Creek, and G. L. Muffley, Golden.

F. L. McCracken, of the McCracken Jewelry Co., has sold out his interest in the business to F. J. Whittemore, who will continue the business. Mr. McCracken will have charge of the watch and jewelry department of the George Bell Co. This is a new department in the latter concern, it having previously confined itself almost exclusively to dealing in native jewelry.

Connecticut.

E. W. Carrington, with the American Silver Co., Bristol, is confined to his home by illness which resulted from stepping on a nail several days ago.

The death is announced of Julius W. Rogers, who died in Meriden last week, aged 81 years. He is survived by his son, Arthur G. Rogers, superintendent of the old factory of C. Rogers & Bros., Meriden.

A slight fire was caused last Thursday in the establishment of Henry Kohn & Sons, Hartford, by rain leaking into the electric light switchboard in the basement of the store, which caused a short circuit. No serious damage was done.

It is rumored that the factory of the Milford Silver Co., Milford, will resume operations before March 1. The delay is said to be due to a contract held by the Jennings Bros.' Mfg. Co., Bridgeport, who, thus far, have been unable to reach an agreement with the local company.

G. E. Holt, residing at Plymouth, and foreman of the dial department of the Seth Thomas Clock Co., Thomaston, narrowly escaped death a short time ago by being thrown from his carriage while on his way to the factory. As it is, the only serious result of the accident is a sprained shoulder.

The Davis & Hawley Co., Bridgeport, is exhibiting a clock which was found in the ruins of St. Pierre, Martinique, by J. M. Saxton, of 57 Fremont St., Jan. 24, when he was visiting that place. The clock was originally made in Waterbury, but will never run again, as the works are partially melted together.

A distribution of the estate of Mrs. Almira Mix, Wallingford, widow of the late G. O. Mix, was commenced Monday morning at 10 o'clock. The distributors of the estate are Lewis M. Phelps, Chas. Hill and J. R. Brown. There are only two heirs—Mrs. Elizabeth A. Glenny, Aurora, Ill., and Mrs. W. A. Kendrick, Yalesville.

A neat souvenir from the Rogers Silver Plate Co. in the form of a miniature tea-

spoon, one inch in length, was presented to the Councilmen at Hartford, at a recent meeting, by Councilman Taylor, secretary of the company.

The Wm. L. Gilbert Clock Co., Winsted, will give a reception and dance tonight at the formal opening of the new office. The dance will be in the basement of the new building and refreshments will be served on the upper floor. The grand march will be led by two of the oldest employes.

A thief last week hurled a stone through the plate glass window of Jos. Schaukopp's store, Hartford, and grabbing a tray of rings, dashed down the street. The police finally captured the man after a long search. When arraigned in court he gave his name as James Carr and was sentenced to six months' imprisonment.

Baltimore.

Edward H. Mealy, with John W. Mealy, Son & Co., was in New York last week.

Word has just been received here that R. P. King, Bristol, Va., lost in a livery stable at Emporia, Va., a valise containing 40 watches, mostly of the cheap variety.

James H. Murphy, who, with William Kerns, was charged with entering the store of Samuel Braunstein, Jan. 28, and stealing watches valued at $59, was convicted last week in the Criminal Court and sentenced by Judge Stockbridge to five years in the penitentiary. He had a police record. Kerns was acquitted. Murphy broke a show window and stole the watches, a number of which were recovered.

Mrs. Joseph Castelberg, wife of Joseph Castelberg, of the Castelberg National Jewelry Co., has had stolen from her a three-stone diamond ring, a solitaire diamond and a beautiful pearl and cluster diamond, valued in all at $1,000. Mrs. Castelberg put them in a drawer in her room on Linden Ave., Feb. 5, and when she went for them, last Tuesday, they were gone. Other costly jewels, valued at about $5,000, were overlooked. As the drawer showed no signs of being forced, the thief must have used a key.

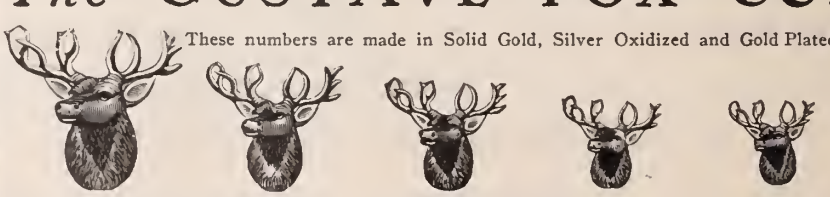
Newark.

Herman Eberly, the journeyman jeweler who was arrested last week on a charge of stealing $500 worth of scrap gold and silver from the jewelry factory of Moore & Son, 22 Green St., where he was employed, has been held in $1,000 bail for the Grand Jury. According to the detectives who arrested Eberly, he has been systematically stealing valuable scraps of precious metal since March 14.

Local No. 2 of the International Jewelry Workers' Union is preparing for a masquerade ball to be held at the Coliseum, Friday, Feb. 27. Local No. 2 is in a flourishing condition financially and in regard to membership. The bowling team of the union won the silver cup Friday offered by Wm. R. Hearst for the best bowling teams of the five unions of the International Jewelry Workers. The contest had been going on for four weeks. The Newark union succeeded in defeating the teams from Toronto, Buffalo, Providence and New York.

Savannah, Ga.

Capt. A. J. Renkl, Augusta, Ga., has been appointed by Governor Terrell a member of the State Military Advisory Board and the State Military Examining Board.



S. E. Theus is actively engaged in aiding the management of the Georgia Hussars' bazaar, now being held in Savannah. Theus & Co. have donated a very handsome clock to the bazaar.

Diamonds valued at $5,000 were stolen, Feb. 13, from H. E. Adams's jewelry store, Tampa, Fla. The police department was at once notified, and, in a short while, two men giving the names of Lawrence and Penn were arrested on suspicion, one of them having previously attempted to sell diamonds to a citizen. One of the stolen rings was found in possession of the other man.

Miss DuBose has been very successful in securing contributions for the purchase of a silver service for the battleship *Georgia*, now in course of construction. It was recently suggested by persons actively interested in the movement that instead of silver gold should be obtained from the gold mines of North Georgia for the purpose of making the service, and that it be presented on a table of Georgia marble, the latter to contain specimens of all varieties of marble found in the State. It is probable that the suggestion will be acted upon.

Joseph Brown & Co., Chicago, are now mailing their March catalogue, which contains several hundred pages devoted to discontinued movements and cases in conjunction with many illustrated pages of silverware, jewelry, etc. The catalogue is complete in every particular and will be sent to jewelers who apply for it.

Philadelphia.

Calvin Solliday, Lambertville, N. J., is reported to be critically ill.

R. L. Saunders, 13 S. 8th St., returned last week from a pleasure trip.

Charles Scott, watchmaker, has accepted a position with P. Korn, 833 Market St.

Robert Steel, Hammonton, N. J., spent several days here last week with his wife and family.

L. C. Reisner, of L. C. Reisner & Co., Lancaster, Pa., was in town on business Wednesday.

W. N. Bruner, watchmaker for the trade, 714 Sansom St., is making alterations to his place of business.

Oscar Fisher, Smyrna, Del., made a business trip to Philadelphia last week and remained several days.

Harry Toplis and Joseph Smith, watchmakers, attended the banquet Thursday of the Germantown Republican Club.

N. Snellenburg & Co., 12th and Market Sts., are planning the establishment of a handsome new jewelry department.

Wm. F. **Nye, the watch** and clock oil manufacturer of New Bedford, Mass., made a canvass of the local trade last week.

Miss Nettie Reeves, of M. Sickles & Sons, made her début as a Thespian at the Riverton Lyceum last week in "A Loyal Friend."

James Moyer, watchmaker, has left Albert Sommer, Warnock St. and Columbia Ave., and has opened a store at Souderton, Pa.

To close the account of the Lans Curiosity Co., New York, old silver, silver plate, etc., was sold at auction last week by M. Freeman's Sons.

Miss M. M. Saunders, manager of the estate of J. M. Saunders, 604 N. 2d St., is spending a few weeks in the south for a much needed rest.

Wm. J. Davis, 616 Chestnut St., furnished the silverware and C. L. Le Cato the case which was presented last week to W. W. Walt, of the Supplee Hardware Co.

Charged with robbing the jewelry store of E. C. Albertson, Bridgeton, N. J., Theodore Sheppard surrendered himself last week and confessed that he was guilty.

W. Hopkins Iszard, 929 Chestnut St., has accepted the agency for eastern Pennsylvania of C. F. Kees & Co., manufacturers of silverware, Newark, N. J. Mr. Iszard left on his initial trip last week.

George Lewis, who is accused of defrauding jewelers and opticians by means of fraudulent checks and spurious orders, was arraigned before the Grand Jury last week and 22 indictments were found against him.

The Assay Commission appointed by President Roosevelt to examine and report upon the work and conditions of the United States mints completed its work in this city Thursday. Two pieces of every delivery of $1,000 stamped in gold and $2,000 stamped in silver was tested.

J. C. Bartlett, a watchmaker and jeweler well known in this city and formerly in business at 221 S. 10th St., died last week after a lingering illness at the home of his son-in-law, H. Morss, a jeweler in South St., between 7th and 8th Sts. Mr. Bartlett was for many years in business at 8th and South Sts. His wife is now in business on 9th St. above Race St. When stricken with paralysis last Summer Mr. Bartlett sold out his store on S. 10th St. to Joseph Lingg, of the Jewelers' Exchange.

W. O. Pierce, 339 S. 13th St., is the only Indian jeweler in the world, so far as is known. Mr. Pierce is from Onondaga reservation, and, though but 25 years old, has been constantly at the bench for 15 years. He has had entire charge of the numerous clocks of Thos. G. Gentry, the antiquarian, for several years.

A mahogany high case hall clock represented to have formerly been the property of Mr. Dandrige, once a secretary to General Washington, later belonging to Col. Philip G. Marstetter, of the Revolutionary army, and until recently the property of Henry T. Hutton, of Warrington, Va., was sold at auction at 12th and Walnut Sts., last week.

Willard E. Ross, a young watchmaker living at 2313 Fairmount Ave., is in the German Hospital in a critical condition from a gunshot wound. The police are reported to have said that he intended to commit suicide, but Ross insists that he was accidentally shot. A note was found in his room addressed to his wife, declaring he was about to kill himself. He is only 22 years old.

In connection with the proposed removal of the Bailey, Banks & Biddle Co. from the S. E. cor. of 12th and Chestnut Sts. to a new building to be erected by the firm at 1218-20-22 Chestnut St., official notices have been sent out to stockholders that at the annual meeting of the company to be

held March 17, authority to sell the factory building at the S. W. cor. of 12th and Sansom Sts. will be asked in such manner, for such price and upon such terms as the Board of Directors may think proper. These notices are signed by Clement Weaver, secretary of the firm, and are dated Feb. 12. The meeting is to be held at the S. W. cor. 11th and Walnut Sts. The new building which the firm proposes to erect will be nine stories high, of fireproof structural steel construction, with a frontage of 75 feet and a depth of 200 feet. Work will probably be started about July 1. The factory will be removed to the new building.

Frank Pritty, jobber, 929 Chestnut St., returned last week from an extended trip.

Ferd Levy, 926 Chestnut St., has returned from a successful trip through the State.

W. A. Moore, 101 W. 8th St., Wilmington, Del., will remove to 521 Market St., March 25.

C. M. Banks, Wilmington, Del., will remove from 615 Market St. to 413 Market St., March 25.

R. W. Quicksall, Mt. Holly, is being congratulated as the proud father of a baby girl, presented to him last week.

Burglars attempted to rob the store of Horace Thoman, Woodbury, N. J., Friday night, but were baffled by an electric burglar alarm.

Joseph Kern, Wilmington, will remove about March 1 into a new store in the immediate neighborhood of his present establishment at 725 Market St.

John Lang, 725 Sansom St., opened his new store on the boardwalk near Kentucky Ave., Atlantic City, Monday. Nicholas Hack will manage the new store, and Mr. Lang will divide his attention between his Philadelphia and Atlantic City stores.

Milwaukee.

A local journal last week contained a photograph of Wm. Upmeyer, of Bunde & Upmeyer, together with a brief history of the firm's business.

Montgomery Ripley, a former jeweler of this city, who was detained recently by the police pending an examination as to his sanity, last week was taken to the Milwaukee Hospital for the Insane. Mr. Ripley is about 37 years of age. He came to Milwaukee 15 years ago and became interested in Lord Bros.' Jewelry Co. Mr. Ripley subsequently went to Oshkosh, but his health had been greatly affected by numerous business troubles, which, it is believed, are largely responsible for his present condition.

L. A. Van Ess, George I. Gretzer, L. A. Kuesel and Henry Zwengel, the four local manufacturing jewelers who were arrested recently on the charge of failing to report the purchase of old gold and other second-hand goods, were present for their trials in the district court last Wednesday morning. Van Ess, Zwengel and Gretzer were found guilty and the two former were sentenced to pay fines of $10 and costs each. Their fines, with the costs, amounted to $17.49 each, which they paid. Gretzer was allowed his freedom on payment of costs, amounting to $9.32. Kuesel's case was postponed until later

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

Mr. Richard has commenced business in Milnor, N. D.

W. D. Hok contemplates opening a store in De Pere, Wis.

Virgil Blackmore has started in business at Colorado Springs, Col.

Knight & Benning have commenced business in Tahlequah, Ind. Ter.

It is reported that a new jewelry store will soon be opened in Elma, Wash.

G. A. Orcutt has engaged in the jewelry and pawnbroking business in Snyder, Okla.

J. B. Duncan has opened a store at Gillett, Wyo., under the name of Duncan & Co.

The H. P. Hall Jewelry Co., Carthage, Md., was recently incorporated with a capital stock of $10,000. The incorporators are H. P. Hall, Jas. Luke, B. Ash and others.

The British-American Watch Co., Toronto, Ont., has been incorporated, with a capital of $100,000. The directors are P. W. Ellis, M. C. Ellis, C. S. Ellis and P. Y. Ellis.

The Gibbs-Marlow Watch Co., last week, was incorporated in St. Louis, Mo., with a capital stock of $5,000, one-half of which is paid in. The shareholders are: F. P. Gibbs, 5; David I. Forsythe, 5; H. B. Marlow, 40.

The Minks Badge and Novelty Co., for manufacturing badges, buttons, advertising novelties and similar articles, was incorporated Saturday by Lewis Minks, Jr.; George W. Payson, Carroll N. Payson, James H. Alford and Kenneth E. Rockefeller. The capital stock is $25,000, divided into 250 shares of $100 each.

Detroit.

Thomas Burns, known as the "Twinkler Kid," a member of the trio of stone getters who worked Ohio cities, is well known to the Cincinnati police. Last week "Thomas Davis" and "John Johnson" were arrested and locked up with Burns, on suspicion of being responsible for the robbery of diamonds from the persons of three Detroiters. They were seen in local jewelry stores, but have not been identified. In case they are not held in Detroit, they will be turned over to the Cincinnati police.

Assistant District Attorney James V. D. Wilcox last week appeared in Judge Swan's Court against "a lot of precious stones," and, as no one appeared to claim the jewels, an order of reference to the commissioner was made. The stones were seized at Port Huron, Mich., from Adolph Goldberg, alias Frackman, who is said to have tried to smuggle them into the United States. They are appraised at $600. Since then the jewels have been claimed by several persons. The sale of the $20,000 worth of diamonds taken from Louis Busch will probably take place early in March.

C. G. Conyne, optician, Mandan, N. D., was a visitor to the recent convention of opticians, held in Fargo, N. D.

Jewelers' Contributions to the Saturda and Sunday Hospital Association.

The committee in charge of the collection of subscriptions from the New York jewelry trade for the Saturday and Sunday Hospital Association, which consists of Leopold Stern, of Stern Bros. & Co. and Emanuel Untermeyer, of the Untermeyer-Robbins Co., reports the following collections:

Stern Bros. & Co., $25; Joseph Frankel's Sons, $25; Oppenheimer Bros. & Veith, $25; Albert Lorsch & Co., $25; L. & M. Kahn & Co., $25; N. H. White & Co., $10; Jacobson Bros., $10; Brubl Bros. & Co., $25; Fred W. Lewis & Co., $10; Keller & Untermeyer Mfg. Co., $25; Leopold Rosenberger, $10; Sussfeld, Lorscb & Co., $25; Eichberg & Co., $25; Arnstein Bros. & Co., $25; Fink, Bodenheimer & Co., $10; J. Heilbronn & S. Marchand, $10; Wallach & Schiele, $10; Adolphe Schwob, $10; David Kaiser & Co., $5; Low, Weinberg & Co., $5; H. Z. & H. Oppenheimer, $10; Jacob Strauss & Sons, $5; Julius King Optical Co., $10; J. B. Bowden & Co., $10; M. J. Robbins, $5; Woodside Sterling Co., $10; Sidney A. Keller, $5; Alling & Co., $5; S. C. Powell & Co., $5; Silbermann & Co., $5; Morris Prager & Co., $5; Josepb H. Fink & Co., $10; Francis R. Appleton, $10; A. Wittnauer, $10; Henry Freund & Bro., $5; Goodfriend Bros., $10; Chester Billings & Son, $25; Hodenpyl & Son, $10; Wm. I. Rosenfeld, $10; Aikin, Lambert & Co., $5; Ingomar Goldsmitb & Co., $10; Freudenheim Bros. & Levy, $5; I. Ollendorff, $10; R. A. Breidenbach, $5; Goodman Bros., $5; Alfred H. Smith & Co., $10; Cross & Beguelin, $5; H. Schenkein's Sons, $5; Cbarles F. Wood & Son, $10; H. Ginnet & Co., $10; Samuel Aufhauser, $5; Manasseb Levy, $5. Total, $595.

Checks intended for the Association may be sent to either member of the committee. Additional subscriptions will be reported next week.

Referee in Bankruptcy Eastman Discusses Amendments to the Bankruptcy Law.

CHICAGO, Feb. 16.—The first copy of the amended bankruptcy act as signed by President Roosevelt, reached the city last week, and is now in the hands of Sidney C. Eastman, Referee in Bankruptcy. The law went into effect with the affixing of the President's signature, and has therefore been operative since Thursday last. Bankruptcy cases begun previous to that date are to be adjudicated in accordance with the provisions of the act passed July 1, 1898. In regard to the amended act Mr. Eastman said:

Tbe amendments to the bankruptcy law which the President signed last Thursday are important, and will tend to make the administration of the law more effective. The principal points are found in the addition of new grounds for objections to discharge, among the most important of which are the prohibition of a discharge where the bankrupt has obtained property on credit, by means of false statements in writing; also where he has fraudulently transferred, removed, destroyed or concealed his property, witb intent to defraud his creditors; likewise tbe prohibition from going through a voluntary bankruptcy more than once in six years, and the penalty for refusing to answer questions or obey orders. Tbis last enabled a bankrupt to say to the examining counsel: "I refuse to answer that question because it would incriminate me." If a bankrupt sees fit to avail himself of that constitutional privilege he may not have his discharge.

Another class of amendments are those wbicb bar from the general discharge that may be obtained sundry debts, changing the former law from the words "judgment" for fraud, which were barred, into "liabilities" for obtaining money under false pretenses, etc.; also adding alimony and claims for seduction, etc., wbicb were omitted in the former act.

Perhaps the feature which will commend it most strongly to the business community is tbe wiping out of the unpopular clause 57-G.

Death of Herbert Allen Clark.

ATTLEBORO, Mass., Feb. 16.—Major Herbert Allen Clark, one of the members of the Horton, Angell Co., manufacturing jewelers, and assistant inspector general on the staff of Brigadier General J. H. Whitney, of the Second Brigade, Massachusetts Volunteer Militia, died this morning at his home on Pleasant St. from pneumonia after a brief illness.

The deceased would have been 44 years old Sunday and was one of the most prominent men in the business and social world of the city. He had in him those sterling New England qualities which led him from obscurity into the lime light of publicity, where he won success, not only in business, but in politics and society.

Mr. Clark, or "Major," as he was more familiarly known, was born in Middleboro, and was a descendant of the pilgrims of the Plymouth colony.

The deceased was educated in the public schools of Middleboro and graduated from the high school of that town in 1876. On the last day of January, 1877, he came to Attleboro and entered the employ of the Horton, Angell Co. He sank his identity amid the mass of workmen employed by the concern, but the qualities so characteristic of him afterwards could not remain long hidden, and in a comparatively short time he was advanced to the position of superintendent of the factory. In 1866, when, owing to the death of some of the members of the concern, the company was reorganized, Mr. Clark was admitted as one of its members.

The deceased's military career opened with the formation of Company I of the Fifth Massachusetts Infantry. He was one of the original men to enlist and was at once elected sergeant. In 1889 he was advanced to the rank of second lieutenant and three years later became first lieutenant. In 1896 he became commander of a company. The same year he resigned from the command of the company and became a member of the staff of Col. J. H. Whitney, when that officer took charge of the regiment. When Col. Whitney was advanced to the command of the Second Brigade, Mr. Clark, who was then a captain, was taken with him as assistant inspector general with the rank of major.

The deceased took an active interest in the politics of the town, district and State. He was a Republican and was, at the time of his death, a member of the Republican Town Committee. Almost any of the offices of the town were open for his acceptance, but he contented himself with only one—that of park commissioner.

In secret orders he was a member of Ezekiel Bates Lodge of Masons, King Hiram Royal Arch Chapter, Attleboro Council of the Royal and Select Masters, Bristol Commandery of Knights Templar, Aleppo Temple of the Mystic Shrine, Orient Lodge of Odd Fellows, Gideon M. Horton Encampment of Odd Fellows, and Fennington Lodge of United Workmen. He was esteemed a valuable member of each. He was also a member of Company C Association. He belonged to the Pomham Club of Providence, and was a director in the Attleboro Savings and Loan Association, in the Attleboro Mutual Fire Insurance Co., the First National Bank of Attleboro, and the Sun Publishing Co. He was also one of the promoters and a director in the newly formed Attleboro Trust Co.

Mr. Clark leaves a mother and two sisters.

The funeral will take place from his home at 2 P. M., Thursday, and the interment will be in Woodlawn Cemetery.

Death of Arthur L. Hosmer.

PROVIDENCE, R. I., Feb. 14.—The sudden death of Arthur L. Hosmer, a well known jeweler and optician of this city, came as a shock to his friends here.

Mr. Hosmer left his home at noon Monday apparently in as good health as he had enjoyed for some time past. He went to his place of business at 29 Westminster St. and entered upon his customary duties. At about 4.30 P. M. he sat down at his desk to do some writing and had been seated there but a few moments when one the clerks saw him fall back heavily in his chair. A physician and Mrs. Hosmer were summoned, but the stricken man lived but a few moments and was dead before his wife arrived. Mr. Hosmer had been troubled with a weak heart for some time, but had not consulted a physician.

The deceased was born in Albany, N. Y., in 1846 and later resided in Buffalo. Mr. Hosmer's parents removed from there to Lockport, N. Y., and it was there that he learned the trade of watchmaker. He then went into business and had stores in various cities in the United States. He was in Kansas City for a number of years and had also been in business in St. Joseph, Lockport, Kalamazoo and Chicago.

In 1897 Mr. Hosmer came to this city and opened a store at 72 N. Main St. Here he established a good business, and upon his removal to the Westminster St. location, about a year ago, this prosperity was materially increased and he had come to be known as one of the most successful men in his line in the city.

Mr. Hosmer was married in 1876 and leaves a widow, a brother, who formerly had a jewelry store at the cor. of Franklin and Westminster Sts., now known as Emerson's, and a sister, who resides in another city.

The funeral was held from his late residence, 76 Olney St., at 2 P. M. Thursday. Rev. Frederick J. Bassett, rector of the Church of the Redeemer, read the Episcopal service. The attendance was large and the floral remembrances were numerous. The remains were placed in the vault at the North End Burial Ground and will later be taken to Lockport, N. Y., for interment.

Death of Ralph A. Foot.

NASHVILLE, Mich., Feb. 11.—Last week in Grand Rapids occurred the death of Ralph A. Foot, of the firm of Foot & Furniss, of this city.

Mr. Foot was born in Battle Creek, and lived there until four years ago, when he came here and engaged as clerk in the store of which he became half owner only three months ago.

He was born in 1871, was a Mason and had a very large circle of friends. He leaves a widow and mother to mourn his demise.

Death of Henry Allen Deming.

HARTFORD, Conn., Feb. 12.—Henry Allen Deming, a well-known jeweler of this city, died at his home, 30 Charter Oak St., at 1.30 this morning, after a long illness. He had been confined to his bed for two weeks, and his condition for several days was such that his death was expected at any time. Mr. Deming conducted a jewelry establishment in this city for more than 40 years.

Mr. Deming was the son of Allen Deming and Sarah Rowell Deming, and was born in East Hartford, May 29, 1836. His boyhood was spent in his native town, where his father was influential. After receiving a public school education the deceased came to this city and apprenticed himself to W. Pitkin, at 20 State St. After a few years he bought out his employer and continued the business himself.

In 1859 he formed a partnership with Louis Gundlach. This partnership continued until 1888, when Mr. Deming withdrew from the firm and opened an establishment for himself under the old Allyn House on Asylum St. He continued in business in that location until the hotel was remodeled, when he removed to 87 Pratt St. He conducted this store until last Summer, when he was compelled to relinquish business cares on account of failing health.

Mr. Deming was a man of domestic tastes, and much of his spare time was spent at home with his family.

Mr. Deming was married about 40 years ago to Miss Anna E. Sage of this city, daughter of E. C. Sage, who survives him. Their only son, Harry Deming, died in infancy. He leaves three daughters, Mrs. F. C. Gill, Mrs. E. C. Roberts, and Miss Florence Deming, all of this city. The deceased was a member of the Knights of Honor.

Death of Charles A. Notbohm.

OCONOMOWOC, Wis., Feb. 11.—Charles A. Notbohm died yesterday morning after a lingering illness, although confined to the house but for a few days. Mr. Notbohm was one of the most highly respected young business men in this city, having been in the jewelry business here about three years.

He was a prominent Mason, a member of the Knights of Pythias and of the Young Bachelors' Club.

The funeral will take place Saturday afternoon from the Dr. Martin Lutheran Church at 1 o'clock. The Rev. Voigt will officiate and interment will take place at La Belle Cemetery.

Nathan Doras, a diamond broker of Philadelphia, Pa., was robbed of $7,000 worth of diamonds within 10 minutes after stepping from a train on his arrival in Chicago from Cincinnati Monday. He boarded a street car, rode a half dozen blocks, and was relieved of his wallet by some one in the crowd.

Leon Levy, trading as the Maryland Optical Co., Baltimore, Md., last week sued William B. Brown, trading as the William B. Brown Optical Co., of the same place, for $10,000 damages, because, he alleges, the defendant advertises in such a manner as to give the impression that it owns the eye-examination records of the plaintiff.

WALTHAM WATCHES.

The Best Four 18 Size Railroad Watches.

HUNTING OR OPEN FACE.

VANGUARD; Nickel;

23 diamond, fine ruby and sapphire jewels; both balance pivots running on diamonds raised gold settings; jeweled main wheel bearings; jewel pin set without shellac; double roller escapement; steel escape wheel; exposed pallets; compensating balance in recess, adjusted to temperature, isochronism and five positions; patent Breguet hairspring, hardened and tempered in form; embossed gold patent micrometric regulator; tempered steel safety barrel; exposed winding-wheels; elaborately finished nickel plates with gold lettering; steel parts chamfered; double sunk dial. The Vanguard is the finest 18 size movement in the world.

VANGUARD; Nickel;

To Prevent Sales of Stock in Bulk.

A BILL to prevent or regulate the sale of stocks in bulk, which was prepared under the auspices of the National Association of Credit Men, will probably be introduced in the legislatures of a number of States within a short time, and an effort is being made to have the credit men's associations, as well as the boards of trade and mercantile bodies of various States, use their influence in having the proposed law enacted.

The bill in question is practically similar to the act passed by the legislature of the State of New York in 1902, at the instigation of the Credit Men's Association of that State, and reads as follows:

Section 1. A sale of any portion of a stock of merchandise otherwise than in the ordinary course of trade in the regular and usual prosecution of the seller's business, or a sale of an entire stock of merchandise in bulk, will be presumed to be fraudulent and void as against the creditors of the seller, unless the seller and purchaser together shall at least five (5) days before the sale make a full detailed inventory showing the quantity and as far as possible, with the exercise of reasonable diligence, the cost price to the seller of each article to be included in the sale; and unless such purchaser shall at least five (5) days before the sale, in good faith, make full explicit inquiry of the seller as to the names and places of residence, or places of business, of each and all of the creditors of the seller, and the amount owing each creditor, and obtain from the seller a written answer to such inquiries; and unless such purchaser shall retain such inventory and written answer to his inquiries for at least six months after such sale; and unless the purchaser shall at least five (5) days before the sale in good faith, notify or cause to be notified, personally or by registered mail, each of the seller's ceditors of whom the purchaser has knowledge, or can with the exercise of reasonable diligence acquire knowledge, of said proposed sale, and of the said cost price of the merchandise to be sold, and of the price proposed to be paid therefor by the purchaser.

Sec. 2. The seller shall at least five (5) days before such sale fully and truthfully answer in writing each and all of said inquiries, and if such seller shall knowingly and wilfully make or deliver, or cause to be made or delivered, to such purchaser any false or incomplete answers to such inquiries, said seller shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished accordingly.

Sec. 3. Nothing contained in this act shall apply to sales by executors, administrators, receivers or any public officer conducting a sale in his official capacity.

A perusal of the act will leave no doubt in the minds of most merchants that it is a proper and a just law, and one, while drawn in the interest of the manufacturer or wholesaler, also serves to aid the retailer in hitting at a dishonest practice, which affords opportunities for unfair competition. It is to be regretted, however, that the existence of the law in New York has not shown that it absolutely prevents the dishonest practices at which its provisions are aimed, but those behind the measure claim that it can be so amended as to prove effective in every way. According to the sponsors of the bill, the principal work in the way of preventing dishonest sales of stocks in bulk is to get the proposed measure on the statute books of the various States, after which it will be comparatively easy to amend the same so as to meet various conditions as they may arise.

Failures During January.

NO better indication of the good conditions prevailing in the jewelry trade at the present time need be mentioned than the excellent showing of collections reported by manufacturers and jobbers, and the comparatively few failures which have been recorded in the industry. January is always a month in which failures are numerous, but the month just past was a decided exception to the usual rule, the number of important insolvencies being less than during any January in many years.

According to an elaborate table compiled by *Dun's Review*, the commercial failures in almost all other lines showed the same good conditions that exist in the jewelry trade. The jewelry insolvencies given by this table, which embraces retail and wholesale dealers, amounted in January in all to 18, with liabilities aggregating $147,720, or an average of $8,262. This is smallest for any January during the past five years, and the amount of the liabilities is less than those of any January in the same year, with the exception of 1901. According to this table, the jewelry failures in January, 1902, numbered 31, with liabilities aggregating $172,910; those of January, 1901, numbered 30, with liabilities of $114,017; those of January, 1900, numbered 25, with liabilities of $353,588, and those of January, 1899, numbered 28 with liabilities of $192,575.

Death of Gus Fredericks.

BLOOMINGTON, Ill., Feb. 5.—Word was received here yesterday by Mrs. Louise Wagner, of N. Lumber St., announcing the death of her brother, Gus Fredericks, of the jewelry firm of Sweeney & Fredericks, Houston, Tex. He had been ailing for several years.

Mr. Fredericks was born in this city 52 years ago and spent most of his early life here, leaving Bloomington at the age of 20 for Houston, where he engaged in the jewelry business.

The deceased leaves, besides his wife three children, all of whom reside in Texas; one sister, Mrs. Wagner, of this city, and two brothers, Adolph, who resides in Missouri, and William, who lives in Texas.

Mr. Fredericks was well acquainted in this city and had a large number of friends who will be pained to hear of his death.

LETTERS TO THE EDITOR.

A WATCHMAKER'S COMPLAINT.

Editor of JEWELERS' CIRCULAR-WEEKLY:

The time has come when our attention must be called to the fact that a change must be made or the country watchmaker will be exterminated. The watch trade is no longer his. The poolroom, barber shop, hardware store, grocery, dry goods man, the peddler, the tinker and the tailor all handle, deal, trade and exchange our standard goods, and are sold to by our wholesale jeweler, jobber and manufacturer.

The question is no longer asked, "Are you a watchmaker?" or, "Do you employ one in your establishment?" It is no longer a matter of protection to the retail jeweler Our country is full of men calling themselves travelers of wholesale jewelers, representing houses that the unwary retailer is led to believe are reputable and honest These knights of the grip will and do sell standard goods to farmers, savages, tramps or beggars, exposing wholesale prices without any regard to occupation, profession or calling.

The only resource left for the watchmaker is to wear out an existence scraping the rust off old, worn-out watches, and even in that line he is handicapped. Some wholesalers and jobbers who do repairing for the trade will and do refer the same for general store or peddler at trade prices without a word of comment.

It is time that we called a halt and confined our little dealings to the manufacturers or wholesaler, who will protect us and sell their goods to watchmakers only. When we learn that any jobber, manufacturer or dealer sells to others than watchmakers we should let his name be known, so that we may learn who to deal with and who to let alone. Yours truly,

A WATCHMAKER.

P. S.—I would like to hear from others on this question.

Kind Words From Readers.

CHICAGO, Ill., Jan. 14, 1903.
I like THE CIRCULAR-WEEKLY very much.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

43 Rue de Mesley, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

Rough Diamonds Advanced Five Per Cent. and Are Expected to Go Higher.

Cablegrams were received by New York diamond merchants Friday from their London brokers notifying them that the London Syndicate had advanced the price on all grades of diamonds 5 per cent.

Several diamond importers were interviewed by CIRCULAR-WEEKLY reporters Friday and Saturday and they said that they had been expecting an advance for several days, as their diamond brokers in London and representatives of their firms who had recently returned from that market reported that diamonds were very scarce there. They attribute the rise to an increased demand for the stones and to the added expense which is necessitated by running the Kimberley mines a greater depth than ever before.

About four months ago the price on "spotted" goods was advanced 5 per cent. and since then further advances have been daily expected. In spite of the recent rise and the unusual high price of diamonds, the importers say that they are daily expecting a further advance

" 14	25,794.09
Total	$271,268.32

S. George D'Essauer, at one time western representative for the Mauser Mfg. Co., who was arrested last May, was sentenced at Chicago Saturday for an indefinite term. The final disposition of this case has been on Judge Brentano's calendar since last Fall, but whenever the case was called D'Eessauer's attorney asked for and secured a continuance. D'Essauer has been in the Cook County Jail for two years.

New York Notes.

Among the retail jewelers visiting New York last week were E. B. Brumm, E. R. Deull, and R. Orkin, of Shenandoah, Pa.

C. G. Alford, of C. G. Alford & Co., accompanied by his daughter, will leave next week for a three weeks' visit to the eastern coast of Florida.

Paul A. Meyrowitz, optician, has rented the basement store at 421 Fifth Ave., for a term of five years. Mr. Meyrowitz's present address is 287 Fifth Ave.

L. Schrier & Co., Brooklyn, was incorporated Thursday at Albany, with a capital of $5,000. The concern will manufacture engravers' tools, and the incorporators are Linus Schrier, W. J. Rile and Charlotte L. Schrier, of New York.

The New York Decorative Leather Co. was incorporated at Albany Wednesday with a capital of $5,000. The directors are: Stanley H. Searles, Elizabeth, N. J.; Edward F. Pfaff, Brooklyn, and S. S. Kapff, Stapleton, Staten Island.

Leo W. Adler, with L. Adler & Son, diamond merchants and manufacturing jewelers at 87 Maiden Lane, for more than 15 years, has retired from the jewelry business and will devote his entire attention to fire and life insurance. He will represent the New York Life, the Equitable and several fire insurance companies.

The first meeting of the creditors of Mary Goldman, formerly a manufacturing jeweler, who filed a voluntary petition in bankruptcy in the United States District Court at New York, Feb. 2, will be held Feb. 26 at 10.30 A. M. in the office of the Referee in Bankruptcy, Stanley W. Dexter, 71 Broadway. A trustee will be appointed and the bankrupt will be examined.

Edward Hufty, said to be a jeweler, living at 225 W. 25th St., was struck by a 23d St. westbound car Wednesday night while crossing Seventh Ave. and thrown 10 feet. When picked up he was unconscious and was hurried to the New York Hospital, where it was learned that he had received a fracture of two ribs, concussion of the brain and several other injuries to his body. Mr. Hufty is 60 years old.

John G. Williamson and H. R. Caulfield, the alleged proprietors of a company at Haverstraw, N. Y., accused of forming watch clubs, who were arrested the first week in December at the instigation of Anthony Comstock for running an alleged lottery, will be given examination before United States Commissioner Shields in New York to-day. The last day set for the examination of the men was Feb. 4, but owing to a plea of sickness Mr. Williamson was able to obtain a postponement until to-day.

A. Ludeke and Alexander C. Chase, who composed the firm of A. Ludeke & Co., diamond merchants at 170 Broadway, have dissolved partnerships. Mr. Chase has withdrawn from the concern, and J. J. Heiser, formerly of H. C. Hardy & Co., and for the past year one of the traveling men of L. & M. Kahn & Co., has formed a partnership with Mr. Ludeke, and the concern will henceforth be known as A. Ludeke & Co., the same as before. Mr. Chase, who has gone into business for himself, will still occupy a part of the office of the old concern, but will be entirely on his own account. He will deal in diamonds and precious stones and will cover the territory from Boston to Washington, in which he has been traveling many years.

W. A. Salmon, who is well known all over the United States in the jewelry and English china trade and who for the last three months has been confined in the Long Island Insane Hospital, has been dismissed from that institution and is once more able to take up his work as a traveling salesman for the Revere Brass and Bronze Co. Mr. Salmon traveled on the road for 20 years for Le Boutillier & Co. and made many friends. The mental trouble from which he suffered last Fall has entirely disappeared and Mr. Salmon is apparently as strong as ever.

Frank Karst, a retail jeweler, 12 Union Ave., Williamsburg, who was badly burned while asleep at his home last week, as was described in the last issue of THE CIRCULAR-WEEKLY, died Thursday in the Eastern District Hospital, Brooklyn, as a result of his injuries. The incident in connection with Karst's accident is peculiar. He retired one night last week leaving a lighted lamp on a table near his bed. When he awoke the bedclothing and his person were in flames; the lamp had been tipped over and the oil from it scattered about the room. Karst told the surgeon who dressed his burns that he had been dreaming of rescuing a woman from a burning building and that as he threw out his hands to save her he knocked over the lamp on the table. The striking of the lamp awakened him, but not in time to save him from the flames.

The police of this city are seeking the owners of 15 ladies' gold watches, 20 men's watches, 10 ladies' diamond pins, 15 men's stickpins and a quantity of other jewelry, valued at between $10,000 and $12,000, which was taken from three men who were arrested and locked up in the W. 20th St. police station last week. The men gave what are believed to be fictitious names when arrested, refused to answer questions and preferred to go to cells rather than explain how the jewelry came into their possession. One of the men is said to be Jos. Lewis, otherwise known as "Sheeny Ike," whose picture is in the Rogues' Gallery. The three men were arrested by the clever work of Detective Martin Kehoe, whose attention was attracted to them by their suspicious method of entering and leaving pawnshops on Eighth Ave.

John J. Sullivan, who organized the Gold Pen Makers' Union, and who, until a short

DIAMONDS AND PRECIOUS STONES,

DESIGNS AND ESTIMATES FURNISHED. **65 Nassau St., Prescott Bldg., New York.** MEMORANDUM ORDERS SOLICITED.

time ago, had charge of the pen department of the John Holland Gold Pen Co., Cincinnati, O., died in that city Tuesday, Feb. 10. At an early age the deceased apprenticed himself to Aikin, Lambert & Co., manufacturers of gold pens at 19 Maiden Lane, and after he had learned the business went to Cincinnati. His body was sent to the home of his parents, at 84 Meeker Ave., Brooklyn, and the funeral was held from that place Friday afternoon. The deceased is survived by a widow and one child.

Monroe Engelsmann, who last year suffered an apoplectic stroke, is rapidly recovering his health.

J. Pierpont Morgan has added a number of rare and superb specimens of gem and gem mineral to the collection which bears his name in the American Museum of Natural History.

Douglas B. Thompson, during the last two years with the International Silver Co., will represent the Queen City Silver Co., Cincinnati, in the east, with headquarters at New York, where the company has opened an office at 46 W. Broadway.

At the regular monthly meeting of the directors of the Jewelers Association and Board of Trade, Wednesday, the following New York firms were unanimously elected members of the association: Chas. Adler's Sons, Geo. Borgfeldt & Co., H. Levinsohn, S. C. Powell & Co., and the Market & Fulton Bank (associate member).

The Cross Harness Co., 253 Broadway, has lately put in a stock of sporting jewelry, including split second watches, stick pins, watch chains, etc., and will handle these goods very extensively in the future. The concern will carry only the finest lines of jewelry.

The first meeting of the creditors of William L. Polack, diamond dealer, 41 Maiden Lane, against whom an involuntary petition in bankruptcy was filed Jan. 5, in the United States District Court, New York, will be held Feb. 27 at 10.30 A. M., in the office of Stanley W. Dexter, Referee in Bankruptcy, 71 Broadway. A trustee will be appointed and the bankrupt examined.

Louis Berman, an instalment dealer, against whom an involuntary petition in bankruptcy was filed in the United States District Court, June 12, has applied for a discharge from his debts in bankruptcy, and creditors who are interested are requested to appear at the Post Office Building, March 22, at 9.30 A. M., and show cause, if they have any, why the petitioner's application should not be granted.

The Heustis Manufacturing Co., Brooklyn, was incorporated, Friday, at Albany, with a capital of $3,000, for the purpose of manufacturing jewelry. The incorporators are W. H. Wheeler, Brooklyn, and H. H. Butts and W. N. Walker, of New York, all of whom are members of the firm of Hayden W. Wheeler & Co. When seen Monday by a CIRCULAR-WEEKLY reporter the incorporators refused to give any further information concerning their company for the present.

Frank E. Harmer, formerly secretary and treasurer of the Solidarity Watch Case Co., 3 Maiden Lane, has been succeeded by Lewis Montagnon. Mr. Harmer has been with the company a number of years, and will in the future represent the concern on the road. He will travel all over the United States, as will also Simon Goldsmith, another traveling man of the concern. Mr. Harmer and Mr. Goldsmith have arranged their trips so that when one is on the road, the other will be at the home office.

Wm. Lipgens, a deaf mute metal worker, has just completed a curious medallion of President Roosevelt. The piece was made from a silver dollar, and is adorned with the figure of the President on horseback in the Rough Rider uniform. This figure was hammered out on the face of the dollar, and there was no welding or introduction of any metal other than that contained in the coin itself. The design was reproduced from a photograph of the President taken at Montauk Point when he returned from Cuba, and represents an unusually fine degree of skilful workmanship. Mr. Lipgens is one of the designers and chasers for Tiffany & Co. of this city.

A special meeting of the Twenty-four Karat Club was held Friday afternoon in the office of the Keystone Watch Case Co., 21 Maiden Lane, and the report of the Dinner Committee, who had charge of the banquet given at Delmonico's Jan. 20, was read and accepted, and the committee congratulated on its excellent work and the success of the dinner. A. V. Huyler, of N. H. White & Co., tendered his resignation, and C. G. Braxmar, of C. G. Braxmar & Co., was elected an active member to fill the vacancy. P. F. Murphy, president of the Cross Harness Co., 253 Broadway, was elected an honorary member of the club. After attending to a few other details, it was suggested that a Shad Dinner be held some time in April.

The Best Location in the Country

Alfred Baillod, a member of the firm of Cross & Beguelin, was one of the unfortunate passengers on the steamship *Madiana,* which went ashore on the coast of Bermuda about 10 days ago. Mr. Baillod is on his way home, and expected in New York at any time.

M. J. Averbeck, 17 Maiden Lane, has in his office a unique carved arm chair of mountain laurel, which was presented to him and made by M. Alexander, Asheville, N. C.

Leopold Weil, formerly of Leopold Weil & Co., at one time wholesale jewelers at 51 Maiden Lane, was erroneously reported in the newspapers last week as having died in Atlantic City. Mr. Weil is still alive and hale and hearty. The Leopold Weil who died in Atlantic City was a furrier. The similarity of their names was probably responsible for the report that the deceased was the former jeweler.

The tools and machinery and other assets of Maxheimer & Beresford, manufacturing jewelers at 9 Maiden Lane and proprietors of a retail jewelry store at New Rochelle, N. Y., who filed a petition in bankruptcy in the United States District Court, Jan. 8, will be sold at public auction under the direction of Edw. S. Thomas, Trustee in Bankruptcy, Feb. 27, at 10.30 A. M., in the office of the bankrupts. A large part of the assets consists of jewelry in the course of manufacture, precious stones and semi-precious stones, old gold and silver and unmanufactured gold and silver, two large safes and a few pieces of office furniture. The total assets are figured at about $6,500. The liabilities of the concern are $23,749.

Death of Herman Bub.

Herman Bub, formerly a manufacturer of gold chains and bracelets, at 49 Maiden Lane, New York, died at his home last week and was buried Thursday from his late residence, 444 E. 84th St., New York. Mr. Bub had been in business since 1881. Two days previous to his death, he sold out to M. Krameras, a manufacturer of gold chains, bracelets and lockets, who removed to 49 Maiden Lane from 215 Grand St., two weeks ago.

The deceased was about 50 years old and leaves a widow and three daughters. He was of a quiet disposition, a hard worker and thoroughly upright in his dealings. For the past few months he had not been feeling as strong as usual, and for this reason decided to dispose of his business and retire from active business life. His arrangements had just been completed when he died.

The Giant of Collar Buttons

IN QUALITY
IN SALES

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the year of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

Vermaas, Van Bergh Silver Plate Co.; R. H. Schley, Sloan & Co.; W. R. Hammath, Whiting Mfg. Co.; W. H. Torrance, Leys, Christie & Co.; T. N. Horton, Ph. Hoke Mfg. Co.; J. H. Johonnot, Krautz, Smith & Co.; C. F. Smith, D. Gruen Sons & Co.; F. A. Pressmeyer, H. C. Hardy & Co.; Ferguson Mead, Barbour Silver Co.; C. F. Duffey, Enos Richardson & Co.; S. Arnstein, Arnstein Bros. & Co.; H. A. Reickmann, Joseph H. Fink & Co.; Mr. Barkman, Simons, Bro. & Co.; D. H. Twaits, Jennings Bros. Mfg. Co.

Representatives of wholesale houses calling on the trade in Syracuse, N. Y., last week, were: George H. Kettlety, Albro & Co.; Charles H. Clark, W. G. Clark & Co.; Charles D. King, Paul E. Wirt; O. Krause, Arthur W. Ware & Co.; H. H. Day, Day, Clark & Co.; C. E. Mott, J. B. Bowden & Co.; Fred R. Keller, Enos Richardson & Co.; E. Shaw, P. W. Lambert & Co.; W. H. Clayton, Bioren Bros.; Benj. Westervelt, New England Watch Co.; L. H. Carpenter, Charles E. Hancock Co.; Mr. McClannin, Wilcox Silver Plate Co.; W. R. Cattelle, H. E. Oppenheimer & Co.; E. C. Ledger, C. Dorflinger & Sons; F. F. Fulcher, M. J. Averbeck; Theo. Lyons, Lyons Gem Co.; J. Laffey, Gorham Mfg. Co.; A. W. Bogart, Waterbury Clock Co.; James G. Magee, C. F. Rumpp & Sons; E. N. Mandeville, Julius Wodiska; Le Roy Thompson, F. W. Sackett; S. Glenn Walmsley, Hermann Baum; L. S. Beckwith, Sessions Clock Co.; W. A. Pope, Fred C. Steinmann & Co.; Dan F. Pickering; James A. Cheney, Alfred H. Smith & Co.; L. Jaskow, Fink, Bodenheimer & Co.; W. Goldsmith, L. H. Cohen; John A. Herschede, Herschede Hall Clock Co.; Mr. Dupal, Dupal & Young; George Trainer, Martin, Copeland & Co.; W. R. Cobb, W. R. Cobb & Co.; E. P. Ledos, Ledos Mfg. Co.; and a representative of Bradley & Hubbard Mfg. Co.

Assets and Liabilities of Gladding & Coombs Bros.

PROVIDENCE, R. I., Feb. 14.—The failure of Gladding & Coombs Bros., recorded last week, was not entirely a surprise in the circles interested. The bankruptcy petition has been referred to Referee in Bankruptcy, Chester W. Barrows, and it is expected that a meeting of creditors will be held soon.

Uriah R. Colwell is the heaviest creditor, the amount for which the firm was indebted to him in various ways being $3,440. The other creditors, whose claims amount to more than $100 are as follows: Lederer Realty Co., $550; Albert Lorsch & Co., $157; D. E. Makepeace Co., $271; the Edwin Lowe Plate Co., $203; Cornell & Andrews, $461; Manufacturing Jewelers' Board of Trade, dues, etc., $268; wages, $119.41. The total assets are given as $7,127.67 and the liabilities as $10,475.59.

Schedules of Mayer Bros. & Wertheimer Filed in Bankruptcy Court.

The schedules of Mayer Bros. & Wertheimer, wholesale dealers in jewelry at 525 Broadway, New York, against whom an involuntary petition in bankruptcy was filed Sept. 16, 1902, in New York, were filed yesterday in the United States District Court at New York.

The schedules show the firm's liabilities to be $33,823, and the assets $5,250, the amount obtained from the sale of the stock and fixtures last November. There are over 240 creditors.

Leslie E. Soggs, Binghamton, N. Y., was in Geneva, last week, negotiating for the sale to the Standard Optical Co. of the right to manufacture lens grinding machines invented by Mr. Soggs and S. J. Manuel.

J. Weiss, optician, has filed articles of incorporation to manufacture optical goods in Chicago, with a capital stock of $5,000, and the incorporators are J. H. Baldwin, Geo. Fulk and N. F. Krebaum.

News Gleanings.

Wm. Dukelow has sold his business in Sayres, Okla.

M. Taylor Reineman, Chambersburg, Pa., will remove, April 1, to Chadron, Neb., where he will engage in business.

Edwin Keller & Sons, Allentown, Pa., have purchased the properties at 725-727 Hamilton St., that city, for $60,000.

D. W. Moses, Plainfield, Vt., has moved his stock into more commodious quarters.

The storeroom of A. B. Kurtz, Connellsville, Pa., is being converted into two rooms.

The repair department of the Fred Frick Clock Co., Waynesboro, Pa., has been placed in charge of Harry C. Sutton.

Hart & Sturgis, jewelers, of Houston, Tex., are reported to have been sued on accounts for $737 and a note for $213.

Fire recently broke out in the establishment of W. Schultz, Annapolis, Md., and wrought damage to the extent of $250.

A. J. Gardner, Boone, Ia., has just concluded a two weeks' auction sale. He expects to leave, March 1, for California.

Mariapolis, Man., which two and a half years ago was almost a wilderness, now boasts of a prosperous jewelry business.

John Brandell, Anoka, Minn., has bought a store building, which is now being fitted up to accommodate his jewelry business.

The jewelers of Little Falls, Minn., have agreed to close their stores at 6.30 P. M. every evening, except Wednesdays and Saturdays.

The stock of J. M. Murray, Collinsville, Tex., was partially destroyed by fire a short time ago. The insurance fully covers the loss.

C. S. Stiffts, Conway, Ark., has purchased real estate for $6,000, for which he has given a realty mortgage for the full amount.

J. B. Moody, a jewelry salesman, was robbed, recently, in Lake Charles, La., by five tramps, three of whom were subsequently arrested.

Stickney & Woodwell, Newburyport, Mass., will meet some time this week and complete arrangements for the erection of a new silver factory.

Two youths, Timothy Reidy and Edward Sullivan, were arrested recently, charged with disorderly conduct by Isaac Simmons, a jeweler of Elmira, N. Y.

Lorenzo Van Allen, Buffalo, N. Y., is receiving the condolences of his friends on the death of his wife, Mabel Elizabeth, who died from pneumonia last week.

Several jewelers of Wilkes Barre, Pa., recently complained to Mayor Price, of that city, that they are not receiving proper protection from itinerant merchants.

Gen. A. Hudson, Albuquerque, N. M., contemplates entering the Elgin Horological Institute, Elgin, Ill., where he will take a special course in angular gearing and angular velocity.

Fred Schmidt has severed his connection with the firm of Ernest Schmidt & Co., Howard Lake, Minn., and accepted a position with a large jewelry establishment in Langdon, N. D.

J. W. Thomas, a jeweler of Dyersburg, Tenn., and his wife were severely burned a short time ago, while the former was in the act of starting a fire. His wife ran to his assistance and both were caught by the flames.

The store of T. W. Smith, Ridgely, Md., was destroyed by fire last week. Mr. Smith's residence, adjoining the jewelry store, was also gutted by the fire. The total loss is $4,000, with an insurance of $1,500.

J. S. Calhoun, a watchmaker formerly employed by Ira T. Gabbert, Caldwell, Kan., disappeared recently, taking with him about $2,000 worth of diamonds and rings belonging to Mr. Gabbert. There is no clue as to his whereabouts.

Geo. R. Gibbs was arrested a short time ago in Somerville, N. J., by constables Dorland and Yoos, on a charge of embezzlement by a New York jewelry house. Gibbs is held in $200 bonds to await the action of the Grand Jury.

The Business Men's Association, of Princeton, Ind., has agreed to take 200 shares of the factory stock of a clock factory in that place, and to dispose of it at $30 a share, in order to enable the concern to expand its business.

A dispatch from Albuquerque, N. M., states that the greater part of the $10,000 worth of watches and jewelry stolen Nov. 20, 1902, from the safe of S. Vann & Son, of that place, was found recently under an old barn by two boys.

Thomas Sherting, Parkersburg, Ia., has been appointed trustee in the case of Wm. Miller, a bankrupt jeweler of that city. G. W. Clarke, S. A. Foote, and Ed Sherting, have been appointed appraisers of the goods turned over to the creditors.

W. H. Van Keuren's establishment, Poughkeepsie, N. Y., was entered by thieves a short time ago, who broke a pane of glass in the rear window, and then unbolted the back door. The value of the stock stolen does not amount to more than $14.

The store of E. Willis Spahr, Tarentum, Pa., was totally destroyed by a fire last Saturday morning, in which five persons lost their lives. The jeweler succeeded in saving a large portion of the stock, and he will resume business in a few days.

At the meeting of the stockholders of the Bundy Mfg. Co., Binghamton, N. Y., held last week, the following directors were elected: President, George E. Green; vice-president, George W. Dunn; treasurer, A. Ward Ford; secretary and general manager, H. E. Bundy.

Two shrewd thieves recently entered the jewelry establishment of A. B. Duncan, Portsmouth, N. H., and while examining several diamond lockets managed to purloin one without being noticed by the jeweler. The police were notified, but no trace of the men has thus far been found.

An attempt was recently made to break into the store of Norman Ransford, Williamstown, Mass., but the thieves were evidently frightened away before completing their plans. A slot machine outside of the store was broken open and pennies taken to the amount of $2.

L. B. Shoop, who recently removed from Chicago to Streator, Ill., is congratulating himself that he did not remain in the former city. A short time ago the brick store, in which he had his jewelry stock, together with five other brick buildings in the same block, was totally destroyed by fire.

Aaron Jennet, who died in Binghamton recently, was for a number of years in the jewelry business. The deceased was born in Poughkeepsie and had lived in Binghamton for half a century. He is survived by a widow, one daughter and one son, the last

In the matter of how much you can earn,

Everything Depends

on what your training has been. This applies to Watchwork and Engraving even more strongly than to many other occupations.

The only way to learn right is to go to a good school.

We believe we are conducting the leading Horological School of the country.

Consider carefully before you decide where to go.

Send for our Prospectus, etc.

"Practical Course in Adjusting."

Price $2.50.

All Jobbers or Jewelers' Circular Publishing Co.

eing Chas. G. Jennet, Police Commissioner of Binghamton.

F. W. Fletcher, a jeweler of Sanborn, Minn., is accused by a former employer, Christ Iverson, of having embezzled $800. Iverson, who employed him as confidential clerk and bookkeeper, recently discovered some peculiar entries in the books, which led to an investigation. Fletcher's stock was attached, but it will not cover the alleged shortage.

The safe in the general store of W. H. Elberson, Bryant, Ind., was broken open shortly after midnight, Feb. 9, and a number of jewelry trays were taken. The thieves secured watches and jewelry valued at $300. The empty trays were found the next morning in a hand car house on the railroad track. No clue to the thieves has been found.

At the annual meeting of the Middletown, N. Y., Business Men's Association held recently a resolution was adopted expressing disapproval of the Ulmann bill now in the New York Legislature, which seeks to impose a tax on all installment dealers and compel such dealers to file a bond for $5,000. The annual banquet of this association was held at the Russell House Feb. 12.

A man by the name of Titus recently disappeared from Richmond, Va., taking with him a sample case belonging to R. L. King, a trading salesman. The case contained 40 watches and a large amount of miscellaneous jewelry. Titus, when subsequently taken into custody, declared that the sample case got mixed up with his baggage and that he had no intention of stealing it.

Some one reported a short time ago that Dr. Hedgepeth, optician, who was recently located in Los Gatos, Cal., had been using his father's diploma, and that he himself was not a graduate from any university. A dispatch from Los Gatos corrects this statement and states that Dr. Hedgepeth graduated from the Northern Illinois College, Chicago, in April, 1899.

Several years ago a large photograph of the daughter of Perry Tindolph, Vincennes, Ind., mysteriously disappeared from the latter's home. A few days ago a calendar containing a reproduction of the picture was received by the jeweler from his brother who is visiting in Minnesota. The calendar is used by a Minnesota firm for advertising purposes, and Mr. Tindolph is at a loss to know how the firm obtained the original photograph.

R. W. Wehrle, jeweler and optician, Indiana, Pa., has sold a half interest in his jewelry business to Harry McQuown, of Punxsutawney. Mr. McQuown will assume charge of the mechanical and repair department of the establishment. The new firm will be known as Wehrle & McQuown. Mr. McQuown was formerly employed by E. N. Wehrle, of Punxsutawney. Early this Spring Mr. Wehrle will begin the erection of a three-story brick building on Philadelphia St. for a home for his jewelry establishment. On the first floor will be the jewelry rooms and offices for the optical department. The remainder of the building will be rented as office rooms. Mr. Harry Lambrecht, who for the past three years has been employed by Mr. Wehrle, has secured a position in Apollo.

Diamond in Meteorite Presented to the American Museum of Natural History.

A diamond in an unusual setting has just been placed on exhibition in the American Museum of Natural History, having been loaned to that institution by George F. Kunz, gem expert for Tiffany & Co., New York. The diamond is imbedded in the center of a 40-pound meteorite and is the first specimen of its kind ever discovered.

The meteorite was found at the foot of Crater Mountain, Arizona, by Professor G. A. Koenig, who was prospecting in that vicinity. It was forwarded to Dr. A. E. Foote, of Philadelphia, Pa., where it ruined several chisels and an emery wheel, which had been used on it by the doctor to discover its constituent elements.

The diamond is perfect and of the purest and hardest carbon. With several very minute particles of black diamond dust, it rests in a small jagged area of less pure carbon about the size of a large marble. The area is surrounded by a solid mass of iron from four to five inches thick. The theory is advanced by experts that the enormous pressure applied to the mass of iron by the heating of the exterior by friction would crystallize the carbon in the center and form a diamond. The specimen is part of a private collection owned by Mr. Kunz.

The existence of a contract of agency may be established by oral testimony of an employe of the principal having knowledge of the fact. (56 N. E. Rep. 1062).

"Something Doing" IN WATCHES.

SHIPMENTS OF

Sweeps, Old Gold or Old Silver

forwarded to our address will secure

Quick Returns, Accurate Valuations, Best Results.

OUR CUSTOMERS SAY SO AND THE PROOF OF IT SHOWS IN OUR CONSTANT AND RAPID INCREASE OF BUSINESS.

PRICES WE PAY.

OLD SILVER, Market Price.

OLD GOLD,
8 karat .....32 cts. per dwt.
10 karat.....40 cts. per dwt.
12 karat .... 48 cts. per dwt.
14 karat..... 56 cts. per dwt.
18 karat.....72 cts. per dwt.

PLATED SCRAPS, 20 to 35 cts. per oz.

OUR PLAN:

Immediately on receipt of old gold or silver we will remit by cash or draft (as preferred). If our offer should not prove satisfactory we will return shipment in same condition as received and pay all charges. Who runs the risk of proper valuation?

WHAT A NUMBER OF SATISFIED CUSTOMERS SAY:

Check received. Thank you for your promptness. Amount exceeded expectations. H. S. Gier, Pittsburg, Pa.

Your favor, enclosing draft, to hand. Many thanks. It was better than I expected. E. A. Schober, Pt. Townsend, Ind.

Check received. Am perfectly satisfied. You gave me all it was worth at the mint. A. Simon, Ft. Worth, Tex.

Received check for old gold. Am pleased to say it was more than I expected. C. A. Notboihm, Oconomowoc, Wis.

I received your check and am well pleased, as it was more than I expected. L. C. Hodskey, Big Rapids, Mich.

Check at hand. Am well pleased as always. This time about $1.00 more than I expected. H. Wykhuysen, Holland, Mich.

Draft received. Will ship you old gold and silver hereafter. I did not expect so much for the shipment.
A. B. Corman, Chetopa, Kans.

Received your check for scraps, etc., sent you some days ago. Entirely satisfactory, more than I expected.
O. M. Nelson, Madison, Wis.

Check received. More than I expected. Sent you a little shipment some time since which I had sent to another firm. Your check was a dollar more than their offer.
G. D. Thomas, Kirksville, Mo.

Your check for gold sent you is O. K. The returns were very quick and the price the best we have had.

Canada Notes.

W. E. Blakely, Trenton, Ont., was burned out last week.

David Lepage, Montreal, has filed an assignment on demand of L. J. A. Miller. The liabilities amount to about $4,700.

Henry Birks & Sons' hockey team, Montreal, played a return match with H. Vineburg & Co.'s team a few days ago and won.

Farrance & Jenkinson, Toronto, last week were the victims of a thief, who stole a lady's watch which had been left for repairs.

W. H. Lively, Ladysmith, B. C., has admitted Mr. Dandorffe into the business, and the style of the firm is now Lively & Dandorffe.

B. A. St. John, who recently sold his business at Minnedosa, Man., to his brother, F. St. John, will retain his store at Portage La Prairie.

Wilks & Michaud have been appointed curators to the estate of Thomas J. Assaly, Montreal. Elias Assaly has assigned to E. Lavigne.

Deniger & Mercille, Montreal, have assigned on demand of the John L. Cassidy Co., which is a creditor to the extent of $8,089 out of the total liabilities of $10,000. The assets consist of stock and book debts of the firm.

While the authorities were investigating the robbery at Mr. Hinton's store, Bathurst, N. B., which took place about a fortnight ago, and that at Holdenraber & Rosenberg's, which occurred Monday, Feb. 9, they got information that Frederick Thibaudeau, at present in jail for breaking into Mr. Landry's jewelry store, was the man they wanted. On going to the jail the constables found that Thibaudeau had cut a hole through the floor in his cell under the bed, through which he had been getting in and out of the jail at will. In his cell was found a lot of plunder which was stolen from the stores mentioned. Two other men have been arrested in connection with the robberies.

SPECIAL PRICES FOR IMPORT ORDERS.

L. W. LEVY & CO., 194 Broadway, New York.

Lancaster, Pa.

J. M. Jenks, of the firm of J. M. Jenks & Co., this city, has started on his western trip.

G. Wm. Reisner is visiting in Pittsburgh to-day and to-morrow in the interest of L. C. Reisner & Co.

The following dealers visited the trade in Lancaster last week: Cyrus Novinger, Halifax, Pa.; E. G. Hoover, Harrisburg, Pa.; A. S. Beiler, West Earl, Pa., and Mr. Brubaker, of Kaufhold & Brubaker, Columbia, Pa.

At a meeting of the stockholders of the Hamilton Watch Co., held last week, the following directors were elected for the ensuing year: Charles D. Rood, J. W. B. Bausman, P. T. Watt, H. M. North and W. Z. Sener. The directors later organized by re-electing the old officers for the year, as follows: President, Charles D. Rood, Springfield, Mass.; vice-president, P. T. Watt; treasurer, Frank P. Coho; secretary, E. P. Coho.

Harrisburg, Pa.

W. P. Denehey states that he has not been asked as yet to put a price on his Market St. store property, and that no offer has been made for its purchase to date.

The jewelry store on N 6th St., formerly conducted by the late Dorner W. Thompson, is still in charge of Mr. Arnold. It is understood the business will be closed out by the heirs of Mr. Thompson.

A bill has passed first reading in the House of Representatives, amending the act imposing a mercantile license tax on merchants and vendors, so as to make it applicable to all classes of tradesmen, including manufacturers.

Mr. Call has introduced a bill in the House of Representatives, making it a misdemeanor for any pawnbroker to accept or receive as a pledge any article from a minor. The bill was referred to the committee on municipal corporations.

Albany.

Otto H. Fasoldt is out of town for a few days.

William Scott, a watchmaker at F. L. Hunke's store, is again confined to his home by illness.

Mr. and Mrs. Otto H. Fasoldt recently entertained a number of friends at dinner at their home in Slingerlands in honor of their son, James S. Fasoldt, the occasion being the 21st anniversary of his birth. The tables were beautifully decorated with carnations and smilax. A very bright and entertaining programme was given.

Goewey & Jennings, 13 S. Pearl St., are offering a gold filled watch to a boy or girl estimating most correctly the number of beans contained in a jar which they have in their window. In the window there is also a large placard announcing that the contest is open to all. It is unnecessary to make a purchase to participate in the contest. The guessing began last week and will conclude Feb. 28.

Alabama.

TRADE CONDITIONS.

All the jewelers report that trade was quiet during the month of January and so far in February business is light, but with bright prospects. In fact there is a tendency towards reaching the good record made in December and November. The large sales of diamonds continue to be features of the trade, while cut glass sales are also well in the lead.

George C. Smith, Chicago, recently spent several days at Daphne, fishing and hunting.

T. B. Dilworth, Jasper, who had been suffering from a prolonged illness, is convalescing.

Kinsel & Petri, Columbus, Ga., just across the Alabama line, have put in new machinery and begun to manufacture.

E. O. Zadek, Jackson, Tenn., son of E. O. Zadek, of the E. O. Zadek Jewelry Co., Mobile, was a visitor to Mobile last week.

Mrs. Thos. J. Irwin, Athens, has moved the stock of jewelry left by her late husband to her residence, where she is closing it out.

Major E. M. Robinson, Mobile, will make the speech on the occasion of the presentation of the silver service to the battleship *Alabama*, Feb. 24, in the midst of the Mardi Gras festival.

C. M. Snyders, formerly of Athens, Wis., has opened a store at Colfax, Wis.

John Weber, Lancaster, Wis., was married last week at Platteville, Wis., to Miss Della Medley.

Optical Notes and Briefs.

(*Additional Optical News on page 71.*)

The Montreal Optical Co. has issued execution against J. B. Delisle for $85.

Dr. E. E. Emerson, eye specialist, has established an office at Medford, Ore.

Negotiations are being made for the sale of an optical plant in Webster, Mass.

F. E. Booth, Worthington, Minn., is taking a post-graduate course in optics.

G. W. Silcher, optician and druggist, Renville, Minn., has sold his drug business.

Ed. Meyer is in San Francisco, Cal., representing the Julius King Optical Co., New York.

The Columbian Optical Co. has been incorporated in Omaha, Neb., with a capital stock of $100,000.

Dr. A. Weck, optician, with the Gale Jewelry Co., Norfolk, Va., has opened offices at 214 Main St.

S. O. Huseth, Park River, N. D., is taking a post-graduate course in optics under S. B. Millard, Litchfield, Minn.

Hirsch & Kaiser, opticians, San Francisco, Cal., have leased the entire building, which they now occupy, for a term of six years.

Five dozens pairs of spectacle frames were stolen last week from the establishment of Meyer Rothschild, 931 N. 7th St., Philadelphia, Pa.

A young man named William Cummings recently stole several articles, including a pair of opera glasses, from the optical store of C. Potter, Toronto, Can.

The annual meeting of the stockholders of the Brooks Optical Co., St. Louis, Mo., for the election of directors, was held at the office in the Globe-Democrat building, Feb. 16.

B. T. Pipenoe, of the Columbian Optical Co., Kansas City, Mo., went to Lawrence, Kan., last week to attend the funeral of his mother, who died suddenly of heart disease.

Albert Abraham, optician, Philadelphia, Pa., has removed to the S. E. cor. of 10th and Arch Sts., the property formerly occupied by Smith & Dreer, retired jewelers. Mr. Abraham has handsomely refitted and equipped the store.

At a meeting of the directors of the Globe Optical Co., Boston, Mass., held last Monday, Edwin P. Wells was elected President; Charles A. French, Vice-President and Secretary, and A. G. Barber, Treasurer and Manager.

The Oregon Optical Co., Portland, Ore., is making changes in the wall decorations of its reception room. This company will shortly put in a lens grinding plant, and add three new employes, making the establishment one of the most complete in the city.

The Crowell Optical Co., Riverside, Cal., has moved into new quarters, at 822 Main St., where it has taken a five years' lease.

The Johnston Optical Co., Detroit, Mich., has awarded contracts for the erection of a two-story brick building, to be built at the cor. of State St. and Washington Ave. The building will occupy a space of 26 x 64 feet, and will cost $5,000.

The report circulated a short time since to the effect that Dr. H. Henker, eye specialist, had left Pendleton, Ore., without paying his bills was untrue and the doctor left the city with the most perfect confidence of all the people with whom he had business relations, and the respect of all his acquaintances. Dr. Henker is now located at the jewelry store of Mr. Hames, Lewiston, Idaho.

The H. Rembold Optical Co., St. Louis, Mo., opened its new store at 512 Pine St., Monday, Feb. 16. Mr. Rembold, President of the new company, is one of the old time men. He went into the optical business with Blattner and Adams, in 1884, and was later with H. Blattner. For the past several years, up to a short time ago, he was with the Erker Optical Co.

In Oregon a board of State examiners of optometry is created by House Bill 301, which declares that after June 1, 1903, no person shall practice optometry in the State of Oregon without first procuring a registration certificate from this board, which is appointed by the Governor. The board consists of five persons now actively engaged in the practice of optometry and holding diplomas from reliable optical colleges.

The regular monthly meeting of the New England Association of Opticians was held Feb. 17 at Young's Hotel, Boston, Mass., The bill that the legislative committee of the New York State Optical Society has drawn was read, and an informal discussion of its merits followed. It was the intention to have the original paper read, but the programme was changed, and the evening was devoted to the discussion of the subject of Retinoscopy. Quite a number of the association have devoted considerable time and thought to this subject, and the meeting was of unusual interest.

Meeting of the North Dakota State Optical Association.

FARGO, N. D., Feb. 11.—This morning when the members of the North Dakota State Optical Association reassembled in the parlors of the Waldorf the first business taken up was the matter of a permanent organization. The meeting was called to order by C. L. Proctor, the temporary chairman, and a report of the committee on constitution and by-laws called for. The report was read and adopted in its entirety.

The work of electing officers then claimed the attention, with the result that the following will govern the association until their successors are named at the next convention of the association: President, E. P. Sundberg, Fargo; first vice-president, C. G. Conyne, Mandan; second vice-president, A. O. Wold, Langdon; secretary, W. R. Blakely, Grafton; treasurer, A. G. Telliner, Jamestown.

The board of directors was then named and the following will serve: Lewis Hanson, Devil's Lake; F. O. Angliss, Dickinson, George Munroe, Grand Forks, and A. L. Thompson, Mayville.

A business talk was then carried on among the members until time for adjourning the morning session. At 2.30 P. M. the association reconvened to listen to a talk on "The Benefits of the Optical Profession," by A. Sweningsen, of Moorhead, president of the Minnesota State Board of Examiners in Optometry.

This evening, the sessions will close with a series of talks on clinics, showing the practical work of testing the eye both objectively and subjectively and will be taken part in by several well-known refractionists of the State. It is likely that a meeting of the association will be held next year, but where and when has not yet been decided upon. The organization is now on a working and practical basis and should flourish. Many points of great benefit and usefulness to members of the profession have been adduced and the boys all agree, in the language of others, "it was good to have been here."

John T. Fox, one of the oldest jewelers in Rochester, N. Y., celebrated his 81st birthday last week at his home, 104 S. Fitzhugh St. At the celebration there were over 70 guests and Mr. Fox was presented with a handsome dress suit case by his friends. The presentation speech was made by Joseph E. Stevenson. Among those present were many of Rochester's pioneer citizens. Mr. Fox was heartily congratulated.

This is the house always prompt
To fill your orders when in want;
Diamonds loose and mounted too,
Safes full of watches are here for you.
These words to you are not a bluff,
Just send an order to ELIASSOF.

A LARGE ASSORTMENT OF DIAMOND MOUNTED JEWELRY CARRIED IN STOCK.

Cleveland.

W. H. Deuble, Canton, visited the jobbing trade here last week.

C. M. Wilson, Salem, O., was a business visitor in Cleveland last week.

A. H. Coleman, Massillon, O., was in this city for several days last week.

Mr. Pickering, of Pickering & Jelliff, Mansfield, was a visitor to this city last week.

C. F. Keim, of the Scribner & Loehr Co., is spending several weeks in Florida, for the benefit of his health.

Albert Zang, of J. A. Zang & Son, Alliance, O., called on the jobbing houses here a few days ago.

August Walker, formerly with Joseph Schuster, has opened a jewelry store at the corner of Pearl and Vega Sts.

A. Leonard, engraver at the Sigler Bros. Co., has resigned his position, to open a millinery department in the store of Strauss Bros.

Brunner Bros. & Co. have moved into new quarters in the same building in which they have been located for some time, at 53 Euclid Ave.

William A. Wortman, a Canton jeweler, has filed a petition in bankruptcy, giving his debts as $1,120, and his assets as $1,775, but of this $800 is in insurance policies, and $500 is claimed as exempt. The stock is put in at $250.

The Wingate-Nusbaum Jewelry Co., of Cleveland, has been incorporated with a capital stock of $25,000, the incorporators being W. B. Wingate, S. M. Nusbaum, W. F. Raes, W. H. Beaver and H. H. Johnson. Mr. Nusbaum has been with the Sigler Bros. Co. for 26 years, and Mr. Wingate has been for 15 years with the same concern. Both men have a wide acquaintance in the trade.

The Scribner & Loehr Co., of this city, has been incorporated with a capital stock of $150,000, by George W. Scribner, Otto T. Loehr, Charles F. Keim, Charles K. Merrill and Norton T. Horr. The company will succeed the firm of Scribner & Loehr, but is made up of the same men who have heretofore done business as a firm. The incorporators have not yet chosen officers, but this will be attended to within a few days.

The Watchmakers' Union, affiliated with the American Federation of Labor, has been organized among the expert watchmakers of this city, and the membership now numbers 20. The object of the organization is to work for the betterment of those connected with the craft, both as to fitness for their work and the maintenance of high business principles. Lectures and talks on watchmaking will be one of the important features of the meetings, which will be held at stated periods. The officers of the organization are as follows: President, E. E. Trayer; vice-president, F. E. Force; secretary, N. L. Cobb; financial secretary, C. A. Danner; treasurer, C. P. Gerdum. At the present time the membership is made up of the watchmakers of the Webb C. Ball Watch Co. and the Bowler & Burdick Co. Membership is secured by examination, and those who are not good workmen will not be admitted.

VOL. XLVI. CHICAGO, WEDNESDAY, FEB. 18, 1903. No. 3.

Chicago Notes.

B. B. Gregg, Brook, Ind., was among the recent buyers in town.

Mr. Jones, of Jones & Roberts, Columbus, Wis., was a visitor to the trade in this city last week.

Mrs. Nellie Smith, a jeweler of Peru, Ind., was a caller on the trade in this city last week.

The engagement of Miss Flora Hirsch, daughter of A. Hirsch, of A. Hirsch & Co., to Iwan Ries has been announced.

John M. Cutter, secretary of the Trenton Watch Co., has been spending the past two weeks in this city calling on the trade.

T. Zurbrugg, president of the Philadelphia Watch Case Co., spent a few days of the past week at the local office of the company.

"Tom" Staneck, formerly representing Otto Young & Co. in Iowa and Nebraska, will in future call on the local retail trade for that house.

D. Axeman, for the past three years assistant to M. E. Meyer, manager of the local office of the J. D. Bergen Co., has succeeded Mr. Meyer in that position.

E. Cooper Stone, Neely Young, H. B. Rogers and Rodney B. Carr were among the eastern travelers who attended the funeral services of C. D. Peacock.

The employes of the jewelry workroom of Marshall Field & Co. recently made a contribution to the "Famine Fund" for the benefit of the impoverished people in Northern Sweden.

W. H. Berg, of Hyman, Berg & Co., who has been making a pleasure trip through the south, accompanied by his wife, was recalled last week on account of the death of his father.

The exact size of the space in the Powers building which has been leased by A. C. Becken, for a term of five years, from May 1, is 76 by 171 feet, the rental for the term being $45,000.

Hirsch & Oppenheimer have arranged to take in the room adjoining their present space in the Masonic Temple, thereby doubling their present capacity. The firm will instal new machinery and put on a number of new men.

The sale of the stock of Landon, Ziegler & Co., as reported in a recent issue of THE CIRCULAR-WEEKLY, did not affect the individual business of C. K. Landon, as his connection with the former concern was simply that of trustee, and he still continues his individual business.

A. Hirsch, of A. Hirsch & Co., will leave in a few weeks for an extended pleasure trip through California and Florida, on which he will be accompanied by his wife. J. F. Gretz, the veteran salesman of this house, left Saturday for a six months' trip to the coast.

P. Sullivan, accomplice of J. F. Nelson, who pleaded guilty of breaking the window of Keil & Hettich's jewelry store on the morning of Jan. 9, and was sentenced to an indeterminate term in the penitentiary, as reported in the last issue of THE CIRCULAR-WEEKLY, was tried before a jury in Judge McEwen's court last week. He was found guilty and sentenced to the penitentiary.

The citizens of the 13th Ward have with general consent settled upon Paul R. Shordiche for their choice as the Democratic nominee for Alderman. "Paul," as he is familiarly known as one of the head salesmen for Lapp & Flershem, is not after the position. On the contrary, it is understood that delegation after delegation of citizens of his big ward have waited on him to secure his consent for the presentation of his name.

Walter Camp, president of the New Haven Clock Co., was in this city last week on a pleasure trip. Mr. Camp, who was the guest of honor of the Chicago Yale alumni at their annual banquet in the University Club Wednesday evening, has been the guiding spirit in the athletic affairs of the New Haven institution ever since his graduation there with the class of 1880. He is now a member of the Intercollegiate Football Rules Committee.

W. W. Newberry, western representative for the United States Watch Co., recently secured an antiquity in the shape of a hall clock, which he displays with some degree of pride at his office. This ancient timepiece, which is thought to be about 150 years old, was brought to this country from Germany by a wealthy family, who settled in Indiana, and has been handed from one to another until it reached the hands of the retail jeweler in the above State, from whom Mr. Newberry bought it, and who has traced it back 115 years.

H. F. Hahn & Co. moved last week into their new and spacious quarters on the fifth floor of the Powers building, Wabash Ave. and Monroe St. This concern has always had the name of having one of the handsomest wholesale jewelry stores in town, but it is apparent, from the appearance of the new store that the members of the firm have endeavored to eclipse their previous efforts in this direction. Upon entering the store the visitor is greeted with an open square, 30 feet wide by 40 feet deep, of solid glass cases, in which are displayed watches, jewelry, etc. The office department and the private offices of the firm occupy the 76-foot frontage on Wabash Ave. Mr. Hahn has arranged a den for his traveling men, in which each traveling representative has his own desk, etc. The vault in this store has about 180 square feet of floor space and is 13½ feet high.

The following list of firms and individuals, all members of the wholesale jewelry trade, appeared in a published list as indorsers of the candidacy of Graeme Stewart as nominee on the Republican ticket for Mayor against John Maynard Harlan: Benjamin Allen & Co., Gorham Mfg. Co., R. Wallace & Sons' Mfg. Co., Swartchild & Co., Philadelphia Watch Case Co., Otto Matthei & Co., G. F. Wadsworth, Ideal Watch and Jewelry Co., Charles A. Allen, Lloyd Milnor, A. L. Sercomb, R. H. Ingersoll & Bro., I. Swartz, Newman Clock Co., H. Haas, M. S. Fleishman Co., A. P. Hunnemann, A. C. Becken, H. M. Kohn, Edw. Schrader, Wadsworth Watch Case Co., F. H. Noble & Co., L. H. Schafer & Co., F. E. Wallis, Bartels Optical Co., Winter Engraving Co., Simons, Bro. & Co.; George C. Faling, A. Husch & Co., F. A. Hardy & Co., the New England Watch Co., C. Rogers & Bros., Wm. L. Gilbert Clock Co., Wm. A. Rogers (Ltd.), J. F. Kappelman & Co., Frederick J. Essig, Samuel I. Piney, Western Watch Case Mfg. Co., E. Kirchberg, Madson & Steele Co., Wechter & Weinman, S. Buchsbaum & Co., Watson & Newell Co., Moore & Evans, Ernest S. Fowler, O. W. Anderson, H. O. Borden, Jos. Fahys & Co., H. M. Carle, Walter S. King, Harlan S. Noyes, G. W. Adams & Co., C. H. Seaman, D. H. Hess, Norris, Alister & Co.; E. G. Tuerk, William M. Zenkel.

Employes of the watch repairing depart-

nent in the store of C. D. Peacock availed themselves of the opportunity presented by their three days' vacation resulting from the death of Mr. Peacock, last week, to inspect the factory of the Elgin National Watch Co. and that of the Illinois Watch Case Co. at Elgin, Ill.

L. Abrahamson, Cottonwood, Minn., was in Chicago last week looking over his old friends in the trade.

It is reported here that Bernhard Braunwarth, West Bend, Wis., has moved into new and larger quarters in that town.

It has been reported at this office that William D. Hoks, formerly with J. Van der Zanden, Green Bay, Wis., has moved into a new and larger store.

The banquet of the organizers of the Jewelers' Club of Chicago was postponed from Thursday night until to-morrow night on account of the death of C. D. Peacock.

George Nettleman, a former watchmaker, 84 years old, died from old age at St. Elizabeth's Hospital, last week. The deceased was a widower and had been a resident of the hospital eight years.

John M. Marks has asked the United States District Court in this city to relieve him of an indebtedness of $40,915, most of which was contracted in connection with the Diamond Contract Co., 315 Dearborn St. The creditors number almost 1,000, and each of them has a claim of $25 or $50 against the concern.

About 2 A. M. Friday burglars smashed the plate glass window of Shourd's, Adcock & Teufel's jewelry store, 66 State St., and stole 28 gold, gold filled and silver watches, the aggregate value of which was approximately $300. The broken window was discovered by a policeman in the employ of the Electric Protective Co., who arrived on the scene within 20 minutes after the thieves had escaped with their booty.

St. Louis.

TRADE CONDITIONS.

Business with the retail jewelers still remains quiet, and there is comparatively little doing, except the regular everyday trade. The wholesale dealers continue to get good reports from their traveling men, and many good orders are being sent in by them.

Sam. Eisenstadt, of the Eisenstadt Mfg. Co., started for the east last week and will visit Providence and New York.

There were very few out-of-town jewelers in this city last week. The only one noticed was Mr. Rodgers, of Hafner & Rodgers, DeSoto, Mo.

Emil and Frank Niehaus, who, for several years, have been associated with their father, F. H. Niehaus, under the firm name of the F. H. Niehaus and Sons' Jewelry Co., have bought out their father's interest in the company for $5,000 and will continue the business.

Everything is now in shape for the dinner of the Retail Jewelers' Association of Missouri, which will be given to-night. Excellent vaudeville talent has been engaged and also a good orchestra. From the appearance of the menu the spread will be very fine.

Alvin Bauman, president of the L. Bauman Jewelry Co., has returned from a purchasing trip to the east. Al Lehman, secretary of the company, sailed with his family, Feb. 14, for Europe, where he will remain for the next three months. The trip will be purely for pleasure, and Mr. Lehman will visit his parents, whom he has not seen for many years.

Kansas City.

TRADE CONDITIONS.

The big Spring rush of advance traveling men is now on and many are in this city at the present time. The weather last week was very mild, and consequently brought in many country merchants who came to replenish their stocks. Trade continues brisk, especially along jobbing and manufacturing lines.

The working jewelers of this city are organizing a union.

The Mercantile Club, of this city, has just elected new officers for the ensuing year.

James Scott has returned to his duties at Woodstock, Hoefer & Co.'s after a two weeks' illness.

Margolis & Metzer are preparing a new 500-page catalogue, which will go to press some time next month.

Mr. Cavanaugh, of the Geo. B. Peck Dry Goods Co., is on a purchasing trip to New York, and expects to return in about two weeks.

Chas. Wright, of Gurney & Ware, has just recovered from a brief illness. E. S. Miller, of the same firm, was also incapacitated for a short time owing to a severe fall which he sustained.

A special meeting of the Retail Merchants' Association was held Feb. 10 to discuss the proposed amendments to the garnishment law. Plans are also being made to effect a change in the methods of the clearing house.

The following out-of-town merchants visited Kansas City last week: Fred Hess, Perry, Kan.; Mr. Cassidy, of Cassidy & Whiting, Whiting, Ia.; G. W. Lewis, Herington, Kan.; Frank Mitchell, Marshall, Mo.; James W. Phillips, Chanute, Kan.

The marriage was celebrated recently of Ward Moffitt Lewis and Miss Fannie A. Norton, daughter of C. B. Norton, of the C. B. Norton Jewelry Co. The couple left for an eastern wedding tour and will return about March 1 to their home at 1833 Pendleton Ave.

W. W. Trigg & Co. have disposed of all of the old stock of C. E. Russell at auction and are now renovating the interior of the store. They are also putting in new show windows and building an addition to the rear of the establishment. A complete new stock will shortly be installed.

Max Levi was ordered in the Circuit Court, last week, to pay his wife $50 attorney's fees and $5 a week alimony pending the trial of her suit against him for divorce. Levi is a pawnbroker on Union Ave. He is 60 years old and his wife is only 16. In her petition for divorce she says he kept her a prisoner in his rooms and was intensely jealous of her.

The Streicher Watch and Jewelry Co. is making alterations to the front of its store and renovating the interior. Several new

employes have been added to the establishment.

Post D, the Kansas City branch of the Travelers' Protective Association, gave a smoker last week and about 75 persons were present. The programme consisted of informal talks by members, after which refreshments were served. The next social function will be the annual banquet, which will be held in March or April. About 15 members of the Kansas City branch expect to attend the national convention in Indianapolis, June 15.

Indianapolis.

W. R. Adams will remove about March 1 from Camden to Frankfort, Ind.

F. M. Herron has been elected a director of the Indianapolis Commercial Club for 1903.

Augustus P. Craft, senior member of Augustus P. Craft & Co., and wife, recently celebrated their silver wedding anniversary.

Samuel Prager, Terre Haute, Ind., recently moved into more elaborate quarters at 507 Main St. He has enlarged his stock considerably and improved his repairing department.

G. V. Dickenson, of the Elgin National Watch Co., Elgin, Ill., was in this city last week, visiting the jobbers and talking over the prospects of obtaining watch movements for the ensuing year.

Albert Hassfurder, Jeffersonville, Ind., was arrested a short time ago on the charge of receiving stolen goods. It is claimed that Hassfurder has been receiving stolen property from thieves in Louisville, Ky., for several years.

Gray & Gribben last week brought suit against Mrs. H. R. Rockwood in the Superior Court to replevy a solitaire diamond ring, which, it is claimed, was bought on the instalment plan and the payments were not continued

Thomas Ward, of Ward & Co., is enjoying the praises of his friends for rendering efficient medical attendance to an old friend of his father who was recently stricken with smallpox. No nurse could be found to attend the sick man and Mr. Ward undertook the task himself.

Minneapolis and St. Paul.

Will Dixon has left S. H. Clausin & Co., Minneapolis.

Arthur Hauck, St. Paul, has accepted a position with Johantgen & Kohl, Minneapolis.

Fred Guderian, with the Minneapolis Jewelry Mfg. Co., has recovered from a week's illness.

Sam. Wilenchek has begun visiting the trade in the Twin Cities for Lewis Finkelstein, St. Paul.

Arthur E. Paegel, Minneapolis, received first and second prizes for racing pige s at the recent pigeon show.

E. H. Brandeis, with Arthur E. Pae Minneapolis, last week spent a few day t his former home in Aberdeen, S. D.

Among the dealers who visited the T Cities last week were: E. S. Hought Brainerd, Minn.; Joseph Noll, Hampt Minn.; J. D. Lifquist, Henning, Minn.

The R. B. Wegner Co., St. Paul, off creditors 20 cents on the dollar. It is derstood that a majority will accept. T matter will be presented to the bankrup court.

A. J. Hendrickson, Minneapolis, recen reported to police headquarters that he w held up by two men near 13th St. and N ollet Ave. and robbed of four diamonds a two rubies, valued at $200. He says t men slipped up behind him and felled h with a "billy."

Omaha.

TRADE CONDITIONS.

Trade is very active in this territory and m of the houses have finished taking their inv tories.

L. F. Andrews & Co. have opened a ne store in Kearney, Neb.

O. Weedman, Butte, Neb., has becon a partner in the C. B. Weedman Co., that place.

P. M. Vermas, of the Van Bergh Silv Plate Co., Rochester, N. Y., was a visitor this city last week.

N. C. Wheeler, Vermillion, S. D.; L. Furnald, Carroll, Ia., and C. O. Grime Amherst, Neb., have entered the Omah Horological School.

The expert jewelry thief known as "Fain ing Bertha" has returned to Omaha, but s far has not made herself conspicuous in an of the local establishments.

Harry Dixon and wife, North Platt Neb.; W. H. Wiker, Cedar Rapids, Neb and C. A. Peterson, Oakland, Neb., wer visitors to this city last week.

San Francisco.

TRADE CONDITIONS.

The weather has begun to brighten up and trad has again assumed an appearance of activity. East ern traveling men are very numerous and cus tomers from country towns are beginning t flock to the city.

C. W. Jacobs, of J. Jacobs, has started on a two weeks' trip to the northern part of the State.

H. M. Abrams, formerly of M. L. Levy & Co., has left for an extended pleasure trip to the east.

Mr. Yanke, now with Albert Hansen, Seattle, Wash., is visiting in this city, where, formerly, he was located.

J. B. Whitney has made a few alterations in his establishment for the better display of his clocks, of which he makes a specialty.

ASK YOUR JOBBER FOR THE R. J. HILLINGER & CO. SILK GUARDS.

R. J. HILLINGER & CO., 137 Wabash Ave., CHICAGO, ILL. Manufacturers, **Silk Guards, Vest Chains, Silk Eyeglass Cords.**

rank Whitney left last week on a rush trip San José.

H. D. Hadenfeldt, of Rothschild & Hadfeldt, has just returned from his eastern ip.

Dan Marx, formerly in business in Portnd, Ore., was a visitor to this city last eek.

A. H. Grennell, Bakersfield, Cal., is now this city. He has decided to retire from e jewelry business.

H. F. Wichman, Honolulu, H. I., has arved in San Francisco, en route to New ork on a pleasure trip.

Jack Lewis has returned from a most easant trip to Japan in the interests of eo. Greenzweig & Co.

Adolph Hirschman last week put out acards announcing that he would occupy e retail store in the Mutual Savings Bank ilding about March 1.

G. Beninghausen, Seattle, Wash., has rerned to Seattle after a brief sojourn in is city. He will soon move into his new ore, which will be one of the best equipped the coast. He has engaged H. Young, rmerly with Radke & Co., as head watchaker.

A. Eisenberg, of Adolph Eisenberg & Co., ill shortly set out for the diamond centers Europe. Joe Leudan, representing the me company, is now touring through the rth and J. C. Feige is out in the central rtion of the State. Carpenters have start- to make alterations to the offices of the mpany and expect to have them remoded by the end of week.

The new Mutual Savings Bank building, its central location at the junction of earny, Geary and Market Sts., is rapidly aring completion and a number of jewers are securing quarters in it. The Keyone Watch Case Co. and the Alphonse dis Co. are established there in quarters rger and more commodious than the for- er ones. The latter has added two addional men to its working force.

William Hoskins, who was arrested by etectives Wren and Reynolds with diaonds galore stored about his clothing and ho claimed to have brought the precious ones from the diamond mines of South frica, has been identified as one of the io who looted the Lichtenstein pawnshop at 617 Washington St., Jan. 26. He has been incarcerated in the City Prison.

Among the out-of-town merchants in San Francisco last week were: J. C. Wahlen, Petaluma; D. Hyman, Sacramento; M. Citron, successor to A. Hyman, Oakland; L. C. Koberg, Healdsburg; L. Machefert, San José; Mrs. G. Ducommon, Hanford; Geo. W. Hill, Lodi; E. W. Wright, Bakersfield; W. A. Hurst, Carson City, Nev.; A. Kaiser, Stockton; F. W. Carter, Santa Rosa; M. Markheim, Stockton, and J. Kocher, of Rudolph Kocher & Son, San José.

Pacific Coast Notes.

P. Wetzold, Willows, Cal., has returned from a short trip to Redding, Cal.

Alfred E. Springborg, Redlands, Cal., has just received a large invoice of alarm clocks.

C. H. Knights, of C. H. Knights & Co., Chicago, Ill., arrived in San Diego, Cal., last week, accompanied by his wife, and expects to remain there for some time.

A letter was received recently by Chas. M. Hanf, a jeweler of San Bernardino, Cal., from a New York house inquiring about the reported discovery of diamonds in Lytle Creek, near that city.

Burglars recently effected an entrance into R. G. Gilholn's store, Los Angeles, Cal., and stole a large quantity of the cheaper kind of jewelry which had not been placed in the safe at night. The value of the articles taken is about $200.

S. W. Mudd, representing a firm in Denver, Col., was in Arroyo Grand, Cal., a few weeks ago, inspecting the Kessler onyx mine near that place. If the mine passes into the possession of the Denver firm it will be reopened and a factory established to turn out the finished product. This is said to be the second expert from the same firm who has been sent within the past year to examine the mine.

The stock of George Buhn, Redlands, Cal., will soon be removed to larger and more convenient quarters in the Baker House block, where Mr. Buhn has leased a store, which will be fitted up especially for his business. Work on the remodeling will begin at once, and Mr. Buhn expects to be established in the new quarters by March 1. In the meantime he will conduct a removal sale of the stock in his present store on State St.

Montana.

Mrs. Dr. Frank has opened optical offices in Dillon.

Elliott Bjorneby has opened a jewelry store on E. 2d St., Kalispell.

John Frederick, 805 Main St., Deer Lodge, is having a sale of his stock preparatory to closing down his business here for a time. He intends going to California.

E. Sutler, well known for many years in the jewelry trade at Anaconda, Mont., has left that city and has taken a responsible position at Herman Kohn's jewelry store in Missoula.

Hight & Fairfield, 101 Main St., Butte, have been notified of the arrest of Charles Hight and John Gill at Springfield, Ill., who are wanted here on a charge of passing worthless checks, one of which, for the sum of $38, was passed on the above named firm last Christmas eve. The men will, in all probability, be brought back to Butte to stand trial.

A serious fire broke out on West Park St., Butte, Feb. 8, which resulted in considerable damage to Ed. F. Mayer's jewelry store, at No. 69, as well as to the stock of the Butte Optical Co., at the same address. The fire broke out next door to these stores in premises conducted as a drug store and it was these premises that were most severely damaged. Mr. Mayer and the Butte Optical Co. are both said to be fully insured.

"Practical Course in Adjusting."

Price $2.50.

All Jobbers or Jewelers' Circular Publishing Co.

Pittsburgh.

TRADE CONDITIONS.

Pittsburgh has just closed one of the greatest political campaigns in the history of local politics, and with its finish jewelers are hopeful that business will again become normal. For the past 10 days the populace of this city has talked nothing but politics, and nearly every branch of business in the city suffered as a result. Most of the jewelers are through with taking stock and the dull season of the past week or so has given them ample time to prepare for the annual Spring rush, which the Easter season always precipitates.

F. Isaacson has opened a new jewelry store at 928 Braddock Ave., Braddock.

E. C. Stevens, formerly employed at E. P. Roberts & Sons', has accepted a position with W. W. Warrick, 6107 Penn Ave., East End.

W. W. Wattles, of W. W. Wattles & Sons, accompanied by his wife and daughter, will leave Thursday for Pasadena, Cal. The party will spend the remainder of the Winter and the early Spring months in the west.

William Worrell, of Canonsburg, was a Pittsburgh visitor on Thursday. Mr. Worrell has opened a new jewelry establishment in that place and was in the city securing a stock of goods from the Pittsburgh wholesale houses.

B. E. Arons, accompanied by his wife and family, left last week for Florida, Havana and other southern points. Before returning home they will make a complete tour of several southern States and visit interesting places in Cuba.

J. Alex. Hardy, of Hardy & Hayes, has completed plans for an extended tour of the south, which will embrace Cuba and Jamaica. Mr. Hardy will be accompanied by his wife and will spend about six weeks under southern skies.

C. D. Stuard, representing Heeren Bros. & Co., has returned from a five weeks' trip through Ohio and Western Pennsylvania. Mr. Stuard says the retail dealers in the territory traversed by him assert that they have been enjoying great prosperity.

John J. McGlone, who was arrested in McKeesport on Feb. 5 on a charge of stealing watches and other jewelry from George V. Brady, a jeweler of Washington, was given a hearing Feb. 8. McGlone pleaded guilty to the charge before the Grand Jury and was sentenced to the Huntington reformatory.

Among the retail dealers from nearby towns who visited Pittsburgh wholesale houses during the past week were the following: T. N. Smith, Morgantown, W. Va.; Asa Joseph, Mt. Pleasant, Pa.; Max Rudert, Tarentum, Pa.; E. H. Kennerdell, Tarentum, Pa., and H. H. Weylman, Kittanning, Pa.

The engagement of Miss Emma Bevan, head bill clerk at the establishment of Heeren Brothers & Co., Penn Ave. and 8th St., and Herman J. Von Dera, Knoxville, has been announced. Miss Bevan has been employed in the clerical department at the Heeren store for the past four years and is well known among members of the jewelry fraternity here.

Supt. B. W. Deer, of the Pittsburgh division of the Baltimore and Ohio Railroad, has issued a circular calling the attention of the company's employes to the fact that the company's inspection of watches is placed in the hands of Edward H. Will, Pittsburgh; James R. Reed & Co., Pittsburgh; A. W. Bishop, Connellsville, and the S. T. Little Jewelry Co., Cumberland, Md.

Abraham Harrison, aged 21 years, son of Isaac Harrison, of 5157 Butler St., died in Greensburg, Pa., Thursday morning. Mr. Harrison, who is one of the best known jewelers in the Lawrenceville district, knew nothing of his son's illness until notified to hasten to his bedside in Greensburg. The young man was in his usual health Wednesday night, but was stricken with a severe attack of heart trouble early Thursday morning, from which he succumbed a few hours later. Mr. Harrison was summoned at once, but did not reach his son until a few minutes after his death had occurred. The boy's body was brought to this city Thursday night and taken to the Harrison home on Butler St., where the funeral was held later.

Miss Maggie Hall, a domestic employed at the home of J. M. Roberts, a well-known jeweler of 441 Market St., was murdered last week by Nicholas Glazner, a street car motorman, who then tried to end his own life. The tragedy occurred in the yard of Mr. Roberts's home, 412 Atwood St., and was the end of a friendship which had existed over a period of six years. The woman, who had been employed by the Roberts family for over six years, was approaching the house in company with Glazner when the tragedy occurred. Shortly after they reached the yard the man, drawing a revolver from his pocket, fired two shots into the girl's head, killing her instantly. With his arm still about the dead woman, Glazner is believed to have fired two shots at his own head. The bullets struck him with sufficient force to render him unconscious and he fell to the ground with the lifeless body of his sweetheart. The shots brought Mr. Roberts and his son, J. P. Roberts, to the spot and the girl's body was carried into the house. The murderer was removed to the Mercy Hospital and was afterward taken to the jail, where he is rapidly recovering.

Cincinnati.

E. & J. Swigart will hereafter carry a special manufacture of Swiss watch movements, to fit American cases.

Chas. Becker, Cincinnati representative of the Philadelphia Watch Case Co., will visit the factory at Riverside this week.

Harry Walton, of the Wadsworth Watch Case Co., is on a trip to the trade with a sample line of the new Spring stock.

Wesley Harmon, New York, and Mr. Widig, Chicago, both representing Jos. Fahys & Co., were in Cincinnati last week calling on the trade.

The Herschede Hall Clock Co. will move into its new factory next week. John Herschede is in the east making a round of the large cities and towns.

The card system of keeping tab on watches sold, originated by Chas. Nolting, of Oskamp, Nolting & Co., and now operated by that firm, proves very successful.

C. J. F. Bene, of Bene, Lindenberg & Co., was elected vice-president, and H. M. Bohmer, of the same firm, was elected treasurer of the St. Mary's Consolidated Oil and Gas Co. at the annual election of that company, held last week. A number of Cincinnati jewelers are interested in this stock.

A. Boiarsky, Charleston, W. Va., who was here buying goods last week, stated that the labor troubles in his district are about at an end, but that there is little prospect of the miners getting on their feet for many months to come, as they are so far in debt. Tradesmen in all lines, he said, feel the situation keenly.

I. Friedman, the traveling salesman for L. Adler & Sons, New York, who committed suicide last week in New Orleans, La., was a resident of this city and was well known here. His father, who is 86 years old, lives on W. 8th St., and two of his brothers, also traveling men, live here as well. The last time Mr. Friedman was home was at his mother's funeral in November. He has a host of friends and was a very popular good fellow. The funeral took place from the Mortuary Chapel, United Jewish Cemetery, on Walnut Hills, Friday morning.

Portland, Ore.

TRADE CONDITIONS.

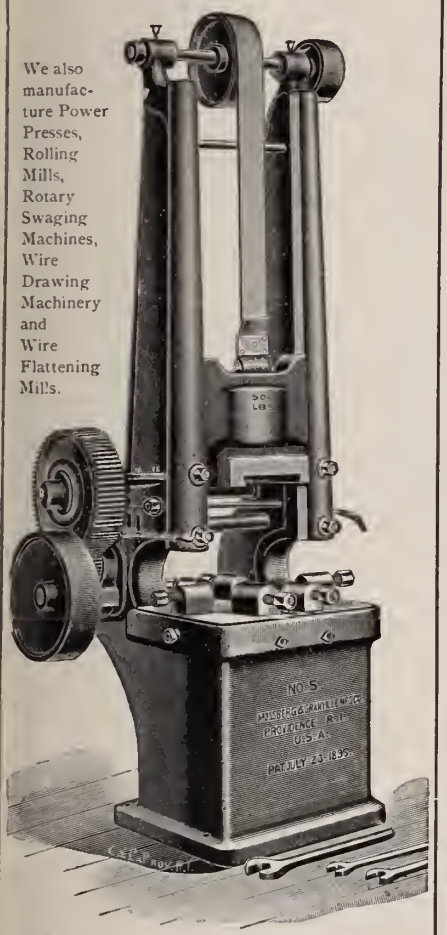
The people of Portland are making active preparations for the Lewis & Clark Centennial Exposition, which is to be held here in 1905. The legislative assembly passed a bill appropriating half a million dollars, early in the session. Other States of the "Oregon country" are preparing to be well represented. All indications point to increased activity in all lines of trade, during the next two years, and, of course, the jewelers expect their full share of the business. At present the trade is somewhat dull, the usual condition for this season of the year. Meanwhile the jewelers are choosing their Spring stocks and preparing for the big increase which they expect by the 1st of May.

F. Shanks, Arlington, Ore., was in Portland last week, purchasing stock for his store.

A quantity of jade, the precious stone of the Chinese, was recently found in Josephine county, southern Oregon.

Jaeger Bros. have added a watch and clock repairing department to their establishment, and engaged the services of an expert watchmaker.

E. Harding, Nanaimo, B. C., and Miss L. C. Cornfield were married last week. After a journey through Seattle and the Sound cities, they will reside in Nanaimo.



G. Beninghausen, Seattle, Wash., has asked permission of the board of public works to remove his time ball from in front of 807 First Ave. to the front of 713-715 First Ave.

F. Abendroth will close his store on Morrison St., about April 1, and move the stock to his 1st St. store. The building in which he is now located is to be razed, and a modern brick erected. Mr. Abendroth expects to open a branch store again when he can find a suitable location.

Wm. Paul, who was arrested recently, for stealing a quantity of jewelry from the store of Challoner & Mitchell, Victoria, B. C., pleaded guilty when arraigned in police court, and was sentenced to four months' imprisonment. When search was instituted, a quantity of jewelry was found in his rooms, which had been stolen from A. A. Clayton's store, of the same place.

ISSUE OF FEB. 0, 1903.

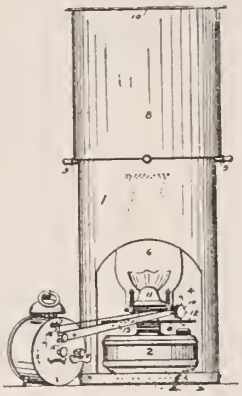
720,060. MATCH-SAFE. William A. Patten, Lesueur, Minn. Filed March 15, 1902. Serial No. 98,287. (No model.)

A metal match-safe formed from a single blank

and involving the body 1, laterally-spaced retaining-fingers 2, side guard-plates 3 and choke-plate 5, said retaining-fingers and guard-plates being rigidly secured together, and extended outward and upward from said choke-plate, to afford the throat 4.

720,131. CHATELAINE-BAG OR THE LIKE. Oscar Greenbaum, New York, N. Y., and Charles W. F. Kroll, Jersey City, N. J., assignors to Raudnitz & Pollitz, New York. Filed Oct. 10, 1902. Serial No. 126,646. (No model.)

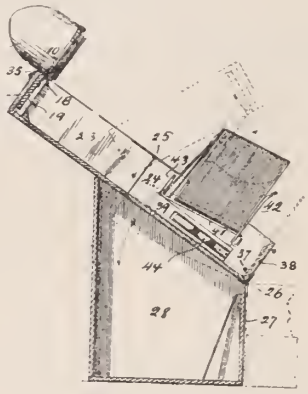
A chatelaine-bag or the like comprising a pair of sides and a gusset located between said sides and having its edges placed in line with the inturned substantially transversely extending edges of the sides and secured thereto, said sides and the gusset being first placed together with their finished surfaces exposed outwardly before being secured together.



720,132. FLOWER-HOLDER. Francis W. Green, Brooklyn, N. Y. Filed Nov. 28, 1902. Serial No. 133,088. (No model.)

The improved flower-holder herein described comprising a frame adapted to rest over the mouth of a vase or other receptacle and provided with a number of vertically-disposed tapering spring flower holders open at both ends, as and for the purpose described.

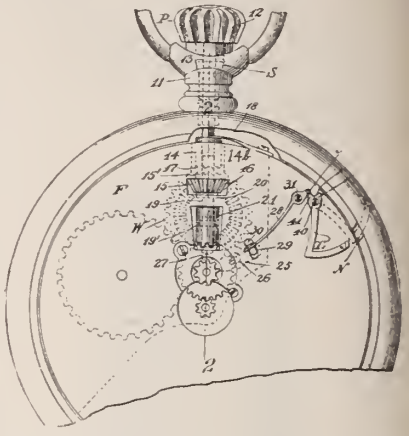
720,182. LAMP-STOVE. Charles R. Sandvig, Canton, O. Filed Aug. 8, 1902. Serial No. 118,855. (No model.)



The combination of a lamp, a wick-wheel on said lamp, there being a peripheral groove and radial

pins on said wheel, an alarm-clock, an alarm winding key on said clock and a cord connecting said wheel and said key, said cord being looped on one of said pins and passed in said groove around said wheel and extended thence to said key.

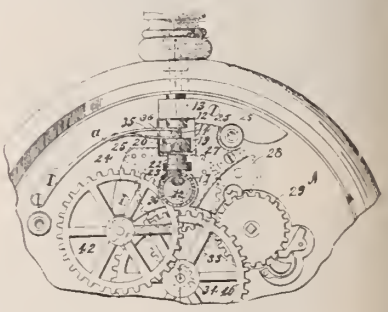
720,204. VIEW OUTFIT. Richard R. Whiting, Cincinnati, O. Filed June 12, 1902. Serial No. 111,301. (No model.)



A lens-holder consisting of the wooden lens-frame

10 provided with lens-pockets, lenses fitted into these pockets, the thickness of frame 10 being such as to provide sufficient depth for these pockets to receive the lenses flush with the frame, a plate 14 having openings corresponding with the lenses and their pockets, but slightly smaller than the lenses so that by projecting over their edges these lenses are held in place and means to hold plate 14 on frame 10 with the lenses between.

720,258. STEM WINDING AND SETTING WATCH. Christopher Kuenzel, Springfield, Mass. Filed April 19, 1902. Serial No. 103,813. (No model.)



In a watch winding and setting mechanism in combination, the movement-plate having a socket 14b opening to the edge thereof and having the winding-sleeve therein with clutch-teeth at its inner end, the stationary winding-pinion set in an aperture in the plate and having a clutch-toothed hub protruding outwardly into said socket, the setting-sleeve 21 rotatably mounted in an aperture in the plate radially inside of, and in alignment with, the winding-pinion, the same being end-wise immovable, and in driving connection with the setting-gearing, a stem endwise movable in and through both sleeves 14 and 21, having a constant non-rotatable engagement relatively to the sleeve 14 and having a portion constructed for temporary

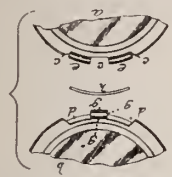
engagement inside of the sleeve 21, means for forcing and temporarily retaining the stem in its inwardly-thrust position, and a spring bearing in an endwise outward direction against the stem.

720,259. STEM WINDING AND SETTING WATCH. Christopher Kuenzel, Springfield, Mass. Filed July 29, 1902. Serial No. 117,559. (No model.)

In a pendant watch winding and setting mechanism in combination, the winding pinion having a fixed position for rotation, and the winding-clutch at the outer side thereof, the stem endwise movable freely through and non-engaged with the

winding-pinion, and movable freely endwise through the clutch but having a rotating engagement with the clutch, and having a shoulder for engagement with the inner side of said clutch, whereby its outward movement outwardly forces such clutch, and having at its inner end the setting-pinion, the winding-gearing with which the winding-pinion is in constant engagement, the setting-gearing with and from which the stem-carried setting-pinion engages and disengages and a spring for forcing the clutch into engagement with the winding-pinion.

720,317. LOCKET. William H. Blaney, Attleboro, Mass., assignor of one-half to Robert B. Macdonald, Attleboro, Mass. Filed Dec. 2, 1902. Serial No. 133,584. (No model.)



In a locket consisting of a body portion and cover connected by a hinge-joint, the portion *a* formed with the curved tubular portions *e* of the knuckle of the hinge separated by a central space, said knuckle portions *e* being substantially flush

L. C. REISNER & CO., Lancaster, Pa.

Special Run on the following numbers of **RIVETT STEPPED WIRE CHUCKS, at 40c. Each.** Cash with order. These Chucks will not be duplicated, as the firm declines to make any more stepped chucks. So buy these while you can. Every one guaranteed to be absolutely perfect, of the following numbers: 2, 3, 4, 6, 7, 8, 9, 13, 14, 16, 17, 19, 21, 23, 27, 29, 31, 33, 34.

WATCH OUR ADVERTISEMENT NEXT WEEK FOR SILVER POLISH.

with the periphery of the portion *a* but not projecting outward therefrom; the portion *b* formed with the tubular portion *g* of the knuckle whose opposite walls *g'* and *g''* are oppositely curved, thereby forming a portion of an ellipse, the outer

wall being curved substantially in line with the curvature of the periphery of the portion *b*, and the inner wall being curved inward to the same extent as the outer wall is curved outward, said knuckle portion *g* being substantially flush with but not extending outward from the portion *b;* and a curved pintle or pin rigidly secured at its opposite ends in the portions *e* of the knuckle but free in the portion *g*, substantially as set forth.

720,378. SWIVEL SNAP-HOOK. Sam Phillips, Sherrill, N. Y., Filed Oct. 23, 1902. Serial No. 128,513. (No model.)

A swivel snap-hook including a main hook-body

having a T-shaped head, and a swivel-head consisting of a bar having its opposite ends flattened and provided with openings, said open ends being lapped one over the other with their openings aligned and slipped over the T-shaped head, and their walls compressed around the reduced portion of the T-shaped head to hold the parts from detachment one from the other.

720,423. HAT-PIN. Jacob A. Hamelback, Zanesville, O. Filed May 21, 1902. Serial No. 108,393. (No model.)

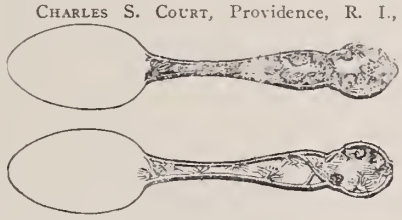
In a hat-pin, the combination of a needle bearing a head, a spring-tongue carried by said needle and arranged to engage the side of the hat and pre-

vent the withdrawal of the needle, an apertured sleeve slidingly mounted on said needle and bearing a stop and finger-grip to limit the insertion of the needle and serve as means for operating said sleeve, said sleeve being arranged to be operated to disengage said tongue, and a spring bearing on said head and said stop.

720,473. BADGE-BUTTON. Augustus Phelps, Newark, N. J. Filed May 26, 1900. Serial No. 18,038. (No model.)

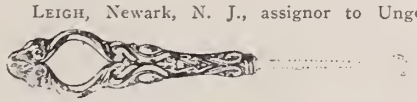
In a badge-button, the combination of a body

having a peripheral groove at the rear, and a fastening-pin comprising a piece of resilient wire bent intermediate of its ends into a holding portion adapted to lie in said peripheral groove of the button-body, and having its ends forming substantially straight wire pin-tongues extending inward from said groove behind the button-body in different directions and substantially parallel thereto, each of said pin-tongues being adapted to be thrust through the fabric of a garment up to its base at the periphery of the button, the two said pin-tongues lying in different lines and one of them being disposed in a small chord of the circle of the button-body at a distance from the center of said circle.



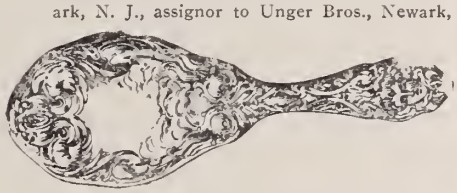
720,515. HAIR-FASTENER. John Erikson, Providence, R. I. Filed Sept. 22, 1902. Serial No. 124,316. (No model.)

A self-clamping or locking hair-pin having two resilient legs, straight on their outside edges, lat-



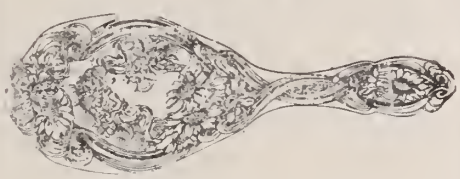
erally-projecting lugs on each leg extending in toward the opposite leg and into the space between the two legs for the purpose of locking or clamping the hair to hold the pin in place.

Design **36,220.** HANDLE FOR SPOONS OR SIMILAR ARTICLES. Eustace Crees and Charles S. Court, Providence, R. I., as-



signors to the Watson & Newell Co. Filed Jan. 9, 1903. Serial No. 138,444. Term of patent 3½ years.

Design **36,221.** HANDLE FOR BUTTON-HOOKS OR SIMILAR ARTICLES. Otto Leigh, Newark, N. J., assignor to Unger



Bros., Newark, N. J. Filed June 28, 1901. Serial No. 66,441. Term of patent 3½ years.

Design **36,222.** BACK FOR BRUSHES OR SIMILAR ARTICLES. Otto Leigh, Newark, N. J., assignor to Unger Bros., Newark,

N. J. Filed July 5, 1901. Serial No. 67,254. Term of patent 3½ years.

Design **36,223.** BACK FOR BRUSHES OR SIMILAR ARTICLES. Philemon O. Dickinson and Otto Leigh, Newark, N. J. Filed

Oct. 29, 1902. Serial No. 129,336. Term of patent 3½ years.

Trade-Mark **39,751.** EYEGLASS AND SPECTACLE FRAMES OR MOUNTINGS. Amer-

ican Optical Co., Southbridge, Mass. Filed Dec. 29, 1902.

The mark shown above used since Nov. 1, 1902.

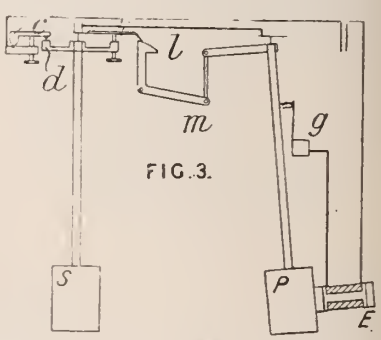
(ABRIDGEMENTS OF SPECIFICATIONS FROM *The Ilustrated Official Journal.*)

ISSUE OF JAN. 7, 1903.

18,583. RESERVOIR PENS. R. N. SAHA, Rangamati Villa, Chowmatha, Chinsurah, Bengal, India. Sept. 17.



Relates to fountain or stylographic pens in which the flow of ink from the reservoir to the writing-point is intermittent. The ink reservoir A is closed at one end, and the other is fitted with a

plug C provided with three tubes D, E, F. The air tube D is closed at the end remote from the writing-point, but communicates with the outer air by means of the hole G bored through the plug C, which is covered by the point protector when the pen is out of use. The writing-point may, or may not, be provided with a needle. The pen may be provided at each end with a writing-point, or with a nib in the case of fountian pens, and the two reservoirs may contain inks of different colors. The position of the opening G may be modified. In a modification, the tube E extends to near the writing-point.

18,622. CLOCKS. A. E. CONRADY, 104 Park St., Camden Town, London, N. W. Sept. 18.

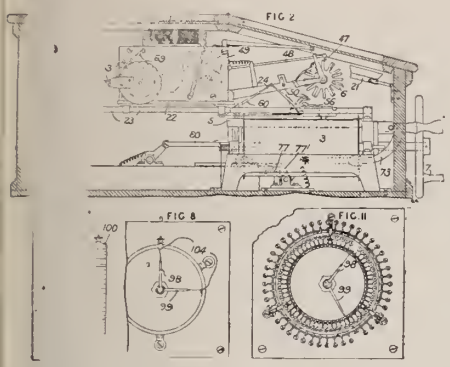
Pendulums.—A standard pendulum S with cross-bar *d* is re-energized by a gravity arm *w* with the aid of an auxiliary pendulum P. The auxiliary pendulum is linked to a cam-lever *l, m,*

under the gravity arm. While the standard pendulum swings from the central position to the right and back, the auxiliary pendulum moves from right elongation to left elongation, and consequently the gravity arm *w* on returning has the lowest part of the cam face *l* of the lever beneath it. The additional travel so allowed imparts new energy to the standard pendulum; then, while it is passing through its left elongation, the auxiliary pendulum moving from left to right restores the lever and the gravity arm to the position shown first considered.

Electric Clocks; Synchronizing-Apparatus.—The cam-lever and the gravity arm may be replaced by an electromagnet, and in both arrangements the auxiliary pendulum is energized and synchronized by means of an electromagnet E in a circuit, which is made and broken (1) between a hinged contact *c* and the cross-arm *d* on the standard pendulum, and (2) between the auxiliary pendulum and a resilient contact *g*. The gravity arm and lever may, however, serve as the first pair of contacts. Pendulums controlling distant clock movements or directly-driving hands are re-energized and synchronized in the same way as the auxiliary pendulum.

18,698. TIME CHECKING APPARATUS FOR

Hand Carved Ring Mountings



SET RINGS IN 10 K. AND 14 K. GOLD. DIAMOND JEWELRY.

KLEIN BROS.,

51-53 MAIDEN LANE, NEW YORK.

WORKMEN. T. H. Roberts, 3 Grange Road, West, Birkenhead, Cheshire. Sept. 19. The times of arrival or arrival and departure are printed on a paper strip serving as a time-sheet, which is divided transversely into columns for each employe and longitudinally for days of the week or divisions of the day. The columns are also arranged in groups corresponding to the different departments of the works. In operation, the printing-wheels are set and automatically brought to the appropriate position in the column by clock-

controlled mechanism, the control being effected electrically, and the employe brings his own column to the printing-point by turning a handle; he prints his record by depressing a hand-lever. The clock also makes electric contacts to sound signal bells in different parts of the works at the hours for commencing and leaving off work. Fig. 2 shows the recorder in end elevation; the case being in section. The paper strip or time-sheet passes across the front of the apparatus from one roller to another over a horizontal table 5 beneath the printing-wheels 6. The winding-handle 7 is on the spindle of the further roller, and the nearer roller 3 is turned by a weight or spring, being provided with locking-mechanism, and released by the closing of the lid of the machine, to facilitate the changing of the strips. The correct position of the strip is read off by a lens 21, and ensured by a spring and roller pawl engaging a wave-notched wheel on the spindle of the winding-roller. Stopwork prevents overwinding. A cylindrical or prismatic indicator (not shown) operated by a finger and star-wheel from the winding-roller indicates which departmental section of the time-sheet is under the printing-wheels. There are three printing-wheels 6, for the hour, tens of minutes, and units of minutes, respectively, mounted on the end of a swinging arm 24 attached to the carriage 22 which runs on guides 23. The carriage supports a spring motor with two trains, one of which acts, under the control of a pin-wheel escapement operated by the electromagnet 37, to set the printing-wheels by means of pawls 47, rods 48, and bell-crank levers 49, which last are engaged by the pins on the escapement wheels. The other train operates at intervals under the control of a detent 69 worked by the electromagnet 67, to turn the crank 63, which is linked to the fixed pin 65, and thus to move the carriage and printing-wheels to the proper position over the employe's columns on the time-sheet.

RETAIL MERCHANDISING

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan that they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

FOR the permanent success of a watchmaker, it is absolutely necessary to possess mechanical ability and patience, combined with push and energy, and to be strictly honest in all one's work and dealings. After having learned the trade with a good, practical watchmaker, preferably one in a large city, where there is a chance to get practice on fine and complicated watch works and chronometers, it is advisable to work a few years more with masters in other cities, or even to go abroad to finish the trade.

When a good location is found, even if the means are at hand, don't start from the top of the ladder, but increase the stock according to the increase of sales, and let the business grow up with you and you with the business. Every evening or morning, carefully clean the bench and tools, and keep everything neat and in good order. The first thing in the morning, wind and carefully regulate watches for repairing and for sale.

When a customer brings in a watch for repairing, examine it carefully, and, if worth repairing, tell him exactly how much it will cost to have the watch put in good running order; always charge him a good living price for your skill and labor, and never cut the price to meet worthless competition. If the watch is not worth repairing, tell him so, and never attempt to get a dollar out of a customer for a job which you know will never give entire satisfaction, or with the mere intention of getting money out of his pocket.

Upon delivering a watch which you have repaired, never charge more than was first asked when the watch was brought in, not even if you had to do more work than was expected. If you carefully examine the watch when brought in, it is not likely that this will happen. Sometimes the mainspring breaks a few days or weeks after the watch has been cleaned. Ignorant people blame you for this; therefore, in such cases, always put in a new spring free of charge. Never resort to any tricks, saying this and that hampers the watch, for, in the long run, you will surely get your punishment for this in the form of a bad reputation.

There is hardly a trade to be found which offers such temptations to use tricks as that of watch repairing, and there are few, indeed, which have so many bad reputations, or in which it depends so much on the workman himself whether he works up a good reputation, based on honesty, or, going the other way, makes a disreputable one for the whole craft.

Besides being careful and skilful in repairing, I believe one of the safest roads to success for a watchmaker is to know how to time a watch accurately, and to have the required patience to do this properly. To be able to do this, he must perfectly understand the different escapements and their functions. A customer, for instance, brings in a lever watch, which, in this country, is a most common type. If gaining or slowing very much, never attempt to time it before you have found the escapement to be correct, that is, see if there is correct draw and locking for the escape wheel and fork. Also see that the roller jewel and banking pins are *not even a little bit loose;* that the guard pin's play on both sides of the roller table is correct; that the hairspring collet lies in the center of cock jewel, and the outer coil of same, intended for the troweling of the curb pins, has the same curvation as the curb pins describe, and do not bend in same when regulator hand is moved; that the train, and, especially the balance pivots, are well oiled, and jewels and pivots in good shape, and that the balance is true and well poised.

If all this is correct, and the other parts of the watch are in good order, an ordinary American watch, with careful handling, nearly always gives good satisfaction to its owner. Teach your customer to buy a good movement and a durable dust-proof case, made to protect the movement. Educate him how to wind and to take care of his watch, and request him to drop in once a year to have his watch oiled, etc. I have heard it said that a good watch repairer seldom makes a good salesman, but I don't believe it, as the most solid customers have confidence in the watchmaker who treats them honestly, and they go to him when they want a good watch, and other goods in his line will sell accordingly.

Always strive to lift up your trade to an art where it rightly belongs, and do not mix it up with bicycle repairing and other "jacks of all trades," which are so prevalent in this country.

I am an "old practicus," who have cast aside all high ambitions, and I do not expect to be one of the fortunate contestants in this competition, but if these few hints will be of any benefit to some young fellow workman starting in our trade, I shall feel fully compensated for my trouble.

S. L. G.

Incautious Criticism.

"A JEWELRY salesman should be wary about commenting otherwise than favorably upon the jewelry worn by a customer," recently remarked an old-time jeweler to a CIRCULAR-WEEKLY reporter. "I once learned *an apropos* lesson from a lady, temporarily staying at the same hotel as myself. She was the wife of a prominent, wealthy Senator from a western State, and when in the east made many purchases from a well-known New York jeweler.

"She was usually attended to by a salesman, whom we will designate as X. To him she took several diamonds to be remounted in a style more modern than the original. Her order was attentively received and booked; after some commonplaces, Mr. X, in a burst of zeal for more business, directed her attention to a bracelet she was wearing, and exclaimed: 'Oh, Mrs. ——! You'd better let me have that bracelet, also, to remount; it seems to have been mounted by some one of your wild west jewelers, and the diamonds, not of the best, we could display to so much better advantage in our present style of setting. I don't like to see you wearing such a bracelet.'

"Mrs. ——, even when reciting the circumstances to me, displayed so much indignation that my heart went out in pity to that salesman, who must have witnessed the original exhibition. She said: 'After recovering from my surprise that he should have so criticized an article which I had admired sufficiently to buy and to wear, I simply replied to him ,"Mr. X—This bracelet you sold to me just as it is during my last visit east—exactly one year ago," and I walked out of the store to spare him any response. I didn't cancel the order given him for remounting my other diamonds, merely to avoid a scene. I shall never require the services of that young man again.'"

Gand HINTS to JEWELERS

Repairing Miscellaneous Articles.

RETAIL jewelers seem to be the last resort when no one else can or will not attempt to repair a broken article. From the miscellaneous collections of broken articles found on jewelers' repair benches, one would infer that it was a general repair shop. Broken silverware of all kinds, spectacles, jewelry, clocks, fans, musical instruments, watches, pedometers, umbrellas, department store jewelry, and even mechanical toys are brought to the jeweler for repairs.

This is all very well, but does it pay the jeweler to do this work? This question has arisen in the mind of the writer quite frequently, and as yet is unanswered. The jeweler competes with every department store and haberdasher in his town, who undersell him in most instances, and yet he is called upon to repair the cheap and inferior articles sold by them.

As all jewelers know, it is more trouble to repair these inferior articles than it is to repair a well made article, such as are sold by all first-class dealers, and why should he not be amply repaid for his trouble and expense. Watch, clock and jewelry repairers are usually well paid, and their time being valuable, many cheap jobs, which require considerable time, are repaired at a loss.

This should not be so, and the only way out of the difficulty is to charge for these jobs according to the time and material used. Plumbers, machinists and artisans in other lines of mechanical skill, make their charges in this way, and why should the jeweler not do likewise?

Competition with the above-mentioned stores will always exist, and to successfully compete with them, the retail jeweler should charge a price on all repairs of their wares that will yield him a fair margin of profit. This might induce the owners of the articles to purchase superior ones in the future, or to patronize the merchant who repairs them.

Ideas and Schemes.

JOHN BRENNER, Youngstown, O., recently exhibited, in his show window, six large diamonds in the rough, just as they were taken from the mines. The stones weigh about two carats each.

S. P. Anderson, Arcata, Cal., has just concluded his novel guessing contest, and awarded the prize to J. Bontelle Tilley, who wrote the sentence, "S. P. Anderson, jeweler, Arcata, California," 4,651 times on a card 5½ x 3¼ inches. Another contestant wrote the sentence 4,592 times. This contest aroused considerable interest, and did much to enliven the jeweler's business.

Novel Design for Displaying Jewelry.

THIS design, which was recently described in the *Show Window*, can be made flat against the background or the body of the butterfly may be built against the background with the wings extending outward. The effect at a distance

FIG. 1.

of 20 or 30 feet is that of the wings opening and closing several times per minute.

The colors and variety of materials from which this can be made are only limited by the ingenuity of the trimmer. It can be

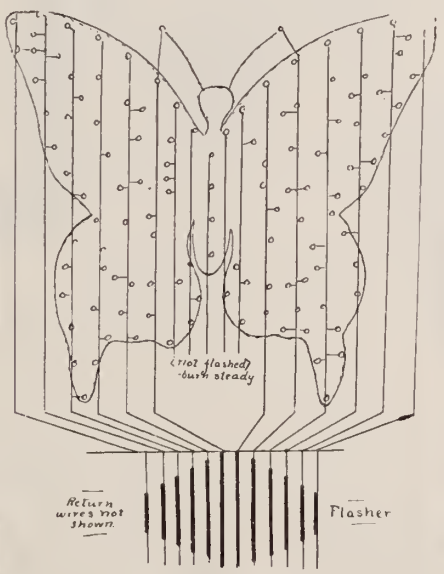

FIG. 2.

made all of white puffed material on a contrasting background, with tinted lamps, or it can be built in several colors, with colored or clear lamps. Also a very fine effect can be produced by making it of light yellow with frosted white lamps.

The lamps are not intended to be ranged in straight vertical circuits, but in irregular lines to avoid sharpness in the breaking. It will require 12 circuits on the flasher, and the lug-setting, as shown in Fig. 2, should be made upon the drum three times to the circumference, which will make the wings appear to move seven or eight times per minute.

In order to avoid confusion the common return wire leading from all lamps is not shown. Very small four-candle-power lamps should be used, and an appropriate size for the design will be approximately five feet in height.

This design is especially adapted to the display of jewelry, and, aside from the lamps, wire and sockets, will cost but very little. It has the advantage of being one that will show off well regardless of the amount of other illumination around it.

Requirements of Successful Salesmen.

THE science of selling jewelry is a fine art, and as such must be cultivated. The degree of cultivation marks the difference between the first and second class salesman.

The really successful salesman is a man of general culture and refinement, who realizes the splendid opportunities which lie before him in catering to the wants of his patrons. He should be a good judge of human nature, and be able to gain the confidence of the patrons of the store. Besides this he should know the quality of his wares so well that he would feel that he was speaking with a full knowledge and without fear of contradiction.

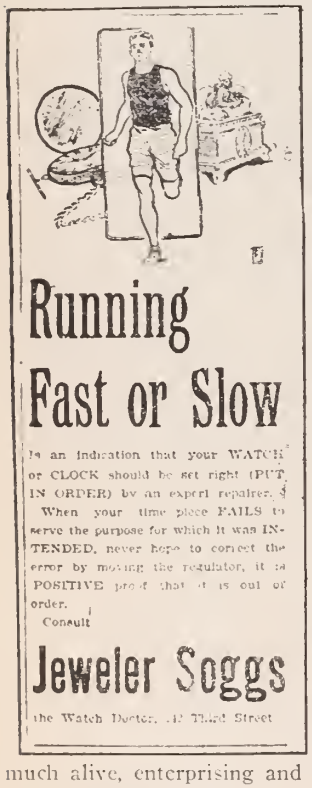
As a representative of the proprietor, he will see that all persons are treated politely and obligingly, and ferret out and put a stop to many of the small leakages that are so disastrous to any business.

For himself, he should feel that he is dealing in absolute fairness with his employer, his patron and with himself. He should not misrepresent goods in any way, nor make any promises that would not have the sanction of the merchant.

He should study the advertisements of his own store as well as those of competitors, so that he may feel secure in any transaction in which he may be engaged.

The time is past when medicore salesmen were tolerated, and the man who wishes to be first-class in every respect must keep thoroughly posted in his line, and be able to hold his old customers as well as to secure new ones.

These are strenuous times, in which competition is sharp, profits close and credits long, and, if the salesmen are deficient in any way, any business is likely to decline —the jewelry business in particular.



J. G. K.

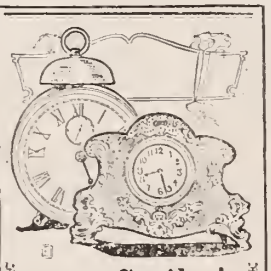
The merchant who hasn't energy enough to advertise his business loses nothing in dying.

Retail Jewelers' Advertising.

[The use of this department is open to every retail jeweler and optician. Forward for criticism your newspaper ads., booklets, catalogues, novelties, circulars, etc. Ask advice and offer suggestions. Replies in these columns are unbiased. Make letters as full and particular as you desire. Every letter and ad. sent will receive full attention, though the publication of the matter may sometimes be delayed several weeks. Address all letters and other matters to THE JEWELERS' CIRCULAR PUB. CO., 11 John St., cor. Broadway, New York.]

LIVE advertising is generally effective, and even though it does not always sell the goods "instanter" (as some advertisers expect that it should), it creates talk, and, consequently, publicity, and keeps the advertiser in the public eye. By live advertising in this case is meant, not necessarily the quoting of prices, or even the mentioning of the goods, for that matter, but a tactful turning of the prospective buyer's attention to the store of the advertiser. It should impress the reader with the fact that the advertiser himself is very much alive, enterprising and energetic, and results will soon follow.

Running Fast or Slow



Is an indication that your WATCH or CLOCK should be set right (PUT IN ORDER) by an expert repairer.

When your time piece FAILS to serve the purpose for which it was INTENDED, never hope to correct the error by moving the regulator, it is POSITIVE proof that it is out of order.

Consult

Jeweler Soggs

the Watch Doctor, 342 Third Street

On a Strike!

Our Clocks never fail to make a strike every hour, and some point along the circle from one to twelve is hit every time. Every one should have a striker, too, by purchasing one of our Clocks that are triumphs of accurate time keeping and superior running qualities. Whatever comes our Clocks go and Keep going every day. You can't lose time with them. Come to time and get a Clock. They are as handsome as they are reliable and cheap. We also repair correctly French and other clocks.

Good People

Drop us a card and we will call for your clock, if it is not convenient for you to bring it.

We make a specialty of Diamonds and Diamond Setting. Any setting you desire we are able skillfully to execute. Perhaps there is something in this line you are contemplating. We shall be pleased to assist you.

C. H. CASE & CO.,

851 Main St. 319 Asylum St.

Much of his advertising is similar to that described above, is Nelson H. Soggs, Niagara Falls, N. Y. Two of his ads., illustrated on this page, originally occupied a space of 6⅛ x 2¼ inches. His plan is, frequently to run a reading notice, such as the following, in conjunction with his ads.

WAS IT THE DEVIL?

Gentlemen—Spending Sunday here I brought along your *Saturday Gazette* as a side companion, and strange as it may seem, I took occasion to read my "ad" on page 2. In my copy for Saturday's edition, among other things, I stated that 100,000 tons of coal was not too much to be kept on hand at all times in this city (Niagara Falls), but the "ad" has it 10,000,000 tons. Now, as I never intend to make a statement that I do not mean when talking business, I wish to make a correction and also wish to ask in the name of Jeweler Soggs, 342 Third St., whether it was the "Printer's Devil" that misquoted me, if so, I wish to meet him, and say to him, "Get behind me, satan," as I have had the will power to do in other things. Now, good public, don't forget the writer when wanting anything in his line.

The argument in his first ad. is good, and would certainly make a favorable impression on those seeking accuracy in their watches. The text in the second ad., calling attention to his clocks, is also strong and convincing.

Fred Rolshoven & Co., Detroit, Mich., used the accompanying ad., with encouraging results, to advertise their diamond department. The arrangement of the cuts within the border makes the ad. stand out prominently. The typographical effect is pleasing, and prices are well displayed.

Pickering & Jelliff, Mansfield, O., used a space 4½ x 2¾ inches for the ad. shown herewith. The ad. would be rendered stronger by the use of a clever catch phrase, displayed in bold type. The different styles of type used in the ad., as it now stands, do not enhance its effectiveness.

The border used in the ad. of Clayton H. Case & Co., Hartford, Conn., is particularly well adapted to a jeweler's line, but would be more congruous if used in connection with the advertising of watches. Neat diamond borders can be secured nowadays at a very small price, and would be preferable in this case, in which especial stress is laid on diamonds.

Look Ahead.

TO a man beginning business oftentimes advertising seems like a mere waste of his scanty capital—an eater-up of money with no appreciable return for it, says the *Advertising World*. He sees his first and the second and maybe his 20th ad. go out—and the orders it brings out may not amount to a fourth of the amount spent.

It is then that the overzealous friend begins to persuade him to drop it all. "Put your advertising money in your stock, that you'll sell and make a profit on. Look at the field of business, strewn with the failures who have spent their money in trying to make advertising pay." Most likely they say something of this sort.

It is a trying time for the man who believes in advertising, believes that it will bring him the results he is after. Five years or more later, when he has the biggest store in town, and that still growing, he can look back on the discouragements lightly, but now it seems a difficult matter to see ahead.

Here in our State is a big company building a new railroad. You see them paying out thousands of dollars for right of way, for materials, for laborers and skilled men to lay it out. When the road is finished there will be engines to buy, and rolling stock to purchase. All this money has to be spent before the road will earn a single cent and it will be years before the stockholders will be able to get their money back. Yet capital for such enterprises is never lacking.

Maybe years after the railroad is built and earning money the directors see that the one track they have is not sufficient to carry the traffic, which at the present rate of increase will come their way in two years. With longheaded foresight, they don't wait till the two years are up. They build the extra track now. When it is finished in the two years the money will show that it was spent to advantage, by bringing in greatly increased returns. They were not satisfied with the present—they planned for the future.

And so with advertising. The man who expects to-day's ad. to bring increased business enough to-morrow to pay for itself, is asking too much of a willing horse. If your ad. brings in an additional customer or two rejoice for the opportunity that it gives you to show these people what your store can do for them—what good values and splendid goods, and, above all, courteous treatment they will get from you.

An Internal Treatment for Cloudiness of the Transparent Media, Sluggish Circulation, Cataract, Floating Spots, Anæmia of the Retina, Congestion of the Retina, Affections of the Choroid, Optic Nerve Diseases, Sluggish Action of Pupil, Hæmorrhage in the Eye, Weakness of Ocular Muscles, Weakness of Accommodation, Dimness of Vision.

What is Banene

BANENE is a distillation of well known drugs that are active tonics, the administration of which stimulates the capillary circulation of the delicate structures of the eye. It seems to have particular effect upon the circulation of the retina (the layer of the inside of the eye where the images are formed). This membrane is a fine, delicate, semi-transparent membrane, 1-75 to 1-200 of an inch in thickness, made up of ten coats, each one performing its own individual function. One of these ten coats is made up of the optic nerve fibers (threads), that originate in the brain and pass through a tube (the optic sheath), that attaches to the back of the eye-ball.

These fibers are attached to the back of the eye (owing to their passing through fine holes), and completely line the inside concave surface of the eye, attaching again just back of the lens (at the ora serrata), and it is upon this coat that all other coats are built. Passing through with these fibers is a small blood vessel that supplies this inside coat (the retina) with blood vessels. Many times the blood supply is not sufficient for this coat. This causes the vision to be blurred, the veins to become congested and many times pain in the eye ball; at these times the patient is usually annoyed with what appears to be floating spots, sometimes arranged and looking like a chain and cobwebs. Those who are wearing glasses feel the necessity of changing them, while those who have never worn them feel how needful they are for their comfort. These conditions speak only too plainly of impaired circulation and mal-nutrition of the eye. BANENE internally and MURINE externally will absolutely cure these conditions, if the trouble has not existed so long a time as to cause structural changes.

Floating Spots, Cobwebs, Etc.

Opacities, Cataract, Etc.

Therefore, the timely use of these remedies will prevent structural changes due to opacities, cataract, etc. Its efficiency upon those parts of the eye where its nourishment depends upon imbibition is marked. There are parts of the eye where we have no blood vessels, and for the want of any better knowledge, we say the parts imbibe their nutrition or one drop sucks its nourishment from its adjoining drop. In order that the substance for absorption shall be properly manufactured in the coats of the eye, it is necessary that we should have a good blood supply to the coats that build up the transparent media, or, in other words, the coats that supply the substance that makes the vitreous humor. By common consent this substance is manufactured in the choroid and cellular body, which is supplied with blood through arteries that penetrate the eye-ball in the back and in front. These arteries are called the ciliary arteries and BANENE, taken internally, acts directly upon this circulation.

Stimulates Circulation

Cataract

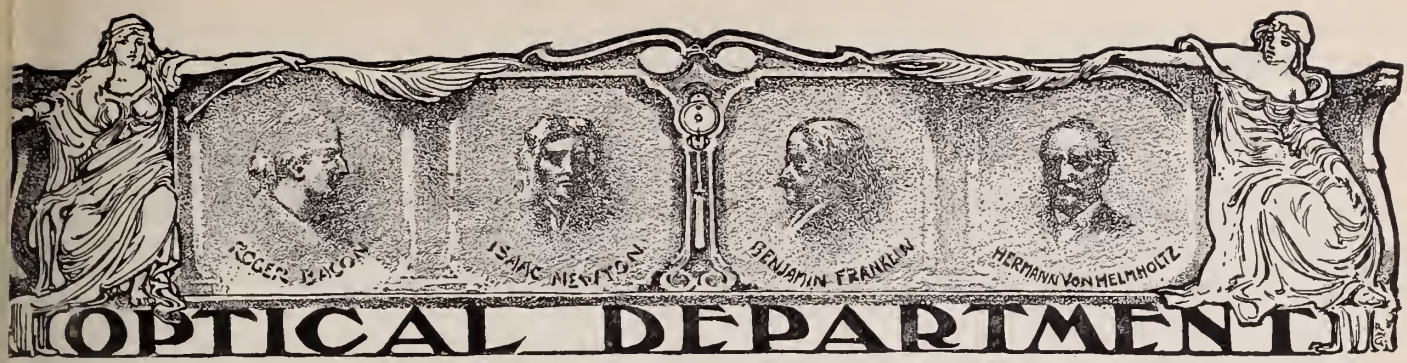
A noted oculist discovered that where people were afflicted with an opacity of the crystalline lens (cataract), and had taken BANENE internally and used MURINE externally, the opacities were often cleared up. Hence, we say that a cataract is absorbed by the use of BANENE. This was first noticed by an oculist of large experience and practice, who was using these remedies for the purpose of getting the eye in a healthy condition before operating for cataract. In this instance, a lady troubled with cataract was the patient. After a careful examination, he found the lens so opaque that it was impossible to get a distinct outline of the blood vessels upon the retina; the eyes were considerably congested (red), and the blood vessels were large and angry looking over the surface.

He gave the patient MURINE and BANENE, and requested that she use the medicine as directed and come prepared for an operation in six weeks. Words cannot describe his surprise when the patient returned at the end of two months with the lens practically cleared up and having very good vision. He experimented with these remedies for a number of years, with the result that a large per cent of the cases troubled with cataract, who used these remedies faithfully, were relieved and their vision restored. We have cases where, even after an operation, there was a blurred condition of the vision and many times light was almost imperceptible, that were entirely cured by these remedies, due to the fact that they cleared the transparent media of the eye. All the eye requires under these conditions is an active tonic and stimulant, and this is supplied by BANENE internally for the internal structures of the eye and MURINE externally for the external surface of the eye.

Cataract Absorbed, Sight Restored

The best oculists use these remedies before an operation and give the case an opportunity to escape the use of the dreaded knife. They have become such favorites among the profession that they try them before sending the patient to a specialist for an operation. It would be foolish for us to claim that they will absorb or remove every cataract, but the large number of cases where these remedies have produced this wonderful result would warrant giving them a thorough trial before subjecting themselves to the expense or to the hardship of an operation for its removal. Should an operation be required after the administration of these remedies, the result will be insured, because their use will leave the eyes in an absolutely healthy condition and the cut will heal rapidly, leaving the retina clear and the vitreous transparent.

Muscular Weakness



The muscles of the eye curtain (the iris) and of the pupil are liable to become relaxed from general debility or age, and thereby lessen the visual action of the eye. BANENE is the SYSTEMIC REMEDY indicated (8 drops in water taken internally three times daily); Murine, one or two drops in each eye hourly, for its local strengthening effect.

Dimness of Vision accompanied by an INABILITY TO WEAR GLASSES WITH COMFORT. Murine and Banene should be in the hands of every individual who wears glasses, and they should be promptly used at the first indication of discomfort.

Meeting of the Optical Society of the City of New York.

THE Optical Society of the City of New York held its regular monthly meeting at the College of the City of New York last Wednesday evening, Feb. 11, 1903. President Marchant being absent, 1st Vice-President Harris presided.

At 8:30 P. M., Dr. Walt. Bryan opened the first half of the scientific session with a lecture upon "Living Matter and the Cell," illustrating it with lantern slides, model eyes, skulls, dissected eyes of sheep, and microscopical demonstrations. Dr. Bryan began some months ago, at the lowest form of living matter, and, as the truths unfold under his able guidance, the lectures become more and more interesting. Considering the limited time allowed, the manner in which he is covering the ground is remarkable, and is due to the entire command he has of his subject. That the members appreciate his work was evident from the applause the Doctor received at the conclusion of his lecture, aside from the innumerable questions asked by his hearers, showing that attention must necessarily have been given to his words.

Prof. Wm. Fox followed, with a lecture on "Refraction," after which each member performed the experiment suggested by the professor, by which it was demonstrated that the refractive index of water is to that of air as 1.33 + : 1.00. Sincere applause rewarded the Professor's efforts.

The business session was then opened. Secretary Ryer read the minutes of the previous meeting, which, upon motion, were adopted as read.

It was then ordered that the secretary cast one ballot for the election to membership of the following candidates: Frank R. Cooley, Joseph Addison Thorn, Martin Sinner, Edward Carson, Morris Cohen, Nelson Y. Hull and T. Arthur Wobie.

Applications for membership then being in order, Lewis S. Levy and Chas. J. Smith were proposed by Mr. Ryer; said applications being ordered laid on the table, to follow usual parliamentary procedure.

A communication from President Marchant was then read, making known that illness was the cause of his absence. To the call for committee reports, Mr. Harris, chairman of the committee, appointed to draft resolutions of thanks voted to Mr. Dilworth, responded that all was proceeding satisfactorily. The society's bills were then presented, and ordered paid.

After having held one of the most promising meetings in the history of the society, it was regularly moved, seconded and carried that an adjournment be made.

Secretary's Report of California State Association of Opticians' Last Meeting.

SAN FRANCISCO, Cal., Feb. 12.—Albert J. Schohay, recording secretary of the California State Association of Opticians, has issued an eight-page circular, giving a full report of the last regular annual meeting of the association, held Jan. 19, in the Cosmos Cafe, San Francisco, Cal., and already noted in a previous issue of THE CIRCULAR-WEEKLY.

The report contains the following address, delivered at the meeting by President Kuttner:

This month marks the beginning of the fifth year of our existence as an Association. Like all other societies ours had its share of vicissitudes. Two years ago a large number of our best and most influential members began to show a feeling of apathy which I consider was entirely justifiable by reason of the fact that the Association seeemd to have had no aim—true the constitution told us we were banded together for the purpose of brushing up our knowledge of refraction and consoling one another in the hour of our trials with the outer world, but was anything accomplished in this direction?

Our meetings were devoid of proper interest on the part of the attendance, which in itself was painfully small.

But these things I am warranted in saying, have been materially improved through the work of an energetic board of directors who have strained every nerve to awaken our members to the importance of acting in unison and with earnestness.

We have endeavored to the very best of our ability to push along the good work so well begun by our predecessors, F. C. Chinn and G. L. Schneider, to whom great credit attaches.

The adoption of a new set of by-laws whereby the technical business is conducted by a board of directors, has proved an important factor in our success—this change removes the monotony which formerly characterized all our meetings.

A matter of great moment was our incorporation. The board has unmistakably shown its determination to make the Association live—as we stand now the eastern societies derive courage from us as we derive courage from them.

The issuing of certificates to members in good standing who are also otherwise entitled to them, we consider as an advance step, a truly wise proceeding on the part of the Association—in this way the public has already learned to discriminate between the scientific refractionist and the mere spectacle vender—let me here impress upon those of our members who have not yet had their certificates framed to have it attended to quickly and hang them in their respective stores—the personal benefit as well as that to the Association is self-evident.

Our latest work has been to urge the wholesalers of this State to make a distinction in the matter of prices between the regular refractionist and those who encroach upon us. With the active cooperation of our Los Angeles members we can safely say it is bearing fruit.

Now in the matter of membership—January 1, 1902, there were enrolled 70 active members, of whom about 30 were in good standing—we have now, according to the secretary's books, 60 active members in good standing—what we have lost in numbers has been doubly offset in quality. Dr. Hall and Mr. Sanford have been made honorary members. The standard of our membership as regards ability and character we consider at the present time as very high—the records show that this standard was in no wise lowered during the past year by the election of Messrs. Hare, Binford, Banks, Lawson and Pardee, and believe me, gentlemen, the ensuing year will bring on its goodly share of desirable members.

Inquiries about the Association, as the secretary will attest, have been pouring in from all portions of the State. The time has come when the matter of joining the State Association is just as important as selecting one's opening stock or building one's store fixtures.

Chief among those who contributed papers and otherwise entertained the Association during the year were: A. P. Winslow, of Ferndale; F. M. Taylor, of San Diego; C. H. Wood, of Oakland; F. W. Ward, of Visalia; Fred Detmers, of Los Angeles.

According to the report of the treasurer, our finances are in fine condition, considering the great expense we have been under during the past year.

We come now to the painful and sorrowful duty of announcing the first deaths in our membership roster—those of Isidore Nordman and Chas. Hess, two gentlemen of sterling worth whose demise will be sorely felt by their families and the community in general.

The resolutions of sympathy submitted by the secretary on the death of the aforementioned, are as follows:

Whereas, Death has called from this sphere of usefulness our esteemed fellow members and friends, Isidore Nordman and Charles Hess, and,

Whereas, We at all times recognized in these gentlemen probity of the highest order, and we deeply deplore their untimely taking off, be it

Resolved, That we, the California State Association of Opticians, hereby manifest our sympathy with, and extend our condolence to the bereaved family of each of the above named deceased gentlemen.

A motion by Mr. Wood to adopt, spread on the minutes and have a copy of the above sent to the family of each of the deceased members, was carried.

Optical Notes and Briefs.

F. C. Kuebler, Jasper, Ind., recently completed a course in a Chicago optical college.

A. G. Barber, treasurer of the Globe Optical Co., Boston, Mass., has just returned from a trip through Eastern Canada, and says that the climate around Quebec is even milder than that of Boston.

The Indiana Optical Society has opened a temporary office in the Stevenson building, Indianapolis, Ind. W. E. Huston, Greenfield, a member of the executive committee, is in charge of the office, and is looking out for the interests of the society in the State legislature, which is now in session.

Fred B. Rebman, Youngstown, O., has returned from a trip to Chicago, whither he had gone to attend the meeting of the executive committee of the American Association of Opticians, which was held at the Palmer Hotel, Monday, Feb. 9. At this meeting, the committee arranged for the annual meeting of the association, which will be held, this year, in Atlantic City.

(*Additional Optical News on page 52.*)

Optical Department.

Asthenopia.

FROM the Greek, meaning the eye lacking strength, as applied to the muscles controlling their movements, in which from speedy fatigue we have pain, blurring while reading, and headaches, usually located in the temples and at the base of the brain.

Asthenopia
1. Accommodative, or hyperopic.
2. Muscular, or myopic.
3. Reflex, or neurasthenic.

(1) Accommodative, or hyperopic, asthenopia is due to some form of hyperopia, and the characteristic symptoms of asthenopia are due to the fact that the overstimulus of the muscles of convergence, which carry the eye inward, cause an extra strain on the external rectus, and the headaches are then said to be asthenopic. In such an instance, correct the error only, and do not prescribe prisms.

(2) Muscular, or myopic, asthenopia is usually due to myopia, and we correct the myopia and then find that the symptoms subside without further trouble. The eyes naturally diverge in myopia, as the motor-oculi-nerve lies relaxed, and then the external rectus carries the eyes outward.

(3) Reflex, or neurasthenic, asthenopia is due to a leak made upon the nervous system, in consequence of which we have the pain, blurring and headaches. This condition needs the attention of the physician, as the leak may be due to dyspepsia, hemorrhoids, and diseases of the genito-urinary tract, and the eye symptoms are secondary.

The test for muscular weakness can be made by the Maddox glass rod, by placing it in the trial frame, and, with a lighted candle 20 feet away, see if the streak of the rod cuts the flame; if it does, in both the vertical and horizontal meridians, the muscles are then said to be in balance or equilibrium. If the light stands to one side, they are out of balance, and the prisms, which will bring them into line, will measure their muscular insufficiency. The rule is to correct the error of refraction, and, if prisms are to be worn, to divide the amount by two and then apportion the result.

The following terms will express the various anomalous states connected with the subject:

(1) Orthophoria.—Normal as to equilibrium, or the muscles in balance

(2) Heterophoria.—Abnormal tendencies, or the muscles out of balance.

Heterophoria.—

a. Esophoria—Tending inward.
b. Exophoria—Tending outward.
c. Hyperphoria—Tending of one eye above its mate.
d. Hyper-esophoria—Tending in and down.
e. Hyper-exophoria—Tending out and up.

The Western Optical Association, Milwaukee, Wis., at a meeting held recently, favorably discussed the project of affiliation with the American Organization. The matter will be decided at the annual meeting, at La Crosse

Heterophoria.

(By MELVILLE BLACK, M.D., in the *Ophthalmic Record.*)

(*Continued from issue of Feb.* 11.)

OUT of the last 1,000 refraction cases examined, only 49 have been cases of heterophoria. I do not make a diagnosis of heterophoria on the history card of the patient unless at least 5° lateral imbalance or 1° or more of vertical imbalance exists; therefore in the 1,000 cases mentioned only 49 showed an error of muscle balance of that amount. Out of this number only six have been operated upon, and, strange to say, with one exception they have all been seen within the last year.

My experience has been that women are more frequent sufferers from heterophoria than men. Of the 49 cases mentioned, 33 were women, and of the six operated upon all were women. Of these six all were unmarried. Three were schoolgirls and three were earning a living. All of them were actively using their eyes for near work. They were all in apparent good health. Cases 2, 3, 4 and 6 were robust, and with the exception of Case 1 they all had low errors of refraction. Personally I have been disappointed with all forms of exercise of the eye-muscles for the correction of heterophoria, except in cases clearly dependent upon constitutional conditions. Case 7 is a good illustration. I have not abandoned exercise by any means, for the reason that it is impossible to always tell how much of a constitutional factor enters into the causation. The use of prisms up to 5° for lateral correction and 3° for vertical correction are many times worn for years with comfort. I am, however, inclined to think that in the majority of cases to prescribe a prism of a given strength means that later one of higher degree will be required, and so on until operation is demanded. This applies more to lateral correction than vertical.

The measurement of adduction and abduction and circumduction is not in my opinion inclined to throw much additional light on a case. As a matter of fact, I now rarely measure the duction power, because I have found it so variable and if relied upon misleading. As a matter of fact, heterophoria has never formed a conspicuous part of my findings, and has certainly given me little concern. I always prefer to correct an existing error of refraction, and give lenses without decentering a fair trial first before altering their centers.

The comfort of the patient is what I am after. If I get it by the simple correction of the refractive error, well and good; if not, it is time enough for decentering or prisms. When it comes to tenotomy several things have to be considered.

Tenotomy should be resorted to last. Lenses and prisms have failed, of course. The case should have been under observation long enough and seen sufficiently often to learn positively that a certain fixed muscular error exists. Personally I should hesitate to perform a tenotomy if the use of prisms did not afford some relief, for I should be inclined to think the cause of the discomfort was not due to the eye muscles. I have seen lateral errors of 12° and more where the patient had no symptoms arising from it.

When tenotomy has finally been determined upon it is not my practice to use any "graduating" upon the tendon. I feel certain that I have not seen even as much as 2° of effect until all the tendon has been severed from its attachment, and to get as much as 7° of effect rather free cutting of the capsule on both sides of the tendon must be indulged in, and then as the muscle heals a good part of it is lost. This statement does not apply to the vertical muscles. One must be more guarded here in tenotomizing not to do too much capsule cutting.

However, as a choice of two evils I prefer a little overeffect to undereffect, for the reason that, since we usually attack the superior rectus of the hyperphoric eye, thereby letting this eye downward, if we overdo the fellow eye can be attacked in a similar manner, thereby lowering the horizontal plane of the eyes, which is usually desirable. Whereas, if when tenotomizing the superior rectus, an under effect is obtained it becomes necessary later to attack the same muscle again or the inferior rectus of the fellow eye, a procedure which is usually undesirable. Advancement is too uncertain a quantity for the correction of heterophoria except in high degrees. Simple stretching of the tendon after the method of Panas without tenotomy is a procedure of value as I have demonstrated in my clinical work but it requires a general anesthetic, and as the latter introduces an element of danger to life it is not looked upon favorably by the patient.

Hypermetropia and How It Makes Its Presence Known.

BY GUSTAVUS KAHN.

BEFORE entering deeply into the discussion of our subject with all its intricacies, I would like to acquaint my readers with the substance of my contention—namely, that latent hypermetropia pure and simple, does not make its presence felt in any way whatever, and there is not, nor can there possibly be, any method by which its presence may be recognized or its amount measured, unless certain drugs, known as cycloplegics, be administered, inducing an unnatural condition.

I would also state that under all natural conditions, such eyes are, to all practical intents and purposes, absolutely emmetropic; and further, that the latent hypermetropia which makes its appearance during the cycloplegic's action is nothing more than a scientific curiosity, the knowledge of which is valueless, except that it points to a possibility of the latent some day turning to manifest hypermetropia, and finally, that latent hypermetropia has no bearing whatever upon lenses, and that from this standpoint, as from any other its existence may, with safety, be ignored.

But in taking up the study of manifest hypermetropia, we at once notice the various phases under which it makes its presence felt. The most curious of all is that some of the conditions in which it at first makes its presence known (*i. e.*, manifests itself) closely resemble, in many respects, those of latent hypermetropia, for instance, in the non-acceptance of a convex lens for distant vision; then, too, there might exist asthenopic symptoms, headaches

Optical Department.

hile using the eyes for close work, or in treme cases constant headache; the sion may be perfect for reading, while flammation of the eyelids may occur peri-lically, and in children convergent stra-smus may make its appearance.

In other cases, however, there may be an ntire absence of such symptoms. The nount of hyperopia in such cases may be timated either by retinoscopy or subjec-ve means, and estimated, as a rule, to a cety, but treatment, optical or medical, necessary before an eye so affected will cept all or even any considerable part the full correction; the optician must ther resort to the fogging treatment of dering glasses for distant vision, gradu-ly increased, and reading glasses of the rongest positive power that can be toler-ed, or turn the case over to a competent culist.

The above-described condition of mani-st hypermetropia is popularly termed tonic pasm of the accommodation, and, while it sually resembles emmetropia in respect to ie non-acceptance of convex lenses for dis-nce, it may sometimes resemble myopia; oncave lenses, up to a certain power, rais-g vision from below to normal, or even bove normal. What causes this so-called onic spasm of the accommodation is not itogether clear. There are, certainly, arious causes, some local, others reflex, ue to some weakness, imperfection or dis-ase of organs remote from the eye, which nuse a dilapidated nervous constitution.

With the local causes we are much more miliar, and, as opticians, have long ago ecognized as such insufficiencies of the notor muscles, namely, exophoria, eso-horia or hyperphoria, or some combination f these. But excepting that due to eso-horia, the conditions produced by the in-fficiencies are not true spasms, but only ver-stimulation of the ciliary muscle, rough the action of the internal recti, hich are compelled to over-exert them-elves in the act of converging, on account f this insufficiency. Since, moreover, the nternal recti are enervated, together with ne ciliary, from the same nerve (the third ranial), the tendency exists toward over-ction of the ciliary in accommodating to alance the strong effort of converging.

When, in such spasms, convex lenses lone are of no use, we should try to com-ine prisms, bases in, with the spheres, es-ecially in the reading glasses, and should ll these avail nothing, the case should e turned over to an oculist for treatment vith higher prisms, which may have to be upplemented later on with an operation n the internal recti, called a graduated ten-otomy.

An esophoric spasm is more of the nature f a cramp, and, therefore, may be more asily treated by continual use of a full orrection of the hypermetropia and rest or the eye, and possibly the use of prisms, ase out.

But the real tonic spasm, due to re-lexes from constitutional complaints of the nerves, and found usually in persons under 20 years of age, is the kind that frequently needs not only glasses, but medical treat-ment and complete rest from near work for the eyes. In this kind of spasm, the pupils are often contracted; there is constant dull headache and pain in the eyes themselves, and, furthermore, the amplitude of accom-modation is less than normal. This con-dition gives the clue to an easy subjective method of determining the amount of the manifest hyperopia, while it may be meas-ured accurately objectively by experts in dynamic skiascopy.

There is also another variety of so-called tonic spasm, which is not limited by age, but found in persons past middle life, in which cases the refraction, as measured ob-jectively, discloses a much greater amount of hypermetropia than will be accepted for distance without blurring, while for read-ing, a full correction may or may not be required; this variety cannot properly be called a spasm, inasmuch as there is com-plete absence of any bad symptoms, other than difficulty in reading. I would attrib-ute the cause to over-development of the ciliary muscles, due to constant exercise from childhood, in overcoming the uncor-rected hyperopia. This over use of the ac-commodation in a healthy individual will not cause spasm, but will simply hypertro-phy the ciliary muscles by causing them to supply the abnormal demand of the ac-commodation. The same amount of work, however, in a weak person, would have pro-duced opposite results, retarding the de-velopment of the ciliary muscles, and caus-ing a real tonic spasm of the accommoda-tion.

The next phase of manifest hyperopia is that which may be measured by fogging, or by skiascopy, but which will not readily accept the full correction at first, requiring a few weeks use before vision is clear with this correction. This is called manifest hy-peropia with chronic spasm, but is nothing else than a mild case of tonic spasm. Vision is variable, and the glasses, to be acceptable, must also be varied, possibly from day to day. It would, however, be a great mistake to give such cases any but the full correction of the manifest hyper-opia, even though the weaker lenses may afford temporary benefit, and the stronger ones be objected to. This is especially true in the case of children, who, if allowed to accept the weaker ones, will soon be com-pelled to get others of higher power. For that reason, a full correction for the mani-fest hyperopia had better be given for con-stant use, with explanations that in a short time all will be well.

The next kind of manifest hyperopia will accept its full correction at once without annoyance, but with vision remaining as good without as with them. This is called faculative manifest hyperopia. Glasses should be worn constantly, unless it be found that no harm is done to the eyes or general health by using them for reading only, or even dispensing with them entirely.

Relative manifest hyperopia is always connected with a tendency toward an in-ward squint of both eyes, an over-conver-gence, so to speak, which enables a greater accommodative effort than without it; this over-convergence may in time pass into a permanent squint, if the correction be neglected. Relative hyperopia is usually present during early childhood.

Finally, we have the total or absolute manifest hyperopia, in which the accom-modation has given up the task of compen-sating the shortage in the static refraction, thereby causing dimness of distant, as well as near vision.

In most hyperopic cases, part of the hy-peropia may be latent, part manifest, rela-tive or faculative, and with or without a so-called spasm, while still another portion may be absolute. But in older people, we usually expect the whole amount to be either faculative or absolute, but by no means is this always the case. Absolute hyperopia of over one diopter should al-ways be corrected for distant vision, so as to keep a clear-cut focus on the retinæ con-tinually, and to prevent amblyopia, which may arise from want of visual exercise.

It is advisable often to correct even a smaller amount than one diopter, when per-fect distant vision is required, either for pleasure or to perform one's work; as a rule, however, uncorrected absolute mani-fest hyperopia does not produce eye-strain, nor anything worse than dimness of vision, and, when asthenopia does exist in these cases, it is produced, not by the hyperopia, but by disease or muscular insufficiency.

The Ophthalmometer in Determining Errors of Refraction.

By Lewis H. Taylor, M.D., Wilkes Barre, Pa.

THE ophthalmometer has proven of such excellent help in my daily practice that I should feel its loss very greatly were I deprived of its use, but that its reading cannot always be relied upon in the final fitting of glasses is well shown by the fol-lowing case: Mrs. T. K., age 31, came to me recently for refitting of glasses, V. OD. $20/\frac{20}{50}$ L; OS. $20/\frac{4}{14}\ \frac{20}{40}$. She complained of much headache and difficulty in using her eyes for continuous work.

She was wearing + 1.25 cy. ax. 180°; OS. + 25 cy. ax. 180, which were fitted 12 years ago by an excellent oculist. They do not now improve the vision. The ophthal-mometer gave OD. 7 D. ax. 115°; OS 2 D. ax. 60°. Subjective test, without my-driases, was fruitless. Under atropia, she selected OD. + 1.25 cy. ax. 115° = — 75 cy. ax. 25°; OS + .75 cy. ax. 180° = — 50 cy. ax. 90°. Thinking my ophthalmom-eter reading must be wrong, or that with accommodation relaxed it would at least be different; I again made a careful examin-ation, and found it almost the same as be-fore: OD. 6.50 D. ax. 115°; OS. 2.50 D. ax. 60°.

The final selection was: OD. + 1.25 cy. ax. 115° = — .25 cy. ax. 25°; OS. + .75 cy. ax. 180 = — 37 cy. ax. 90°, making vision almost 22/xx in each. The left eye would not at all accept the axis shown by the ophthalmometer.

This is simply an interesting case, show-ing that the corneal astigmatism may be affected by lenticular astigmatism, but it does not show by any means, that the oph-thalmometer is a useless instrument.

One should make use of various methods in determining refraction errors, and even then will find his skill and judgment taxed to the utmost in some rare and difficult cases.

Supereminence in Mainsprings.

The underlying principles and generally accepted theories of modern mainspring construction emanate primarily and to the greatest extent from the Maker of the **Longeval.**

Making of Mainsprings in its various phases has attained its greatest development at the hands of this maker.

Method of packing avoids all possibility of rust. Made by the best maker in the world, of highest grade steel, finished down by hand, high in carbon, best in temper, ensuring uniform pulling power.

Only one spring need be **handled** and **exposed** at a time, instead of a full dozen as with other makes.

With each order for one gross of mainsprings, a fine oak cabinet, made expressly for this brand of springs, will be included gratis.

The "LONGEVAL" are for sale at your jobbers. If not, write the Importers, **HAMMEL, RIGLANDER & CO., 35 Maiden Lane, New York City,** for the address of the nearest jobber who will serve you with the BEST—

The "Longeval"

Mainsprings for all makes and grades of American Watches.

NOTICE.

The importers of these mainsprings are the first to have employed the idea of putting each spring in a separate box, thus protecting them against rust and climatic changes, and to place a number of these small boxes in a box or case.

They have taken expert advice as to their sole and exclusive right to this manner of "dressing" mainsprings, and have been advised that they have a proprietary right thereto.

The trade is hereby notified that any infringement of this manner of "dressing" mainsprings for the market will be vigorously prosecuted.

The Motive Power of a Watch.

BY PUTEANUS.

THERE appeared, recently, in foreign papers a heated discussion among several professional men about the motive power of a watch. A certain writer asserted that one single horse-power in machinery is sufficient to run 270,000,000 watches. He did not state how he calculated this number.

A man who is probably a professional watchmaker, objected to so great a number, and showed by figures that the exact number of watches of medium size would be only 6,250. The force of a watch of medium size, he says, is 400 grams, and that of the same watch, half unwound, 200 grams.

A third writer joins the discussion with a more technical explanation, and says that Julius Grossmann has shown, in his treatise, that a watch of a certain size, with 18,000 vibrations of the balance in one hour, has a force of 0.209 mmg. (millimetergrams) every one-fifth second, from which he obtained, by calculation, the result that the total number of watches which can be run by one single horse-power is 71,770,000.

The writer says, however, that our great master, Moritz Grossmann, advised against taking too seriously the utterances of authorities. He then calculates the power of a watch according to Julius Grossmann's example. He selects an ordinary watch, of which the barrel has a pitch diameter of 20 mm., and of which the force is 480 grams, which is generally the case with a watch of ordinary size, and he arrives at the conclusion that the exact number of watches that can be run by one single horse-power is 72,000,000; this, he says, is in accordance with the calculations of Julius Grossmann, and the man who stubbornly wants to maintain that the number is 270,000,000 must be crazy. Such heated discussions generally awaken interest, and I determined to investigate the matter myself.

It struck me in the first place that a watch with a barrel of 20 millimeter pitch diameter is not a watch of medium size, but that it is rather an 18-size watch, which, as we know, is generally considered one of the largest sizes. The mainsprings of the small watches, O size, etc., are a great deal less powerful than those of the 18-size watches, and to be fair to the man who said, but did not prove, that 270,000,000 of watches may be run with one horse-power, he having borrowed this assertion from the meritorious writer, Eugen Gelcich, it would be essential, before expressing an opinion, to first know how many O-size watches may be run by one horse-power.

In order to make such calculations, it is necessary to know the force of the mainspring. Not many writers seem ever to have taken the trouble to inquire into the matter from a practical point of view. We have, in theory, formulas for calculating the strength of a spring, a spiral spring, or what we call a mainspring, but such calculations cannot be depended on, as they can never be exact, inasmuch as the friction of a mainspring in a barrel cannot be calculated. It varies with each turn of winding, and each turn of unwinding, which I will endeavor to show by some practical trials, which were made after the reading of the foregoing interesting discussions.

I have tried only a few mainsprings of watches of different sizes, but they were of a sufficient number to allow me to dare the wrath of the discussing foreign writers in case I may differ with them in opinion. The trials proved to be so interesting that they were repeated for each mainspring. Each trial developed the fact that the friction of the mainspring on the cover, the bottom of the barrel of its coils upon each other, and the pressure on the arbor pivots in the barrel pivot holes, varies with each winding. Also that the force exerted by the development of the mainspring, when unwinding, is much different from that when being wound.

The following tables show the results of trials with different sizes of watches.

A mainspring of an 18-size Swiss watch (American imitation), with full six turns of winding, manifested a force (at the pitch diameter) of:

FIRST TRIAL.
(WHEN WINDING.)

First turn	270 grams
Second turn	370 "
Third turn	435 "
Fourth turn	500 "
Fifth turn	± 560 "
Sixth turn	± 560 "

SECOND TRIAL.
(WHEN WINDING.)

First turn	270 grams
Second turn	370 "
Third turn	435 "
Fourth turn	500 "
Fifth turn	± 570 "
Sixth turn	± 620 "

It can be seen from this table that in both trials the first four turns act equally; at the fifth and sixth turns the pressure and friction makes the power very uncertain and unequal. At the first trial and the fifth winding, for instance, the barrel remained in the same position, with a weight of from 555 grams to 565, when it gave signs of desiring to move. I, therefore, took the main weight 560 grams. One more winding, the sixth, did not move the barrel any further, and, therefore, this same weight, with the mark ± which stands for more or less, has been placed before the figures.

The spring was then unwound and rewound again. At this second trial, the first four windings developed exactly the same force as that of the first trial; at the fifth and sixth there was a difference, which could only have been produced by friction in the barrel. The fifth turn was of 570 grams, and the sixth, of 620. Taking the mean between the two trials, there will be 565 for the fifth and 590 for the sixth turn. This force is, however, not exactly the one that is used for the motions of the watch, as the spring does its work when unwinding, not when being wound. The measurement of its force ought, therefore, to be taken at its unwinding turns; that is, when the spring tends to spread its coils again. The irregularity of this backward trip of the spring can be seen from the following table:

UNWINDING OF THE SPRING.

FIRST TRIAL.

Sixth turn	560 grams
Fifth turn	500 "
Fourth turn	448 "
Third turn	410 "
Second turn	348 "
First turn	235 "

SECOND TRIAL.

Sixth turn	620 grams
Fifth turn	500 "
Fourth turn	485 "
Third turn	410 "
Second turn	360 "
First turn	240 "

The purpose of this article being to inquire into the force of a mainspring and its standing in comparison with horse-power in machinery, it is needless to enter into further reasoning about friction, etc., which might be treated in separate articles later on, the experiment of measuring the power of watches having been so interesting that further explanation about this part of the watch may be desirable.

The mean power of the spring was determined from the above table by the following system of reasoning. A watch which is regularly wound up every day does not entirely run down, and, only four of the six turns given in winding are unwound. These are the four last turns, the sixth, 560 grams; the fifth, 500 grams; the fourth, 448 grams, and the third, 410 grams, of which the mean weight has 479½ grams in the first trial.

Proceeding in the same manner, the mean of the four last turns of the second trial will be 553.75 grams; again, we take the mean of the two latter numbers, 479½ and 553¾, and we find the average power of this 18-size imitation American watch to be 516 grams. Before proceeding in the comparison of this power to the horse-power, let us first see what force is needed by other watches.

(To be continued.)

The Manipulation of Steel in Watch-Work.

(By JOHN J. BOWMAN, of the Ezra F. Bowman Technical School, Lancaster, Pa.)

(*Continued from issue of Feb. 11.*)

OPERATIONS USED IN SHAPING STEEL.

THE principal operations used in shaping unhardened steel are filing, turning and forging; in finishing hardened steed rginding and polishing are the means employed. Since forging is not used in watch-work it need not be discussed here.

ANNEALING.

In working a piece of steel of considerable size the first operation should be to anneal it. This will make it softer and easier to work and will also tend to relieve any interior molecular tension which may exist, as noticed before.

Heat the steel by blowpiping or in a charcoal furnace, to a moderate red, then bury it in ashes previously heated and contained in an earthen pot. Cover the steel with the ashes and cover the pot. Allow it to cool slowly; a day sometimes is required; do not remove it until entirely cooled. On removal from the ashes it will be found covered with a black scale or oxide. Do not attack this with a file, but brush over it with soft wood dipped in diluted acid until as much as possible is removed. Wash in soap and water and wipe the piece dry.

FILING.

Filing is the fundamental operation in all mechanical work, yet it seems there is hardly another which is more neglected by many watchmakers. We will give a description of the "ideal" action of a file. Do not think

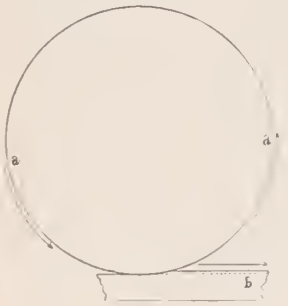

FIG. 2.

because ability to follow this plan is difficult of attainment that the plan itself should be dropped. In this, as in other things, learn what is theoretically correct and then approach it as nearly as you can in practice.

Do not treat filing as a mere matter of scratching off metal by any means—always work with a view to effect the greatest economy in time, tools and effort. A nutmeg grater is a useful instrument in its own way, but a file requires more thought and skill in handling to get the best results from it; yet we have seen supposedly finished mechanics work with a file about as a housewife would use the grater. It will be noticed that all files of standard shapes are curved in their lengthwise direction. This curve forms part of the circumference of a large circle. Imagine the cutting surface of the file contained entirely around this circle; then we should have a huge circular file (*a*, *a*, Fig. 2), and the obvious operation of it would be a simultaneous rotation and advancement along the plane of the work (*b*, Fig. 2) to be done.

The file is of necessity made of such size as to handle with convenience, still its shape is part of the circle, and the workman must strive to imitate the action of the imaginary circular file as nearly as possible. Bearing this in mind and with practice, one should be able to file a surface of reasonable extent as flat as it will be left by a machinist's planer. The mind and hands must work together; there are "instinctive" faculties which will develop by which you can *feel* the work under your file and know where the pressure is needed.

In files, a good assortment of shapes should be kept, with two or more different "cuts" in each shape. The difference in cuts is designated by numbers—00 is the coars-

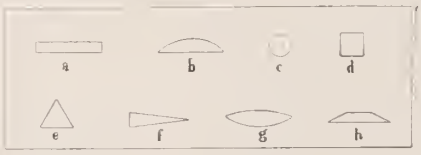

FIG. 3.

est usually used by watchmakers and No. 5 the finest. The principal shapes are shown in cross-section in Fig. 3, and are flat (*a*), half-round (*b*), round (*c*), square (*d*), triangular (*e*), knife (*f*), and entering or flat oval, the uses of which are suggested by their names. Then there are crossing files (*g*), for "crossing out" or filing the arms of wheels; pillar files, which are narrow, flat files, with both edges ground smooth; barrette files (*h*), one flat side cut and the opposite side ground to a peak or ridge for clearance, for flat filing in certain cases; riffle files, cut on the ends, which are of different shapes, for die finishing, etc.; escapement files in set covering all the other shapes in extremely small sizes, for the purpose implied by the name.

It is best not to use a perfectly new file on steel at first; start it on brass or other soft metal and after it has been "worked in" for a while it may be used on steel with less danger of quickly wearing off the extreme edges of the teeth.

Have all of your files furnished with handles of the same shape (cylindrical preferred), and differing in size according to the weight of the file. They can be put on the files by heating the tang red-hot, clamping the file quickly between two pieces of soft metal in the bench vise, and driving the handle on at the same time the tang is burning its shape into the wood. Handles fitted in this way will not split. Keep your files in a drawer with wood cleats to keep them separate. Throwing them in haphazard wears them out more than working with them, as the hard steel of each acts on the ones it comes in contact with.

Where the surface to be filed is of considerable area, use good thin sperm oil plentifully applied. This, together with an occasional brushing out of the oil and particles of metal from the file and fresh oil on the steel, will prevent the particles of metal from clogging in the file and stripping long gashes in the steel, which will happen without the use of oil. The brush used should be a piece of wire "card," such as is used by manufacturers of woolen goods. This material mounted on convenient handles may be bought of tool dealers. Either have the file perfectly dry and free from grease or else use oil freely. A little grease will merely cause the file to slip over the work. For light finishing with a fine-cut file, frequent application of soft chalk to its surface will prevent clogging.

Files should occasionally be cleaned in this way: Take a piece of sheet brass about one-fourth inch wide, one millimeter thick and two inches long; file a tang on one end and drive it into a wooden file handle. File the end of the brass off squarely then, holding the tool at an angle of about 45 degrees, rub it across the single-cut portion of the file to be cleaned (Fig. 4). This portion is the triangular space at the upper or tang end of the file which has received cuts in only one direction. When the brass has taken a full impression of the cuts, start at one end of the file and through the deepest, or first-cut, channels push this cleaner until the entire file has been gone over. This will shove out all dirt and accumulation of metal which a brush would not move. For fine-cut files use thinner brass.

If the work is heavy the operator should stand or sit so that the arms have plenty of room above the work—in other words, the work should be fixed rather low than too high. Delicate work should be placed pretty high, in order that the workman need do no stooping. The eye is called into play more in delicate work than in heavy work.

Grasp the handle of the file in the right hand and support the tip with the left. If the file is thin handle it so it will tend to bend convexly toward the work; if care is not taken in this direction the pressure of the hands will bend the file concavely over the work and spoil its flatness. Let the right hand supply the propulsion and the left do the guiding and hold the file into the work. On the back stroke the file should slide lightly over the work; this will help to keep the teeth free from particles of metal. Occasionally strike the file against

FIG. 4.

the bench, working side down, to dislodge as much as possible of the filings. In enlarging a round hole with a file of that shape select one only a trifle smaller than the hole, else you will have great difficulty in keeping the hole round.

Barrel arbors and similar combinations of cylindrical and squared portions may have accurate squares filed on them by using a filing fixture, which is simply two steel rollers held parallel with the length of the square to be filed and revolving in a frame held in the T rest socket. The rollers are set to the desired height and the file worked on them as guides, insuring the production of a square true with the rest of the work and with flat surfaces and sharp corners. The work is divided by the circle of holes and stop pin at the back of the lathe pulley.

It will be noticed that most files have one edge blank. This is known as a "safe edge," and its object is to enable the file to be used against a shoulder or projection as a guide, or so as not to cut some part of the work which is to be left standing. See that this safe edge is perfectly flat, without tooth burrs standing on it at the corners. If any such are found grind them off. To file a perfectly sharp, clean corner, use the safe

d, as it comes to a sharper corner than a
ut on the edge.
ter a flat surface has been "rough" filed
ist be finished by cross-filing and draw-
li. In cross-filing propel the file rather
e ately with the handle; apply pressure
i the hand on top of the file near the
c. Keep it flat by pressing it down and
e areful that it does not "tip" and round
fl corner of the work. Now file diag-
n y across the work until some of the
h places" are reduced and the slanting
s of the file are easily observed; then
across the first made lines and continue
nately until a flat surface has been at-
d. The object of this cross-filing is to
y where the metal is highest and needs
oval. After the surface is flat it may
nished by laying the file at right angles
he length of the surface, and, holding
t the top over the work, drawing or
bing" it from one end of the surface to
other until a fine line finish is obtained.
is called draw-filing.

(To be continued.)

Foucault's Pendulum.

SINCE the celebrated experiments of Leon Foucault, fully described in the Circular-Weekly of Sept. 17, have been renewed at the Pantheon, in Paris, many people have inquired if it were not possible to demonstrate the rotation of the earth by a pendulum of reduced dimensions.

Foucault himself had already given the answer, for, before putting up the immense pendulum at the Pantheon, he had installed at home, in the hotel where he lived

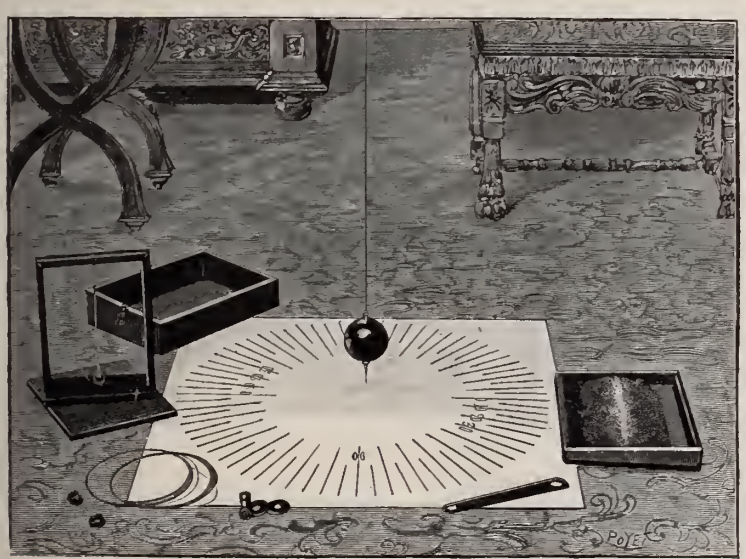

Fig. 1.

with his mother, a little pendulum of hardly 2 meters, whose oscillations at the end of about a quarter of an hour showed a displacement apparent to the eye.

"It would be interesting, indeed," says *La Nature*, "to place at the disposal of the curious an apparatus of small dimensions, so that everybody could convince himself at his own home, of the fact that the earth revolves. It would, above all, be interesting, from a pedagogical viewpoint, to demonstrate this fact to the scholars of the elementary schools."

Now, a young French engineer, Mr. Canneval, has constructed an outfit in which he has placed all that is necessary to repeat the experiment. The price is moderate. One has only to hang up the pendulum, no matter where, so long as it can oscillate freely. The box also contains a reduced frame, with pendulum, which serves as the base of the demonstration. This vertical frame can be displaced by hand, and when the impulse has been given to the pendulum, it is turned gently, and it will be found that the plane of oscillation of the pendulum remains invariable, although the point of suspension is displaced.

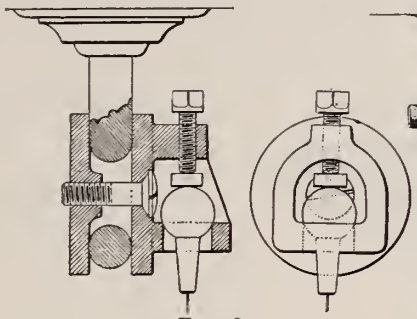

Fig. 2.

In consequence of this invariability, it is clear that if the earth revolves, the invariable and constant plane of oscillation will appear to be displaced. The ball of the pendulum, provided with a point, will trace on the sand lines more and more removed from those of the point of departure. The little demonstration frame will be seen at the left of the illustration.

With the pendulum of Mr. Canneval, there can be ascertained, on the graduated dial, a displacement of 11 degrees, 294 per hour for the latitude of Paris. After a quarter of an hour's motion, one will notice on the sand a displacement of two centimeters, with a pendulum of 2.5 meters, and an initial amplitude of oscillation of 75 centimeters.

A box 15 centimeters wide, 20 long and six high, contains all that is required to carry out Foucault's experiment. This includes a leaden sphere, plated with copper and weighing 1,250 grammes; a shallow box with sand; a dial 50 centimeters in diameter, for measuring the variations; bolts, washers, a wrench, steel piano strings, 0.35 millimeter in diameter, to make the pendulum wire, and two suspension devices.

The system of attachment, which is very important, is plainly shown in Fig. 2, while Fig. 3 illustrates the mode of attaching the pendulum to any ceiling.

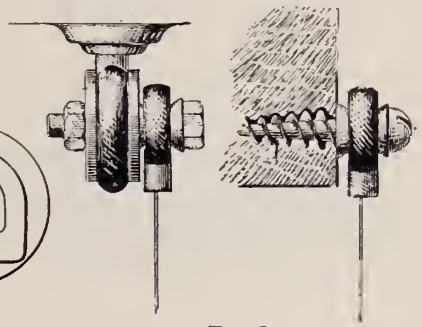

Fig. 3.

Hence, anyone is enabled, with the aid of this reduced apparatus, to repeat as often as desired the experiment of Foucault, an experiment which well deserved to be placed within the reach of everybody.

An Historical Clock.

JAMES F. McREYNOLDS, of South Omaha, Neb., has in his possession an historical clock, which is 300 years old, and is still keeping good time. It was made in Switzerland in the early part of the 16th century, and was the property of the Royalty for many years. In the latter part of the 17th century, a companion of Lafayette brought it to America and left it in Washington's home, at Mount Vernon, for safe keeping. There it remained for a number of years until called for by another Frenchman, who later gave it to Mr. McReynolds's great-grandfather. Since then it has been handed down from one generation to another, until it came into the possession of its present owner.

With the old clock is a paper written in the Swiss language, giving its history up to the time it came into the McReynolds family. This paper states that it was given by a prince to a princess on her 16th birthday. She became so attached to it that she carried it with her when she left home to avoid marriage with a man she detested. This clock is a small affair, with a hammered brass frame and the old style Swiss movement. The face is a dark yellow, with pink figures, set as in modern clocks. There is no striking apparatus connected with it. Mr. McReynolds will present it to the State Historical Society.

$5.00 for an Idea!

The JEWELERS' CIRCULAR-WEEKLY will give a prize of $5.00 to the person who sends in the best suggestion for a real live, up-to-date, interesting article appertaining to horology. The subject suggested must be one capable of holding the attention and interest of watchmakers. Contestants will be given until February 25th to forward the title of the subject. Hence THINK and get cash for your THOUGHT!

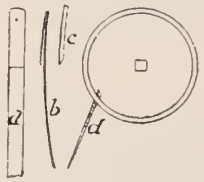
Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

QUESTION No. 383.—**Silver Ore.**—*Please inform us through* THE CIRCULAR-WEEKLY *as to how we can remove the rock from silver ore, like samples, without spoiling the appearance of the silver, as we wish to make specimens of them.* *W. A.*

ANSWER:—First separate the outside copper parts which stick to the silver ore, by digesting the lump in a solution of chloride of zinc, which dissolves the copper and leaves the silver unchanged. After that, most of the rock parts adhering to the ore can easily be removed by a graver, or any other pointed tool, and, finally, by putting the lump in fluorhydric acid. This acid does not attack metal, but is an excellent etching acid for glass, amethyst, agate and topaz; also for the common grades of stones and rocks.

QUESTION No. 384.—**Magic Napkins.**—*What kind of prepared cloth is used to brighten or to clean up jewelry? Can you tell me how it is prepared?* *B. G.*



ANSWER:—Such prepared cloth is sold under the name of magic napkins, and they are used for cleaning jewelry, if the latter needs only a retouching. These napkins are made of pure wool fabric, saturated with soap and rouge, and dyed with a red aniline dye. A piece of cloth, 100 centimeters long and 10 centimeters wide, for instance, is saturated with a solution of four grams of Marseilles soap in 20 grams of water, to which is added two grams of rouge, and then allowed to dry. The cloth is then cut up into napkins, 10 centimeters square. These will last for a long time, and will be found very useful for restoring the luster to articles of gold and silver, which have become dull through handling and atmospheric influences.

QUESTION No. 385.—**Distortion of Steel.**—*What is a good way to harden a long piece of steel, such as the winding click spring of a Swiss keywinding watch and the like?* *A. C.*

ANSWER:—When you harden long steel articles, heat them to a cherry red and plunge them in a vessel containing water, on top of which is a thin layer of oil. This will prevent warping of steel and is recommended for the hardening of any steel article. Delicate steel articles are generally hardened in a small copper box, made of the foil of an old dial. The article is put in that little box and covered with charcoal dust, then heated to a cherry red and immersed with the box in cold water, cleaned, annealed, and finally cleaned again. *R. P.*

QUESTION No. 386.—**Steel Barrel.**—*What is the best method of putting a new hook in the steel barrel of a Waltham movement when the original steel hook is broken off?* *L. K.*

ANSWER:—The best method is to anneal the part of the barrel where you intend to drill a hole for a hook, taking care that the annealing does not go so far as to reach the square hole of the center. The hook *d* can be made of steel wire instead of brass wire, and consequently the hole that is to be drilled can be much smaller. Notice in the illustration that the hole should not be drilled perpendicularly, but obliquely, which will give a good hole for the spring, and, moreover, will dispense with the necessity of filing the hook thinner or weakening it. When we had to make such a new hook, we also changed the hooking

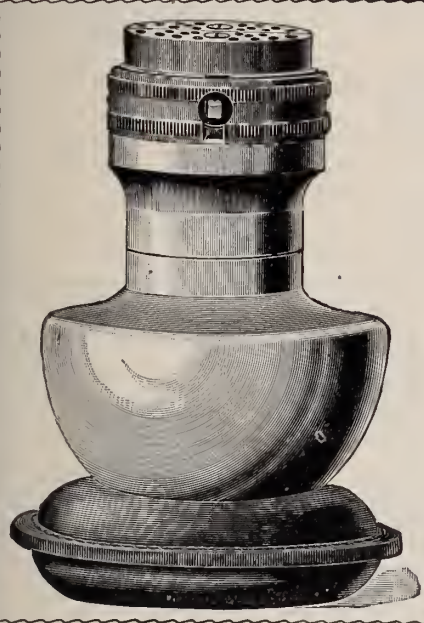
of the mainspring. The best hooking, as recommended by experienced watchmakers, is that represented in the illustration by *a*, which shows a front view of the mainspring, upon which a small piece of mainspring is riveted, not bent, as is sometimes done. Bended hookings on mainsprings are very weak, and break very soon, because, in order to bend the spring, that part must be entirely softened, and then the hooking has lost its elasticity; consequently, when the spring is wound up and run down, the hooking is opened and closed—that is, it is twisted exactly as one would do if he were trying to break it. It is not necessary to soften the mainspring very much in order to make a small hole for the riveting. If a piece for the hooking is to be made like that seen in the illustration, a hole can be readily punched, even without annealing the mainspring. The lower part of the piece to be riveted is shown in enlarged size in *c*, which ends in a sharp edge, so as to have a firm hole in the steel hook.

QUESTION No. 387.—**Metric System.**—*How do grams compare with the American grains, and what grams or weights are used in the jewelry trade in Europe? Is the metric system simpler and more convenient in making calculations?* *L. W.*

ANSWER:—A gram is equal to 15,432 grains, and in all the countries where the metric system of weights and measures is adopted, there is but one single kind of weight, no matter whether the material to be weighed be gold, coal, drugs or pharmaceuticals. The metric system, which will, probably, also be adopted in the United States, is so easy, that it can be learned in half an hour. Some people who are opposed to it, say that it contains Greek and Latin words which can hardly be learned and understood by the common people. This, however, is a bugaboo, which can be easily conquered. Do not people soon learn and retain most strange words which they are taught on gay occasions, such as the words, sauerkraut (German), macaroni (Italian), chop suey (Chinese), etc., and consequently, it will not be hard to learn a few words, already well-known by most of the people, such as *kilo*, which means thousand times, or simply thousand; *hecto* hundred times, or simply hundred; *deca* 10 times, or 10. Then there are the French diminutives, derived from the Latin, *deci* which means a tenth part of; *centi*, which means a hundredth part of; *milli*, which means a thousand part of. These six words, with the three following root words *gram*, for weight; *meter*, for measures of length, and *litre*, for measures of capacity constitute the whole secret of the metric system. The immigrants who come to this country, and are accustomed to their kopeks, centesimis, sous, öres, etc., try, first, to find out what an American cent is worth in their respective money; then they know easily what is the value of a 10, 25, 50 or 100-cent piece, and just as easy will it be for the American people to know what is a decagram (10 gram), a hectogram (100 gram), or a kilogram (1,000 gram), when once they know the value of a gram. The pharmaceutical weights, which are generally used in weighing small quantities, are the diminutives of the gram, and are, as we have said above, the decigram (1/10 of a gram), the centigram (1/100 of a gram), the milligram (1/1,000 of a gram). The meter, which is equal to 1,093 yards, or 328 feet, or 39.37 inches, is subdivided in decimeter (1/10 of a meter), centimeter (1/100 of a meter), millimeter (1/1,000 of a meter). The longer measures are the decameter (10 meters), the hectometer (100 meters), the kilometer (1,000 meters). Then there is the root of the measure, for capacities, be it liquid or dry, which is the litre. The value of a litre is 1.05671 quart liquid (a little more than a liquid quart gallon), or 0.9081 dry quart (about 1/10 less than a dry quart). Thus, if you buy a hectolitre of beer, or a hectolitre of coal, both measures represent the same volume. The different divisions and subdivisions of the meter are also composed of the aforementioned three augmentative Greek, and the three diminutive French words. They are: the decalitre, the hectolitre, the kilolitre (also called the cubic meter), and the decilitre, the centilitre and the millilitre. This system is, as you see, very simple, and has none of the awkward features of the old English system, which is hardly known thoroughly by one person in a thousand.

The Smallest Compressed Air Engine.

W. D. BOOT, a watchmaker, of Danbury, Conn., has constructed the smallest compressed air engine known. It is exactly two centimeters in height, and weighs, with its diminutive pediment, only 30 grams.

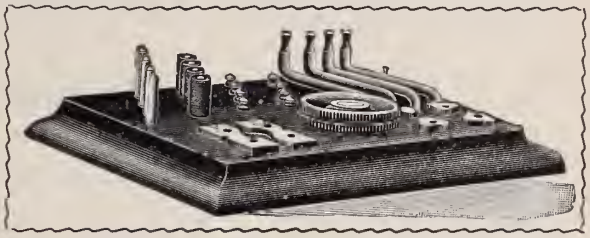


Mr. Boot, who is a jeweler, as well as a watchmaker, has made use of the precious metals in constructing his miniature motor. Thus, the supply pipes, whose diameter is only one millimeter, are of silver, as well as the piston rod and the cylinder. The flywheel, which, at full speed makes a great noise, is of gold, and measures 11 millimeters. At the top of the motor is a tiny ball governor.

Some idea of the size of this tiny motor can be had, when it is stated that for the base of the engine, the inventor has utilized a silver 10-cent piece.

THE SPECIAL

DUPLEX BASE



Anti-Friction Engraving Block.

Designed by an Engraver for Engravers.

Nickel-plated.
With Swivel Jaws.

Designed and Manufactured by
Adolph Muehlmatt,
Cincinnati.

Perfection of construction, shape and workmanship. The Special is not a cheap engraving block, but a first-class article of improved design. Complete, with attachments and leather pad. $6.00.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

GLASS AND BRONZE LINES.

AN attractive line of glass and metal mounted goods is now on display in the show rooms of L. W. Levy & Co., 194 Broadway, New York. The goods are extremely novel in appearance, as well as artistic in their conception and workmanship. They consist of different colored iridescent glass vases, on which are traced and mounted strange conceits and floral designs in copper, gilt, nickel and platinum. In some cases the metal is sunk into the glass in fine scroll patterns, barely larger than a thread, and in others the metal is deposited on the glass in relief effect. The metal in both cases is plain or polished, according to the design to be produced. In addition to this line, the concern also has an unusually fine assortment of onyx clocks, mounted with bronze, and surmounted by pieces of bronze statuary. The mountings show old bronze, French bronze, violet, purple and all the popular *art nouveau* colors and finishes.

RESOLUTIONS BY CUT GLASS MANUFACTURERS.

AT the semi-annual meeting of the Cut Glass Manufacturers' Association, held recently in New York, the following resolutions were offered and adopted, and are now in effect: First, that all packages shall be charged for; second, the terms of credit shall not exceed 60 days from date of invoice; third, the discount for cash shall not exceed 2 per cent., and then only on condition that payment is made within 30 days from date of invoice; fourth, goods shall only be delivered at the nearest general shipping point, and in no case shall freight be paid or allowed by the shipper; fifth, the delivery of goods to transportation company, with receipt or bill of lading therefor, shall be a release of all claims by the purchaser on the shipper for breakage, delay or loss.

NEW ROCK CRYSTAL DECORATIONS.

SOME beautiful samples of polished engraved, or rock crystal glass, have recently been received at the New York warerooms of the Pairpoint Corporation, 38 Murray St. The samples show beauty of design, shape and cutting, and are unusually artistic and tasteful in general appearance. The line comprises water pitchers, comports, vases, decanters, celery dishes and almost every known kind of piece usually carried in cut glass lines. The shapes of the vases and comports are antique and Egyptian in effect, and are full of graceful curves. In no piece is there a sharpness or ungainliness of outline, and the whole assortment is decorated with a beautiful scroll and floral pattern, which seems to specially adapt itself to the general style of the articles shown. Many of the taller vases and stem pieces have a twining decoration running up their sides, which is finely cut and delicately polished. The polished prism cutting is intermingled with this twining effect with beautiful results. The whole line, which is new and a distinct departure from rock crystal cuttings in the market last season, is rapidly becoming popular with the finest trade.

THE RAMBLER.

The Jeweler In India.

AS there are, in all probability, a certain number of jewelers' assistants resident in Great Britain who are discontented with their surroundings, it will perhaps not be out of place to give some account of the pay, living expenses and prospects awaiting the jeweler who accepts an engagement in India.

Although the Anglo-Indian jeweler's assistant receives a higher salary than he would were he to remain in England, he sacrifices a great deal by living in India. In the first place, the climate may prove exceedingly detrimental to his health; secondly, the light side of life does not exist; and, thirdly, though he is well paid, the luxuries worth having are by no means cheap, though ordinary living is inexpensive. His prospects may, on the whole, be said to be good, as (India being an unhealthy country) promotion often arrives in an unlooked-for manner. Thus an assistant who has been serving behind the counter for a few months may suddenly find himself promoted to the post of manager, owing to the sudden death of his predecessor. Moreover, suitable men being difficult to find, he is afforded unique opportunities of bettering himself, especially should he possess a good all-round knowledge of the business upon which he is engaged. It may be added that if the assistant plays his cards well he stands an excellent chance of being taken in as a partner. But, as has been already pointed out, a junior assistant in a civilized country is, in many ways, better off than is a senior partner in India.

As to the salary of the Anglo-Indian jeweler, it varies considerably. The imported assistant may begin on 200 rupees (£12)

a month, or he may have to accept two-thirds of this sum and a commission. With each successive year his salary is increased by 15, 20 or 25 rupees a month. This continues during the three or five years of his agreement. At the expiration of that time he will sign for a further term of service at an increased salary, returning to England between whiles. Or he may say good-bye to India, having had enough of its doubtful advantages. Should he be afforded the opportunity of traveling "up-country" he may gain a desirable commission. Sometimes he is allowed to collect debts, being paid a percentage thereon. It may be added that to obtain money due from Anglo-Indian customers, be they white or black, is no easy matter.

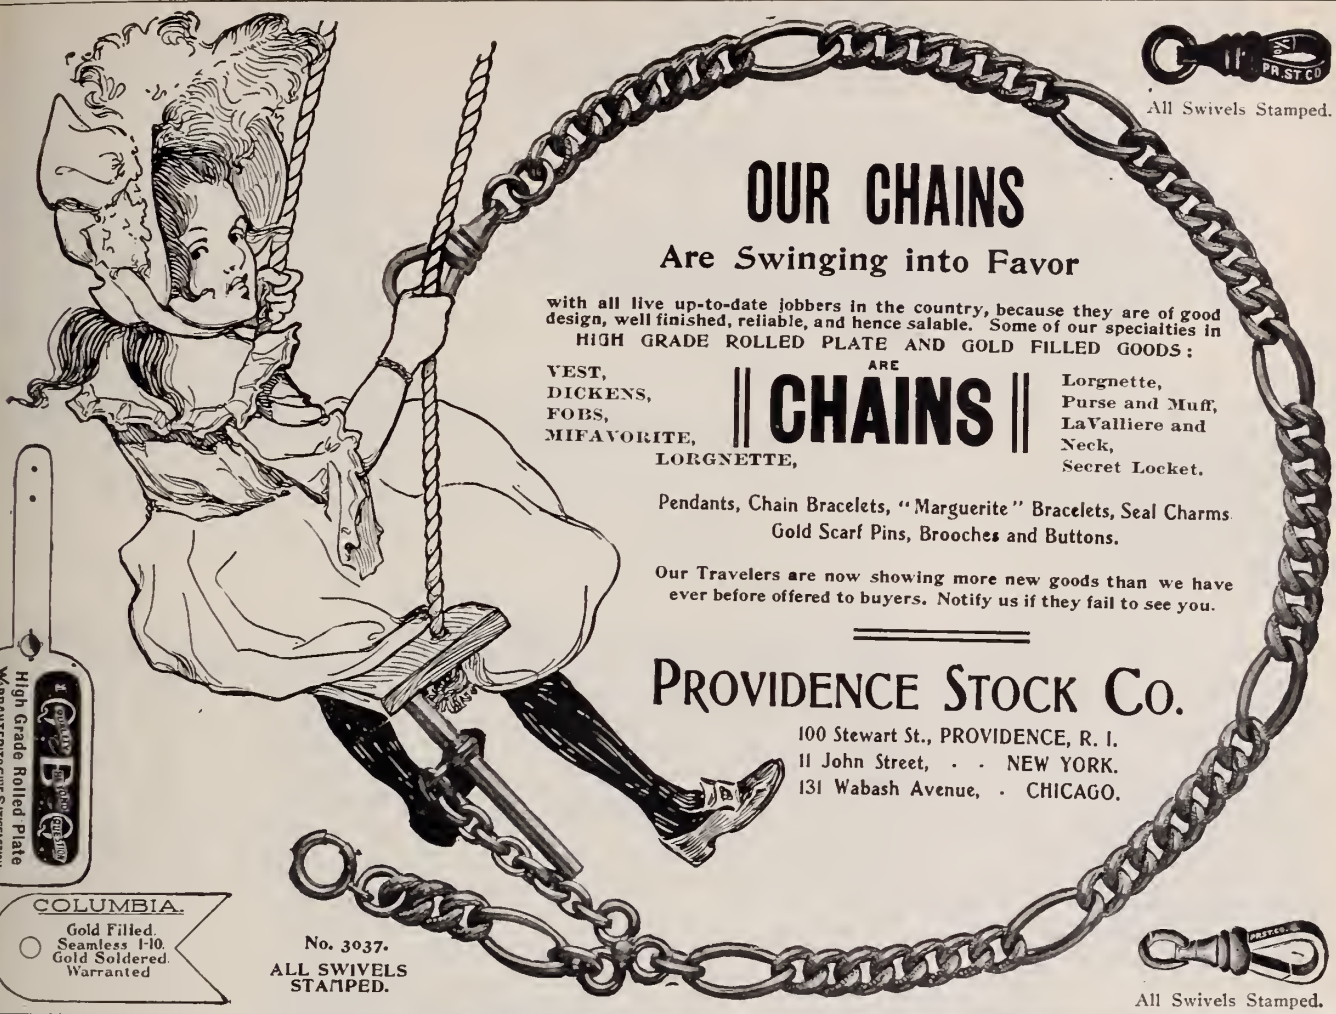
Next come the living expenses. For from 50 to 70 rupees a month he can live in comparative comfort, according to the locality selected. This applies to board and lodging in one of the numerous Calcutta boarding houses. He may also live with four or five other men in a "chummery" at much the same rate. Should he be a married man, he will probably prefer to take a "bungalow." This in Calcutta will be a matter of much expense, though in Allahabad, Lucknow, or Bangalore a very good five-roomed house can be obtained at a rental of 50 rupees a month. As a rule, it is only managers and partners who indulge in these luxuries. The furniture for such "bungalows" is either purchased at the local auctions or obtained second hand. Though several servants are required, their united wages do not amount to much. Thus, a cook will work for nine rupees a month, and a male housemaid for a trifle less. A nurse will lend her services for from eight to 10 rupees for a similar period. The more children there are the more she will charge. In some married establishments it is customary to have all the meals sent in from a neighboring hotel or restaurant. But, as a general rule, the jeweler's wife finds it cheaper to do her own housekeeping. To that end she will visit the market early every morning, returning laden with vegetables, fruit, fish, meat and fowls. Sometimes she entrusts this duty to the "bowarchi" (cook), being under the impression that the native menial will obtain better value than she herself can. She is right in her surmise. But she must bear in mind that the black man will present her with a bill made out at the same rate which she would have to pay, duly pocketing the difference.

Should the married jeweler have the misfortune to possess a number of olive branches he will be forced to have them educated at the inferior Anglo-Indian schools, unless he can afford to send them home to England. As a result of the former procedure his progeny contract a most appalling Anglo-Indian accent, besides learning everything which they ought not to know.

Moreover, owing to their surroundings and the enervating climate, they grow up wanting in energy and self-reliance. Under these circumstances married jewelers would do well to curtail extravagances of a domestic nature.

There remain the prospects of the expatriated jeweler. As has already been pointed out, they are of a fairly promising nature. It must, however, be borne in mind that trade is by no means as good as it was. Consequently proprietors are given to reducing their expenses as much as possible, and, to that end, keeping their salary list uncommonly low. Thus, on a satisfactory assistant serving his time, his employer, rather than increase his salary, is more ready to take on in his place a half-caste youth. The last named quaint product of civilization will readily accept an engagement in a jeweler's establishment at from 80 to 120 rupees a month. But since the curiosity in question cannot be depended upon in any way, the engaging of him amounts to a practical illustration of the penny-wise-pound-foolish policy. It should be added that in the leading jeweler's establishments this class of labor is not employed.

It may, in conclusion, be pointed out that every now and then an Anglo-Indian jeweler's assistant sets up on his own account, confident that he will make a fortune. If he succeeds in selling his newly-found business without incurring the loss of his savings he will indeed be fortunate. In fact the exiled assistant working in a Bombay, Calcutta, Madras, Lucknow, Lahore or Simla jewelry establishment would do well to devote his energies to becoming a working partner in the firm employing him rather than to seeking honor, wealth and glory as sole proprietor of an establishment of his own.—Geo. Cecil in *The Jeweler and Metal Worker.*



It is reported from Louisville, Ky., that the chances are favorable for the establishment of a factory for the manufacture of cheap watches. Negotiations have been going on between the merchants of Louisville and the Harvard Watch Co., Chicago. It is said that nearly all the capital necessary for the deal has been secured.

Among the recent additions to the Carnegie museum, at Schenley Park, Pittsburgh, Pa., is a magnificent specimen of the best modern Japanese ceramic art. It is a vase about 26 inches high, embellished with figure work and escutcheons. Festooned around it is a cluster of chains, made of porcelain. The vase was donated to the institution by Robert Pitcairn, resident assistant to President Cassatt, of the Pennsylvania railroad. There is no similar piece of art work in America, and there is only one in Europe; that being in the British Museum, in London.

THE JEWELERS' CIRCULAR

THE HOROLOGICAL REVIEW,

WITH WHICH ARE CONSOLIDATED THE JEWELERS' WEEKLY. THE JEWELERS REVIEW

Copyright 1903 by THE JEWELERS' CIRCULAR PUB. CO.

Corbin Building, 11 John St., Corner Broadway, New York.

Entered as second-class matter at the New York, N. Y., Post Office.

35TH YEAR. NEW YORK AND CHICAGO, WEDNESDAY, FEB. 25, 1903. VOL. XLVI. No. 4.

IVORY AND SILVER IN ARTISTIC COMBINATION.

THERE was recently presented to Dr. Edward F. Brush, president of the City Club, of Mount Vernon, N. Y., a remarkable combination of the arts of the silversmith and of the ivoryworker, in the form of a large cup or tankard, composed of a section of an elephant's tusk mounted with silver. The piece of ivory is considered one of the best in existence in this country, it being a perfect specimen of unusual size and quality. The tusk is about eight inches across at the base, and fully an inch thick, and tapers to about five inches at the top. The lining is gilt.

The scheme of ornamentation of this tusk reflects the things nearest the heart of the recipient, who is a mighty Nimrod, the moose being his especial game. The tusk is highly polished and is bordered by silver pine needles and pine cones, indicative of the haunts of the moose. The cover represents a moose's head in solid silver, handsomely modeled in simulation of nature, and so finely are the details brought out that the head seems to be instinct with life. The inscription is engraved on a representation of a bear's skin, which forms a panel on the front of the tankard and tells the story of the gift.

This work is the production of the artisans of two New York houses, the ivory being worked and donated by an intimate friend of the recipient, Chas. A. Hetzel, while the silver portion of the work was done by the Mauser Mfg. Co., 14 East 15th St., New York.

The entire piece manifests the highest class of craftsmanship and is a credit to American designers and artisans.

TANKARD OF IVORY AND SILVER PRESENTED TO DR. EDWARD F. BRUSH.

Prehistoric Bracelets.

THE first bracelet, says a writer in the *Atlantic Monthly*, consists of a series of facades with the royal hawk above, alternate gold and turquoise. The turquoise hawks were made probably in the time of Aha-Mena, and came from another bracelet, for they have been originally threaded with beads between them; the gold hawks are of the more finished type of the Horus hawk of King Zer. The man who worked the golden hawks cast them each in a double mold, and burnished them with such nicety that only an expert could tell that they had not been cast by *cire perdu* process.

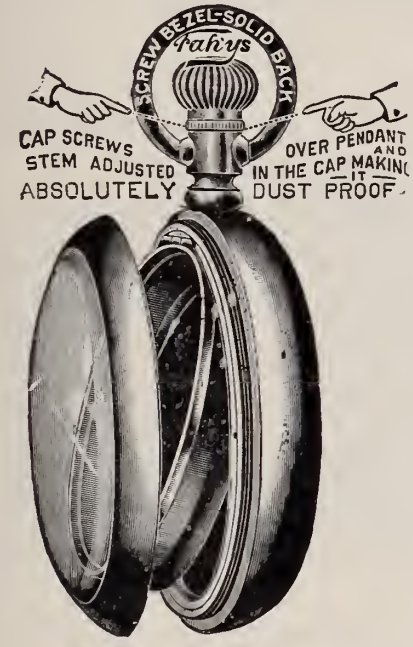
The second bracelet has a gold rosette or daisy as its central ornament, flanked by beads of turquoise and gold, these again flanked by dark purple beads of lapis lazuli, and these in turn by golden balls.

(*Continued on page* 11.)

HAVE YOU SEEN "THE RAPHAEL?"

There is nothing a Jeweler needs in his stock more than handsome patterns of flat ware, fancy spoons, etc., so suitable for presents.

"THE RAPHAEL," a small sized berry spoon here illustrated, is particularly suitable for this purpose. It is the handsomest figure pattern ever placed before the jewelry trade. A heavy weight pattern finished in French Grey and Rose Gilt, made in fancy pieces only, striking, very artistic and entirely original. Notice how the figure on the handle stands out; nothing could be more beautiful.

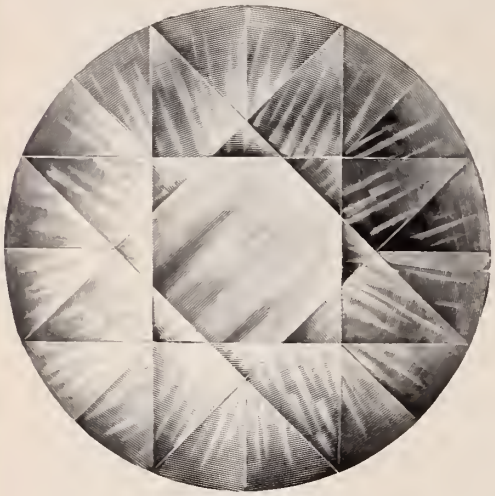


We also have complete sets of flat ware in other patterns.

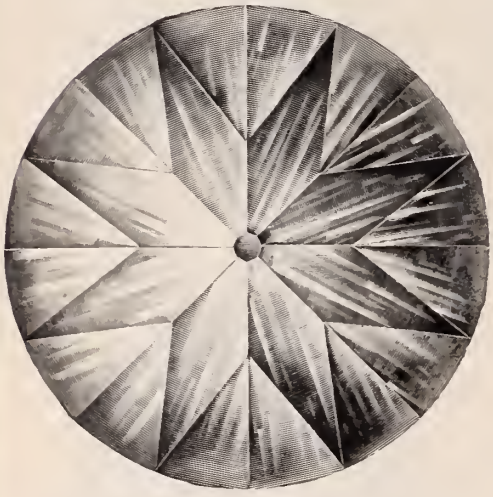
Alvin Manufacturing Company,

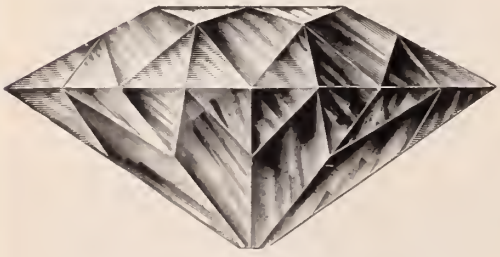
54 MAIDEN LANE, 41 UNION SQUARE,

NEW YORK.



We were recently asked





"Why do not more people insist on having the **Fahys** Solid Back Screw Bezel Case and protect the movement of their watch absolutely from dust and moisture?" Possibly because the general public do not know about them or else, without having the merits of such a case explained to them are adverse to departing from the old style of spring back or hunting case. You, Mr. Jeweler, could largely increase your sales by explaining the virtue of a watch being encased in one of these cases that will protect the movement from dust or moisture affecting the works. The **Fahys** Solid Back and Screw Bezel, with dust-proof pendant, are absolutely dust and moisture proof and are so accurately made that the thread never binds. Take time to explain their merits and recommend them and see how your sales will increase.

Cut shows op of diamond with properly laid facets.

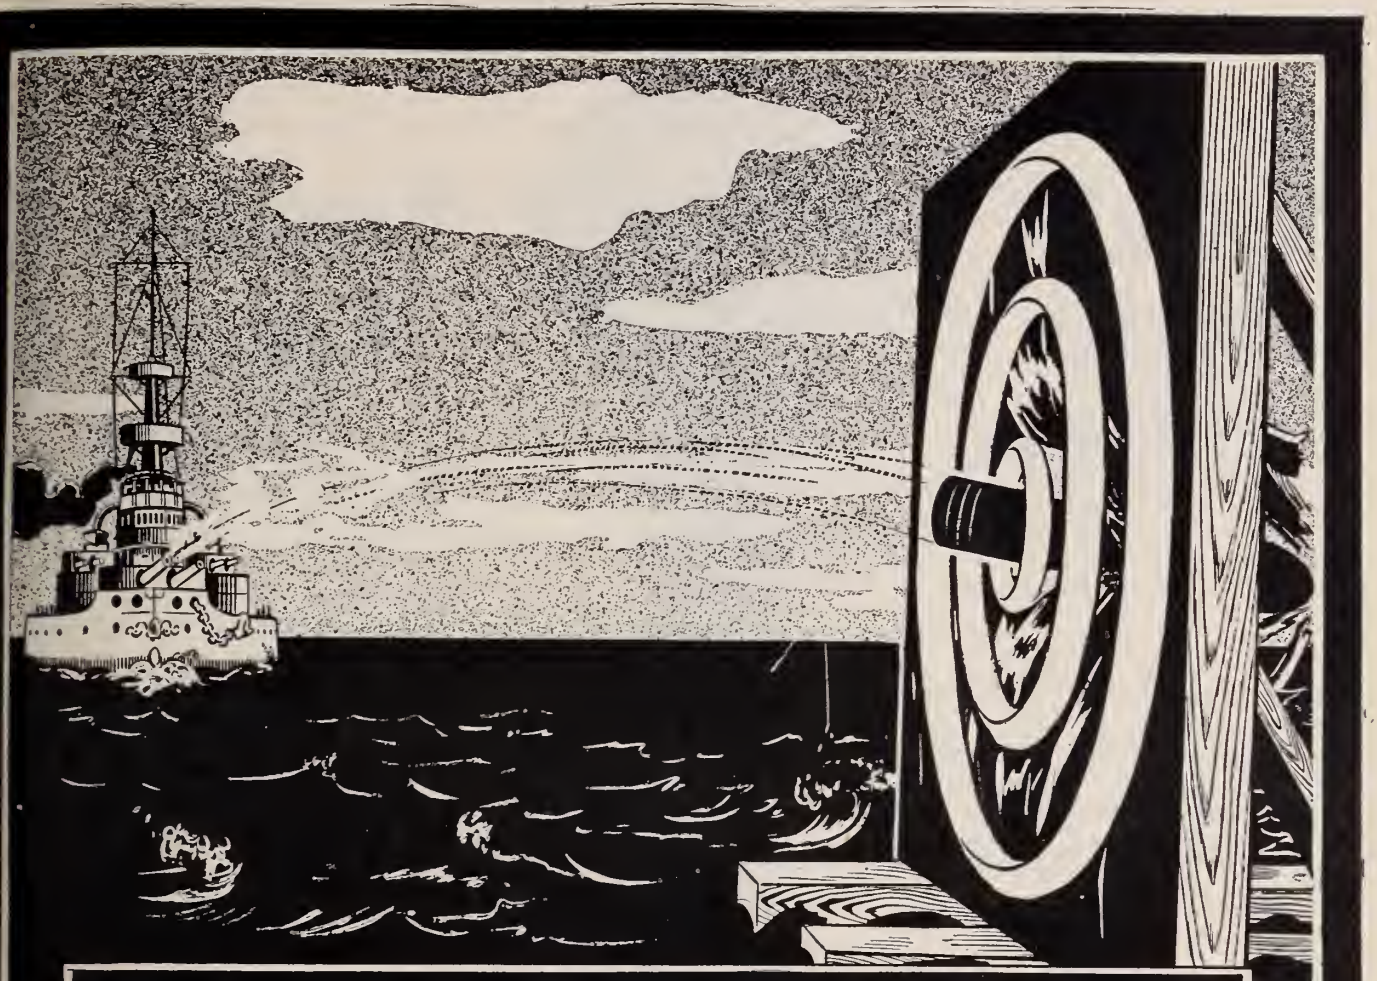
Cut shows bottom of diamond with properly laid facets.

Cut shows side of diamond with properly laid facets and properly shaped diamond.

DIAMOND CUTTING

Brilliancy, brightness or snappiness depends on the cutting of the diamond.

It is light entering from all sides of the stone; the facets deflect it, and it passes out the top of the stone.



If the facets are not properly laid, and the stone not the correct thickness (in relation to the spread) the rays of light do not concentrate and leave the top of the stone at the same angle, and the diamond is not as bright as it should be.

For fuller particulars regarding correct cutting and dimensions of diamonds see our leaflet dated Feb., 1903, which we have mailed. If one has not reached you, send us word.

Don't Refuse A Job

of any kind.

If you cannot do it yourself, it can be done in our wonderful shops, as we do almost everything; but if we cannot do it, we will have it done for you. This applies to such occasional jobs as *Fan*, *Pipe*, *Amber* and *Mother of Pearl Repairing; Ivory* or *Tortoise-Shell Work; New Combs*, *Mirrors*, *Brushes*, *Whisk Brooms* to replace old ones in *Silver Mountings; Bronze Statuary Repairing* and *Refinishing; Scientific* and *Mathematical Instruments*, *Barometer* and *Compass Repairing*, or any other kind of odd work that is brought to a jeweler to be repaired.

Don't let a Customer go to a Competitor's Store.

The advantage of doing business with us is to have a firm in the city that will attend to everything that you cannot do at home.

It is no bother—it is part of our business. We know the best place to send every job that is out of our regular lines of work, have messenger boys for that purpose, and the prices will be as low as if sent direct to the repairers or matchers of each particular kind of work.

We want our customers to feel that our shops are theirs, that we attend to their work, whether much or little, the same as if attended to by themselves, and that the oftener we hear from them, the better it pleases us.

Only those jewelers who deal with us regularly, and their name is legion, realize how convenient it is to have a house in the city to attend to all their special order work and repairing in a business-like manner.

Retail jewelers who send work to firms that attend to it as a matter of accommodation have no conception of the advantages of having an account with us.

Wendell & Company,

The only Firm in the Country that makes a separate and distinct business of doing all kinds of Special Order Work and Repairing for the Retail Jewelry Trade.

Two Wonderful Shops always at your service.

The Strength of a Chain

FOSTER'S STRONG LINKS.

LINK No. II.—Finish.

In many years of manufacturing vest chains we have learned one thing well. That one thing is how to obtain the maximum of finish with the minimum of loss of gold.

Our 1-20 chain starts 1-20 and ends 1-20. Our 1-10 chain starts 1-10 and ends 1-10. The exact proportions are maintained throughout.

No loss of gold is suffered in the process of manufacture or finishing, and upon the last link of every 1-10 chain we stamp it 1-10, and we mean just that. Every 1-10 gold chain is soldered with gold solder.

You can place these chains before your customers with absolute confidence. They will bring you satisfaction and other orders. Send for our catalogue.

Theodore W. Foster & Bro. Co.,
PROVIDENCE, R. I.

is its Weakest Link

Ivory and Silver in Artistic Combination.

(*Continued from page* 1.)

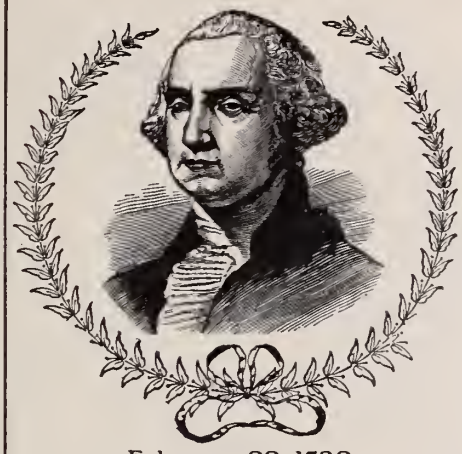
The second half of the bracelet shows similar arrangement, but without the rosette, and the arrangement of gold and lapis lazuli beads is reversed. The jeweler who beat out the halves of the golden balls and soldered the two parts of each together must have been a past master in the art of soldering, just as the man who arranged the beads of gold and turquoise and purple lapis lazuli in the two other bracelets must have been a past master in the art of color arrangement.

United States Geological Survey Asks Jewelers' Aid in Reporting Finds of Precious Stones.

The United States Geological Survey is again sending around to jewelers and mineralogists letters of inquiry, to find out what precious, semi-precious or ornamental stones have been found in various districts of the United States. Attached to the letter is a complete list of the minerals in question, with blanks for the recipients to fill in, stating the date of the find, the amount found, and the value.

The letter reads as follows:

Dear Sir—The gems, precious stones, and ornamental stones named in the following list have been found at various times in the United States. If you know of the finding of any of these within the last year (1902), will you, if possible, kindly fill in the amount and estimated value opposite the name of the species or variety, with a description of the locality and occurrence, and return the list in the enclosed envelope (which requires no postage) to Mr. George F. Kunz (address below), who has charge of the preparation of the report on precious stones for this office. If you know of any other precious or ornamental stones found, in addition to those on the list, kindly include a description of them also, and give any facts within your knowledge concerning the method of finding or mining such gems. Please forward your response as soon as you conveniently can. Very truly yours,



CHARLES D. WALCOTT, Director.

Address: Mr. George F. Kunz, 40 East 25th St., New York, N. Y.

Trustee of Joseph Drukker Attempts to Recover Jewelry Pledged by Bankrupt.

WASHINGTON, D. C., Feb. 18.—F. W. Brandenburg, trustee of Joseph Drukker, the bankrupt jeweler, has informed the Bankruptcy Court that from an inspection of the petition filed by the bankrupt and the testimony given by him before the referee, it appears that there is now held by the Traders' National Bank of Washington, and E. Heidenheimer, a pawnbroker, a lot of jewelry alleged to have been given as security for certain debts of Drukker. The trustee further avers that there is an equity in the said jewelry, the amount of which is unknown, and if the same is sold by the parties holding it, the creditors of Drukker will, no doubt, receive nothing.

The trustee has therefore asked the court to issue a rule directing the president of the bank and E. Heidenheimer to show cause why the goods of Drukker now held by them as pledges should not be turned over to the trustee for the benefit of the creditors. The rule has been duly issued.

Character and Honesty Bring Their Own Reward.

The above truism is as applicable to business concerns as to men. Character, honesty and achievement are as important factors in *our* business as they were in the lives of the great men whom our country delights to honor this month. We, like they, have the reward of appreciation from those whom we have faithfully served.

The work of preparation for another great year is now over and our business moves forward at a steady and increasing pace. Quality—ever our chief distinction—is more predominant than ever before. Never have we been so singularly favored in the matter of new and exclusive stocks of **WATCHES** and **DIAMONDS.** Through our logical business system, the vastness of our stock and long experience we can supply these goods at attractive prices.

We are now ready to replenish your stocks with the all-around satisfaction for which our house is noted.

United States Consuls Report on Silv Trade in Great Britain.

WASHINGTON, D. C., Feb. 18.—A series reports from the United Kingdom on t subject of silver and plated ware has be received by the State Department, fr which the following excerpts of interest the trade are taken:

Consul McCunn, at Dunfermline, Sc land, says: "There are no manufactur of silver or plated ware in this consul district, but both are retailed quite e tensively by jewelers and hardware deale The demand is steady and regular. T greater bulk of the silver and plated wa sold here is manufactured in Sheffield a Birmingham, and orders are generally tak from samples shown in Edinburgh or Gl gow, as the traveling salesmen for th lines seldom bring a complete line samples to the smaller towns. The or foreign importations in this line here cor from Germany, through London houses.

"I cannot say that there are any o stacles to prevent the extension of Am ican trade here in that line, as I cann learn that the introduction of Americ silver and plated ware has ever been thc oughly attempted. Dealers here occasio ally receive catalogues and circulars fro London agencies for American plated war and silver novelties, but that method w never succeed in Scotland, for, no matt how attractive the illustrations may appea or how satisfactory the prices and terr may be, the Scotchmen will not buy t they have an opportunity to examine th design and quality of the wares.

"Though jewelers and others here cor ment in very high terms on the artist and unique designs and patterns of Ame ican silver and plated articles, neverthele they prefer to stick to the popular hon goods of conventional style and patte rather than risk an order for Americ goods solicited merely by catalogue d scription and price list. A full line samples of the various articles of silver ar plated ware displayed in the commerci centers of Scotland, where dealers fro the smaller cities and towns could be i vited to call and inspect, would, in m mind, if the values were right, do mo to extend the American trade in Scotlar than any other method."

Consul Fox, at Falmouth, says: "Ame ican silver and plated ware are in a ce tain demand, and are obtained from Lo don, Liverpool and other distributi centers. There is no local manufactur Germany is the only foreign country oth than America from which these goods a imported. I am advised that America trade in silver and plated ware wou probably receive extension if there w more variety of design in the manufa ture."

Consul Taylor, at Glasgow, says: "Th sale of silver and plated ware of America make is very limited in this consular di trict. Most of such goods, if not all, sol in this district are of British made. Ge man jewelry is sold in large quantities, b little or no silver or silver plate. It is sai of American silverware that the styles a not suitable to the trade, that the pric are too high, and that the make is too ligh Makers here sell their ware according t

s weight, while it is claimed by dealers hat lump prices are asked for American oods, regardless of weight, and that these rices are excessive. In this connection, owever, I desire to say that parties here, ishing to give wedding presents of silver- are to parties in the United States, have nformed me that they could purchase etter presents, and at less price, in the nited States than here, to say nothing of caping tariff duties."

Consul Boyle, at Liverpool, says: "There practically no silverware or plated ware anufactured in this consular district, and here is very little of such ware sold here f foreign manufacture, such being at a disdvantage, on account of the goods not earing the English hall-mark. The conumption of silverware in Liverpool might e estimated at $1,250,000 per annum, and f plated ware about $500,000.

"American silverware has been introduced n this market recently, and the articles re, I understand, generally lighter and of cheaper class of goods than those manuactured in England, but they are much adhired for their design and workmanship. Beyond the fact that the Goldsmiths' Hall re the governing body, who demand a cerhin quality before placing the hall-mark pon the goods, there are no obstacles in the ay of extending the American silver rade in this country, and the trade in merican-made articles only requires fosterng, and the styles and tastes of the Britsh public to be studied, in order to successully introduce such wares here."

Consul Grinnell, at Manchester, says: Manchester is not a manufacturing center or silver and plated ware, and retail dealrs here are very reticent regarding the onsumption and source of supply. I was ortunate, however, in securing an interiew with one of the principal salesmen in large firm of silversmiths and importers f silver and plated ware in this city. He as good enough to inform me that the onsumption of American-made articles in his consular district was very small, but ould be increased by expert inspection.

"The design and finish of the Americanade goods on sale here are equal to the English articles, with the exception of the lie work. The cost of the American aricle is, however, greater.

"There are one or two faults which the American exporter must guard against if e wishes to compete successfully with the English manufacturers. In some cases the rticles made in silver are far too heavy, he English goods being proportionately ighter and cheaper. In some instances, owever, the articles are made too light, vhen compared with other makes. These lefects are very important and various, and an only be made known and rectified by a isit from an American manufacturer, as efore mentioned."

The opera house block at Ashland, O., as totally destroyed by fire Wednesday. he blaze originating under the stage where he natural gas fixtures are. Among the usiness firms who had rooms in the block nd whose establishments were wiped out as that of P. F. Sharick, a leading jewler of that town. Mr. Sharick suffered a eavy loss. The total loss by the fire was 60,000, of which $17,000 is covered by inurance.

Police Recover Jewelry Stolen from York, Pa., Store.

YORK, Pa., Feb. 18.—Through the efforts of the city detective force the jewelry stolen from the store of M. R. Swartz, on the morning of Jan. 11, has been recovered and identified and is now in the possession of the police department, which has also recovered and holds for identification about $200 worth of other jewelry and silverware, captured from parties suspected of being the thieves. Warrants have been sworn out for the alleged guilty parties and their arrest is but a matter of a few days at most.

Two men are known to have committed the robbery at the Swartz store. They watched the officer on that district until he went to headquarters to report, when one of the men, who had a hatchet under his coat, walked up to the jewelry store window, and, after a look around, smashed it. His accomplice who was immediately behind, reached through the broken window and extracted the tray with 37 gold rings. They then went to a certain house in E. Charles Alley, where the rings were divided and the tray burned.

Not long thereafter Police Sergt. Arndt, who was working on the case, came into possession of some of the rings and swore out four search warrants for as many houses. In the residence of Rose Shaub the police learned that a trunk containing a lot of jewelry and silverware had been shipped to Reading. An order for the trunk was secured and Detective Fickes brought it back to York. In the trunk were found a number of rings, as well as new style silverware.

Jeweler Swartz identified the rings as his property and the Shaub woman was arrested for receiving stolen goods. Several young men were arrested recently charged with being mixed up in many robberies, that of Mr. Swartz's store among the number.

Proceedings of the Jewelers' League of New York.

The regular monthly meeting of the Jewelers' League of New York was held Feb. 9, 1903. There were present Vice-Presidents Karsch and Street, Messrs. Van Deventer, Wormser, Bliss, Hodenpyl, Crippen, Lissauer and Secretary Stevens. The minutes of the previous regular and special meetings were read and approved.

At the regular and special meetings held Jan. 9 and 23, there were seven members admitted to membership, five of whom were from Brooklyn, one from New York and one from Troy, N. Y. At the regular meeting held on Feb. 9, there were six members admitted to membership, four from New York, one from Providence, R. I., and one from Cranford N. J.

The next regular meeting will be held March 6, 1903.

Watches, Clocks and Jewelry Importe Into the Philippines.

WASHINGTON, D. C., Feb. 18.—Return for the month of July last and the seve months ending with July 31, show tha our trade with the Philippine Islands i gaining in nearly all lines. The imports o clocks and watches showed a total valu for the month of $2,149, as against $1,26 in 1901; and of this amount the import from the United States were valued a $287; United Kingdom, $184; Germany $240; France, $20; Switzerland, $702 China, $186; Hong Kong, $452; Japan $78. For the seven months the total valu was $11,157, as against $9,485 in 1901 an $3,740 in 1900. The United States was i the lead, with a total value of $3,047.

For the month the importations o watches and parts of same show a de creased value from $6,905 in 1901 t $6,720 in 1902, and the decrease was en tirely in the value of those imported fron the United States, only $1,736 as compare with $4,490 in July 1901. The entire im portations for the month were received a follows:

United States	$1,73
United Kingdom	32
France	2,42
Spain	30
Switzerland	1,56
China	4
Hong Kong	15
British East Indies	21
	$6,72

For the seven months there has been a steady increase, the value in 1900 being $60,170, in 1901, $70,382, and in 1902, $86,644; of this latter value the United States contributed $52,156.

The imports of jewelry during the month were only valued at $5,984, as against $26,987 in July, 1901, and for the seven months there has been a decrease from $307,013 in 1901 to $79,178 in 1902. The countries showing decreases are the United States, United Kingdom, Germany, France and Switzerland. There has been a slight increase in the other manufactures of gold and silver for the month from $2,553 to $3,942, and a decrease for the seven months from $57,178 in 1901 to $33,649 in 1902.

A very satisfactory increase is shown in the imports of plated ware. For the month of July, 1901, the value was $1,118, and in 1902 it was $9,156. For the seven months in 1901 the value was $7,267, and in 1902 it had increased to $44,617. The sources of the imports for the month were as follows:

United States	$1,985
United Kingdom	295
Germany	395
France	897
Spain	43
Switzerland	14
Hong Kong	851
Japan	1,112
British East Indies	3,564
	$9,156

The exports include mother-of-pearl and tortoise shell. The quantity exported in July was $10,565 and during the seven months $46,924. Those of tortoise shell were $639 and $7,936 for the month and seven months, respectively.

DURING 1903

Resolutions Passed on the Death of John H. Thorn.

ALBANY, N. Y., Feb. 18.—The death of John H. Thorn, whose obituary was published in the last issue of THE CIRCULAR-WEEKLY, has been the cause of much sorrow, not only among his friends and relatives, but also among the members of various bodies with which he was associated. This has led to a number of resolutions being passed, testifying to the esteem in which the deceased was held.

The Board of Trustees of the First Lutheran Church, in which he was prominent, adopted the following resolution on the death of Mr. Thorn:

Greatly shocked and deeply grieved by the inscrutable Providence which has called from our midst our honored and beloved brother, John H. Thorn, we desire to place on record the following minutes as to the action of the Council of the First Lutheran Church, of Albany, N. Y.:

For nearly 26 years Brother Thorn has been a faithful and consistent member of the church. He has adorned the gospel of Christ which he professed. For many years he has been actively engaged in various departments of our church's work. In Sunday school he was a devoted and faithful teacher until failing health compelled him to relinquish his class. In the Christian Endeavor Society he was profoundly interested, maintaining an official connection with it until his death, and being one of its most enthusiastic leaders; all its lines of work appealed to him, because he became especially interested in the work of its missionary committee, to which he gave substantial expression.

The distinctively spiritual interest of the church lay very near to his heart. He longed and prayed for the salvation of souls, and rejoiced in any lines of efforts that looked definitely towards this end. As a member of the board of trustees for some years he was particularly helpful. His splendid business training, his progressive spirit, his prudent methods, his wide experience, together with his deep and abiding interest in the truest progress of the church made him an invaluable member of the board. Therefore, be it resolved,

First. That we hereby bear testimany to the unsullied integrity of Brother Thorn's character and to his Christian spirit, to his deep devotion as a follower of Christ, to his unflagging interest and unremitting activity in the work of our church, and to the high respect we entertained for him and the esteem in which we held him as a brother beloved in Christ.

Second. That we bow in humble submission to the will of the Great Head of the church in this personal sorrow that has come to us in Brother Thorn's death, and the great loss which our church has sustained, with the prayer that God may sanctify it to our personal good and the church's highest welfare.

Third. That we extend our sincerest Chris sympathy to his stricken family, assuring them our heartfelt prayers that the God of all g and comfort may minister consolation to them only He can.

Fourth. That this action be spread upon minutes and published in two of our city pap and that a copy be sent to the family of Brot Thorn.

The board of directors of the Young Me Christian Association adopted the following re lution:

The board of directors of the Young Me Christian Association, of the City of Albany, lea with profoundest regret and sorrow of tbe de of Director John H. Thorn. A member of t executive board for 14 years, his zeal was u tiring and his services invaluable in promoti the interests of the cause so dear to his hear the advancing of the religious department of t work.

We feel that the loss of his conservative juc ment is a severe blow, and his place will be ha to fill, but the memory of that unobtrusive, y influential and always faithful life will contin to be an inspiration to us all. He bas look within the veil and is blest.

Through Brother Thorn, and such as he, we w remain have a firmer hold on that which is t anchor of the soul and which enters where be h gone.

Resolved, That a committee of the board of d rectors be appointed to attend the funeral, and th the secretary of the board communicate th minute, with an expression of our sympathy, the widow and family of the deceased.

Wilkes Barre, Pa., Auction Ordinanc Held to be Unconstitutional.

WILKES BARRE, Pa., Feb. 18.—Judg Wheaton has declared the ordinance re cently passed by Councils regulating th auction business to be unconstitutional, in asmuch as it was prohibitory. The matte was brought before the court on a test cas in which W. M. Barber was the plaintiff Mayor Price fined Barber $25 last week notwithstanding the fact that he had pre viously paid $10 for a license to transac his business. Under the provisions of th ordinance an auctioneer must pay $40 a day for a license to ply his trade. Fo each violation there is a fine of $25.

Counsel for Mr. Barber contended tha the city has no authority to collect more than $100 per year for a license. City So licitor McHugh argued that the ordinance was a police regulation and that the Mayor was justified in imposing the fine. The court decided in favor of Barber.

Bill Against Trading Stamps Introd ed in New Jersey Legislature.

TRENTON, N. J., Feb. 19.—A pow ul combination of storekeepers is again k- ing an effort to drive the trading s mp companies out of business by legisl m. Assemblyman Leavitt, of Trenton, at th e- quest of the merchants opposed to tr g stamps, has introduced in the Legisl re the following bill:

Be it enacted by the Senate and Genera s- sembly of the State of New Jersey.(1) Se s 1 and 3 of an act entitled, "An act resp g trading stamps, tickets and other devices, t o- vide for and regulate the mode and mann redemption of said stamps, tickets and er devices, and to provide penalties for a vio n thereof," approved April 22, 1902, be am d so as to read as follows:

(1). Any association, corporation or indiv al or individuals who shall sell or issue st s, known as trading stamps, tickets or other de es to any association, corporation, individual c n- dividuals engaged in any trade business or o- fession, with the promise or assurance, ex ss or implied, that they, it, she or he will gi or deliver to any person presenting said st s, tickets or other devices, money or goods, s or merchandise therefor, and that all h stamps, tickets or other devices shall ha a fixed redeemable value, and shall stipulate d advertise on the face of said stamps, ticke or other devices the redeemable value thereo n cash, good and lawful money of the U d States of America, and shall redeem said st s, tickets or other devices at their stipulated o l- vertised value, either in cash, like lawful m y, or in goods, wares or merchandise, at the o n of the holder thereof or person who pre s the same.

(2). Any number of said trading sta s, tickets or other devices, the advertised or r ulated value of which shall amount to at t . . . . cents in specie shall be redeeme a hereinbefore set forth at the stipulated and - vertised value thereof, and it shall not be n - sary to have any stipulated number of t stamps, tickets or other devices, except as he a set forth, before demand for redemption ma e made.

(3). This act shall take effect immediately

The Merchants' Association of Tren which was organized a short time ago correct trade abuses, has decided that all s members must discontinue the use of tr ing stamps. The membership represents per cent. of all the storekeepers in the c

Career of the Late Gus. Fredericks.

HOUSTON, Tex., Feb. 18.—The career of Gus. Fredericks, of Sweeney & Fredericks, Houston, Tex., an account of whose death was published in the last issue of THE CIRCULAR-WEEKLY, was one of success and achievement, and his loss is deeply felt in this city.

Mr. Fredericks was born at Mt. Pulaski, Ill., June 8, 1851, but when a child moved with his parents to Bloomington, Ill., where he remained until 1873, when he went to Houston. In that city he became connected with the railway service, and was identified with railroads for a number of years, after which he entered the employ of Sweeney & Coombs, at that time one of the best-known jewelry houses in the southwest. Attracted by his many good qualities, his honorable course and his fine business qualifications, this firm admitted Mr. Fredericks as a partner in 1887, and after the retirement of E. L. Coombs from the firm the name of the concern was changed to Sweeney & Fredericks.

Mr. Fredericks was the embodiment of all that was honest, upright and honorable. He was a devoted husband and loving father. He had a pleasant smile and cheering word for all, and his death will be sadly felt in the community where he was so well known.

The deceased was comparatively well known in New York and other cities of the east, which he visited several times in the course of his business experience, and where he made many friends in the trade.

The funeral services of the deceased were held Feb. 5 from his late residence at the cor. Congress and Chenevert Sts., the Rev. S. R. Hay and the Rev. Jamison officiating. Interment was at Glenwood Cemetery. The active pall-bearers were selected from the employes of the firm, and were as follows: P. G. Romer, John Larson, P. C. Doehring, Wm. Giles, Lessley Newton and D. G. Shelby. The honorary pall-bearers were: H. B. Rice, H. F. Fisher, Wm. Baugh, James H. Adair, Geo. J. Mellinger, C. G. Pillot, Jake Keller, Edmund Browne, Ed. Settegast and Geo. D. Hunter.

Labor Act in Rhode Island Legislature May Annoy Jewelers.

PROVIDENCE, R. I., Feb. 18.—An act introduced in the Legislature the last week relative to laboring classes is likely to be of interest to manufacturers of jewelry in this State. Under its provisions manufacturers or others who employ labor would be guilty of a misdemeanor if they attempted to induce any of their employes from joining a labor organization. The far-reaching results that might follow the enactment of such a law may readily be seen. As one manufacturer said: "If there is one of my men who has a grudge against me, or something like that, and wants to 'get square' he simply comes out with a story that I tried to get him to refrain from joining a labor union. Even if he can't prove the case it's going to cost me bother and expense as well, perhaps, to fight it. No, sir; we don't want any such law as that on our statute books."

The act in question, which was considered by the General Assembly, reads as follows:

Section 1. Any person or persons, employ employers of labor, ond any person or p of any corporation or corporations, on beh such corporations, who shall hereafter coer compel any person or persons, employe o ployes, laborer or mechanic, to enter int agreement, either written or verbal, from person or persons, employe, laborer or mec not to join or become a member of any organization, as a condition of such pers persons securing employment, or continuir the employment of such person or persons ployer or employers, corporation or corpora shall be deemed guilty of a misdemeanor.

Sec. 2. The penalty for such misdemeanor be imprisonment in a penal institution fo more than six months, or by a fine of not than $200, or by both such fine and imprisonm

Sec. 3. This act shall take effect immed upon its passage.

The act was introduced in the Senat Senator Banigan, of Pawtucket, and sent to the committee on special legisla

The Diamond Markets.

ANTWERP, Feb. 2.—This market is very steady, owing to the continued demand for fine mêlée and large brilliants. Antwerp roses and "mêlange" are also very popular at present, and there is no change in prices, all goods having about the same value as last year. Merchants express their satisfaction with the state of business and long credits are allowed. Thus far not a single failure has been reported, and the financial condition of trade is strong. Representatives of several American firms have recently been represented here, among others being Irving Baum, New York; Mr. Davis, of B. H. Davis & Co.; Mr. Dick, S. & I. Berman, D. DeSola Mendes, all of New York. These merchants bought large amounts for their concerns. Kohn & Hock, Vienna, and Mannessohn, Moscow, Russia, have also been here to buy flat goods.

F. Mertens has been elected a member of the Superior Council in Brussels.

The Belgian Government has decided to take part officially in the St. Louis Exposition of 1903. It is probable that the government will send there the products of the Congo Free State. The next world's fair in Belgium will take place in Liege in 1905, and important festivities will be going on in Brussels at the same time, the occasion being the celebration of the 75th anniversary of the liberty of the Belgians.

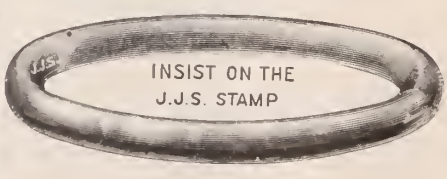
The firm of Louis Colinette & Co. has just been formed and will deal in diamonds. L. Colinette will be the senior partner of the company and will sign all checks.

A thief broke open the safe of Mr. Lipochultz, a diamond merchant living at 71 Herenthal St., recently, and stole 60,000 francs in money, stock certificates and bonds. The diamond merchant has offered a reward of 1,000 francs to any person who can give a clue as to the whereabouts of his stolen property. Three persons have been arrested, but it cannot yet be learned whether or not they were concerned in the robbery.

The "Work Bourse" and the cash for inscriptive men have been opened in the Rue des Pelerins and have received the support of the Antwerp Civic Council. The diamond polishers will be much benefited by the works. When they are unemployed they will receive one franc per day which will be added to the assistance they receive from their societies, but they cannot receive more than 50 francs in one year. All the employes living in Antwerp can be enrolled in the "Work Bourse" without expense, while those living outside of the city will pay 25 centimes. One of the advantages connected with the "Work Bourse" is that its members may learn when merchants want more help. A. Adler, who represents several diamond merchants, is one of the officers of the Bourse.

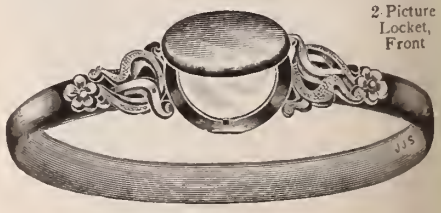
The next public sales of Ivory in Antwerp will take place February 4-5. About 80,000 kilos of ivory from the Congo, Angola, Gaboon and Cameron, will be sold.

AMSTERDAM, Feb 2.—The diamond market here continues the same as it was at the end of the year. Several sales have been made in flat rough goods and several Antwerp merchants have been buying their "rough" here. There is a good demand for very small brilliants and several buyers are asking for this variety.



Henry Fischer, of D. Kleinberger & Co., New York, is expected here. Other American representatives have sent cards announcing that they will be here next week, and merchants are expecting a lively business during the next three months.

LONDON, Feb 2.—The month of January just ended has been very satisfactory to the diamond trade here. Business continues good notwithstanding the foggy weather. Stock taking has been finished and the majority of merchants report good profits for the year just ended. Reports here from other diamond markets have been very favorable and have created an easier feeling.



Mr. Sinauer, of Hoffnung & Co., has returned from Antwerp. B. Meaissen & Co., Antwerp, had a representative here last week, who bought several lots of mêlée.

According to the statistics of the dia-

mond syndicate, the carat value of diamonds in 1896 was 20s. 10d. and in 1902 46s. 6d., an increase of nearly 100 per cent. in six years.

Alfred Beit, of Werner, Beit & Co., and one of the principal owners of the De Beers mines, who has been very ill in South Africa, is expected to arrive here this week from the Cape.

Owing to the steady increase in the value of precious stones, many persons think that there is destined to be in the future a greater appreciation of stones of lower grades.

PARIS, Feb. 2.—The French diamond market has shown during the first month of the year a continuous improvement. An unusually large quantity of diamonds were sold during January, and the demand has been constant for large goods of first color. Several foreign buyers have been visiting the large jewelry and diamond firms in this city, while others have been in the country.

Good Oriental pearls are soaring higher and higher, owing to their scarcity, and black pearls are very rare and costly. The tendency in prices is upward for pearls of all qualities. The same can be said in regard to emeralds. The general opinion here is that during 1903 there will be higher prices for diamonds, emeralds, rubies and pearls than ever before.

C. Ditto, Wahoo, Neb., has moved into the storeroom just vacated by L. K. Bell, of that place.

The store property in Kutztown, Pa., occupied by W. E. Myers has changed owners and Mr. Myers will have to move in the Spring.

Theo. Kampmann, S. Bethlehem, Pa., has purchased the jewelry store and residence of James K. Ranch, 28 S. Main St., and will occupy it in the Spring.

Death of Thomas B. Eaton.

WALTHAM, Mass., Feb. 18.—The death of Thos. B. Eaton, ex-president of the United States Watch Co., of this city, has caused much sorrow among his many friends in New England. Mr. Eaton died Feb. 9 as a result of an apoplectic stroke, from which he suffered three or four days.

The deceased had been a well-known newspaper man of this city for more than 20 years. He was the founder of the Waltham *Tribune*, *The Weekly Review*, *The Railway and Steamboat Gazette* of Boston, the Taunton *News* and the Waltham *News*. Of the last named he was the publisher at the time of his death.

The deceased was admitted to the bar in 1873 and was also prominent in politics. He was clerk of the District Court from 1883 to 1887 and president of the Board of Aldermen of this city in 1899. He became connected with the United States Watch Co. and was its president for 12 years.

He is survived by a widow and two sons.

Maryland Jewelers Indicted on Charges Made by Fire Insurance Company.

BALTIMORE, Md., Feb. 18.—F. Hooker and Howard H. Fehl were arrested in this city at their homes Monday and taken to court yesterday, where they were later released in $2,000 bail each, to answer to the charge that they had set fire to a jewelry store in Frederick, Md., with the intention of defrauding an insurance company. Mr. Hooker is said to have been the proprietor and Mr. Fehl the manager of the business, which was started in Frederick last November. They were indicted by the Grand Jury on a charge made by the insurance company, which claimed that the fire was of an incendiary origin.

The fire in question occurred early Dec 23, and it is said that the insurance carried at that time was $14,000.

Preparations for Mid-Winter Banquet of the N. E. M. J. and S. A.

PROVIDENCE, R. I., Feb. 24.—The New England Jewelers' and Silversmiths' Association will hold its Winter banquet in the Trocadero Friday evening. During the week just passed President Pearce and the executive committee, of which Roswell C. Smith is chairman, have been perfecting the details of the affair, and hold out promises that it will be one of the most successful and enjoyable in the history of the organization.

From 6 to 7 o'clock there will be a reception in the parlors of the large assembly hall, and at 7:15 dinner will be served. The menu will be fully up to the standard set in past years. Music for the occasion will be furnished by Clarke's Providence Orchestra.

On the list of after-dinner speakers are Gov. Garvin and Mayor Miller, who, it is expected, will honor the affair by their presence. Maj. H. S. Piper, assistant general superintendent of the United States Life-Saving Service at Washington, will speak on "Heroism and Some of the Heroes of the United States Life-Saving Service." Judge Lafayette G. Blair, of Boston; George A. Littlefield, of this city, and E. G. Buckland, attorney for the New York, New Haven & Hartford Railroad are also expected to be present and make remarks. Judge William H. Sweetland, of the Sixth District Court, will be toastmaster. Those who remember the graceful manner in which Judge Sweetland carried out the duties of this position at last year's banquet will approve the selection of the committee for this important place.

It is expected that between 300 and 400 members and guests will attend the banquet.

Creditors Issue Attachments Against Ware, Mass., Jeweler.

WARE, Mass., Feb. 18.—Four attachments against Paul Satz, a jeweler of this city, were issued Monday afternoon to Deputy Sheriff Fitzgerald, who served them at the jeweler's store. The first attachment, which was sued out by A. Mendelsohn, Boston, is for $1,200, while the others were in the name of Bruno & Son, New York, $160; J. A. Albertine, $200, and one for $400, which is said to be for money loaned.

Mr. Satz has been located here for about three and a half years, and is well thought of in the community. He was for several years located in Taffville, and in 1897 went to Norwich, Conn., where he remained until he moved to Ware. His credit has always been good, and therefore the action of the creditors in taking out attachments came as a surprise.

Mr. Satz's liabilities are said to be about $3,200, while the amount of stock which he carried is said to be valued at about $1,000. Among his creditors in the jewelry trade, besides Mr. Mendelsohn, are L. Witsenhausen, $530; J. R. Wood & Sons, $172; Cross & Beguelin, $239; Wm. L. Gilbert Clock Co., $237, and Harris & Gips, $210.

Mr. Satz has committed no act in bankruptcy, though it is said his creditors are anxious that he should file a petition.

A. E. Colburn is closing out his stock of jewelry in Trinidad, Col.

Assets and Liabilities of Mayer Bros. & Wertheimer.

A meeting of the creditors of Mayer Bros. & Wertheimer, wholesale dealers in jewelry at 525 Broadway, New York, against whom a bankruptcy petition was filed Sept. 16, 1902, will be held March 2 at 2 P. M. in the office of George C. Holt, Referee in Bankruptcy, 35 Pine St., New York.

The schedules of the bankrupts, which were filed Feb. 17, show liabilities of $33,823 and assets of $5,250, the amount obtained from the sale of the stock and fixtures last November. Henry Wertheimer's individual debt amounts to $16,612, all on notes discounted for the firm or for others. His assets are given as $89,250, of which amount $75,250 is in real estate.

The bankrupts have been attempting to effect a settlement with the creditors on a 25 per cent. cash basis, but this settlement has not yet been consummated.

According to the schedules just filed there are more than 240 creditors of the firm, and among those for amounts of $100 and upward are: J. Friedman, $354; Porter Bros. & Co., $242; A. Rogers, $146; F. J. Appleby, $164; E. B. Hirsch & Co., $144; I. Emrich & Co., $152; Chas. Keller & Co., $212; L. Greenberg, $390; American Bead Co., $926; Martin Bros., $105; Birmingham Bros., $126; Herring & Co., $125; E. R. Barker & Co., $180; B. A. Preliminary Report on the Precious Stone Industry in 1902.

WASHINGTON, D. C. Jan. 24.—The following preliminary report of the precious stone industry for 1902 has been submitted by George F. Kunz, special agent in charge of precious stones, to the United States Geological Survey:

"The year 1902 has been remarkable in the precious stone industry in America in a number of particulars, among which the following may be especially noted: The finding of a new locality for sapphire in Montana—a new creek, in the bed of which sapphire is found associated with gold, as in the Rock Creek region at Yogo Gulch, and on the Missouri near Helena; the further development of a new mine of the blue sapphire in Fergus County; and the continued workings of the other two mines in the same State. Then comes the mining and development of the old beryl localities in Mitchell County, N. C., and the development of the beryl locality at Grafton, N. H. An amethyst mine has been opened in South Carolina, and two new amethyst deposits have been found in the State of Virginia. The mining of rubellite in San Diego County, Cal., continues, and a new deposit near Banner in the same region has been found. The further development of chrysoprase in Tulare County, Cal., and the discovery of a new locality in Buncombe County, N. C., are to be noted. A deposit of vesuvianite (idocrase) has been discovered in Central California. The output in turquoise from eight or more Western localities continues, and it has been discovered at two localities in Alabama, the most easterly region yet known for that gem.

"It has been the greatest year on record for the importation of diamonds, pearls, and other precious stones, and is notable also for the patenting of three new forms of brilliant—one with 88 facets, another with 108, and the third, a most ingenious system of concaving the eight templet faces on a brilliant, and also concaving the faces of octagonal pyramids and of producing other quaint forms, the claim in all instances being a greater brilliancy and beauty.

"The imports, also, of topaz, both the true and the so-called Spanish, Saxon, and Scotch varieties, of coral in delicate tints of pink, and of seed pearls and pearls in ropes, are worthy of remark.

The following table gives the production of precious stones in the United States during 1902:

PRODUCTION OF PRECIOUS STONES IN 1902.

Sapphire	$115,000
Ruby	.....
Topaz	.....
Beryl	4,000
Emerald	1,000
Phenacite	.....
Tourmaline	15,000
Peridot	500
Quartz	12,000
Quartz, smoky	2,000
Rose quartz	200
Amethyst	2,000
Gold quartz	3,000
Rutilated quartz	100
Agate	1,000
Moss agate	500
Chrysoprase	10,000
Silicified wood	7,000
Opal	500
Rhodolite	1,500
Garnet (pyrope)	1,000
Amazon stone	500
Turquoise	130,000
Chlorastrolite	4,000
Mesolite	1,000
Pyrite	3,000
Anthracite ornaments	2,000
Catlinite pipestone	2,000

"This gives a preliminary total of $318,800 for 1902, as compared with $289,050 in 1901, and $233,170 in 1900."

Roseville Pottery Co.'s Plant Damaged by Fire.

ZANESVILLE, O., Feb. 18.—The Roseville Pottery Co.'s plant in the northern suburbs of this city was damaged in a disastrous fire which visited here this morning. The flames were permitted to consume the company's three-story office building without molestation, the water pipes in the neighborhood being so tightly frozen that it was impossible to use the water supply.

Had it not been for the effective work of the chemical engines and that a fireproof wall separated the office building from the various factories, the entire plant would have been destroyed.

G. F. Young, manager of the plant, and one of the principal stockholders, estimated the loss at $40,000, partially covered by insurance.

G. E. Marchbanks, Pelzer, S. C., has sold his business to H. M. Bigby.

J. B. De Lamater, Leslie, Mich., has just leased larger quarters for his increasing business.

Death of Warren Scott Sillcocks.

Warren Scott Sillcocks, who was for nearly a score of years engaged in the jewelry manufacturing business in New York, died Wednesday at his home, 23 S. Portland Ave., Brooklyn, from heart trouble and a complication of diseases.

At the time of his death Mr. Sillcocks was a director and manager of one of the departments of the Celluloid Co., having been identified with the manufacturing of celluloid almost since the beginning of that industry.

The deceased was in his 70th year, and was born at New Brunswick, N. J., Sept. 28, 1833. He came from an old Revolutionary family, his grandfather having served with the New Jersey troops and his mother being a relative of Commodore Hull, the famous naval hero. Mr. Sillcocks came to New York at the age of 16, and engaged in the jewelry business, finding employment with Sam. J. Smith, then at 10 Maiden Lane. He remained with this firm for a number of years and eventually worked up to the position of manager. In 1863, in company with Joshua S. Cooley, another employe of Mr. Smith, he established the firm of Sillcocks & Cooley, which continued in the manufacturing jewelry business until 1874.

About this time the substance known as celluloid was brought to Mr. Sillcocks's attention, and he was one of the first to foresee the future of the material. He immediately began to deal in it in a small way, and as this business increased rapidly, and seemed to offer so many opportunities, Mr. Sillcocks persuaded his partner to abandon their prosperous jewelry business and embark in the new venture. He then organized the concern known as the Celluloid Novelty Co., of which he became president, and after the death of his partner, Mr. Cooley, was for a time president also of the Celluloid Brush Co. A few years later, when all the separate companies were consolidated as the Celluloid Co., under the leadership of Marshall C. Lefferts, he continued his connection with the concern as manager of the novelty department and as a member of the Board of Directors.

The deceased possessed a strong religious sentiment, and had been for a number of years, until the time of his death, a trustee of the Lafayette Ave. Presbyterian Church, of Brooklyn. He was a a strong Republican and had been a me ber of several city conventions. He w a member of the Oxford Club of Broc lyn, and of the Sons of the Revolutic and was for several years a member the Chamber of Commerce.

The deceased leaves a widow and t sons. The funeral services were he from his late residence Friday afterno at 2 o'clock, and the remains were inte red in Greenwood Cemetery.

Opticians Fear Medical Bill Introduc in the New Jersey Legislature.

TRENTON, N. J., Feb. 19.—Assemblym Williams, of Newark, has introduced in t Legislature a bill regulating the practice medicine and surgery which is of speci import to opticians. The measure is know as Assembly bill No. 125 and it amends t medicine and surgery act of 1894. The b provides that all persons practicing medici or surgery in any of its branches in th State must pass an examination before t State Board of Medical Examiners. The la section reads as follows:

Any person shall be regarded as practicing me cine or surgery, within the meaning of this a who shall use the words or letters "Dr "Doctor," "Professor," "M. D," or "M. B.," connection with his or her name, or any other tit intending to imply or designate him or her as practitioner of medicine or surgery in any of t branches, and who in connection with such tit or titles or without the use of such titles sha prescribe, direct, recommend, advise, apply, gi or sell, for the use of any person or persons, ar drug or medicine or other agency or applicatic for the treatment, cure or relief of any bodily i jury, infirmity or disease; and it is further pr vided that the use of any of the aforementione titles, or the use of any sign, circular, advertis ment or any other device or information, whic implies the user to be practicing medicine or su gery in any of its branches, shall constitute a vi lation of this act and shall be sufficient groun for indictment and punishment as herein provided.

Judge E. A. Merriman, acting in the in terest of the International Silver Co., Meri den; the Charles Parker Co., the Meride Cutlery Co., and other local concerns, an backed by capital amounting, it is estimated to $20,000,000, went to the Legislature a Hartford last Wednesday and had the hear ing on the petition of the Cheshire Wate Co. to be incorporated postponed to Marcl 4. It is alleged that the dam and power a South Meriden cost about $125,000 and tha it would be practically valueless if the new company secured control of the river and cared to make similar use of it.

Last Honors Paid to the Late Herbert Allen Clark.

ATTLEBORO, Mass., Feb. 20.—The funeral of Major Herbert Allen Clark, of the Horton, Angell Co., was held yesterday afternoon at 2 o'clock in the Murray Universalist Church, and the town did honor to her departed citizen by a suspension of all possible business, and the Commonwealth added her tribute by sending four companies of the militia and a group of distinguished officers.

Members of the firm and the personal associates of the deceased lent their presence in large numbers to the ceremony, while the love and esteem of scores were shown by the presence of a wealth of flowers.

The auditorium of the church was filled with people an hour before the ceremony began and it was necessary to throw open the lower hall for the soldiery and the overflow of friends from the main room above. The family occupied the front of the church, while grouped about them were representatives of the Masons, Odd Fellows, United Workmen, Company C Association, the Attleboro Mutual Fire Insurance Co., the National Bank, the Savings and Loan Association, the State Militia and the town.

Minister Wilson S. Fritch, of Pilgrim Church, officiated, aided by Rev. J. Harry Holden, of Murray Universalist Church. The Mendelssohn Male Quartette, of Boston, rendered "Lead, Kindly Light," and "Eternal Goodness."

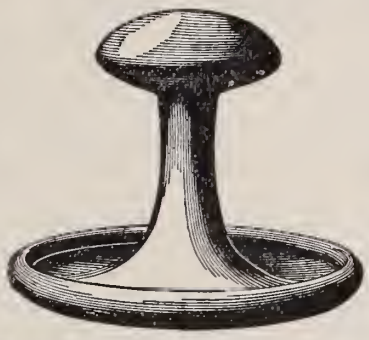
The bearers included Walter J. Newman, from the Horton, Angell Co.; Captain George H. Sykes, from the Militia; Orville P. Richardson, from Company C Association; Charles H. Wheeler, from the insurance company, and Republican Town Committee; Clarence L. Watson, from the National Bank; Thomas D. Gardner, from the United Workmen; Edward A. Sweeney, from the Odd Fellows, and Alfred R. Crosby, from the Masons.

After the service the procession, with the military escort, proceeded to Woodlawn Cemetery. The commitment service was given by Minister Fritch, and the soldiery formed in a hollow square about the grave of their fallen comrade. The three ceremonial volleys were fired, and the funeral ended with the notes of the final bugle call, "Taps."

Death of Julius A. Chopard.

KANSAS CITY, Mo., Feb. 18.—Julius August Chopard, a well-known watchmaker and horologist, died at his home 1415 Walnut St., last Thursday of paralysis, aged 60 years.

Mr. Chopard came to this country from Switzerland many years ago. He worked at his trade in this city for 27 years and during that time made many friends here.



The funeral was held Sunday afternoon at 2 o'clock, the Rev. Mr. Sauer officiating.

Mr. Chopard was a member of the Guitlie Verein, and this society attended the funeral in a body.

The dissolution is announced of the jewelry firm of Lacey & Buckles, East End, O. Mr. Buckles retains the business and will continue at the old location.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? **Because** of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had **FREE** for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the year of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

KREMENTZ & CO.,

in their Factory,

49 Chestnut Street,

Selling Agents to Jobbing Trade.

The 13th Annual Banquet of the Retail Jewelers' Association of Missouri.

St. Louis, Mo., Feb. 19.—The 13th annual banquet of the Retail Jewelers' Association of Missouri was held at the Mercantile Club last night and was largely attended.

The banquet table was in the shape of the letter E and was beautifully decorated with cut-flowers, smilax, ferns, etc. The officers of the association, the entertainment committee and the invited guests were seated along the outside of the table. The chairman and toastmaster, Herman Mauch, was seated in the center of the side, and the arrangement was so admirable that all could plainly see and hear.

After a most enjoyable dinner, Mr. Mauch rapped for order and announced an address by the president of the association, Frank W. Baier.

The latter made a very pleasing and interesting address, in which he gave a history of the organization from the time it was started in 1887, and the reason why it was organized. He said that the first banquet was given in 1890 and annually every year since.

After this address Sam Eisenstadt left his seat at the banquet table and approached Mr. Mauch, and after a few well-chosen remarks presented him with a large wooden gavel, made of various kinds of wood with the center surrounded by imitation precious stones of various colors and decorated with various colored ribbons. Mr. Mauch was very much surprised and at first somewhat nonplussed. He responded with a good story, which was much enjoyed by all those present. Before quiet could be restored the Knickerbocker Quartette, that sang all through the dinner, had to render another song.

Mr. Mauch then called for the toast entitled "Friendship," by Rev. Leon Harrison.

Dr. Harrison facetiously announced that he did not feel like saying anything that would offend the toastmaster, who had the means of making a hit. He asked the indulgence of those present for only a few moments. He spoke on the necessity of friendship in all professions, declaring that they must work together and that the foundation of all friendship is prosperity. His address was concluded by several witty stories which elicited much applause.

The orchestra and quartette then furnished some music, after which the toastmaster introduced Col. John H. Holmes, who responded to a toast on "Woman." Col. Holmes opened his address by saying that this toast should be given to a bachelor, for if responded to by a married man someone might tell his wife of all the flattering remarks that were made.

Col. Holmes, in his speech, paid a high tribute to woman as a wife and mother, and alluded to the heroism and patriotism of American women.

Charles Krone was then introduced to the banqueters. A feature of Mr. Krone's toast, "Why We Meet at the Banquet Board," was a parody which he gave on the supper mentioned in "Quo Vadis," and which he applied to the jewelers' banquet. This was the witty speech of the evening and the guests were kept in a constant state of laughter.

A solo was then sung by Fred Cahn, who represents Dattlebaum & Friedman, New York, after which followed impromptu speeches and popular airs by the orchestra.

A vote of thanks was tendered to the entertainment committee for the excellent programme which they had arranged and the banquet ended, after being pronounced "the best ever" by those who had the pleasure of being present.

The complete list of those who attended follows:

Frank W. Baier, president of the association; W. F. Kemper, secretary; Herman Mauch, financial secretary and chairman of the Entertainment Committee; John H. Holmes, Charles T. Krone, Rev. Leon Harrison, F. W. Bierbaum and Edw. Bohle, of Bierbaum & Bohle; Gerhardt Eckhardt, F. H. Niehaus, Morris and Samuel Eisenstadt, Otto Kortkamp, of E. H. Kortkamp Jewelry Co.; Martin Hecker, Aug. Kurtzeborn, of A. Kurtzeborn & Sons; John Schmid, Otto Steiner, of Steiner Jewelry Co.; John F. Zeitler, Charles Derbeth; George Hess and S. D. Culbertson, of Hess & Culbertson; G. H. Konert, of E. H. Kortkamp Jewelry Co.; G. R. Stumpf, Julius Friton, Theo. A. Ebeling, Albert Mauch, Julius Steidman, of J. W. Cary & Co.; Ed. Lang, W. Mauch, Samuel Bauman and M. Bauman, of the Bauman-Massa Jewelry Co.; Richard Pfeffer and Fred Steiner, of the St. Louis Clock and Silverware Co.; J. Wendt, of Bauman-Massa Jewelry Co.; A. Zerweck, W. E. Barker, J. A. Jacobs, A. L. Eisenbeiss and G. G. Gambrill, of the Eisenstadt Mfg. Co.; J. J. Menges, of Mermod & Jaccard Jewelry Co.; John Koecomg, H. H. Mark, F. A. Durgin and R. O. Bolt, of Mermod & Jaccard Jewelry Co.; H. C. Haim and Albert Freck, of the Eisenstadt Mfg. Co.; Albert Steiner, John E. Schmidt, Paul Kaesses, Herman Kaesses, W. Wolfburger, Frank Windweh, W. H. Feldmer, F. G. Fry and J. J. McKenna, of the Bauman-Massa Jewelry Co.; D. A. Diamond, A. L. Bauman and Moses Straus, of the L. Bauman Jewelry Co.; Harry Aller, Ed. F. McKee and Oliver Abel, of the Geneva Optical Co.; W. Weidlich, of Wm. Weidlich & Bro.; Robert Sauloch, P. J. Clifford, Robert Freickert and Fred Cahn, of Dattelbaum & Friedman, New York, and a correspondent of The Circular-Weekly.

Debate on Proposed Pennsylvania Law to Suppress Trading Stamps.

Harrisburg, Pa., Feb. 20.—After a pretty warm and rather prolonged debate the Wittig bill to suppress the use of trading stamps and similar devices, published in full in the last issue of The Circular-Weekly, passed its second reading in the House of Representatives yesterday and will come up on final passage early next week.

Representative Mayne declared that the stamps which this bill proposed to prohibit were beneficial to the small dealers, and that it was the large department stores which wished to stop the use of these stamps. Mr. Wittig, the introducer of the bill, said that he was a small dealer, and that for that very reason he was against the trading stamp system. He further declared that, speaking from 25 years' experience as a small dealer, he knew that trading stamps were hard on the very class of men for whom Mr. Mayne stood as sponsor.

A motion to indefinitely postpone the bill was lost, as was also a motion to postpone it for the present. Then Mr. Scott, of Philadelphia, moved to recommit the bill to the Committee on Municipal Corporations, but this motion was lost by a vote of 80 to 54.

The bill then passed the second reading, after minor amendments had been made.

F. J. Hartley, Kansas City, Mo., has sold real estate for $1,850.

Several manufacturing jewelers from this city attended the funeral of Maj. Herbert A. Clark in Attleboro Thursday.

Jewelers figured quite prominently in the list of petit jurors drawn by the Board of Aldermen at their meeting Thursday afternoon.

Henry D. Sharpe was elected one of the members of the board of directors of the Providence Engineering Co., at a meeting of the stockholders held Thursday.

In an action in replevin brought by the Arabian Jewelry Co. against the Adams Express Co., in the Sixth District Court civil side, last week, decision was rendered for the plaintiff for 10 cents damages, possession and no costs, in accordance with an agreement which had been reached between the parties interested.

Frank McDermott, who is employed by the Gorham Mfg. Co., and lives in Arlington, probably owes the fact that he is alive to-day to his baby. About 1 o'clock one morning last week Mrs. McDermott was awakened by the crying of the baby. She tried to arise and found that she was almost overpowered by the odor of gas which filled the room. She succeeded in arousing her husband, who, in turn, aroused the inmates of the house.

Benjamin J. Bliven, at one time engaged in the jewelry business in this city, died at his home, 518 public St., Wednesday. Of late years he had been a broker and had engaged in various other enterprises after having left the jewelry business. He was well known by many jewelry men. He had been ill since last November and the immediate cause of death was kidney trouble. Deceased was in his 68th year. The funeral was held Saturday from his late residence on Public St.

John A. Tillinghast, who has offices at 234-235 Banigan building, Weybosset St., was last week appointed by the Appellate Division of the Supreme Court receiver of the goods, effects, books, accounts and other property of Edward W. Rogoves and John Costello, both of this city, doing business as the Providence Finding Co. All firms indebted to the concern have been notified to pay their bills to the receiver and all persons having claims against the firm are requested to present them to him.

William H. Shaw is anxiously looking for Owen Cannon, who was indicted recently by the Grand Jury for the theft of silver from the shops of the Gorham Mfg. Co. Cannon gave bail for $300, Mr. Shaw acting as bondsman. His bail was defaulted Jan. 8, 1902, and since that time Mr. Shaw has not set eyes on him. He has made various efforts to locate the man, but as yet has been unsuccessful. Reuben R. Baker, who was at the time of the arraignment the Chief of Police, was the complainant in the case.

The first meeting of the creditors of Oscar M. and Edward I. Coombs, doing business as Gladding & Coombs Bros., was held at the office of Referee in Bankruptcy Chester W. Barrows Thursday. The firm recently filed a voluntary petition in bankruptcy in the United States Court. The first part of Thursday's meeting was occupied by the creditors filing and proving

eir claims. The next matter of business ken up was the appointment of a trustee. enjamin F. Chester was nominated for the osition and upon a vote being taken it as found that he had received a majority f the votes of the creditors, both in num-er and amount of the claims, so was de-ared elected. His bond was fixed at $5,000 nd this was furnished.

H. Lederer & Bro. have taken another oor in the building at 227 Eddy St., in hich they are at present located.

Notices of the intention of the McWill-ms Co. to go into liquidation are being sent ut to all the creditors. The trustee has au-orized the plant to be offered for sale.

News of the death, in Pittsburgh, Pa., of lbert H. Fordham, traveling salesman for . & A. Linton, of this city, last week, was ceived with genuine regret by those who new him. Mr. Fordham was a resident f Brooklyn and was about 60 years of age. He had been the representative of the Provi-ence firm for about 22 years. He leaves widow.

What the local Jewelry Workers' Union egards as its most important meeting was eld Thursday evening in the Hanley build-ng. Thirty-two candidates for admission vere initiated, these following the initia-ion of more than a dozen at the meeting eld the Sunday previous. During the sec-nd week in march a mass meeting will be eld by the Union and it is proposed to old the first annual ball in Music Hall on he night of April 16.

Mindful of the dangers to which its em-ployes have for some years been exposed, and having at heart their interests in this as well as other matters, the Gorham Mfg. Co. has decided to do away with the cross-ing at Earl St. leading down to the works of the company at Elmwood. This has been done in accordance with an agree-ment with the railroad company and the Gorham Mfg. Co. has declared itself will-ing to bear all the expense, which will mean an outlay of about $25,000.

The first annual concert and ball of the W. J. Feeley Mutual Sick Benefit Association was held in Oriental Hall on Friday even-ing and was a big success in every respect. The concert consisted of a piano solo by Frank Schaeffer; tenor solo, William Fish; baritone solo, Geo. Connell; soprano solo, Mrs. N. Humee; readings, Miss Elsie Had-ley; solo, Miss Katharine Bugbee; sentimen-tal songs, S. H. Berry; vocal solo, John Brennan; solo, Walter Krantz. At the con-clusion of the concert there was a dance, which lasted until the small hours of the morning.

The newly formed committee on trans-portation recently elected by the Board of Trade considered at a meeting held last week complaints from jewelry manufac-turers regarding express charges. The manufacturers send their express packages to New York by water for 15 cents, while by rail they are compelled to pay 25 cents. The manufacturers desire to have the same rate by rail as by water, and with the view of taking steps to bring this about, made their complaint to the body above men-tioned. The committee will consider the matter at a future date and the re-sult will be awaited with considerable in-terest by manufacturers.

North Attleboro.

TRADE CONDITIONS.

Business in this town is in the main very s factory. The spring depression has not begu show itself as yet, and some concerns are busy for this season of the year.

Wallace G. Franklin, of E. I. Fran & Co., spent a portion of last week in N York.

Frank Kennedy, western salesman Joyce & Co., has returned from a succe ful trip.

W. B. Ballou, of R. Blackinton & and Fred S. Gilbert made flying trips New York last week.

Raymond Wise, son of L. W. Wise, of T. I. Smith Co., is home from Ithaca the midwinter recess.

Anthony H. Bliss, of A. H. Bliss & has been elected a director in the Plainv Savings and Loan Association.

Henry F. Barrows is the owner of a tr of land for which the North Attleboro R Drivers' Association is negotiating speedway purposes.

Harry W. Tufts, of the H. W. Tu Tool Co., attended the monthly meet and banquet of the Massachusetts F Chiefs' Association at Boston last week.

William Cotter, New York representat for the Bugbee & Niles Co., arrived in to Saturday for a short visit. He reports g business since he took charge of the office

Reports from the Winter resort wh G. Herbert French, of Riley, French & H fron, is staying state that he is making enviable record at golf and has already w one cup.

Charles Holmes, son of Frank Holmes, the B. S. Freeman Co., has been obliged go to a sanatorium for his health. He the best wishes of many friends for speedy recovery.

The High School Debating Society rece ly held a debate on the subject, "Resolv that the town of North Attleboro sho change its name." Sentiment here is larg in favor of a change.

Edwin I. Scott has sold his brush bu ness to Providence parties and will go i the grocery business at Sheldonville. T purchasers of the brush business will move it to Providence.

Local jewelers are making some f scores at the billiard tournament which being run by the Fish and Game Assoc tion. G. C. Hudson, of G. C. Hudson Co., has the best average up to date. Al Chisolm, of the Bugbee & Niles Co., and G. Frothingham, Jr., are two other h men.

Plainville.

Henry Wilson, New York representat for the Plainville Stock Co., has been spe ing a few days in town.

H. Alton Hall, for many years bookkee for Scofield, Melcher & Scofield, has bee very busy man the past month, in the cap ity of Town Auditor for North Attleboro

Joseph G. Barden, one of the old-t manufacturing jewelers of this town, has signed as a director of the Plainville S ing and Loan Association, a position filled for 23 years with credit to himself a advantage to the association.

Attleboro.

The Board of Trade of Taunton is endeavoring to get a jewelry factory to locate in that town.

William C. Tappan, of the D. F. Briggs Co., left Monday, with Mrs. Tappan and his sample case, for a six weeks' trip in the West and South.

Fred L. Torrey, of the Torrey Jewelry Co., has sold his interests in the concern to Charles D. Lyons, and Mr. Lyons has assumed full charge of the house. Mr. Torrey started the business nearly 11 years ago. He has made no statement as to his future plans, but it is expected that he will again enter the jewelry line in the future.

The latest contributions to the public library building fund, for which the jewelers and their employes have been so generous, are $500 from William C. Tappan, of the D. F. Briggs Co.; $29 from the Bay State Optical Co.'s employes, and $20 from William E. Coles, of Spier & Coles.

Politics are stirring Attleboro to her depth at present, the Republican party being engaged in a desperate effort to unseat Selectman George A. Sweeney. Charles M. Robbins, of the Chas. M. Robbins Co., and Charles P. Keeler, of McRae & Keeler, who have been Park Commissioners for several years each, refuse a re-election at this time owing to the demands of their growing business. At caucuses last week nominations equivalent to elections were given to Hiram R. Packard, of the Daggett & Clap Co.; David E. Makepeace, of the D. E. Makepeace Co.; Everett S. Horton, of the Horton, Angell Co.; William H. Garner, of the Dunbar, Leach, Garner Co., and J. Thomas Inman, of J. T. Inman & Co.

The annual meeting of the Biggins-Rodgers Co., Wallingford, Conn., was held last week and the following directors were elected: H. E. Biggins, Dr. O. E. Powers, H. B. Hall, E. T. Carter, F. W. Miner. Mr. Biggins was elected president; Mr. Hall, secretary, and Mr. Miner, treasurer.

Boston.

R. D. Gordon, of Gordon & Burgin, sailed from Boston for Jamaica to-day. He is accompanied by Mrs. Gordon.

W. B. H. Dowse, president of the Reed & Barton Co., was confined to his home at West Newton by illness several days last week.

Bigelow, Kennard & Co. became members of the Boston Merchants' Association recently, at a meeting of the directors of that body.

S. Meyers started last week on a business trip to San Francisco, which may be extended to Honolulu. Mr. Meyers will be away from Boston for about three months.

Harris & Lawton, diamond dealers, Jewelers building, recently rearranged the interior of their offices, making them more comfortable for the customers and also giving better facilities for the carrying on of the business.

E. Howard, founder of the Howard Clock Co., and sometimes called one of the "fathers" of the American watch, is improving slowly at his residence on Washington St., Dorchester, after an illness which has extended over several months.

Daniel Low & Co., Salem, Mass., have bought the Williams estate in Derby Sq., Salem, and have prepared plans for a three-story brick building to be used for the mailing, manufacturing and engraving departments of their jewelry business.

David Mendelsohn, of A. Mendelsohn & Co., is at home, suffering from a severe attack of la grippe. S. Mendelsohn has just returned from a trip to Maine and L. Webber, representing the same firm, has gone out on his New York trip.

Buyers in Boston last week included the following: J. S. Stanley, Wakefield, Mass.; H. L. Meyers, Lynn, Mass.; Mr. Chapin, of Bruce & Chapin, Worcester, Mass.; W. H. Ford, Lowell, Mass.; H. E. Harris, Lowell, Mass.; George A. Collins, Salem, Mass.; F. R. Hayden, Worcester, Mass.

Nathan T. Davenport, watchmaker, Worcester, Mass., filed a petition in bankruptcy last week in the United States Bankruptcy Court, Boston. According to the schedule, Mr. Davenport's total liabilities are $469 and his total assets are $450. Most of the creditors are Worcester people.

W. F. Newhall, Lynn, Mass., is looking for Ernest Ballaty, foreman of a fire engine company of Lynn, who has d appeared from that city. Ballaty obtain a $100 diamond ring from Newhall so time ago, claiming to have a customer i it. Since his disappearance, Mr. Newh received by mail a pawn ticket with a nc stating that it could be redeemed paying $45.

An alarm was sounded from box 68 sho ly before midnight last Monday night for fire in the factory of the Ringset Co., Geor W. Gregory, manager, 8 Waltham St., Sou End. The building is owned by George V Belyea. The fire was the result of an expl sion of a brick retort used for burning wo to make charcoal. The flames were so extinguished and the actual damage w slight, although the appearance of the e gines caused considerable excitement in t neighborhood.

Connecticut.

About 200 persons were present last we at the sociable given by the employes of t Parker Clock Co., Meriden.

H. H. Stockder, paymaster of the Inte national Silver Co., left Meriden last we on a short business trip to St. Paul.

Robert Norton, one of the oldest employ of the Seth Thomas Clock Co., Thomasto who went to Winsted Hospital last wee suffering from blood poison, has be obliged to undergo an operation for t amputation of one of his legs.

At the funeral of Henry A. Demin whose death was announced in last week issue of THE CIRCULAR-WEEKLY, the fo lowing persons acted as pall-bearers: E. Roberts, F. C. Gill, E. W. Sage, W. Sage, H. Bliss and Fred J. Bliss.

At the recent annual meeting of the cre itors of the C. F. Monroe Co., Meriden, t old board was re-elected, consisting of F. Monroe, E. B. Everitt, H. W. Lines, W H. Lyon and Edward Miller, Jr. The off cers chosen were: Chas. F. Monroe, pres dent and treasurer; Miss Emma L. Ban man, assistant treasurer; E. V. Everit secretary, and J. L. Holt and E. J. Doolittl auditors.

A great deal of inconvenience was cause in the factory of the New Haven Clock Co New Haven, last week, by the theft by boy named Grove Robbie, of several die valued at $400. The dies, which were mad of a composition, were used for stamping by a burning process, fancy designs on th

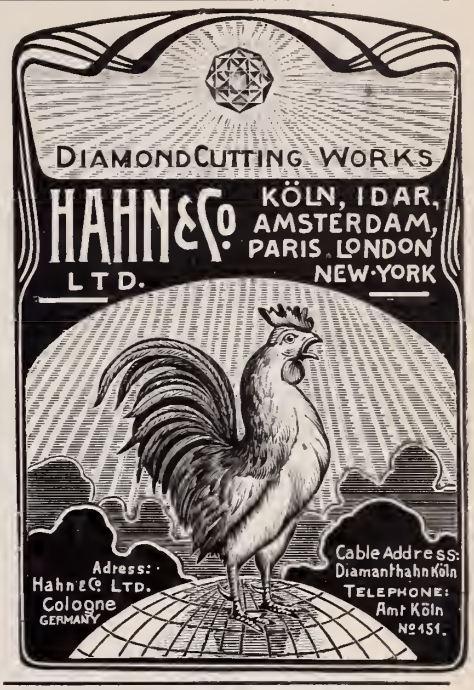
woodwork employed in the construction of clocks. All but two of the dies were found in the junk room of an Italian named Raffaele Morottoli, to whom the young thief had sold the dies for $4.50. The boy and the letter were both arrested.

Robert M. Mansfield and wife have returned to their home in Wallingford, after a brief sojourn in New York.

Roswell M. Williams, for the past 18 years night watchman for the Meriden Britannia Co., died last week.

Robert Hills has been appointed foreman of the knife handle department of the International Silver Co.'s factory "E," Meriden.

A. B. Dayton has resigned his position in the office of the Steele & Johnson Co., Waterbury, and accepted a position with the New England Watch Co., of that place.



The contract has just been awarded for the brick factory to be built for the International Silver Co. in Meriden. The new factory will be 50x73 feet, part of it being two stories and part one story high, with new chimneys, vaults, etc. The floors will be of wood and cement.

Speechmaking, music and a banquet marked the opening last Wednesday of the new office building of the Wm. L. Gilbert Clock Co., Winsted. The new building is on N. Main St., on the west side of the Mad River, and connected with the other side of the river by a steel passageway. The new building has a total length of 200 feet and is 32 feet wide. It is equipped with the most modern improvements, including several fireproof vaults.

Sidney P. Burwell, a prominent citizen of Bristol, died last week. Several years ago he was associated with his brother, Austin Burwell, in the clock business in Pittsburgh, Pa., where they handled the products of some of the Bristol manufacturers.

An amicable settlement has just been arranged between the Eaton, Cole & Burnham Co., Bridgeport, and the factory employes, who strenuously objected to the introduction of a factory time clock which they will have to ring up every time they enter or leave the building.

At the annual meeting of the J. D. Bergen Co., Meriden, held recently, a dividend of eight per cent. was declared, an increase of two per cent. over 1901. The directors elected were: J. D. Bergen, N. L. Bradley, E. J. Doolittle, C. E. Stockder, Jr., A. W. Tracy Bergen, C. B. Peets, C. P. Bradley. The following officers were elected: President and treasurer, J. D. Bergen; secretary, C. E. Stockder, Jr.; superintendent, Thomas Niland.

HAVE YOU TRIED KONOLIA? IF NOT, WHY NOT Write Us

An innovation along the lines of the manufacture of CHAFING DISHES is the introduction this season of a long handle affixed to the hot water pan, a recognized advantage over the small side handles with which these dishes have heretofore been equipped. The illustration shows the manifest improvement; it is a feature which cannot fail to be appreciated.

A Silly and Mischievous Statement.

AN article which has been going the rounds of the daily press of this country may do harm to the retail jewelers and diamond dealers by reason of the silly headline which appears above it. This article, which was originally published in the Brooklyn *Eagle*, is entitled, "Diamonds May be Cheap—Great Britain's Monopoly of African Fields Threatened," and is a somewhat imperfect résumé of the discovery and development of the South African diamond fields. The incorrect heading was based purely on the facts contained in the articles as to the recent discovery of diamond fields in German Southwest Africa.

While jewelers generally and such members of the public, who have any knowledge of the question, are thoroughly well aware that there have been no discoveries of diamonds that could affect the practical control of the situation by the De Beers Co. and the syndicate to which it sells its output, nevertheless, items of this character tend to confirm in the minds of the public something that many people want to believe *i. e.*, that the present price of diamonds is not here to stay. Of course, this is a case where the wish is father to the thought, but far from the truth, and the silliness of the statement in the article referred to is particularly apparent in the view of most recent information from London, which shows that, not only the price of rough diamonds has again been increased, but the impression of those in the trade, most generally conversant with the situation, is that prices are to go still higher.

Jewelers throughout the country will do themselves, their craft and even their customers a favor by calling attention to the true facts as to the diamond prices, whenever possible, and never fail to loose an opportunity to brand as silly and without foundation incorrect newspaper stories like the one mentioned.

Otto Ziems, Le Roy, Ill., is now established in new quarters in the Van Deventer building.

Death of William Bollmann.

ATLANTA, Ga., Feb. 23.—Wm. Bollmann, one of Atlanta's pioneer citizens and jewelers, died suddenly, Monday afternoon, at his residence, 92 Marietta St. He appeared to be in his usual health until a few moments before his death; in fact, he was at the establishment of Silvers & Woods, silversmiths, where he had made a social call.

THE LATE WILLIAM BOLLMANN.

Later he complained of a severe pain in his chest and almost immediately expired.

Mr. Bollmann was born in Germany, May 9, 1843. He came to Atlanta in 1866, and for more than a quarter of a century was one of the most prominent jewelers of the city. His reputation for fair dealing attracted to him a large clientage and he accumulated considerable property, which is left to his estate.

His wife, who was Miss Amelia Kontz, and his two children, died several years ago. Mrs. Bollmann was a sister of Hon. Anton Kontz, and Judge Ernest C. Kontz, of Atlanta.

The funeral services were conducted at the Church of the Immaculate Conception last Tuesday morning. The interment was in Oakland Cemetery.

Daring Robbery of East St. Louis, Mo., Jewelry Store.

ST. LOUIS, Mo., Feb. 18.—Two men dressed as women, and with their features partially concealed by huge poke bonnets, broke a plate glass window in the Zerwick Jewelry Co.'s store, 211 Collinsville Ave., East St. Louis, at 8.30 o'clock last Saturday night, snatched diamond jewelry worth $1,500 and escaped.

L. A. Holdemer, of this city, the watchmaker of the firm, who occupied a bench close by the window containing the fine jewels, was cut by the flying glass and fired upon by one of the thieves, who had thrust in his hand to get the jewelry.

The two members of the firm and Holdemer rushed to the street and fired after the thieves, who ran east through a dark alley. Citizens and police joined in the chase, firing as they ran. The burglars returned one volley and then bent their whole energies to escaping.

They were easily traced through the mud to St. Louis Ave. That street is brick paved and there the trail was lost.

The police department immediately notified Chief Desmond. Holdemer's injury is trivial.

Death of John F. Feldmann.

BALTIMORE, Md., Feb. 21.—John F. Feldmann, a well-known jeweler and watchmaker of South Baltimore, died suddenly yesterday morning at his residence, 1107 Light St., of heart disease. Mr. Feldmann had been suffering from heart trouble for some time and his death is thought to have been hastened by excitement, as he was stricken with neuralgia of the heart shortly after arriving from the bedside of a sick friend.

Mr. Feldmann was a native of Austria and came to Baltimore about 12 years ago. He held a diploma from the Austrian Government for his skill in clockmaking, and the timepiece which earned him this distinction now hangs on the wall of his store on Light St.

It is a self-regulator clock, the pendulum being so constructed as to prevent alteration in its length by the changes in the weather. He was recently interested in a patent for a quick-action release air brake. Mr. Feldmann is survived by a widow and a daughter.

J. H. Mulholland Killed in Fire Which Destroyed His Jewelry Store.

SPRINGFIELD, O., Feb. 19.—J. H. Mulholland, one of the best known jewelers of this city, lost his life as the result of a fire which caused damage amounting to $325,000 in this place early to-day.

At 3.30 A. M. fire was discovered in the plumbing establishment of Mitchell Bros. and in less than three hours it had destroyed the buildings in which are located M. M. Kauffman's clothing and jewelry store, the Fountain Theatre, S. J. Lafferty & Sons' hardware store, Mitchell Bros.' plumbing establishment, J. H. Mulholland's jewelry store, a blacksmith shop and the new Y. M. C. A. building as a result. Mr. Mulholland, Dorsey Crane and Albert Voorhees were killed and five persons were injured.

Just before daybreak Mr. Mulholland, aided by several spectators, was removing the stock from his jewelry store, which was in a small building next to the theatre. He had carried out several loads of goods, and, with his friends, was in the store when without a second's warning the walls of the theatre toppled over on the small building and completely crushed it, pinning the victims under the debris.

The body of Mr. Mulholland and those of his ill-fated friends were removed from the wreckage this evening. Mr. Mulholland's stock was damaged to the extent of $20,000 by the falling walls, and he carried but $1,500 insurance. Kauffman's loss is $75,000, with $40,000 insurance.

Mr. Mulholland was about 63 years old and had been in the jewelry business for over 30 years. He was highly esteemed in the community and was well known throughout the jewelry trade of Ohio.

D. Lamon has added new fixtures to his store in Denver, Col.

Semi-Annual Meeting of the Virginia State Optical Association.

RICHMOND, Va., Feb. 20.—The Virginia State Optical Association held its semi-annual meeting last evening in Murphy's Hotel, this city. There was an afternoon and evening session, both of which were largely attended.

Those who addressed the meeting included B. R. Tucker, C. H. Rudd, E. E. Shreiner, of the S. Galeski Optical Co., Richmond; J. N. Buchanan, Petersburg.

Thirteen new members were received into the association, which can now be called the largest body of its kind in the south. A full account of this meeting will appear in next week's issue of THE CIRCULAR-WEEKLY.

Will of the Late Henry Hayes Probated at Newark.

NEWARK, N. J., Feb. 20.—The will of the late Henry Hayes, who died Feb. 6 at his home in Newark, was admitted to probate in the Surrogate's Office, Wednesday.

According to the terms of the will, $10,000 is bequeathed to the trustees of the Episcopal fund of the Diocese of Newark, which is to hold it in trust for Grace Church. The deceased was a member of Grace Church for nearly half a century and was treasurer of the Newark Episcopal Diocese for more than 30 years. The trustees are instructed to pay to the church an income from the trust fund semi-annually.

The deceased's estate is valued at $500,000 and the residue is left to the widow, Mrs. Mary Louise Hayes and to a son, Arthur H. Hayes, of Morristown. The executors are Alden M. Young, of Branford, Conn., and the deceased's sons. The will is dated July 25, 1901, and the witnesses are Gertrude W. Drake, of Newark, and Odelia S. Sheldon, of Derby, Conn.

Directors and Officers Elected by the Illinois Watch Co.

SPRINGFIELD, Ill., Feb. 18.—The stockholders of the Illinois Watch Co. held their annual meeting yesterday. There was a full attendance and the affairs of the company were discussed in a very thorough and satisfactory manner. It was reported that the past year has proved by far the most successful in the history of the company, and the outlook for the future is very encouraging.

The following were elected directors of the company: John W. Bunn, Henry Bunn, George W. Bunn, Jacob Bunn and George A. Bates.

The new board of directors met immediately after the adjournment of the stockholders' meeting and chose the following officers for the ensuing year: Jacob Bunn, president; Henry Bunn, vice-president; George A. Bates, secretary.

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

Rue de Mesley, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

New York Notes.

A judgment for $130.63 was filed Wednesday against E. T. Taliaferro in favor of Arnstein Bros. & Co.

A judgment for $254,28 in favor of the city of New York has been entered against the American Watchman's Time Detector Co.

A judgment for $1,841.56 or return of property and $326.84 was filed Saturday against Joseph, Jacob and Herman Baum in favor of I. Hochburger.

A dispatch received in New York Wednesday from Butte, Mont., states that John W. Gates and John A. Drake are about to purchase a group of gold mines at Kendall, Mont.

Through a typographical error last week the name of M. Kameras, gold bracelet and chain manufacturer at 49 Maiden Lane, who succeeded to the business of the late Herman Bub, appeared as M. Kramens instead of M. Kameras.

E. R. Thomas, formerly of the International Silver Co., and his wife were among the passengers on the *Kronprinz Wilhelm* during the collision of that boat with the steamship *Briton*, which occurred Feb. 11 on the European side of the Atlantic.

L. Piccard, a jeweler at 705 Fulton St., Brooklyn, Thursday had a paste diamond substituted for a genuine diamond ring worth $80. The jeweler suspects a tall negro, who called on him Wednesday afternoon and asked to look at some rings. The police are looking for the suspect.

J. Richard Riha, of 710 Humboldt St., Brooklyn, said to be a jeweler, was Thursday awarded in the Supreme Court a verdict of $1,050 in a suit against the city to recover $1,068 for damages caused to his house by the backing up of the Humboldt St. sewer. Mr. Riha's case was a test one, having been selected out of 40 to be tried.

It is reported that Edward B. Davidow, doing business as Davidow Bros., retail jewelers at 124th St. and Third Ave., intends to sell out his stock and fixtures at that address. He expects to resume again some time in the future, but whether it will be in the wholesale or retail branch of the jewelry business he has not yet determined.

Herbert M. Condit, who from 1886 to 1897 was secretary of the New York Jewelers Board of Trade, has been elected secretary of the Stationers' Board of Trade and will take office some time this week. Mr. Condit had charge of the credit department of this latter organization previous to his connection with the Jewelers Board of Trade. He is well known both among the jewelers and stationers.

Cowen H. Cragg, who until 10 years ago was engaged in the jewelry business at 383 Broadway, died Sunday at his home, 538 Lafayette Ave., Brooklyn. The deceased was born 46 years ago in Bradford, England. Immediately on coming to the United States he engaged in the jewelry business. About 10 years ago he became commercial traveler for a lace importing concern, and has since been traveling in that line. He was a Mason and a member of the 17th Assembly District Republican Club.

Feye Frakman, also known as Fanny Frakman, living at 117 E. 123d St., New York, who filed a voluntary petition in bankruptcy in the United States District Court Jan. 16, has made application for a discharge from all her debts in bankruptcy. Creditors who are interested are notified that this application will be considered March 2 at 9:30 A. M., in the United States District Court of New York, and they are requested to be present to show cause, if they have any, before Judge Adams why the application should not be granted. The bankrupt's liabilities are $9,325 and there are no assets.

A morning newspaper of this city published an interview last week with Leonard Krower, wholesale jeweler at New Orleans, in which he stated that the future of New Orleans is very bright. According to the interview, that city has now 29 feet of water and will soon have 35 feet, placing it on an equality with the greatest ports of the world. "The universal prosperity in all branches of commerce, finance, industry and particularly shipping," says Mr. Krower, "is attracting a tremendous amount of outside capital, while our home people are investing their money in making New Orleans a greater city."

Local No. 1 of the International Jewelry Workers' Union has opened a business office and employment agency at 115 Nassau St The office will be in charge of Ernest Koeppicus, financial secretary and business agent of the body. Mr. Koeppicus states that the union is able to furnish designers, stone setters, enamelers or first class workmen for any branch of the jewelry manufacturing industry. The fourth annual ball of the union which was held in the Manhattan Lyceum on the 11th inst., netted more than $500. There was an unusually large attendance, many of those present coming from Newark and Brooklyn.

Fred L. Baker, the former salesman of the Non-Retailing Co., of Lancaster, Pa., who disappeared with a trunk containing $18,000 worth of jewelry, Jan. 3, and who was subsequently captured in Rio de Janeiro by Pinkerton detectives hired by the Jewelers' Protective Union, was brought back to New York, Thursday, on the same steamer in which he sailed from this port seven weeks ago. Baker came in the custody of United States Consul Jesse H. Johnson, and at the dock in Brooklyn was met by Pinkerton men and Central Office detectives, who took him in charge on a warrant issued by Governor Odell upon a requisition from the Pennsylvania authorities. He was taken to Pennsylvania Friday and will soon be tried upon a charge of grand larceny.

John R. Greason & Son, 182 Broadway, have leased offices at 22 John St. and will

move about May 1. In the new location the firm will occupy the entire second floor of the building.

Frederick H. Larter, of Larter, Elcox & Co., accompanied by his family, left New York this week for a three weeks' vacation in Florida. He will visit other Winter resorts in that State and will return to New York the latter part of March.

Alfred Baillod, a member of the firm of Cross & Beguelin, who was one of the unfortunate passengers on the steamship *Madiana*, which went ashore on the coast of Bermuda about two weeks ago, will not return immediately to New York, as was expected, but will continue his trip among the islands of the West Indies, arriving home the latter part of March.

Trans-Atlantic Voyagers.

FROM EUROPE.

B. H. Davis, of B. H. Davis & Co., New York, accompanied by his wife; D. de Sola Mendez, of the Mendez Cutting Works, New York, and C. August Windels, with Powers & Mayer, New York, returned Wednesday on the *Kronprinz Wilhelm*.

TO EUROPE.

Albert Lorsch, of Albert Lorsch & Co., New York, accompanied by his wife, and B. F. Rees, of Zimmern, Rees & Co., New York, sailed yesterday on the *Kronprinz Wilhelm*.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

Mr. Potter will shortly open a store in Newberg, Ore.

G. A. Turcot has opened a new store in Montreal, Canada.

R. Kerr has gone into business at Bonner's Ferry, Idaho.

Mr. Anderson, formerly of Monroe, La., has commenced business in Clifton, Ga.

Fred Oles, formerly of Newark, N. Y., has opened a new jewelry store in Friendship, N. Y.

A new jewelry store will be opened in Cornell, Ill., Mar. 1, by N. W. Shanebook, of Gridley, Ill.

G. Mackey, formerly of Marion, Ala., is making arrangements to open a jewelry store in Attalla, Ala.

Fred Flaschmann has commenced business at the cor. of Campau and Gratiot Aves., Detroit, Mich.

A. M. Bilsky will start in business in Sturgeon Falls, Ont., Mar. 1, with Samuel Pierce, under the firm name of Pierce & Bilsky.

The Commonwealth Optical Co. has been organized at Portland, Me., for the purpose of manufacturing and dealing in optical goods, with $50,000 capital stock, of which $400 is paid in. The officers are: President, John Howard Hill, Portland; treasurer, Austin W. Tiffany, Worcester, Mass.

M. J. Weidenhoffer has leased quarters in the Lewis building, Doylestown, Pa., where he will engage in the manufacture and repairing of watches.

The Columbus Chain Co. was incorporated in Dover, Del., a short time ago, with a capital stock of $100,000, to manufacture and deal in chains.

The Baltimore Silver Plate Co., for dealing in and manufacturing silver plated goods and hardware, last week was incorporated in Baltimore, Md., by W. Sanders Carr, Robert H. Carr, Jr., James E. Tippett, Geo. L. Mattingly and Andrew Aitken. The authorized capital stock is $4,000, divided into 40 shares of $100 each.

Rudolph Brodezky Files Voluntary Petition in Bankruptcy.

A voluntary petition in bankruptcy was filed in the United States District Court, Saturday, by Rudolph Brodezky, a diamond setter at 37 Maiden Lane, New York. Schedules filed with the petition show liabilities of $9,354, while the assets are $3,009, of which $1,527 is in bills, promissory notes and securities, and $1,568 is in open accounts.

Among the creditors for amounts ranging upward from $100 are: Arthur J. Kahn & Co., $5,389; Chas. Altschul, $1,079; Julius Wodiska, $164; Feigenbaum & Schweiger, $163; Bonner & Co., $221; Bolotin & Daniel, $100; Levy & Frackman, $189; J. A. Lewis, $110; P. Neulinger, $142; Albert Lorsch & Co., $117; R. A. Breidenbach, $450; J. Macher, $250, and L. & M. Jarmulousky, $300. Jac. Kryn & Wouters Bros. claim to hold by assignment $4,435 of the indebtedness due to A. J. Kahn & Co.

Mr. Brodezky has been in business as a diamond setter for several years, and for the past five years has been dealing in diamonds. He became embarrassed in November, 1901, when at a meeting of his creditors an extension of two years from Nov. 8, 1901, was asked and granted to him. He owed then about $5,000.

Senator Bradstreet, Thomaston, Conn., recently distributed to each of his brother Senators a neat carriage clock, bound in leather. The clocks were made by the Seth Thomas Clock Co.

C. B. Adams, Bottineau, N. D., will shortly erect a new residence.

News Gleanings.

The Wayne Jewelry Co., Ft. Wayne, Ind., of which J. S. Sievert is president, contemplates increasing its capital stock to $100,000.

Burglars recently entered the establishment of C. A. Florey, Kenny, Ill., and secured miscellaneous jewelry valued at about $25.

The Kann Bros. Silver Co., Baltimore, Md., has purchased the entire stock of metal goods of George Careless, Philadelphia, Pa.

W. S. Cole, Omaha, Neb., who for the past year had been recuperating in Arizona, has returned to his home much improved in health.

J. C. Haupt has purchased his brother's interest in the firm of Haupt Bros., Peabody, Kan., and will continue the business at the same location.

Myron W. Wiard, San Diego, Cal., will shortly sell out his business and move to Washington. He contemplates locating eventually in Spokane.

A. V. Strait, Sidney, N. Y., has secured the contract for placing clocks in the stations on the line of the trolley road between Oneonta and Cooperstown.

Henry F. Schmidt, Terre Haute, Ind., recently entertained his brother, Gustav A. Schmidt, St. Louis, Mo., who is assistant superintendent of mails at that place.

K. F. Keller & Sons, Appleton, Wis., have removed the jewelry stock of their Milwaukee store to Appleton, Wis., where they have inaugurated a clearance sale.

Geo. Stoll, of Stoll & Funck, Lebanon, Pa., recently presented Zion Lutheran Sunday School with a handsome clock for the latter's newly furnished assembly room.

In a large fire in which the entire business portion of the town of Circleville, O., was destroyed, L. V. Thompson, a jeweler of that place, lost the greater part of his stock.

John B. Ash, Rockford, Ill., has just removed to newly furnished quarters where he has all modern store improvements and a greater amount of space for his increasing business.

The Goldstein-Weisser Jewelry Co., Peoria, Ill., will remove its stock, April 1, into more commodious quarters. Special attention will be paid to the optical department in the new location.

A recent dispatch announces the dissolution of the firm of Basinger & Cameron, Lima, O. The business will be continued by Mr. Cameron, Mr. Basinger having retired for an indefinite period.

M. German and wife, San Diego, Cal., one of the oldest jewelers in Southern California, has arrived home after an absence of two years spent in Seattle Wash., where he conducted a jewelry business.

W. K. Thaxton, a jewelry salesman of Birmingham, Ala., is seeking a diamond stud, valued at $150, which he lost recently at the Union Depot in Birmingham. Mr. Thaxton believes that the stud was stolen.

William W. Hall, Salt Lake City, Utah, recently conducted a special sale for the benefit of St. Mark's Guild, a charitable organization of that city. During the sale the ladies of St. Mark's Guild acted as salesladies.

John Fleckenstein, of John P. Fleckenstein & Co., Sioux City, Ia., was recently found frozen to death on his own door step. It is supposed that he started for home in an intoxicated condition and collapsed just as he reached his door.

Judge Hanford, a short time ago, denied the motion made in the United States Circuit Court by attorneys of Henry W. Parrott to reinstate the latter as referee in bankruptcy of Mrs. M. E. Taylor's jewelry store, Whatcom, Wash.

Martin E. Nabstedt & Sons, Davenport, Ia., recently made a 32 Degree Consistory Mason ring for C. H. Bashford, manager of the Dun Commercial Agency in Davenport. It was hand carved out of a single bar of gold, with a ¾ carat diamond set in the breast of an eagle design.

A check forger recently made his appearance in Catskill, N. Y., and succeeded in swindling Lewis Maratskey, a jeweler of that place, out of $20.50 in cash and a gold chain. He entered the store and purchased a chain for $4.50, for which he tendered in payment a check for $25, receiving in return the gold chain and the cash.

Eric E. Farwell, a jeweler of Manchester, Ia., who recently filed a petition in bankruptcy, has applied to the United States District Court for discharge from all his debts. A hearing on this application will be given Saturday before Referee-in-Bankruptcy M. W. Harmon, in Independence, Ia., at which creditors who desire to oppose this discharge may appear and file their objections.

Chas. W. Osgood, Rockingham, Vt., who filed a petition in bankruptcy a year ago, has applied for a discharge of all his debts to the United States District Court. A hearing on this application will be had before Referee-in-Bankruptcy F. D. E. Stowe, in Bellows Falls, Windham County, Vt., Mar. 18, at 1 P. M., at which creditors may file any objection they may have against the discharge in question.

Lawrence and Penn, the men arrested at Tampa, Fla., Feb. 14, on a charge of having looted H. E. Adams's store of diamonds and jewelry valued at $5,000, waived examination before the County Judge and are now held in jail for trial at the next term of court. Both men pleaded innocence, claiming that the robbery was committed by a third party, although Penn told Lieut. Johnson that the plunder was hidden in the house of a negro, Tom Smith. Officers were sent to the place and recovered 23 rings and two sunbursts, all of which were identified by Mr. Adams, who gave the police officers a generous reward. Lawrence claims to be a printer and Penn a boilermaker.

A woman of dark complexion and apparently about 45 years of age, plainly garbed in dark clothing and black nubia thrown over her head, entered the store of C. W. Ritter, Pottstown, Pa., a short time ago, and, after purchasing a small chamois watch bag and giving the jeweler five cents in payment therefor, declared that she had given the jeweler a $20 piece and immediately demanded $19.95 in change. The jeweler suggested that she might have given the money in some other store which she had visited, and deeming the suggestion a good one she hurried out of the establishment. Mr. Ritter feels certain he can recognize the woman when he sees her again.

The kind of wear

Most any gold filled or rolled plate chain will wear 20 years if it is put away in a bureau drawer six days of the week, and worn by the owner on the seventh day only. But—put it on a railroad engineer who not only wears it the whole seven days of the week but exposes it to the hardest kind of wear, where dust and grit and perpetual motion combine to attack the surface, and this chain might not "make good."

The guarantee that goes with Blackinton's Old Reliable W. & S. B.★ Chains is based on the hardest kind of continuous wear and is the only brand of gold filled chains that have "made good" for thirty-eight years. Insist on getting them from your jobber. Did you receive a copy of our booklet entitled "A Chain of Circumstances?" If not, write us for one.

W. & S. Blackinton Co.,

New York, 14 Maiden Lane.

Factory, NORTH ATTLEBORO, MASS.

BLACKINTON "OLD RELIABLE W. & S. B. ★"

Atlanta.

TRADE CONDITIONS.

Silverware is being sold in large quantities just now. The demand seems to be general and is not due to any particular cause, although there are a number of weddings taking place.

The past week brought but few out-of-town buyers and drummers to Atlanta.

W. N. Shute, formerly in the watchmaking and repair department of Julius R. Watts & Co., is now representing the firm as traveling salesman.

A. Montgomery was presented with a handsome silver service supplied by local dealers upon his retiring, recently, from the Atlanta agency of the Southern Express Co.

Fred. J. Stilson, who has been associated with Moses Greer, in the business of the Greer Jewelry and Mfg. Co., will continue the business, Mr. Greer having retired and gone to Macon, Ga., where he has accepted a lucrative position.

The police have under arrest a young man who has been offering to pawn or sell a lot of old gold, which looked as if it had been broken up to conceal its identity. There were bracelets and rings, all battered and hammered out of shape. The goods are believed to have been stolen from a jewelry house at Birmingham, Ala. The young man gave his name as C. M. Brooks, but afterward admitted he was Argyle, who is wanted in California for robbing a post office.

The jewelers here will lend their aid to the "Greater Georgia Association," which has just been organized for the promotion of the interests of Georgia. All lines of trade will be stimulated and the State's resources advertised to the outside world.

Charles W. Crankshaw's auction sale, which has been going on for several weeks, is nearing a close. At the end of each sale beautiful souvenirs are given away. One lady was recently the lucky recipient of a diamond sunburst, valued at $185.

Memphis, Tenn.

Geo. T. Broadnax has returned from his eastern buying trip.

H. Cairo is selling out at auction. Col. J. D. Lewis is the auctioneer.

Ed. L. Burns, formerly with C. L. Byrd & Co., has returned from Atlanta, Ga.

Rumor has it that Geo. R. Lechler will open again in the manufacturing jewelry business.

Miss Anna Lee, an employe of Frank B. Thayer, was married to Frank Gill, of Oklahoma City, Okla., Feb. 14.

R. McDougall, formerly with the L. Manasse Co., Chicago, opticians, has succeeded R. M. Rasmussen at C. L. Byrd & Co's.

Washington, D. C.

The home of A. D. Prince, of R. Harris & Co., was recently slightly injured by fire caused by an overheated furnace.

James Reilly, who is to serve three years for the theft of $3,000 worth of diamonds from Gerome Desio, and E. A. Liefeld, who is also under a similar sentence for stealing jewelry from Schmedtie Bros., have been taken to the penitentiary at Trenton, N. J.

Carrie M. Jones has appealed from the decision of the District Supreme Court removing her as administratrix of the estate of George Milton Jones, who conducted a jewelry business under the name of the R. M. Dobbins Co., and substituting Edward H. Thomas and Alexander Wolf.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended Feb. 21, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$276,363.93
Gold bars paid depositors	43,467.99
Total	$319,831.92

Of this the gold bars exchanged for gold coin are reported by the Sub-Treasury as follows:

Feb. 16	$42,916.15
" 17	87,921.28
" 18	57,240.90
" 19	46,054.76
" 20	15,790.07
" 21	26,240.47
Total	$276,163.63

Philadelphia.

S. M. Smith, Woodstown, N. J., is reported to be critically ill.

M. E. Harmstead, Burlington, N. J., is critically ill with typhoid fever.

J. F. Neill, 727 Sansom St., was elected a school director of the 24th Ward last week.

Wm. H. Kensil, engraver, 618 Chestnut St., has departed for a cruise to the West Indies.

Fred Barry, of Gimbel Bros.' jewelry department, was in New York on business last week.

F. A. Fiedler, Milton, Pa., has departed for a trip to the Pacific coast accompanied by his wife.

J. F. Neill, Jr., 727 Sansom St., made a business trip through New Jersey last week.

Mr. Smith, of Smith & Dreer, recently retired, has gone south for an extended pleasure trip.

Wm. T. Miller, 2012 Ridge Ave., has added a new clock delivery wagon to his establishment.

Harry Murray, of Wanamaker's jewelry departmeunt, is convalescent after a long illness of typhoid fever.

S. Kind & Son, 928 Chestnut St., are advertising a special sale of the stock of Pfaelzer Bros. & Co., retired.

Wm. Reisner, of the Lancaster house of L. C. Reisner & Co., stopped off in this city from Pittsburgh Friday.

David J. Berry, watchmaker, 606 N. 5th St., Camden, was married last week to Frances Rosenblum, 1220 Dickinson St.

Louis Stern, of L. Stern & Co., left Monday for a western trip, the first that Mr. Stern has personally made for some time.

Leo Goldsmith has entered suit in Common Pleas Court No. 1 against Isaac M. Garfinkle in an appeal from a magistrate's hearing.

S. K. Kamp, 631 Chestnut St., and Mr. Smith, a Danville (Pa.) jeweler, are contemplating making an extended pleasure trip together.

Margaret Hall, who died recently at her home, 1703 Race St., by will probated Saturday contributes a "Mephistopheles" clock to the Memorial Hall collection of antiques.

J. E. Caldwell & Co. last week entered judgment against David T. Huston for $716.20 for want of an affidavit of defense in suit brought in the Common Pleas Courts.

Charged with robbing the mail of jewelry and other articles, Herbert E. Simcox, of Norristown, a driver of a mail wagon, is in Moyamensing prison awaiting trial. Many of the stolen articles have been recovered.

Fellichen Vonnau, a watch case maker employed at 722 Sansom St., died suddenly of heart disease Thursday at 814 Race St. He was unknown at Race St. and was removed to the morgue. Friends identified the body later. Vonnau's home was in New York.

The condition of Arthur Staples, of the watch repairing department of Wanamaker's, who has been a patient at the German Hospital with appendicitis, is reported to be much improved. Harry Winner and Frank Holman, also of Wanamaker's jewelry department, have both been critically ill.

Lou Sickles and Abe Sickles, of M. Sickles & Sons, attended the funeral at Newark Monday of Evan Eastwood, Jr., the son of Mr. Eastwood, of Eastwood & Park, manufacturing jewelers, who was killed in the trolley car accident Thursday.

Elmer Welkert, a watchmaker by trade, was arraigned before the United States commissioner here last week charged with counterfeiting and was held for court. Welkert is accused of electro plating and "milling" nickels and passing them for $5 gold pieces on storekeepers in this city and throughout Eastern Pennsylvania.

Harry Lipman, formerly a diamond dealer, who made several trips to South Africa, died February 17 at his home, 837 N. 6th St., at the age of 70 years. Mr. Lipman came to Philadelphia from London when he was 30 years old. He had been successful in various business enterprises, particularly as a diamond dealer, but has been retired for several years. He is survived by a son and a daughter.

Frederick Sauter, 2713 Girard Ave., from whose store three solid gold and three filled watches were stolen recently, and believing that the police were not making thorough efforts to recover them, has advertised a liberal reward and "no questions asked" for their return. The stolen watches are described as follows: Three ladies' solid gold, No. 43622, No. 315161, and No. 58816; ladies' gold filled No. 2717723 and No. 609129, and gentleman's gold filled, 1025.

W. W. HARRISON,

MANUFACTURER OF

Umbrellas and Walking Sticks

OF THE BETTER SORT,

405 BROADWAY, NEW YORK.

Chicago Notes.

C. F. Guffin, West Brooklyn, Ill., was a visitor to the trade last week.

O. P. Noisom, South Bend, Ind., placed orders at this market last week.

Edward Swartchild, of Swartchild & Co., left for a western trip Sunday night.

E. A. Kelly, of L. H. Schafer & Co., left Monday for an extended western trip.

Edwin S. Robbins, with the American Silverware Co., was a visitor to this city last week.

Mr. Brumer, of Brumer Bros., Clinton, Ia., was here looking up his old friends last week.

Miss Spence, traveling for the Racine Jewelry Mfg. Co., called on the local trade last week.

Mr. Steere, of Arnold & Steere, Providence, R. I., spent a few days of the past week in this city.

F. E. Hyatt, western manager for the Philadelphia Watch Case Co., returned from the east last week.

D. A. Wilkins, western representative for the Ostby & Barton Co., returned last week from a coast trip.

J. W. Stoneburner, western representative for J. W. Fuller & Co., has returned from a coast trip.

F. E. Gleason, Austin, Minn., accompanied by his wife, paid his semi-annual visit to this city last week.

George H. Robinson, vice-president of the Gorham Mfg. Co., spent a few days of last week in this city.

The local organization of the Watch Case Makers' Union held a meeting at 55 North Clark St. Wednesday night.

Alletta Burchard, daughter of M. N. Burchard, western representative of the Ohio Cut Glass Co., died Thursday.

J. W. Armbruster, general selling agent for the Illinois Watch Co., was here last week and attended the banquet of the Jewelers' Club of Chicago.

A. Rundquist, for the past four years house salesman for Spaulding & Co., died last Friday, after a week's illness. Death was due to pneumonia.

David N. Smith, of Wm. Smith & Co., New York, was in town the past week looking up his old friends. C. C. Offerman, with the same firm, was also a visitor to the trade.

J. W. Forsinger left Saturday for New York. Mr. Forsinger will spend some time traveling through the east and will go from there on a trip through the south, combining business with pleasure.

R. E. Brackett, Jr., Lansing, Mich., came to this city last week to bring back his wife, who has been in ill health at a local hospital for some months, to their home at Lansing. Incidentally, Mr. Brackett looked over various lines.

George A. Armstrong, formerly cashier in the local office of the International Silver Co., will in future assist J. K. Caldwell, the representative of Simpson, Hall, Miller & Co., Derby Silver Co., and Rogers & Hamilton Co.'s factories.

Lloyd Milnor, of Spaulding & Co., returned from a brief trip east last week. Charles F. Greene, of this firm, and manager of the Paris branch, was in Chicago last week to attend the annual meeting of the directors of the company.

W. M. Davidson, with J. W. Forsinger, left last week for a brief trip to New York.

At the annual meeting of the directors of Spaulding & Co., recently, Lloyd Milnor was re-elected president, treasurer and general manager and E. J. Smith was re-elected secretary.

M. Henery, who claimed to travel for Johnson & Tomek, of this city, was arrested at Sioux City, Ia., Wednesday, on a charge of stealing diamonds from a jewelry store in that city. It is alleged that several rings, asserted to have been stolen, were found on his person.

Among the out-of-town buyers in town the past week not elsewhere mentioned were: A. C. Wortley, Kalamazoo, Mich.; J. A. Seekatz, Hooperstown; L. D. Merrill, Sparta, Wis.; R. W. Chamberlain, Marshalltown, Ia.; T. H. Gill, Marengo, Ill.; A. L. Howard, Beloit, Wis.; H. G. Van Wagenen, Monroe, Wis.; F. A. Averbeck, Madison, Wis.

John H. Mertz, secretary of the Elmer A. Rich Co., has resigned from that position, his resignation to take effect Mar. 1. He will in future be associated with Ferdinand Holtz, in the Stewart building. Mr. Mertz has been connected with various diamond houses in this city since 1887, a which time he entered the employ of Alfre H. Smith, where he remained until 189 When the Rich & Allen Co. was organize he assumed the position of secretary, whic he has filled for that concern and its suc cessors until the present time.

It was learned last week that C. D. Pea cock died intestate and proceedings for th administration of his estate, valued at $300, 000, were instituted in the Probate Cour last week. Of the estate, $275,000 is in per sonal property. Letters of administratio were issued by Judge Cutting to C. D Peacock, Jr., a son, on the petition of th widow, Mrs. Mary E. Peacock. The heir at law named in the petition, other than th widow and the son mentioned, are Rober E. Peacock, Walter C. Peacock, sons, an Marion C. Smith, Bertha L. Davis and Ell R. Peacock, daughters. The children wi share equally in the fortune after th widow's award has been deducted.

Organizers of Jewelers' Club of Chicag Hold Successful Banquet.

CHICAGO, Ill., Feb. 21.—It was indeed representative body that gathered round th festive board at the first banquet of the Jew elers' Club of Chicago, which was held i the banquet hall of the Union Hotel on Ran dolph St. Thursday night. Manufacturers jobbers, retailers and the traveling men wer all in evidence. The presiding officer a the dinner was H. S. Hyman, who was elect ed president *pro tem.* of the organization a a previous meeting.

The object of the banquet was to gathe together those who might be interested i organizing a club that would promote a mor intimate fellowship among the members o the jewelry and kindred trades, and, judg ing from the fact that there were 133 mem bers of the trade present at the feast, it i obvious that the object was accomplished.

After a good dinner, which was appar ently enjoyed by all present, Thomas Rudd secretary *pro tem.*, read the minutes of th previous and first meeting of the organizers The constitution and by-laws were the read and freely discussed and were finall adopted after a few changes and amend ments had been made. The dues are to b $12 a year, payable quarterly, in advance

Meetings will be held on the first Tuesday of each month, and suitable quarters, centrally located, are to be found at the earliest possible moment.

A motion was made that as traveling men were not in town to enjoy the privileges of the club but a brief period of the year they be admitted at half the regular dues. This was objected to by Mr. Krugler, traveling for the H. A. Kirby Co., who spoke for the traveling men, and stated that every traveler who was desirous of becoming a member would rather pay the regular dues. He was vociferously applauded and carried his point.

Application blanks were distributed and 102 joined at the meeting. This number, however, was raised to 130 by Saturday noon. The present temporary officers will retain their positions until the next meeting, which will be held on the first Tuesday in April. The temporary officers are as follows: Harry S. Hyman, president; E. J. Penny, vice-president; B. F. Coffin, treasurer; Thomas Rudd, secretary.

As the election of officers for the ensuing year will take place at the next meeting, it is expected that all members will be present.

Kansas City.

TRADE CONDITIONS.

Last week brought a very severe storm to Kansas City and the adjoining territory, and this affected the retail trade considerably. The cold was the severest of the season, and a very heavy snowfall was experienced. In certain districts a temperature of as low as 14 degrees below zero was observed. There is some anxiety as to the effect on the wheat as the warm weather of two weeks ago started the roots in some fields, and this severe frost may be injurious. The effect will not be known for several days. The wholesale trade still continues brisk as usual, but the retailers have experienced a temporary lull on account of bad weather and heavy snow. It is not expected that the present cold snap will last very long now, as it seldom does in Kansas City.

J. C. Gilbert, of the Jaccard Jewelry Co., is in the east on business.

The Edwards & Sloane Jewelry Co. is taking an inventory of its stock.

W. A. Montague, with Woodstock, Hoefer & Co., is in town for a few days.

J. A. Chopard, formerly in business here at 14th and Walnut Sts., died last week.

Mr. Neven, of the Meyer Jewelry Co., has gone to New York in the interests of his firm.

Mr. Gurney, of Gurney & Ware, is in New York on a business trip. He will return in about 10 days.

A number of the local manufacturing jewelry firms last week held a meeting and a supper at a cafe in this city.

Mr. and Mrs. Lewis are back from their wedding trip to Chicago and St. Louis, Mo. Mrs. Lewis is the daughter of C. B. Norton, of the C. B. Norton Jewelry Co.

Frank Kassel, formerly with the Streicher Watch and Jewelry Co., has gone to work for Emery, Bird, Thayer & Co. Mr. Chamberlain, of the latter company, is gradually recovering from a severe illness.

Herbert Koppel, of the Meyer Jewelry Co., last week met with a curious accident, which has proved very painful to him. He dropped a $20 gold piece, and, in stooping to pick it up, slipped on an apple peeling and fell, hurting his kneecap very badly.

The following out-of-town merchants visited Kansas City during the past week: J. W. Phillips and wife, Chanute, Kan.; L. Hoffman, Leavenworth, Kan.; W. H. Meyer, Lawson, Mo.; T. H. Robertson, Blackwell, Okla.; Walter Sperling, Seneca, Kan.; D. E. Lowmiller, Linkville, Mo.; A. Rosenfield, Leavenworth, Kan.; Leslie White, Lee's Summit, Mo.; I. Kolstad, Pleasant Hill, Mo.; G. M. Dillon, Bonner Springs, Mo.; Ira Stutzman, Garden City, Mo.

Forty jewelers and engravers met at labor headquarters recently to form a union of their craft. J. T. Smith, organizer of the Industrial Council and the American Federation of Labor, called the meeting, but left early in the proceedings, angered because the jewelers had refused to affiliate with the American Federation of Labor or the local central labor body. The jewelers will hold other meetings in the near future to perfect their organization and will soon apply for a charter from the Secretary of State.

J. H. Gorman, Gastonia, N. C., recently purchased the stock of the late Jos. Horah, who formerly conducted a business at Salisbury, N. C.

"Something Doing" IN WATCHES.

Indianapolis.

TRADE CONDITIONS.

Zero weather, heavy snows and impassable country roads, had a marked tendency to decrease the volume of trade last week.

Geo. S. Drake, Pendleton, Ind., has just become interested in a western gold mine.

John T. Gardner visited western Ohio last week in the interests of the Baldwin-Miller Co.

Alfred R. Varian, of the Dennison Mfg. Co., and I. Lederer, of the S. & B. Lederer Co., visited the local trade last week.

The jewelry trade is well represented in the present Indiana State Legislature, with Charles Whitcomb, Clinton, in the Senate, and W. J. Hamilton, Linton, in the House. The latter is a prosperous druggist, jeweler, optician and postmaster at Linton, Ind. Fifteen years ago Mr. Hamilton was swinging a pick in the coal mines near Linton. He saved his money, bought out a drug store, added a fine jewelry department, and, last year, was elected a State representative.

Minneapolis and St. Paul.

Louis P. Mahler, Olivia, Minn., has moved his stock into a larger store.

G. Goodman, Hallock, Minn., has moved into newly furnished quarters.

Carl J. Solum, with Weld & Sons, Minneapolis, has returned from a week's sojourn at Rochester, Minn.

The mother of O. H. Arosin, St. Paul, died last week in Minneapolis. The interment was in St. Paul.

E. C. Bennett, Zumbrota, Minn., and T. J. Thompson, Cameron, Wis., were visitors to the Twin Cities last week.

S. B. Abeles, Minneapolis, has begun an auction sale of his jewelry stock, to include safes and fixtures. The sale started Feb. 21. Mr. Abeles will retire from the jewelry business and will devote his time to the mining business, in which he has been interested for some time. He is president of the Oregon Development Co., of Baker County, Ore., and the owner of the Cracker-Oregon gold mines. The mines have a free milling ore and now have a mill in operation. Mr. Abeles has an office at 660 Temple Court, Minneapolis.

Pacific Northwest.

TRADE CONDITIONS.

Portland jewelers are still placing orders for stock in anticipation of a brisk Spring trade. Stocks generally were very low after last year's heavy business. At present there seems to be a considerable demand for silver plated ware.

B. B. Giles has closed his store at Shelton, Wash., and removed to Tacoma, Wash.

Harry C. Liebe, The Dalles, Ore., and M. L. Coovert, Vancouver, Wash., were in Portland, Ore., last week.

T. A. Van Norden, The Dalles, Ore., has employed a first class watchmaker and will hereafter make a specialty of repairing watches.

The G. Heitkemper Co., Portland, Ore., has rented two more rooms above its store and removed the partitions to make room for its enlarged repairing and manufacturing plant. Three men have been added to the force and new machinery has been installed

San Francisco.

TRADE CONDITIONS.

The cold weather has come to an end and trade with the retailers is rapidly on the increase. There are a great many people now to be seen on the street and the retailers are in a very pleasant frame of mind. The wholesalers have hardly started as yet, but from the present outlook in the interior they expect a brisk trade.

Peter Engle, Marysville, Cal., is a visitor to this city.

Alex. Lippman, with the Morgan & Allen Co., has left on a trip to Portland, Ore.

Frank Golden, Reno, Nev., is still in this city, combining business with pleasure.

Albert Hansen, Seattle, Wash., was in San Francisco last week making purchases.

The wife of Albert A. Ritter, 237 Kearny St., last week presented him with a bouncing baby girl.

Mrs. Mary Wetzold and daughter, Willows, Cal., are in this city making purchases for the Spring trade.

A. W. Huggins, with A. I. Hall & Son, who is now in Honolulu on a business trip, is expected to return Mar. 1.

Nordman Bros. are preparing their tool and material catalogue and expect to have an elegant production when finished.

H. M. Blankenstein will shortly open a small jewelry store on Kearny St., near California St. He was formerly located at 630 Kearny St.

H. F. Wichman, Honolulu, H. I., who recently left this city on a business and pleasure trip through the east, will return to his home in Honolulu about April 1.

J. Lippmann's store, at 333 Kearny St., was broken into, Sunday night, by burglars, who cracked the glass of the show window and extracted what jewelry had been left there overnight by means of a hairpin attached to the end of a stick. The loss amounts to about $100.

R. W. Edwards, Oakland, just across the bay, met with a heavy loss by fire last week at his jewelry store on Broadway, between 9th and 10th Sts. The front of the store was not damaged, but the rear was totally destroyed. The loss amounted to about $15,000. The insurance is said to be $10,000.

ASK YOUR JOBBER FOR THE R. J. HILLINGER & CO. SILK GUARDS.

R. J. HILLINGER & CO., 137 Wabash Ave., CHICAGO, ILL. Manufacturers, **Silk Guards, Vest Chains, Silk Eyeglass Cords.**

Pacific Coast Notes.

Mr. Spike, Laton, Cal., is making arrangements to move his stock into new quarters.

C. H. Wright, Eureka, Cal., has returned from a month's vacation spent in San Francisco and nearby places.

George Jordan, Redlands, Cal., has just completed placing a large Seth Thomas clock in front of the postoffice in that city.

A. W. Lord, with Richard Herz & Bro., Reno, Nev., has gone to Southern California for a month's trip for the benefit of his health.

N. J. Lloyd, a mining engineer from Butte, Mont., has been engaged by George S. Goode & Co. to manage their turquoise mine near Pearce, Ariz.

E. A. Fano, San Diego, Cal., has instituted proceedings in the Superior Court of San Francisco to regain possession of a valuable ring, worn by an actress in that city, whose husband was in San Diego a few days ago and who obtained the ring for examination by his wife, with a view to purchasing it, if satisfactory. The ring, which is valued at $500, had not been returned nor the money paid for it.

In the event of the President's coming to the Pacific Coast next May the citizens of Pasadena have arranged a unique invitation to Mr. Roosevelt and his party to visit Pasadena. This greeting consists of a key of solid gold, five inches in length and elaborately carved, thrust through a crown of similar workmanship. The key is held in place on a highly polished card of manzanita wood, while on a similar card of orange wood is engraved the invitation. This card is placed beneath the manzanita, in an orange wood box of exquisite workmanship and trimmed with silver. The Pasadena Novelty Co., in whose shop the box was made, presented it to the city, while J. Herbert Hall, a jeweler of that place, made the key. The committee delegated by the city to make this gift was composed of W. J. Heiss, representing the City Council; W. R. Clark, representing the Pasadena Board of Trade, and J. H. Hall, representing the Merchants' Protective Association.

Mr. Bangham, Benedict, Neb., was a recent visitor to Omaha, Neb.

Cincinnati.

TRADE CONDITIONS.

The great blizzard which raged throughout the west last week had its effect on the trade. The deep snow blocked travelers, and local trade with the retail dealers fell off considerably.

M. Aron, Springfield, O., and Chas. Ritter, Selbert, Ky., were in town buying goods last week.

Joseph Noterman & Co. report the largest demand for diamonds and diamond mountings that they have ever known at this season of the year.

John Herschede, of the Herschede Hall Clock Co., is on a return trip from the east and will be home this week. The company is now moving in its new factory.

Herman & Loeb are outgrowing their quarters and have been compelled to add another large room to their present offices in the Johnston building. They have also decided to increase their clock department.

Miss M. Owen, who has started an art pottery in connection with the jewelry store of her brother, Wm. Owen, 134 W. 4th St., left this week for the Mardi Gras at New Orleans. Wm. Owen and his wife have just returned from a southern trip.

The department store of H. B. Phillips, Owensboro, Ky., is to be sold and the purchaser is said to be Edward Brauer, Metropolis, Ill. The company was incorporated with a capital stock of $75,000, and had a big jewelry department.

John M. Cutter, formerly of the Elgin National Watch Co. and now of the Trenton Watch Co., was in Cincinnati last week on a special trip, visiting his old friends and customers. Mr. Cutter has not been on the road before for 15 years. It is reported here the Trenton Watch Co. will get out an O size movement.

Theodore Neuhaus & Co. have again received the order for the Cincinnati trophy for the Spring meeting at the Latonia races, which is to be presented by Mayor Julius Fleischmann. It is to be a silver loving cup weighing 150 ounces, and will have solid 14-karat gold trimmings. It will be a companion piece to the cup illustrated in The Circular-Weekly, July 2, 1902.

Wm. Clark, a negro, was arrested at Cincinnati last week with a satchel full of jewelry, watches, chains, rings and brooches. He confessed that a companion named Francis had two more satchels and about 100 watches. He admits that he and Francis robbed stores at Ashland, Va.; Quarnico, Va.; Jackson City, Va.; Alexandria, Harper's Ferry, W. Va.; Grafton, W. Va., and Cumberland, Md. The police are looking for Francis and are holding Clark, awaiting word from the West Virginia authorities.

Columbus.

The appraisers of the bankrupt estate of W. S. Tussing have not yet made their report. It is understood, however, that the stock will not amount to as much as was expected. The report will probably be filed within a few days, as the creditors are urging an early hearing.

The employes of the Columbus Watch Co. changed occupations Feb. 16 and engaged in loading the machinery of the plant for shipment to South Bend, Ind., where the local company has consolidated with the South Bend Watch Co. This plant has been located in Columbus 20 years and employed 150 hands. The company was organized in 1883 with E. Guerin as its first president. It was purchased by the Studebakers, owners of the South Bend factory, and the consolidation will result in making the new company one of the largest of its kind in the country. Many of the workmen will be employed by the new company at South Bend.

Harrisburg, Pa.

I. Peiser, agent for H. M. Jacobson & Son, Philadelphia, has opened an office at 1941 N. 6th St.

The J. W. Gitt Co., Hanover, Pa., will apply for a charter at the State Department to-morrow. The company will deal in jewelry and clothing.

The jewelry store of the late D. R. Thompson, N. 6th St., has been closed and the stock will be sold by Mr. Thompson's sister.

An effort is being made to settle the case of the two Adams Express Co. employes arrested some time ago for theft of packages of jewelry consigned to W. P. Denehey and other Harrisburg dealers.

ESTABLISHED 1854. **EXCLUSIVE DESIGNS IN ARTISTIC JEWELRY.** INCORPORATED 1883.

Fancy Diamond Mounted Goods, Diamonds, Pearls, Emeralds, Rubies, etc.

JUERGENS & ANDERSEN CO.,

92-98 State St., Chicago.

23-25 LOOIJERSGRACHT, AMSTERDAM, HOLLAND.

Cleveland.

TRADE CONDITIONS.

Salesmen for the wholesale houses here are making good reports of business done over their territory since starting on the road two or three weeks ago. From all appearances retailers over this section are looking for a very good business this Spring. The retailers of the city all have good reports to make for the time of year and are looking forward to the June business with the idea that it will be much better than it has been in several years past.

R. E. Burdick has been re-elected one of the directors of the Dime Savings Bank.

Karl Einig has been added to the traveling force of the Scribner & Loehr Co., and will cover a part of Ohio and Indiana.

William A. Wortman, Canton, O., has filed a bankruptcy petition in the United States District Court. His liabilities are placed at $1,120.98, and his assets at $1,775, with a $500 exemption.

Albert J. Miller, Massillon, O., was in Cleveland last week, taking the Knight Templar degrees in the Masonic Lodge. He also took advantage of the opportunity to call upon his friends in the trade here.

M. B. Rumsey has taken charge of the watchmaking department of the Kluger Optical Co., Superior St. The company is steadily adding to its stock, with the intention of operating a complete jewelry store as well as an optical establishment.

Chas. Ettinger, 112 Ontario St., is selling out his stock to prepare for the erection of a skyscraper at that location. The old building will be razed April 1, and the work will be pushed with the expectation of occupying the new building for the holiday trade next Winter. Mr. Ettinger will occupy the same quarters in the new building.

The business of J. M. Jenks & Co., Lancaster, Pa., which was recently purchased by the Scribner & Loehr Co., will be moved to this city and installed in the third story of their new building on Erie St. as soon as it is completed. J. M. Jenks becomes a member of the company through the purchase and will have charge of that special branch of the business here.

Three men recently robbed the jewelry store of John Heutner, 1616 St. Clair St. While one of the men leaned over the show case and talked to the proprietor, another read a newspaper. The third man suddenly ran behind the counter, opened the case, grabbed several watches and made for the door. His companions followed him and all three ran down the street.

The wholesale merchants of this city will make their excursion trips among their customers as usual this Spring, but they are planning to go over the ground they covered six years ago and shake hands with many they have not seen since that time. In addition they will take up some entirely new territory and arrange their schedules a little differently from what they have been in the past.

Pittsburgh.

TRADE CONDITIONS.

The severe storm which has enveloped the country for the past week was particularly severe in this district and caused an almost complete suspension of business. Therefore jewelers with their fellow tradesmen suffered the consequences. When the storm loosened its grasp here Friday, business at once picked up, and Friday afternoon and Saturday were fair days.

P. C. Gillespie, of Gillespie Bros., is in the east on business.

Steele F. Roberts, of E. P. Roberts & Sons, was in New York last week.

Harry W. Freudenheim, of Freudenheim & Levy, New York, was a guest of Pittsburgh friends last Friday.

W. W. Wattles, accompanied by his wife and family, left Thursday evening for Pasadena, Cal., to remain during the Winter.

The Liberty St. branch of the Pittsburgh Jewelry Co., and the main store of the company at 443 Smithfield St., will, May 1, go under the control of the Knickerbocker Jewelry Co., which is a reorganization of the Pittsburgh Jewelry Co.

J. A. Hardy, of the firm of the Hardy & Hayes Co., accompanied by his wife, left Thursday for Jamaica, where they will spend a month. Mr. Hardy has been in poor health for some time and this trip is taken in hope that it will prove beneficial.

Charles Sloan, of Charles Sloan & Co., 237 Fifth Ave., returned Thursday from the east, where he was spending his honeymoon. Mr. Sloan recently married Miss Rose Trigger, of Troy, N. Y., and the young couple are comfortably located in their new home on Mulford Ave., East End.

Gillespie Bros. have secured a five years' lease on a room adjoining the one they now occupy on the second floor of the Park building and will get possession of it April 1. This will give the firm double the space they now have. It will be fitted up with modern cases and used for a sales room tor art ware.

Retailers who purchased goods at Pittsburgh within the past week included Max Rudert, Tarentum; G. A. Spies, Monongahela; A. Roy, of Roy & Anderson, Braddock; S. Lijedahl, of Lijedahl & Lundberg, Braddock; D. Segelman, Homestead; Edward Priese, Homestead; J. Barger, McKees Rocks; J. Linnenbr Rochester; Frank Bloser, New Kensington; and E. A. Bloser, New Kensington

A sale that has proved of unusual in est to Pittsburgh jewelers and allowed s of them to secure bargains in rare art w and expensive silverware, bronze and glass goods was that conducted in this last week by the Fidelity Title and T Co., when a number of the personal p sessions of the late Recorder George Bonnhorst were disposed of. At the t of his death Mr. von Bonnhorst was possessor of one of the finest collecti bric-à-brac, expensive statues and art w goods in this portion of the State, many the articles having been given to him Pittsburgh millionaires while he was serv as recorder of Allegheny county. At death the greater portion of the collect was put on sale by the trust company Pittsburgh jewelers are said to have p chased many of the articles.

St. Louis.

TRADE CONDITIONS.

The wholesale trade was rather brisk during past week. Retail trade was inactive, caused p cipally by the disagreeable weather. A large ume of retail business, however, is not expec by local dealers at this season of the year.

It has been learned that no less t three "turf" companies who conduc "Get-Rich-Quick" schemes have just b discovered in this city. It is reported tha certain Pine St. jeweler in this city vested as much as $3,000 in one of the co panies. The jeweler is said to have mitted that he got back in dividends tween 200 and 250 per cent.

The Eisenstadt Mfg. Co. has just ma the first of a series of souvenir spoons be manufactured for the Louisiana Purch Exposition Co. The company has recei the contract for making all of these spoo The specimen just designed is a solid sil teaspoon. In the bowl is a design of Cabildo, the New Orleans building in whi the formal transfer of the possession of Louisiana territory from France to United States took place in December, 18 The handle is also appropriately engrav Each spoon will bear the words, "Offici and "Sterling."

W. M. Miller, Greer Depot, S. C., filed a petition in bankruptcy.

G. E. Bamberg, Bamberg, S. C., has s ceeded to the business of D. Dowling.

GUN METAL

Chains (Lorgnette and Vest); Fobs, Lockets, Purses, Chatelaine Bags, Coin Holders, Powder Boxes, Bon Bon Boxes, Match Boxes, Cigarette Cases, Cigar Cases, Cigar Cutters, Pencils, Knives, Spectacle Lorgnettes and many other articles.
The largest variety ever shown by any house, American or European.

SPECIAL PRICES FOR IMPORT ORDERS.

L. W. LEVY & CO., 194 Broadway, New York.

Newark.

Allsopp Bros., manufacturing jewelers, are out to erect a substantial factory on the E. cor. Camp and Orchard Sts., for which ans have already been drawn. Work on e new structure will be begun some time is week and the building is to be ready for cupancy in about three months. It will a four-story structure, with a basement, d will be built of Trenton brick, with blue-one trimmings. It will have a frontage of ft. on Orchard St. and 40 ft. on Camp St., d will cost in the neighborhood of $20,000. he first two floors will be occupied by the welry concern, who now rent factory room the building at the cor. of Hamilton and ruen Sts., which was recently damaged by e. The two upper floors will be divided suit the tenants. A 25-horsepower gine will be installed and there will also a six-horsepower engine, which will fur-ish power for the Allsopp factory entirely. The whole town is in sorrow over the d railroad and trolley accident that oc-rred here Thursday morning. The scene f the accident had been referred to in the layor's message as a "death trap" and citi-ens are hinging their indignation on the ct that the danger of the Clifton Ave. ilroad crossing was recognized by the ighest authority in the city and yet noth-g was done to remedy the evil. All last eek the city was in mourning, and many f those killed and injured in the wreck were friends and relatives of members of the manufacturing and jewelry trade of Newark. Among the killed was Evan H. Eastwood, Jr., the 19-year-old son of Evan H. Eastwood, one of the partners of the firm of Eastwood & Park, manufacturing jewelers at 81 Oliver St. Mr. Eastwood was not killed instantly, but was injured so seriously that he died shortly afterward in the German Hospital. Frederick Allsopp, son of Geo. A. Allsopp, of Allsopp Bros., manufacturing jewelers, was injured about the head and body.

Lancaster, Pa.

H. S. Meiskey, W. F. Meiskey and Ray Heiland, of Heiland, Meiskey & Co., spent several days in New York last week.

The new building of the Hamilton Watch Co. has progressed so far as to be under roof. The company has put in a steam heat plant, floors and shafting, and expect to have the building ready for occupancy in the very near future.

Fred L. Baker, the former salesman for the Non-Retailing Co., who was arrested in New York Thursday on changes of embezzlement, upon the arrival of the vessel that brought him back from Brazil, was lodged in the police station of this city Friday evening. He was brought here by James P. Walker, of the Philadelphia office of the Pinkerton Detective Agency, and arrived at 10.50. Baker disappeared Jan. 5 and it was only 45 days later that he was back in New York. Baker consented to return without extradition proceedings. The United States Consul at Rio Janeiro has $1,507 of the money found on Baker, and there are two trunks of jewelry at New York, which are expected to arrive in this city at once. Baker is a resident of Detroit, Mich. Charges of embezzlement as employe and agent and larceny by bailee have been preferred against him before Alderman Spurrier. The hearing on his case has been postponed until next week. In the meantime he will be held in the Lancaster County Jail, awaiting his hearing. Chief of Police Herr had an interview with Baker, who states he is not worried about the case, as he feels that he has done nothing wrong. As the company will receive its property, he thinks he cannot be held on the charge against him.

Otis Powers, formerly with Penrose Myers, Gettysburg, Pa., is taking a course in engraving at the Ezra F. Bowman Technical School. Harry Swartz, son of M. R. Swartz, York, is taking up watchmaking at the same school, as is also Russell Bell, York; Abram Sheirich, Millersville, Pa.; John Knox, Washington, Pa.; George J. Wagner, Wellsville, N. Y., and John J. Stortz, Point Pleasant, W. Va.

Chas. T. Blaum, Dothan and Greenville, Ala., contemplates opening a first-class jewelry establishment in Bainbridge, Ga.

Published by

THE JEWELERS' CIRCULAR PUBLISHING CO.,

11 John St., Cor. Broadway, New York.

Optical Notes and Briefs.

(*Additional Optical News on page 71.*)

Hearn & Harrison, Montreal, have registered as opticians.

S. C. Hone, Osceola, Wis., has added an optical department to his store.

F. Nichols, of S. T. Nichols & Co., Indianapolis, Ind., is on the sick list.

Mrs. Sawyer, optician, has opened an office in the Mower block, Stillwater, Minn.

A building owned by Wm. T. Steven, optician, Hartford, Conn., was destroyed last week by fire.

Dr. F. L. Thomas, Columbus, Ga., recently added a stock of jewelry to his optical establishment.

W. H. Hulbert is in San Francisco, Cal., in the interests of the American Optical Co., Southbridge, Mass.

Mathauer & Koester is the name of a new wholesale firm recently established in business in Detroit, Mich.

Dr. P. V. P. Dapoe, optician, Greenleaf, Neb., died recently on a train from St. Louis, while en route home.

F. L. Butters, optician, Des Moines, Ia., has made extensive improvements in the interior of his establishment.

Charley Myers, representing the Julius King Optical Co., last week visited the opticians in San Francisco, Cal.

The Montreal Optical Co., Montreal, Can., has obtained judgment against F. S. Caron, St. Eugene, Que., for $57.

J. G. Bear, Liberty, Mo., is taking a course in optics at the South Western Optical College, Kansas City, Mo.

J. R. Sheaffer & Son, Bloomfield, Ia., have added a balcony for their optical work to the rear of their jewelry store.

Charles H. James, representative of the eastern firm of Codman & Shurtleff, opticians, is now in San Francisco, Cal.

Chas. M. Stebbins, optician, formerly with D. C. Prudden, Kansas City, Mo., has opened an office of his own at 318 E. 9th St.

W. H. Allen, Glencoe, Minn., has completed a course in optics in the school of S. B. Millard, Litchfield, Minn., and accepted a position in Neche, N. D.

The executive committee of the California State Association of Opticians is trying to introduce a bill in the Legislature for the purpose of compelling all opticians to be licensed.

Briggs S. Palmer, president of the John W. Sanborn Co., Boston, Mass., accompanied by his workshop foreman, Joshua Taylor, has just returned from a trip to New York, Philadelphia and Baltimore.

Theo. Kampmann, optician, Bethlehem, Pa., has purchased the former jewelry business and residence of James K. Rauch at 26 S. Main St., and will take up his abode there in the Spring.

Bert Stevenson, with the Boston Optical Co., Los Angeles, Cal., was in San Francisco, Cal., last week to see his mother, who was very ill, but who is now on the road to recovery. Mr. Stevenson was formerly with the California Optical Co., San Francisco, Cal.

Portland (Ore.) opticians are urging the passage of the bill providing for a board to examine and license opticians. The law would protect the public from imposters and prevent "traveling opticians" from coming into competition with legitimate dealers. The local opticians seem to be in favor of some sort of city union for the mutual benefit of those engaged in the optical business.

Andrew J. Lloyd, of A. J. Lloyd & Co., Boston, Mass., accompanied by John W. Collison, sailed last week from Boston on the *Merion* to visit A. J. Lloyd & Co.'s European connections. An important feature of their trip will be the selection of a large variety of glass—about 27 different sorts—for use in making a new and desirable improvement in spectacle lenses. They will be absent about two months.

Syracuse.

George T. Jack left Monday for a two weeks' trip to Washington and Philadelphia.

S. W. Percy, traveling for W. P. Hitchcock, will move his home, Mar. 1, to Rochester.

A local paper last week published an interview with E. B. McClelland on the increase in the value of diamonds.

Word has been received from Lyons, N. Y., that the old factory of the Manhattan Silver Plate Co., of that city, has been reopened by the International Silver Co. Albert Sheldon, who was formerly connected with a silver plate factory in Oswego, has been selected superintendent; an inventory of the stock has been taken, and the plant is now being put in running order.

This portrait was made from an ordinary photograph. We make bas reliefs or intaglios in plaster or bronze. They are photographic likenesses.

THE PHOTO-MOULDING CO.,

213-217 EAST 24TH STREET,

NEW YORK.

QUERIES BY OUR READERS.

Note.—Questions under this department will be answered as promptly as possible. Some queries require careful investigation before a satisfactory answer can be given; hence such answers are often seemingly delayed. THE CIRCULAR-WEEKLY desires every jeweler to take advantage of this department.

ALBANY, N. Y., Feb. 11, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

We write you for information in regard to articles left here for repair and not called for. We are retiring from business and have in our possession watches and jewelry which have been here for one, two, three, four and five years, and have never been called for. What disposition can be made of them? Kindly answer and oblige, Yours respectfully, J. B.

ANSWER:—The points involved in this question come under the lien law of the State of New York, in the laws of New York of 1897, volume I., chapter 418, section 80, page 534, which prescribes for the sale of property in the possession of the lienor to satisfy his lien. Assuming that you have a lien on the watches and other jewelry in your possession, which have not been called for, you are entitled to sell them at public sale by giving the owners of the articles notice of the sale in writing, mailed to their last known place of residence, containing a statement of the nature of the debt or agreement, under which the claim arose and itemized statement of the claim and the time when due and brief description of the personal property against which the lien exists, the estimated value of such property and the amount of the lien at the date of the notice, the time and place of sale of the property, the day for which shall be mentioned in the notice and shall not be less than 25 days from the service of the notice, together with a notice that if the property is not redeemed and the claim paid within 10 days from the date of service of notice, the property will be sold at public auction. The notice must be verified by you to the effect that the lien upon it is valid, and that date when the claim upon which such lien is founded is due, and that the claim has not been paid, and that the facts stated in such notice are true to the best of your knowledge and belief.

The sale of the personal property shall be at public auction to the highest bidder and shall be held in the city or town where the lien was acquired after the time for the payment of the amount of the sale specified in the notice required to be served as above. Notice of such sale, describing the property to be sold, stating the name of the owner, and the time and place of such sale, shall be published once a week for two consecutive weeks in a newspaper published in the town or city where such lien is held, and such sale shall be held not less than 15 days from the date of the first publication.

From this you will see that the notice must be given at least 25 or 30 days before the date of the sale, so that the owner shall have 10 days after receiving the notice in which to come in and pay, and redeem his property, and if he fails to do so the time and place of sale shall be advertised for two weeks thereafter. At any time before the property is sold the owner may redeem it by paying the lienor the amount of the claim and all the legitimate charges and expenses. If the property is sold, the lienor selling it, shall first pay the charges and expenses attending the sale, then pay his claim against the property and other charges, and the balance, if any, shall be held for the owner and notice that it is so held shall be served on him either by mail or personally; if he does not claim it within 30 days such balance shall be deposited with the treasurer or chamberlain of the city or village or the supervisor of the town, where such sale was held. There shall be filed with such deposit the affidavit of the lienor, stating the name and place of residence of the owner of the property sold, if known; the article sold, the price obtained therefor, that notice required was duly given, and how served upon such owner and that such sale was legal and how advertised. There must also be filed with the deposit a copy of the notice served upon the owner of the property and of the notice of sale published or posted as required by law.

The above are the legal steps necessary to be taken in order that you may not be liable in any way for disposing of the property. But you would probably be safe in selling the property after having made reasonable endeavor to find the owner, satisfying his claims out of the sale and holding the balance subject to the order of the owner, because you have already been in possession of it so long that it is not likely that it will ever be claimed, and then if it was the most the owner would be entitled to would be damages to the amount of the value of the property over and above his indebtedness to you.

KINGSTON, N. Y., Feb. 13, 1903.

Editor of THE JEWELERS' CIRCULAR-WEEKLY:

Will you kindly advise us if there is any work published treating of the finishing of metal ornaments, statuary, etc., made of zinc in the different French barbedienne finishes, as the plain barbedienne, antique verde, Pompeian green and others? Most of the books on plating and coloring of metal do not give any particulars as to these methods. M. B. P.

ANSWER:—There are not many books written in English treating on this subject. The following two books, however, might perhaps be of help to you:

(*a*) "The Practical Brass and Iron Founders' Guide," by James Larken. Illustrated, 12mo., 394 pp. Price, $2.50. This treats of casting of bronze; modern method of founding statues; bell founding; casting on to other metals; new process of casting iron and other metals upon lace; embroideries, fern leaves and other combustible materials; Fontainemoreau's new alloys of zinc, a substitute for bronze, copper and brass; some modern bronzes; aluminum bronze, etc.

(*b*) "Modern Foundry Practice," by John Sharp, M. E., with practical examples, rules and tables. 260 illustrations and 12 folding plates. Price (cloth), $8.00. This treats of materials used in moulding; green sand, dry sand and loam moulding; malleable cast iron; case hardening; casting on to other metals; bronze fine art work—statue foundry; bell founding; cleaning and dressing castings; examples of foundries; costs of moulding and casting; alloys.

There may be some French or German books which treat the subject more elaborately, but these are among the best printed in English.

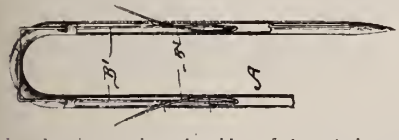
The Latest Patents.

ISSUE OF FEB. 17, 1903.

720,553. BUTTON-BADGE AND PIN THEREFOR. William D. Beetchenow, Newark, N. J., assignor to William Hornich, Jr., Newark, N. J. Filed April 27, 1900. Serial No. 14,564. (No model.)



In a badge, the combination with the shell or body having a recess formed a little in from its

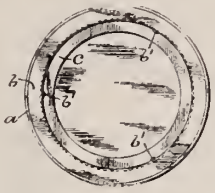
outer edge, of a fastening pin integrally embodying a holding portion adapted to fit into said recess and be retained through the pointed end of said pin extending diametrically across the face of the body and the opposite end of said pin being bent to lie in a chord of the circle of said body, said last-mentioned part projecting out from said recess and lying in a plane away from the plane of the said body-surface and normally holding the pointed end of the pin away from contact with the surface of said body.

720,601. SAFETY HAIR-PIN. Asa H. Mosher, Westfield, N. J. Filed March 22, 1902. Serial No. 99,467. (No model.)

In a hair-pin, the combination with the tubular members having a plurality of perforations, of a wire member inserted in the upper perforations, its ends extending downwardly in said tubular members, respectively, then bent back upon them-

selves bearing against the sides of the tubular members opposite the sides containing the lower perforations, and then crossed over to the said opposite side, said ends resting when in their lowermost position immediately below said lower perforations and adapted to be projected through them when the wire member is drawn upward and to be held in either position by the frictional contact of the bent portions with the sides of the tubular members.

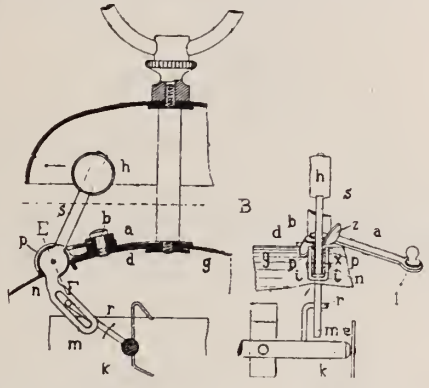
720,616. STUD. Eugene Pringle, Gloversville, N. Y., assignor, by mesne assignments, to United States Fastener Co., Portland, Me. Filed March 20, 1888. Serial No. 267,861. (No model.)



In a member of a stud-and-socket fastener, a

stud, comprising a head, an engaging groove below the head and a flange below the groove, an eyelet-turning piece within the stud, and an eyelet to attach the stud to material, having its tubular portion passed through the material and upset against the eyelet-turning piece.

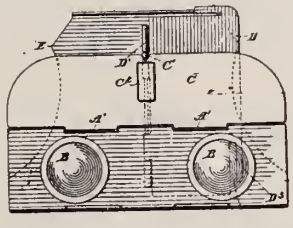
720,798. LOCKET OR SIMILAR ARTICLE. Thomas Giguere, Attleboro, Mass., assignor to the Daggett & Clap Co., Attleboro, Mass. Filed Nov. 14, 1901. Serial No. 82,229. (No model.)



In a locket or similar article, the combination with the shell *a*, of an annular rim *b* secured to the shell *a* and provided with a cylindrical face, the points *b'* *b'* projecting from the cylindrical

face of the rim *b*, and the ring *c*, as and for the purpose described.

720,801. ALARM-CLOCK. Jakob Hauser, Schramberg, Germany, assignor to Hamburg-Amerikanische Uhrenfabrik, Schramberg, Germany. Filed Nov. 11, 1902. Serial No. 130,898. (No model.)

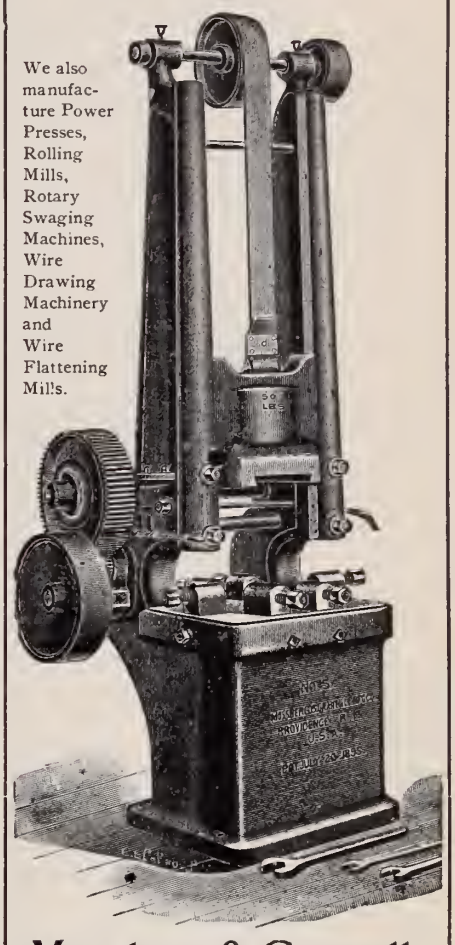


In clocks with exterior gong, the combination of a casing, a bridge-piece secured to said casing, upstanding lugs on said bridge-piece, a pivotal axle journaled in said lugs, a clapper journaled upon

said pivotal axle, comprising a clapper-head, a clapper-rod, a hub and a slotted crank-arm, part of the said bub freely passing through and moving in a slot provided in said casing and in said bridge-piece, washers between the said lugs and the said clapper-hub, means for oscillating the said clapper and means for arresting it.

720,849. STEREOSCOPE. Arthur Schwarz, Steglitz, near Berlin, Germany. Filed Sept. 30, 1902. Serial No. 125,367. (No model.)

A stereoscopic apparatus comprising a lens carrier, a top and a bottom pivotally connected with said



lens-carrier at the upper and lower edges thereof respectively, a partition arranged to swing about an axis at right angles to the plane of the lens-carrier, and means for holding the said parts together in such a manner that the partition will extend in a longitudinal plane between the two lenses.

720,859. SPECTACLES OR EYEGLASSES.

FOR
Rapid Production
USE
Automatic Drops.

We also manufacture Power Presses, Rolling Mills, Rotary Swaging Machines, Wire Drawing Machinery and Wire Flattening Mills.

Mossberg & Granville Mfg. Co., Providence, R. I.

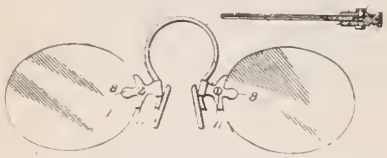
CANDO.
THE - - - -
Royal Silver Polish.

We have taken hold of "Cando" silver polish, and propose to sell it to the retail jewelry trade for the two following reasons:



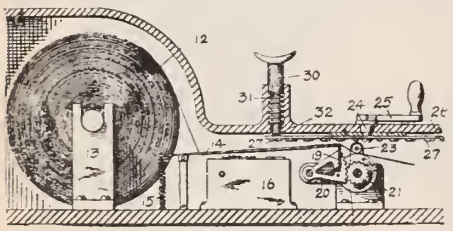
1st. That the price is maintained throughout by the Cando people.
2d. That it is as good as the very best.

We have on hand now, and in process of making, the handsomest line of Elk Buttons on the market. We would be pleased to send you a memorandum package, if you wish us to do so.

L. C. REISNER & CO., Lancaster, Pa.

Barclay T. Trueblood, O'Neill, Neb. Filed June 16, 1902. Serial No. 111,970. (No model.)

In a device of the character described, the combination with a lens having a grooved periphery, of a mounting, a flexible strip within the groove

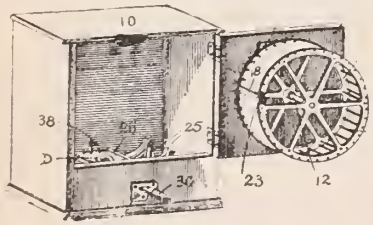


and inclosing the lens, and a rotatable device extending through a portion of the mounting and engaged by the said flexible strip, the said rotatable device being exteriorly accessible for tightening or loosening the said strip.

720,939. OIL-SUPPLY-CONTROLLING MECHANISM. Albert E. Lovett, Jersey City, N. J., assignor by mesne assignments, to Municipal Lighting Co. Filed Jan. 9, 1900. Renewed April 1, 1902. Serial No. 100,891. (No model.)

The combination with a fluid-supply pipe, of an automatic valve therein which permits a predetermined flow of the fluid, but is closed by an excess of such flow, a valve for relieving the pressure in the supply-pipe, and a clock mechanism for operating the same at any predetermined time, as set forth.

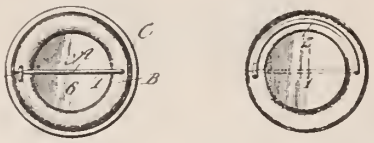
720,957. WORKMAN'S TIME-RECORDER. Charles E. Ongley, New York, N. Y., assignor, by mesne assignments, to the United States Electric Clock Co., New York. Filed Sept. 13, 1899. Serial No. 730,356. (No model.)



In a time-recorder, the combination of hour and minute hands arranged on a clock-dial with the hour-hand above the minute-hand, a depressible plate for guiding a strip of paper over the clock-dial, a printing mechanism for printing a number or character to indicate the person operating the machine on the strip of paper, and for depressing

the plate to record the position of the hour and minute hands on said strip of paper, and a paper-feeding mechanism for advancing the paper after an impression has been made thereon.

720,958. WORKMAN'S TIME-RECORDER. Charles E. Ongley, New York, assignor, by mesne assignments, to the United States Electric Clock Co., New York. Filed May 14, 1900. Serial No. 16,556. (No model.)



In a time-recorder the combination of a casing, a shaft journaled therein, a handle secured on the outer end of the shaft, an index for setting said shaft, a cylindrical paper-carrier secured on the

inner end of the shaft, embossing points or prickers arranged in a circle in positions corresponding with the numerals of an ordinary clock-dial, an embossing point or pricker for the hours and one for the minutes, mechanism for turning the hour and minute points or prickers in the opposite direction from the hands of an ordinary clock, and means for operating said parts to perforate the paper on the paper-carrier to form records each consisting of perforations showing a complete dial with the position of the clock-hands indicated thereon which will read correctly from that side of the paper from which the impression is made.

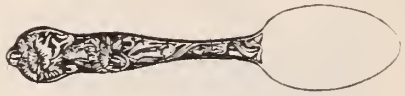
721,008. BADGE. George H. Brooks, Louisville, Ky. Filed Oct. 7, 1902. Serial No. 126,271. (No model.)

The combination, with the badge-backing having a circular groove near its edge, of the fastening-pin formed of a spring-wire having at one end a hook and an adjacent shank which is bent twice at right angles, also a semi-circular body or middle portion which lies in the aforesaid groove, also

a pin proper which forms the other terminal of the wire, the said fastening being inserted through holes in the backing and the outer shoulder or bend of the shank engaging the backing.

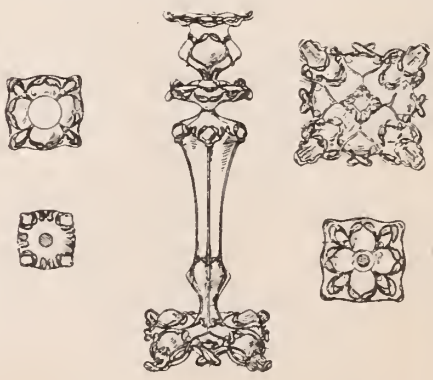
721,054. MACHINE FOR COVERING EYEGLASS-CASES. Erick W. Linquist, Weymouth, Mass., assignor by mesne assignments,

to Irving L. Drake, Providence, R. I. Filed June 12, 1902. Serial No. 11,429. (No model.)



A machine for covering eyeglass-cases, having, in combination, a die shaped to enter the space underneath the lip of an eyeglass-case and a plunger adapted to co-operate with the die to press the covering material against both sides of the lip.

Design **36,228.** WATCH CASE. Louis Camille Calame, Bienne, Switzerland. Filed June



12, 1902. Serial No. 111,413. Term of patent 14 years.

Design **36,229.** HANDLE FOR SPOONS OR SIMILAR ARTICLES. Eustace Crees and Charles S. Court, Providence, R. I., as-

signors to the Watson & Newell Co. Filed Dec. 26, 1902. Serial No. 136,756. Term of patent 3½ years.

Design **36,231.** CANDLESTICK. Emile Bachle, Meriden, Conn., assignor to International Silver Co., Meriden, Conn. Filed Jan. 8,

1903. Serial No. 138,322. Term of patent 3½ years.

Design **36,230.** HANDLE FOR SPOONS OR SIMILAR ARTICLES. Eustace Crees and Charles S. Court, Providence, R. I., assignors to the Watson & Newell Co. Filed

Dec. 26, 1902. Serial No. 136,757. Term of patent 3½ years.

EXPIRED PATENTS.

[Reported specially for The Jewelers' Circular-Weekly by R. W. Bishop, Patent Attorney, Washington, D. C., who will furnish complete copies of patents at the rate of 10 cents each.]

Issued Feb. 16, 1886.

336,107. KNIFE-BOLSTER. George Havell, Newark, N. J.

336,112. COMBINED ERASER AND KNIFE. Thomas Holdsworth, Elyria, O.

336,116. HANDLE FOR CUTLERY. S. E. Jeralds and E. R. Lawton, Cheshire, Conn.

336,198. METHOD OF MAKING CUTLERY. C. O. Appleby, New Haven, Conn.

336,250. PENCIL-HOLDER. M. C. Meigs, New Haven, Conn.

336,314. KNIFE. W. B. Hatfield, Sheffield, England, assignor to Joseph Rodgers & Sons, Ltd., same place.

336,316. SATCHEL-FASTENING. B. F. Hillery, New York, N. Y.

336,323. COFFEE-POT HANDLE. Augustus Jahant and De Forest Parker, Akron, O.

336,360. WATCH-REGULATOR. G. I. Tuttle, Aurora, Ill.

336,460. AUXILIARY GOVERNING-SPRING FOR TIMEPIECES. Marshal Wheeler, same place.

336,532. UMBRELLA. U. G. Steinmetz, Philadelphia, Pa.

336,536. BAG-LOCK. Benno von Eigen, Newark, N. J.

336,540. PEN-HOLDER. John Wyttenbach, Rockport, Ind.

Designs issued Feb. 18, 1896, *for* 7 *years.*

25,168. SPOON. Amaziah Garner, Lynchburg, Ohio.

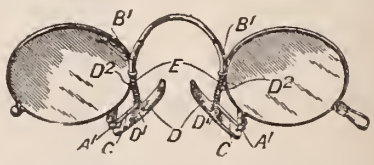
25,172. CUFF-HOLDER. L. P. Kleiderer, Henderson, Ky.

Designs issued Aug. 15, 1899, *for* 3½ *years.*

31,388. BADGE. E. R. McMaster, Buffalo, N. Y.

31,400. MATCH-BOX. Lebrecht Fritzsche, Newark, N. J.

31,401. MATCH-BOX. W. H. Barbour, New York, N. Y., assignor to E. G. and F. H. Webster, same place.



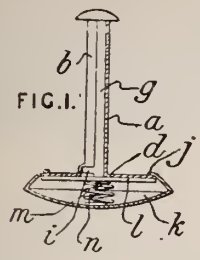
ENGLISH PATENTS.

(Abridgements of Specifications from *The Illustrated Official Journal.*)

ISSUE OF JAN. 14, 1903.

18,824. EYEGLASSES. S. L. Goldman, 42 Goswell Road, London. Sept. 20.

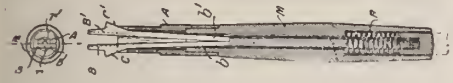
A short arm C, pivoted at A^1 to the rim, carries



a pivoted placquet D. An extension D^2 slides in the tubular ends B^1 of the fixed bridge. A spring E tends to press the pivots D^1 downwards, and the placquets inwards. The invention has special reference to pince-nez of the kind described in Specification No. 14,295, A. D. 1897.

19,340. COLLAR STUDS. F. Jones, 37 Bromboro' Road, Lower Bebington, Birkenhead, Cheshire. Sept. 27.

A collar stud is shown in section in Fig. 1. A tubular stem *a* is provided with a flanged longitudinal slot *b*, and is attached to a plate *d*, which is provided with a keyhole-shaped opening corresponding to the cross-section of the stem *a*, and also with two lateral recesses on the underside. The plate *d* is placed under inturned edges *j* of a base *k*, within which is a loose plate *l* held

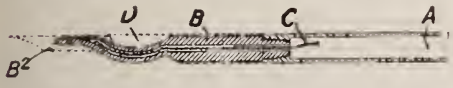


against the plate *d* by springs *m*, *n*. A headed shank *g*, provided with a projection *i*, is passed down the stem *a*, and the projection is engaged

with one or other of the lateral recesses in the plate *d* by rotation.

19,391. CLOCKS AND WATCHES. H. A. Beguelin, 47 Rue du Parc, Le Chaux-de-Fond, Switzerland. Sept. 28.

Keys applicable to winding-squares of any size. A tube A, terminating a larger tube M, contains a pair of self-separating springs *b*, b^1 which pro-



trude as jaws B, B^1 and are attached to a stem C within the larger tube. A spring R presses the stem backwards, so that the jaws, having beveled external lugs *c*, c^1, overlying the end of the small tube, are normally closed together, and the grooves *r*, r^1, in them then form a square barrel for the smallest-sized winding-square.

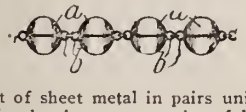
ISSUE OF JAN. 21, 1903.

19,571. RESERVOIR PENS. O. Wall and R. C. Hughes, both of New Plymouth, Taranaki, New Zealand. Oct. 1.

The ink-conducting tube B, provided with a

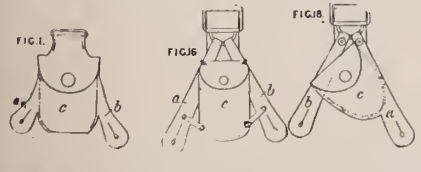
bend D, terminates in a flat feed-part B^2, split to receive the end of a cord C, which is preferably formed of plaited horse-hair. The reservoir A is preferably made of brass.

19,675. NECKTIE RETAINERS. J. Rickard, 22 Harvist Road, North Kensington, Middlesex. Oct. 2.



A necktie clip or fastening is shown in front view in Fig. 1. A piece of wire is bent to form a central horizontal loop *b* to take one end of

the necktie, lateral loops *d* leaving a space *c* on each side of the collar stud, and loops a^2 to receive the collar, and is provided with terminal knobs *e*, ornaments, sharp points, or hooks to engage the necktie.

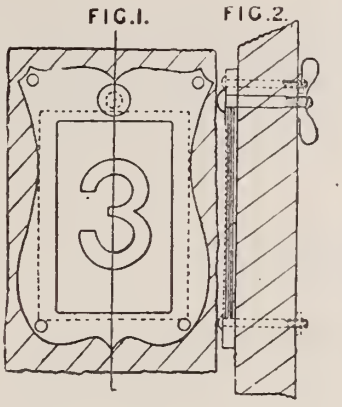


19,756. CHAINS. E. Burkhardt, J. Burkhardt and R. Huber, all of 1 Louisenplatz, Pforzheim, Germany. Oct. 3.

Ornamental Chains.—Hemispherical cups *a*, or other bodies having raised or recessed surfaces, are

stamped out of sheet metal in pairs united by connecting strips *b*; the cups are then folded one on the other, and the strips or tabs at the free ends are soldered together to form links as shown.

20,048. BRACES; PURSES. P. A. Martin,



Granville St., Birmingham. Oct. 8.

Relates to braces provided with purses, and consists in placing the purse between one pair of the front tabs. Fig. 1 shows one form, in which the purse *c* and tabs *a*, *b*, are formed from one piece of material. Fig. 18 shows another form, in which one only of the tabs *a* and the purse *c* are made of one piece of material, and Fig. 16 shows another form, in which the purse *c* is made separate from the tabs *a*, *b*, and is attached to them by suitable means. Several other modified arrangements are described.

ISSUE OF JAN. 28, 1903.

19,850. TIME INDICATORS. W. Buchan, 2 Rowley St., Blyth, Northumberland, and R. G. Buchan, 8 Priory Park Road, Sudbury, Harrow. Oct. 4.

Signals, indicator or visible, for showing the

time when sleepers should be called consist of numerical tablets on the door of the sleepers' room or house. The tablets may, as shown, be in a pocket bolted to the door, and an additional bolt may prevent change from the outside, or the tablets may be in a pocket with its mouth on the inside, or they may be pivoted behind an aperture.

Complete specifications accepted Jan. 28, 1903.

1902.

2,627. TIME-RECORDER. Llewellin.

6,216. CLOCK. Hamburger, Herrnstadt & Forstl.

7,272. AUTOMATIC CALENDAR. Peatfield.

17,276. CARD-CASE. Wilcox.

21,105. BUCKLE. Schmahl.

21,470. ELECTRIC CLOCK. Carruthers.

27,659. BELT. Teufel.

27,879. HANDLE FOR KNIFES AND FORKS. Muller.

Applications filed Jan. 19 *to Jan.* 24, 1903.

SOLE AGENTS,

TRADE MARK

14 E. 17th St., New York.

RETAIL MERCHANDI

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan that they are utilizing in connection with their business.

PRIZE ESSAY COMPETITION, NO. 10.

SUBJECT:

"How to Develop a Watch and Watch-Repairing Department."

DECIDE, first, on a location, and see that the place which you select is made suitable for the convenience of your customers, with the necessary show cases, chairs, looking glasses (handy for the ladies), counter with glass top and sides, and a nice carpet on the floor.

The extent to which the shop will be set up and furnished will, of necessity, depend greatly on the funds in hand. A great deal can be done, however, to make a place look business-like in an inexpensive way if the watchmaker will give some thought and perseverance to the subject. Always remember in choosing your furniture, carpet, mirrors, etc., to see that they harmonize with the color of the room, or paper the latter to harmonize with them. This is important. One can easily recall times when upon entering some stores, however small, they looked cosy and business-like, and the only reason for it appears to have been the taste displayed in making the whole place harmonize in color.

Now we get to the watchmaker himself. He must decide once and for all to be courteous under all circumstances, and to wear a good suit of clothes of tasty pattern that becomes him; if he works without his coat he should wear a pretty patterned shirt, with cuffs, and gold or gold-filled links of pretty design. His boots should always be polished; hair always cut and trimmed and he should shave daily unless he grows a beard. He should learn to do the latter himself if necessary.

It is very important in opening up or introducing a new business to start right, and one of the main points is a clean, up-to-date shop, as well as a clean, good-humored, well-dressed (not gaudily) watchmaker or attendant. Without these prime essentials a man may be ever so clever a workman and good fellow and yet not cater to the best trade, for the best of the trade go where they find everything up to date, and make a point of avoiding a slovenly-kept store and storekeeper. They reckon his ability must equal his caste, which is *nil*.

Next in order are his tools. He should possess a good kit, kept in order and not scattered promiscuously all over the bench. The bench should be cleaned up every night, tools put away, and when once this habit is formed it becomes a simple matter, indeed. The bench should be near the counter, where customers can see the watchmaker.

Repairs, when taken in, should be ticketed and a duplicate ticket given to the customer, and before being again delivered should be entered in a book giving number and description of the watch, nature of repairs, charges and owner's name, and date of delivery.

Watches, when they come in for repairs, should be hung up in a neat case, with glass door, velvet or plush back, and brass hooks (color of velvet to suit general surroundings). When the day's work is finished, tools put away, the watches under repair should also be taken down and put in the safe as a guard against loss.

If a watch should come back after repairs with a complaint that it "will not go," and if, after an examination, it is seen that it had not received rough usage, be candid with your customer, apologize and agree to do the needful free of charge, even after a lapse of nine or 11 months. Many watchmakers try to get an extra dollar by some excuse that the pallet-stone or ruby pin has fallen out or jewel cracked, which is a decided mistake and loses to them many good customers, together with the customers' friends, though not apparent at the time.

The cost in time to the watchmaker of doing the needful (if nothing is broken) is very little, but the generous treatment of which the customer feels he is the recipient, is worth dollars to the watchmaker as an advertisement. More frankness and less duplicity is the keynote of success in developing a watch repairing department.

I have left the question of stock for the last consideration. The selection of this will depend on the financial standing of the watchmaker. However large or small it may be, it should be selected with the greatest care. Do not let wholesale houses or travelers induce you to take stock on credit that you would not be willing to order if you had the cash. This is the stumbling block on which most watchmaking concerns get a serious fall.

Let your motto be, "No Credit," or, if credit is unavoidable, accept it only on absolutely ready salable stock or material in daily demand, and in small quantities. Make it a point, moreover, to pay as you promise, for, by this means you maintain a reputation for honesty in the trade, and if you carry out the suggestions previously given in regard to a clean, up-to-date store, an always clean and tidy appearance, frank and generous treatment of your customer, a fair profit on your goods, satisfactory work, with an ever-present desire to do your best honestly in every transaction, you are bound to succeed.

Finally, do not allow sentiment to interfere with business. Be regular in your hours, on time with your repairs, avoid the sociability which centers in the saloon and keep your business before the public by a tasteful window display and judicious advertising at regular and frequent intervals. This coupled with good health, should develop a watch and watch repairing business with credit and satisfaction to the party who gives it a fair trial. W. H. H.

A Few Facts on Business Building.

THE jewelry dealer who is about to begin advertising should study his field thoroughly and well, but once having made up his mind, ought to start forthwith and with vigor. The very first matter which he is to determine is the amount which he intends to expend. Regarding this amount, there is room for great difference of opinion. The safest way to determine, and the one which is most generally in vogue, is to make the amount dependent upon the volume of business which is done.

To get at the desired outlay, the popular method is to decide upon just what percentage of this volume shall be set aside to be spent on advertising. This amount varies popularly, some inclining to think that two per cent. is sufficient, others thinking that 5 per cent. is not too much. However that may be, it will readily be appreciated that if the advertising is successful, it will soon pay for itself. If it does not do so, there must be something fundamentally wrong with matters. In that case it is well to analyze quickly, and to "about face." Either the advertisements are in fault, or the backing, the conduct of the store, is not proper.

This sum, two to five per cent. of the volume of the business, is naturally based upon a year's trade. Whatever the sum thus set aside, on $100,000 say $2,500, though not large, if judiciously expended, can do a great deal, even if spread out to cover a year. That gives ample time to discover all mistakes, rectify them, and start you properly on the right course. One is not to be discouraged if the returns during the first

Grand HINTS to JEWELERS

few months are not satisfactory, but vigilance should not be relaxed to discover possible mistakes. Nor, if the returns are satisfactory should one be less careful in watching, trying to deduce the causes of that success. In advertising, nothing should be taken for granted, and the acquisition of habits of observation will at some time more than repay.

Of course that sum, $100,000, represents the sales of a pretty large business, but the proportion holds good for smaller amounts. The village or town store, which does a business of about $20,000, will find that $500 will almost go as far proportionally in that smaller community as $2,500 would in the large city.

In the town or village a small sum will buy nice space in the leading local newspaper. If it is a weekly, your advertisement should appear in every issue. If it is a daily, two or three appearances a week, so that they are regular, ought to be sufficient.

In the city, especially the leading ones, it is a question whether the retail dealer should use the newspaper at all. That it is a good medium, indeed the best of mediums is now generally conceded. But space in the city daily is so expensive that it eats up the small appropriation too rapidly.

Then, too, there is another reason why the newspaper, excellent medium though it is, is not as effective for jewelry as for most products. This holds good as far as the village paper is concerned, too. It is that the jewelry advertisement ought, from its very nature, to be artistic. The newspaper, even those using the best quality of paper, is destructive of artistic results. The newspaper is an institution that depends upon speed for success, and speed and artistic effects are inimical.

By artistic effect is meant that the whole genius of the jewelry advertisement is dependent upon its æsthetic appearance, and the impression it makes. To this result it is essential that it be printed on fine paper; that the type to be employed be such as to suggest fine products; that the cuts be half tones or illustrations of the best quality, and that the language be dignified, and such as to raise the thoughts of the reader to things that are the essence of the beautiful.

The jewelry advertisement in the newspaper must forego much of this, then; but, since it is so excellent a medium in every other way that it offsets the disadvantage, it can be used limitedly for good results, even when the appropriation is only a moderate one.

But the main efforts of the jewelry dealer should be expended on circularizing and on booklets and that general class of literature. If the dealer lives in a comparatively small community he can have these circulated throughout the town to advantage. If there are no ordinances inimical, he can have a house-to-house distribution from time to time. If he lives in a large city, it should be his effort to acquire lists of the responsible persons living in his neighborhood and see that these are supplied with booklets, etc., occasionally—often enough not to permit himself to be forgotten.

There is one essential never to be overlooked by the dealer, whether in the large city or the small town. That is to see to it that never a parcel is sent out, no matter to whom, which does not contain a full complement of this literature. Unfortunately, as far as this is concerned, the jeweler sends out very few parcels. His goods come in such small boxes that the buyer almost invariably carries his purchases with him.

But there is another thing just as essential. This is that the dealer should see to it that a good supply of the full complement of his literature should always be found upon the counters of his store, and that every one who calls should be made to feel that it is to his advantage to carry away a set of these. They should not be pressed upon the caller, perhaps, but every bit should be gotten up so attractively that the latter should feel like carrying a set away, to admire and digest at his leisure.

Before turning to the manner in which the advertisement is to be presented—the type display, etc., and the matter the literature or announcement is to contain, to be subjects for discussion later on, two or three axioms or fundamental truths had better be adduced.

These are common sense deductions, not applicable to jewelry advertising alone, but truths which experience has decided to be essential to all good advertising. One of these, for it is not attempted to give them in the order of their importance, which is after all but relative, is that if you choose to do newspaper advertising, you should be careful in choosing your newspaper if there is more than one in the community.

In the case of the jeweler that newspaper which is read by the better class of people is always the better and cheaper, regardless of cost. Even if the bulk of your customers read the other newspaper you had better identify your advertisement with that read by the more cultured or the more select. If your advertisement were seen in the former and not in the latter, it would be detrimental to your interest. But a wise course in this case would be to advertise in both papers. One thing always to be borne in mind is that the lower-priced advertising rate may not be the cheaper. Therefore, the converse is also true, the higher priced is not always dearer.

Of course, in calling attention to the next truth most may feel that this is so well known that it might have been omitted. But sometimes what has become obvious to most people has been strangely overlooked by one here and there. This truth is, never mention the name of a competitor. In fact, it is wise to go a step farther and never to make any reference of any kind, kindly or unkindly, to anything of a competitor's—neither himself, his policy, his store nor his advertisements. If you do break this rule, no matter how badly you speak of him, you are at worst giving him a free advertisement. If you speak well of him or his, you are foolish. If you speak ill of him or his, you are more foolish—the public will not think worse of him, but will discredit you.

About the question of mentioning prices. If your advertisement is a general one, merely meant to draw the public's attention to your store, avoid mentioning a price at all; but make your announcement so interesting that they will read it for its own sake.

But if you are to mention a price, be very sure that that price is worth while. Do not call attention to any special article, unless you are very sure that that price is one which will satisfy people that in dealing with you they are getting a return which they cannot duplicate elsewhere.

THE ONLOOKER.

A Little Free Advertising.

EVERY few days some interesting or amusing incident occurs in your store, says the *Advertising World*. You tell your friends about it and they think it's very good; you tell it at home and they enjoy it. Write it up and put it in the paper. And when you do something new in your store — make an improvement — put that among the local items in the local paper. It's a good piece of news and at the same time it's advertising.

The local reporter can give you more free advertising than any other man in your town, and it would be a profitable investment to cultivate him. He is always hungry for items; he has several columns to fill each day and will look upon you as his friend if you'll help him fill it. Give him a good cigar and occasionally make him a present of something new you have just received. Tell him you want his judgment on the article. These little attentions touch the susceptible heart of the newspaper man, who probably is working for a small salary.

See if you can't get something about your store in the local paper every day, along with your regular advertising, which ought to be changed every insertion. You'll keep the people thinking about your store if any one will. Try it and see how it works.

Agency cannot be proved by the declarations of the alleged agent. (39 S. E. Rep. 421).

Questions as to the makers of certain lines of goods, where to buy certain lines, where certain kinds of work are done, the owners of certain trade-marks and other matters relating to the buying branch of a jewelry business will be cheerfully answered under this department. *All queries are also answered promptly by mail.*

NORWICH, Conn., Feb. 11, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Kindly let us know who sell or make painted shirt waist sets and hat pins; we mean the large button sets like enclosed description. C.-P. Co.

ANSWER:—Write to J. H. Gallagher, 409 Pine St., Providence, R. I., or the Keramic Art Novelty Co., 90 Davis St., Providence, R. I.

LINCOLNTON, N. C., Feb. 9, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Will you please inform me where I can get cheap Alpha Tau Omega fraternity stickpins? W. M. S.

ANSWER:—John F. Newman, 18 John St., New York.

DANVILLE, Ky., Feb. 12.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Who manufactures and sells "Gruen" watch cases? M. & McM.

ANSWER:—The Gruen National Watch Case Co., 31 East Fifth St., Cincinnati, O.

FRANKLIN, Pa., Feb. 14, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Can you furnish us with a pocket directory of manufacturers and jobbers and importers of fine china, cut glass, etc.? C. & H.

ANSWER:—We do not publish a directory of cut glass and china ware manufacturers, but the "Vest Pocket Directory" of the jewelry and kindred trades, published by the Jewelers' Circular Pub. Co., contains a list of cut glass manufacturers and also importers and jobbers in fine china and art glass who sell to jewelers.

WATERBURY, Conn., Feb. 14, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Would you please tell me the name and address of two or three wholesale dealers in wall papers and oblige, J. F.

ANSWER:—Alfred Peats & Co., 41 W. 14th St., New York; Gledhill Wall Paper Co., 543 W. 34th St., New York; National Wall Paper Co., 225 Fourth Ave., New York; E. Richard Thibault, 50 E. 13th St., New York; Robert Graves Co., 483 Fifth Ave., New York.

HAMILTON, N. Y., Feb. 14, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
I write to ask you if you can help me to find who make a pattern in silver flat ware called the "Rose?" The one I want is not the rose pattern made by the firms whose names I enclose. F. N. T.

ANSWER:—Besides the firms mentioned by you, the Gorham Mfg. Co., 19th St. and Broadway, New York, make a rose pattern, and Reed & Barton, Taunton, Mass., and 17th St. and Broadway, New York, have a "Wild Rose" pattern in teaspoons.

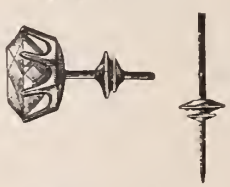
WEST DERRY, N. H., Feb. 11, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Where can I procure blank leases to be used in instalment contracts in this and other States. J. W. B.

ANSWER:—Blank leases good in all States cannot be purchased in printed form. These contracts are generally printed to order, and so as to conform to the laws regarding leases and instalments in the particular States in which they are to be used.

NEW YORK, Feb. 13, 1903.
Editor of THE JEWELERS' CIRCULAR-WEEKLY:
Did you ever receive an advertisement using the phrase "Riding Bow Temples when in a certain position stay there," and also telling of an electric pan for cementing lenses? If so, will you kindly let us know the name of the advertiser, and oblige, J. B.

ANSWER:—We have no record of any such advertisement appearing in these columns. Can any reader of THE CIRCULAR WEEKLY supply the information desired?

The 18th annual issue of the Almanach des Horlogers et Bijoutiers has just been received. Its pages are filled with reviews of new things in horological progress and some good historical articles on the science, nearly all of which are well illustrated. The present issue seems to keep up the high standard established by its predecessors.



Burglars last week attempted to enter the store of H. Thoman, Woodbury, N. J., but were frightened away before securing any plunder.

MIGHTY MEN O' THE HAMMER.

The services of the two best-known auctioneers at the cost of one.

A Tremendous Triumph!

Without the shadow of a doubt, the sale we are now conducting for Chas. W. Crankshaw, of Atlanta, Ga., is one of the most successful ever made in this country, from every point of view. We especially solicit large dealers who are in any way interested to personally write to the above well-known jeweler.

Recently we sold out the stock of Jos. Brown & Co., 176 E. Madison St., Chicago, which was damaged by fire. Just prior to that we conducted a four weeks' sale for the Gem Jewelry Co., of Norfolk, Va., the largest and most successful sale ever made in that city. Preceding that we made a record-breaking sale for Geo. Winder, of Troy, N. Y., after another firm of auctioneers had made a failure. One success has followed another. We have to our credit a greater number of sales, higher average of goods sold and a better percentage of profit than any other auctioneer in the trade.

Jewelers desiring our services must write months in advance, as our time is booked for several months.

OPTICAL DEPARTMENT

Resume of Lecture Delivered Before the Optical Society of the City of New York by Prof. Wm. F. Fox.

E. LE ROY RYER.

THE object of the lecture was to demonstrate that the refractive index of water is, as compared with air, as 1.33 + is to 1.

Prof. Fox first proved, theoretically, that such was the law of refraction, after which each member was allowed to corroborate this deduction by showing, practically, that a ray of light was actually refracted by water in that proportion. The following experiment was performed:

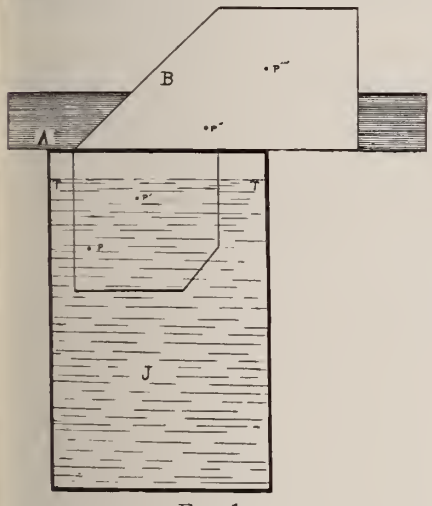

FIG. 1.

In Fig. 1, J represents a glass jar filled to T T′ with clear water; A, a block to which was attached the L-shaped board B. Upon B was fastened a sheet of paper with two pins, P P′, so placed as to come below the surface of the water in jar. The student then took a third pin, P″, and, by sighting, so placed it as to be in line with P and P′; this done, the fourth pin P‴ was placed so as to be in line with P P′ and P″. Thus the four pins appear to lie in the same straight line when P and P′ are immersed. The board was then lifted from the water and the paper removed, giving the result represented in Fig. 2:

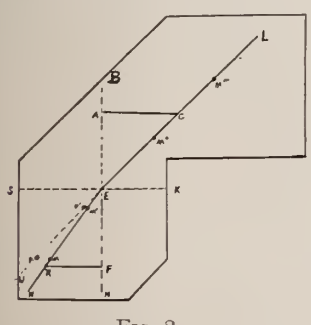

FIG. 2.

M, M′, M″, M‴, denote the four holes made by pins P, P′, P″, P‴. Line S K denotes the water line upon which, at E, was erected the perpendicular A H. Lines L E and E N were drawn passing through M″, M‴ and M, M′, respectively. A distance of 10 centimeters was laid off from E on line E L, indicated by C. R is laid off on line E N, being also 10 centimeters from E.

From these points C and R were drawn the lines C A and R F, each perpendicular to A H. Now C A is the sine of the angle of incidence and R F the sine of the angle of refraction, and according to Prof. Fox's deductions ought to be to each other as 1.33 + : 1, or in other words R F ought to be contained in C A 1.33 + times.

C A was found to measure, approximately, 7.5 centimeters and R F, 5.6 centimeters, and, as the sine of the angle of incidence divided by the sine of the angle of refraction will give the refractive index 7.5 ÷ 5.6, showed that the refractive index of water was 1.33 +.

It may be mentioned incidentally that the angles obtained or the distances chosen make no difference, inasmuch as the proportion will remain fixed, *i. e.*, the refractive index of water will be to that of air, as 1.33 + : 1.

Death of Frank Honig.

ALBANY, N. Y., Feb. 18.—Frank Honig, 40 years old, said to have been one of the most skilful opticians in the northern part of the State, committed suicide last Monday by shooting himself through the head. His body was found in a chair in his apartments over his store.

Mr. Honig's intimate friends declare that he had long been despondent, and a sufferer from melancholia.

Optical Notes and Briefs.

J. W. Swails, optician, Reading, Pa., has removed into more commodious quarters at 620 Penn St. The new offices are finely furnished and equipped with all the modern optical appliances.

The Keating Jewelry Co., Sioux Falls, S. D., has installed a complete apparatus for the cutting and fitting of lenses. W. H. Fritz, who has taken charge of the optical department, is a graduate of the Chicago Ophthalmic College and S. B. Millard's Optical School, Litchfield, Minn.

(*Additional Optical News on page* 60.)

A Trachoma Incident.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Not long ago there was much ado over the increasing number of school children suffering from trachoma; hardly a day passed without a more or less exaggerated account concerning it coming to light through the press.

Parents naturally became anxious, and the school authorities adopted active measures to discover those affected by it and to compel their absence, which was, it seems to me, the only proper mode of procedure. But, while the plan was a wise one, the means selected to execute it were, to say the least, unwise. About this time a report reached my ears that occasioned much surprise, but, I reasoned, any man may commit an error, and so thought little about it.

A few days ago, however, when a similar report came to me, it struck me that instead of being one man's error it was the general practice, and, therefore, demanded attention because, simple though it might be considered, it goes to show how careful, how extremely watchful of the details, we must be.

There were physicians detailed to combat the spread of trachoma, warning the children against rubbing their eyes with dirty hands, forbidding them to use, promiscuously, towels and handkerchiefs, and citing precept upon precept and capping the climax by setting an example such as to give convincing proof of their infallible wisdom.

Lo! from scholar to scholar he passes, examining minutely the conjunctiva of the upper and lower lids of each subject by lifting up the former and pulling down the latter with his fingers—with fingers that are not cleansed once after the examination begins. Towels, handkerchiefs, dirty hands, mediums of contagion in general, "go 'way back and sit down" and bow to your superior—the doctor's fingers—"nufsaid."

What a vigorous raking over the coals (costly as it would be) would the doctor give us could he catch us in like manner. "Return good for evil"—but don't get caught.

AN OPTICIAN.

A New Lens-Grinding Machine.

A LENS-GRINDING machine recently invented by Leslie E. Soggs and S. J. Manuel, Binghamton, N. Y., is said to possess many desirable advantages. It is claimed to be especially adapted to the grinding of expensive compound lenses and can do the work at a much less expenditure than is required by the old methods.

The Standard Optical Co., Geneva, N. Y., is said to be seriously contemplating the manufacture and marketing of the machine.

Optical Department.

Report of Three Cases of Congenital Punctate Cataract.

(By J. G. Parsons, M.D., in the *Ophthalmic Record.*)

THE writer has recently had under observation some cases of punctate cataract which present some interesting features.

Two sisters, aged 11 and 13, respectively, were brought for examination, thinking that they could be helped by glasses. They both gave history of being unable to see clearly at distance, and were unable to read writing on the blackboard at school. No headaches or other asthenopic symptoms

were complained of, nor was there any history of inflammatory conditions nor of injury.

Suspecting myopia, an attempt at refraction was made.

Ophthalmometer O. S. 2.00 ax. 90 +, 180 —.
O. D. 1.50 ax. 90 +, 180 —.

O. S. V. 20/110, 20/80 with — 1.25 c. ax. 180.

O. D. V. 20/110, 20/80 with — .75 c. ax. 180.

Reads D. 1. at six inches. No further improvement could be made with spherical lenses.

Under homatropin no change in vision was noted. Ophthalmoscopy reveals the presence of cataracts as shown in illustration. Fundus reflex shows brightly around periphery of lens, but on closer examination fine pigment specks are seen near the edge. The whole circumference of the lens is densely pigmented, allowing no passage of light through it. Toward the center the pigment is more scattered, gradually merging into individual specks.

In the center is a triangular area of dense pigmentation, becoming less dense and merging into individual specks toward the periphery. Between the two areas the fundus reflex shows through, studded with numerous fine specks.

The specks can be made out at different depths in the lens, and on the capsule. They are irregular in shape, and it is not possible to distinguish a clear center in the individual spots, as described by Zirm.

As will be seen from the illustration, there is no tendency to arrangement of the specks along the lines of lens sectors, nor anything resembling a stellate arrangement.

The above description will hold good for all three cases observed. The refraction and vision in the two sisters is practically the same. The mother of these girls gives in the main the same conditions, excepting that her vision is 20/80, and that the areas of pigmentation are more circumscribed.

All three notice that their vision is poorer on bright days, and that they can see best on dull days and toward night (hemeralopia).

The mother informs the writer that her mother had the same condition. Her vision remained about the same until the time of her death. No other cases are known of in the family. None of the male members were affected.

All three cases are congenital, and have noted no change in their condition, with the exception that the younger girl thinks her vision has decreased lately.

The mother states that the girls are fond of reading, and do well at school.

The Glass Art in the Optical World.

MENTION has been made in a Chicago Sunday paper of the prospective restoration of the "lost art" of manufacturing malleable glass. Whether this art is ever restored or not, the ancients who practiced it would have far greater reason to be amazed at the part this fairly abundant material plays in modern science and art than we at any lost art connected with it, and would, no doubt, readily admit that many of its present uses eclipse the profoundest arts of ancient times.

Glass, as a material, the same as all other materials, is valuable because of certain combined qualities, shared equally by no other material, that it possesses. Its abundance is a leading element, for it makes it available for selection because of these qualities.

The qualities referred to are: (1) Its hardness, or resistance to physical force, unless applied in a particular manner; (2) the readiness, when in a molten state, with which it is shaped into any desired form by molding or blowing, or, when cold, ground to any desired shape; (3) its imperviousness to air and water, and (4) its transparency, the quality that allows light freely to pass through it. The last is its characteristic quality, which, in connection with the other qualities of refraction, etc., gives it so important a position in the domain of the optician. Indeed, no more suitable example than the lens need be taken to show the wonderful superiority of modern glass art over the ancient variety.

This use of the lens is exemplified in the spectacles and eyeglasses that have become so familiar to us. It seems as though almost every other person we meet wore them in one form or another. They have become a part of the familiar features of many of our most intimate friends and acquaintances, so much so that it is doubtful if, without them, they would be recognized in a face-to-face encounter upon a public street by their most intimate associates, and the non-recognition would very likely be mutual.

Glasses become, by continuous wearing, as much a part of the features as the nose or mouth, and to discard them is to assume a quite effective disguise. The disguise is the more complete by depriving the one who takes them off from the quick recognition and play of the features that accompany t most ordinary greetings of friends.

Glasses are worn by people of all ages a conditions of life, and there are few w wear them who do not find them all but i dispensable, if not for vision, for cert quieting effects they have in many cas upon the nervous system, making existen comfortable that would not be comforta or hardly endurable without them. But f visual purposes, glasses are very oft necessary in quite early life. They are a solutely necessary for all people who ha advanced beyond a certain age, if they co tinue to live and find use for their ey for seeing at a distance, and nearby als

Spectacles were originally worn for t latter purpose only, but their use has on become common for that purpose during t last one hundred years, and this is undoub edly the chief of all reasons for the wonde ful advances science and art have made du ing that time.

The age of greatest mental activity between the ages of 40 years and 70 year It is then, if ever, that the mind unfolds it greatest riches of intellect; that men an women are capable of making that profoun and unrelenting search for the most deepl hidden truths that surround the huma race; that study becomes a pleasure an research, a habit that will not be denied that the intellect is undiscouraged by th most stupendous tasks, and undertakes wha would be appalling to youth or even middl life.

But it is at the beginning of this perio that, even in the best of eyes, near visio begins to fail. Without the lens to supple ment the failing accommodation, and witl the advance of hypermetropia, due to th gradual collapse of the humors and struc tures that give the eye its spherical form near vision soon becomes, after the age of 40 years, or certainly 50 years, a thing quite out of the question. Before the highly potential intellect of 50 years and 60 years are a pair of eyes that make its exercise, at least in relation to the finer details of objective physical phenomena, an impossibility.

But the lens completely and scientifically bridges over this tremendous chasm. And by giving the eye perfect near vision, preserves for these highly potential intellects the means of observing again and studying from the standpoint of acquired knowledge, and, with deeper insight, the basic physical facts once more, to see that no spot has been too lightly passed over and no effect misinterpreted.

Lenses have, therefore, prolonged the intellectual life and activities of those whose intellects are most indispensable and best fitted to grapple with the scientific problems that have, now do and always will surround us, at the time of the zenith of their dynamic power. That the delay in modern scientific progress for many centuries has been due, so far as a negative rather than a positive thing can be ascribed as a cause, to the delay in the discovery of the lens, is not to be doubted.

Indeed, we may say that the discovery of the lens itself was delayed because of the want of lenses with which to make the period of highest intellectual force active. So that, in its simplest form, as a means to

Optical Department.

n end, as exemplified in the wearing of nses for near vision after the age of 40 r 50 years, as well as in the more compli- ated forms of the microscope and the tele- cope, the lens is the greatest agent of ad- ancement in science and art that the world as ever produced, not excepting printing r any other art, however important. But he use of lenses with scientific ends in iew, while they have served to make the orld wiser and civilization greater, have ontributed much to the comfort, happiness, ealth and longevity of the human race, y relieving overwrought muscles and erves of strain and giving the eyes—and hrough them other organs—normal action nd normal rest. This may be regarded as he highest use of lenses, for upon these ffects man's capacity to use his talents and nergy to a purpose depends.

The science and art of making dioptric neasurements of the eye and adapting enses of glass to its defects and insuffi- iencies represents one of the highest arts f modern times, if taken at its full signifi- ance. As a science and art, it will engage he exclusive attention and become the life- work of a great body of professional men, who will neither be doctors of medicine nor mere opticians, and it will deserve all he attention that can be bestowed upon it.

The anatomy and physiology of the hu- nan body, the external signs of disease. he complicated nervous organism of man, nd the relations of organs and functions, lue to this nervous connection of each part f the body to every other part, will be es- sential knowledge for these professionals to possess.

But all of this knowledge will not avail in the slightest degree without masterly knowledge of optics and of the eye as an optical instrument, which involves years of study, especially in a mathematical di- rection, for in the architecture of the eye, the very deepest mathematical principles are involved. Its optical structure is of the spherical order, and it is a physiological (or dynamic) as well as an anatomical (or static) machine, and its refraction embraces values the most delicate and varied of any optical instrument in the world.

To properly fit glasses to the eyes, the following are among the fields of exact in- formation required: (1) The number of dioptric surfaces in the eye, and the normal value of each; (2) the means of making exact measurements of the action of each surface, both in static and dynamic refrac- tion; (3) the adaptation of the combined action of the surfaces to the position of the nervous field upon which images are thrown; (4) the effects of imposing a lens before the eye upon the action of the re- spective surfaces, and all of them together; (5) the adaptation of the total value of the lens, and of the relative value of its re- spective surfaces, to the defects of the eye; (6) the means of making the eye reveal, by test, their most hidden defects, both by subjective and objective methods; (7) pro- gressive methods of correcting defects, that, by being long uncorrected, have worked a change in the natural condition of the eyes; (8) the fine mechanics involved in so plac- ing lenses before the eyes that the best re- sults are obtained by wearing them; (9) the proportioning of the curvature of the surfaces of the lenses in such a manner that they carry out the principle of the sphere upon which the eye is constructed; (10) technical knowledge of glass, and of its optical structure and value, so that the suitable quality required for a given case may be selected and given the most effective form.

The flat lens, ground in the most con- venient and cheapest form possible for a dioptric correction, represents but the lowest degrees of this science and art. It is less scientific attention that requires to be given to a kodak, for the most delicate in- strument embraced in our human anatomy.

The class of professionals engaged in this work of adapting lenses to the eyes are known as "dioptrists." They are as superior, professionally, in this work to oculists and others as the former now are to them in the treatment of the eye medically and surgically.

It is no secret that their work already surpasses that of any class of those who, more or less, perfunctorily fit glasses to the eyes. They do with ease and certainty many things that their medical rivals do not even know how to pretend to do, and their compensation, in a business way, is coming to them rapidly and surely.

In the dioptrist and his work, we have the highest representative of glass science and art of the modern variety.

Optical Queries Answered.

State College, Pa., Feb. 7, 1903.

Editor of The Jewelers' Circular-Weekly:

Miss Hoffer, age 52 years, came to me for examination and to get a pair of glasses. I found vision to be 20/30 in both eyes, and with retino- scope I found astigmatism of + 1.00 cyl. ax. 90, which gave vision 20/20.

This pleased her very much. Then, of course, as you understand by the age, she needed a cor- rection for reading, + 2.00, which she wanted in a form of bifocal. Her P. D. being 2 3/16, I ordered uppers spaced to this, and segments to 2 in. I find great satisfaction in spacing bifocals in this way.

This combination looks to me as if it certainly might disturb binocular vision, as it would have the prismatic effect of this cyl., same as prism base out to overcome when reading with the lower lenses, supposing them to be about 2 in. and the upper exactly 2 3/16 in.

Miss Hoffer might not realize any serious effects because the recti muscles are about balanced, but if she had esophoria to the amount of 1°, then with this combination the internal recti would have about 2° more work to overcome than it should. In other words, convergence could not be in harmony with accommodation. I make this explanation so you can apprehend of what I would like to be positive.

Please let me have the best information that you can possibly give on this subject. Yours truly,

Dr. S. Slagle.

The interest centered in the above inquiry is found in the care with which a careful adjuster fits frames to a patient's face.

The upper segment will require very painstaking care as to the pupillary distance and the lower segments should be placed at an angle so that the visual lines will traverse paths at very nearly 45°, in order that the segment will be placed somewhat inward toward the mesial planes.

The rule is, relative to prism or decen- tration of lenses, to discard everything but the correction, and then, if heterophoria exists, to give one-half of the prismatic relief and then to apportion the prism be- tween the two eyes.

Sheboygan, Wis., Jan. 19, 1903.

Editor of The Jewelers' Circular-Weekly:

I notice in an article in Jan. 14 issue, headed, "The Ophthalmoscope," the statement that as- tigmatism exists when by indirect method of ex- amination the optic disc appears oval. Do you claim that in every case? How would you ac- count for the following:

A lady, 18 years of age, complained about her eyes, especially for her near work, as she does a great deal of sewing. I examined first with ophthalmoscope and found the disc in right eye oval, O, like that, otherwise clear and distinct. I then examined with retinoscope and found this error of refraction: R. V. + 125 + 75 ax. 90; L. V. + 200. I then verified at 20 feet and found L. V. perfect, 20/20, but she complained that R. V. was indistinct. I increased sph. and reduced cyl. and found that + 20° sph. gave her 20/20 just as good as L. E.

I gave her the glasses with that correction, + 200 in both eyes, and asked her to return in about a month to let me know how she was get- ting along, as I was not satisfied with the cor- rection in the right eye. She had worn glasses over two months when she reported that she was well pleased and had no more trouble with her eyes. I examined the eye again and found error the same as at first. I have also fitted many cases where the disc was round and had astig- matism.

I would be pleased to hear from you in regard to above. Respectfully yours,

W. A. Pfister.

The query as to the indirect method in ophthalmoscopy revealing astigmatism by an oval cornea is not of necessity diagnostic from the fact that the patient's position may be such as to be from one side and not in the direct path.

Relative to the case in question, the skiascope, together with the ophthalmome- ter, verified by means of the subjective tests, should give you all the evidence necessary. As to the case in question, your practical work, backed up by experience, is worth more than the theories put down in the books, and one cannot help but admire the results even in the teeth of fears expressed otherwise.

St. Joseph, Mich., Feb. 2, 1903.

Editor of The Jewelers' Circular-Weekly:

I have a patient who has trouble with his eyes. He has consulted all the leading opticians in this part of the country but as yet has found no re- lief. He will feel all right at times and will put on his glasses to read. After reading a short time his head will commence to ache on top and at temples, and unless reading is stopped at once he will begin to be sick at his stomach, and this will continue till he stops reading. He will then have to close his eyes until the effects gradually pass off. This patient is now 58 years of age. He was sunstruck about 30 years ago, but has not been troubled until the last few years.

If you would discuss this subject and answer in your next paper you will greatly oblige,

Yours very truly, C. S. Rutledge.

Patients of this character who have suf- fered sunstroke or who suffer from a gen- eral breaking down such as results from gen- eral debility, senility, or cerebral anæmia, will complain of headaches at the top of the head, and such patients should consult with their family physician for his advice and treatment.

It is a matter of surprise that an optical man should not suggest to such a patient advice as given above. That he should be permitted to call upon all the members of the optical fraternity, and never a physi- cian, is a matter of some surprise. This patient is evidently sick and needs care and treatment together with such rest and tonics as his case demands.

THE BEST IS ALWAYS THE CHEAPEST; THIS applies to Watch Glasses as well as to anything.

The best Watch Glasses are those that are carefully made, from the proper stock, properly labeled and correctly gauged.

The CHEAPEST Watch Glasses are those which require the least time to fit, and in which there is the least percentage of breakage.

The **V. T. F.** Glasses combine all of these cardinal qualities and BEAR THIS LABEL: Insist upon getting the **V. T. F.** and take no other.

REVERSE.

Revolving Celestial Globe.

(Translated for THE JEWELERS' CIRCULAR-WEEKLY from the *Journal Suisse d'Horlogerie.*)

FROM the origin of horological art, the reproduction of the celestial movements by mechanical means has tempted the ingenuity of numerous artists, a few of whom have bequeathed a celebrated name to posterity. Others, less fortunate or more reserved, have disappeared, leaving at times only a remarkable work, which the collector will discover some day or other. Such is the case of the celestial sphere, which is the subject of this article.

The total height of the object is 0.45 meters. A very graceful pediment, composed of three cariatides of gilded bronze, forming a tripod, connected in the center by a compass for the purpose of orientation, supports a framework, consisting of the equatorial circle, attached to two meridian half circles fixed at right angles, according to the cardinal points.

In this framework is inserted perpendicularly to the equatorial circle, a complete meridian circle, to the interior of which the revolving sphere and its mechanism are attached. On the meridian circle is fixed tangentially, and at 45 degrees from the equator, the usual horary dial. The center of the dial is in the exact axis of the rotation of the sphere.

The motor mechanism, attached to the meridian circle, and concealed in the interior of the sphere, is very ingeniously disposed. First, the barrel is in the center; its arbor passing through the center of the dial is in consequence the axis around which the hour and minute hands rotate, as well as a fast and slow index, moving by means of levers the silk of the balance suspension. The constructor was thus able to solve the problem of the winding, the setting of the time, and the adjustment, without interrupting the movement of the sphere.

This is composed of two hemispherical portions of gilded bronze. It is a marvel of adjustment and execution; a better work cannot be executed with modern tools. The engraving artist has traced on the outer surface the imagined reproduction of the constellations, as well as the equatorial and ecliptic circles, and that of right ascension.

The upper pivot is a steel piece attached to the meridian circle around the wheels of the motion work. The lower pivot or celestial axis is a conical rod, screwed solidly to the lower plate of the movement. On this rod, terminated by a fixed beveled pinion and a pivot, is adjusted, freely, a pipe, bearing at about half of its length an arbor, inclined at 23.5 degrees. On this axis is a train of wheels and pinions, of which the first mobile engages with the beveled pinion on the central or celestial axis.

Three hour wheels, moving at different rates of velocity, revolve on the inclined axis, which passes through the sphere at 23.5 degrees from its austral pole; and each carries a curved hand, revolves around the sphere at the height, and according to the ecliptic. The inclined or terrestrial axis is terminated by a square, on which is adjusted a steel crank, directed towards the austral celestial pole, and resting in a cavity on a pivot screwed on the meridian in the prolongation of the celestial axis, which completes and closes the system of rotation.

The sphere is actuated by the hour wheel of the motor movement, which engages with a wheel mounted on an axis passing through the frame, and, carrying near the lower plate, another toothed wheel which engages with the pipe on the celestial axis. This pipe, by means of the terrestrial axis, actuates the sphere, as well as the small auxiliary mechanism, of which the organs are set in action by the revolution of the first toothed mobile around the fixed beveled pinion on the extremity of the celestial axis.

Nothing is more simple and more admirable for its simplicity itself than this arrangement, which affords a high idea of the ingenuity of the author. The wheels on the dial indicate mean time; the globe accomplishes its diurnal revolution in 23 h., 36.3 m., 9 s., an error of 0.4 s. per day* The first hand represents the sun, or, more exactly, its apparent movement around the heavens in 366 days sidereal time.

The second hand, of which the retrograde movement indicates the displacement of the lunar nodes, accomplishes a complete revolution in 6,820 sidereal days, instead of 6,816 days and a fraction (an error of about four days in 18 years).

Finally, the third hand, indicating the apparent revolution of the moon in the heavens, accomplishes it in 27 d., 9.31 h., 8 m., 10 s., sidereal time, which is very nearly exact.

To sum up, we have: (1) The mean time; (2) the apparent stellar revolution; (3) the apparent motion and exact position of the sun; (4) the ready prediction of eclipses by the conjunction of the sun and moon meeting on the line nutation, and (5) the apparent progress and position of the moon.

Another detail is not without importance: the escapement is a crown wheel, with oscillating pendulum, suspended, as has been said, by a silk thread. The plane of vibration is parallel to that of the meridian circle, so that, on displacing the latter circularly to the extent of a few seconds of an arc in one direction or another, the accurate position is readily secured.

This piece bears the name of J. B. Cattin, and the date 1728. In consequence of imperfect repairs, it has been necessary for us to go over all the calculations of the numbers of the teeth ranges, in order to find the times of the revolutions and to make new hands, wheels and pinions for those that are missing.

We have thus had the pleasure of putting into good working order a remarkable horological construction by an artist whose name was unknown to us.

*According to statements of the actual astronomers the precise and constant duration of the earth's motion of rotation is 23 h. 56 m. and 4 sec.—ED.

Return of a Clock After Four Generations of Wandering.

A CLOCK was recently repaired by a jeweler of Rahway, N. J., which had been in the owner's family for the past four generations, during which it had been located in several different States of the Union, and part of the time in Canada, but never did the owner know, until last week, that the highly prized timekeeper was made in Rahway.

Such, however, is the case. Isaac Brokaw, great-grandfather of Mrs. Mary O. Avery, of Cherry St., that city, and who retired from business at least 75 years ago, made it among the first of his productions.

It is of the regular "grandfather's clock" organism, showing the changes of the moon and the seasons, and still keeps the best of time. In the thorough overhauling which it received, but very little mechanism needed to be added.

An Old German Clock.

REV. JOHN P. DEAN, Reesterstown, near Baltimore, Md., is the owner of a clock that is believed to have been made in the year 1775, in Hanover, Germany. The original owner is not known, but it is said that it was made in the year indicated.

In October, 1796, it was purchased by Thomas Cockey for £30, and in May, 1817, it was bought by John Beckley for $61. During the last 30 years it has been in possession of the Rev. Mr. Dean. It is a tall, stately looking old timepiece, with brass face and steel hands, and keeps good time.

The Manipulation of Steel in Watch-Work.

(By JOHN J. BOWMAN, of the Ezra F. Bowman Technical School, Lancaster, Pa.)

(*Continued from issue of Feb.* 18.)

FILING.

WHERE the work admits of it a clean beveling of all sharp corners will add much to its appearance. If the size and shape permit, the final finish may be given to a piece of work by laying it on the file and rubbing it back and forth. Sometimes it is best to lay the work on a piece of cork in the vise, or hold the work in the fingers. These yielding surfaces will keep the article flat against the file. The best method of finishing very small flat surfaces after filing is to use a plate of ground glass with oilstone powder and oil, and where the shape of the piece does not admit of the use of glass, make iron or soft steel slips filed to suitable shape and use them with oilstone powder and oil in the same manner as you would a file. Of course, the working sur-

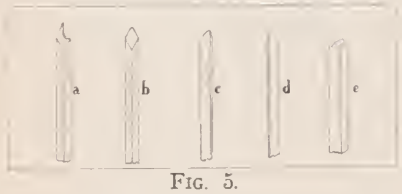

FIG. 5.

face of these slips must be true and flat. They are easily made of round steel or iron, leaving enough of the wire on for a handle. The oilstone powder should have sufficient good sperm oil added to make a thin paste.

TURNING.

With the advent of the "American" lathe, with its hollow spindle and split chucks, the ease and rapidity with which turning could be accomplished was vastly increased. Not only this, but the number of operations possible was likewise increased.

Turning, as is well known, is the shaping of work revolved against a cutter, held either in the hand or in a movable rest. The metal blank is held, if not larger in diameter than about six millimeters, in a self-centering split chuck in the lathe spindle. If larger, a tapered hole is made in each end and the piece swung between tapered centers, one in a chuck in the spindle and another in a tailstock, mounted on the lathe bed. In this case the power is applied through a "dog" clamped on the work and engaging in a slot in a plate on the chuck, called a faceplate.

Flat work is cemented or soft soldered to a brass plate screwed into a chuck or held in one of several forms of mechanical chucks. For light work, such as staff turning, and wherever the surface to be turned is of small area or considerable complexity, the graver is used.

The shape of graver known as "square" (which is the shape of its cross-section) is intended for the heavier roughing-out work, as indeed it can be used for all work; but there are cases, such as working in a deep cleft, undercutting, etc., where a "lozenge" graver (of diamond shaped cross-section) is better. A convenient handle for small gravers is made by heating the lower end and thrusting it into a small ball of lathe cement. This enables the operator to work more delicately than if these small gravers were put into regular handles. The large gravers for heavy work should be driven into wood handles, like a short and thin cylindrical file handle.

Much depends on proper sharpening and on keeping the gravers in good order. For this purpose a grindstone will answer if it is true and the face free from grooves. A more convenient means, however, is found in the use of a carborundum wheel. Carborundum wheels as they come from the manufacturer, if used on the bench, will deposit particles of their composition over everything, and this material is ruinous to any watch movement or lathe bearing with which it comes in contact. We have found, however, that by dropping enough oil on the wheels to dampen them the waste comes off in the form of a paste instead of dust, and they can be used with perfect safety, while the oil does not appear to affect the cutting qualities of the material.

A carborundum wheel of two or three inches diameter and number "120H" may be mounted permanently on the counter-shaft spindle and treated with oil. The grinding may then be done without the workman leaving his bench; the carborundum cuts more rapidly than a grindstone, and the nuisance of having to use water is obviated; besides, a grindstone is a cumbersome machine and the space it occupies is saved for other purposes by using the little wheel. Care must be taken as to the disposal of the carborundum paste which comes from the wheel. Do not let is lay on the bench. While there is no danger from flying particles, as in the case of a dry wheel, one should be particularly careful not to allow this paste to get on the lathe belts, tools, etc., on the bench.

Rest the hand holding the graver on a box or other solid object, and revolve the wheel at moderate speed, moving the graver slowly from side to side, so as to work over the entire face of the stone, thus wearing it away flat and evenly. Do not grind the face of the graver concave; to prevent this work the graver slightly back and forth occasionally. With a little practice you will be able to get a good flat face, which will require but little dressing on the oilstone. The face should be ground at an angle of 45° or a little greater. After grinding, hold the graver on an oilstone, with the thumb and first two fingers down near the point, the tool resting in the hollow of the thumb. With considerable pressure and quick strokes over the stone, finish the tool flat; then face off each of the two lower sides, to make the cutting edges even and keen.

Now we are ready for turning. The steel must be *cut*, not scraped off. Set the T rest up very close to the work, so that the graver edge can be held just at the center or height of the axis of the work. The workman will soon learn when to hold on the center, and when a little above it. Present the edge of the graver to the revolving blank so that the cutting is done a little back of the point most of the time. The waste metal will then come off in spiral ribbons, and this should be the case generally. The point is used when it is desired to work up close to a shoulder, etc. When, as it sometimes happens, the blank is not true when put into the lathe, the first thing necessary is to turn to truth such length of it as is to be used in making the piece of work. The graver must be held down firmly on the rest, and the edge, near the point, advanced very slo into the metal without attempting to take much at a time.

Once the metal is turned true it will main so regardless of any reasonable fo applied. Make progress along the surf being turned by swinging the graver (on t T rest as a fulerum), keeping it firm on t rest, and lifting and replacing it when becomes necessary to turn in a fresh pl —don't attempt to do heavy turning by sl ing the graver lightly back and forth alo the rest. After the rough turning is do finish it by applying the entire edge of t graver and sliding it along the work; th if the surface is pretty extensive, take a ve finely cut file (never wider than the turn surface) and apply it while the work r volves. This will give a well-finished fla ness to the metal which cannot be produc by a graver.

Much time can be saved in certain wo by using a little ingenuity in shaping gra ers especially for it. Several of these sp cial shapes which often come into use a shown in Fig. 5, as follows: (a) A lozeng graver with one-half of its tip ground awa from the side, for working in deep unde cuts; (b) a graver ground round on the en for finishing curved cuts; also (c and d) or each ground to a right and left handed ha round point; (e) a square graver ground i the usual way and then having the point face off so as to form a cutting edge at a righ angle to one of the side edges. With thi tool a square shoulder may be quickl turned, as it forms the entire shoulder a one cut.

Gravers found not to hold their edge ca be rehardened and the temper drawn to pale straw. Keep the faces stoned flat an do not sharpen the gravers to an obtus edge; in that shape they will rather scrap than cut the metal. There are very few wh cannot learn to stone their gravers to a fla face by hand; those who really cannot ha better avail themselves of one of severa good sharpening devices which are on th market. As before stated, when the face o the work to be turned is of considerable extent, the only accurate and economical method of working is by aid of the slide rest. This attachment is fastened to the lathe-bed and holds the graver, or "tool," as it is termed. Then it allows the tool to be moved either parallel to the bed and the axis of the work, or transversely across the work (facing), or at any angle between.

The plan on which all slide rests are built is that of a detachable base clamped solidly to the lathe-bed, on which is a movable slide, actuated by a screw operated by a crank. On this slide is mounted, on a large pivot, a second base, also carrying its screw and crank, which moves a second slide carrying the toolholder. We may call the sets of bases and slides the parallel and transverse, from the relation of their normal motions to the axis of the lathe-bed. The lower part of the parallel or upper slide base is of circular form and is graduated into degrees of a circle. This base revolves on its pivot and is clamped at any desired angle by a lever or screw. When the circle reads zero the slide moves parallel to the lathe-bed.

(*To be continued.*)

R. F. Duvall, formerly of Stephenson, Va., has established himself in business at Ronceverte, W. Va.

Heinrich's Horologica

ING ANSWERS TO A SERIES OF QUESTIONS ON ADVANCED HOROLOGICAL SUBJECTS.

By H. H. Heinrich.

Copyright, 1902, by The Jewelers' Circular Publishing Co.

The Pendulum.

(Continued from issue of Feb. 4.)

NOW the question arises, How can a pendulum be made isochronal by the our methods mentioned?

Firstly, the suspension spring of a pendulum has the same influence upon it as the nd curve of a hairspring has upon the balnce, for the greater and heavier the balnce is, the shorter and more stiff the end urve of the hairspring must be, and so it is vith the pendulum, the longer and heavier he pendulum is, the shorter and more stiff ts suspension spring should be. Herein ics the art of making the vibrations of he pendulum and the balance isochronal.

Secondly, that we can arrive nearer to perfect isochronism of the pendulum by making the lift small is due to about the same causes as in the case of a balance, for, the greater the arcs of vibration of a balance, the more will the hairspring lose in force. So with the pendulum, the greater its arcs of vibration the more its suspension spring will lose in power, and consequently the suspension spring ought also to increase in force when the large vibrations are to be performed in the same lapse of time as the small ones. But if it were made to provide for this, it would deprive the pendulum of a part of its liberty and would cause a greater probability of the clock stopping than if the suspension spring were less strong.

Another reason why the vibrations should be small is that the small vibrations encounter less resistance of the air, and consequently changes of temperature, cold and hot air, *i. e.*, dense or less dense air, do not interfere as much with the freedom of the small vibrations of the pendulum. The small vibrations, requiring comparatively less motive power, which also lessens the friction on the pivots, will help in eliminating obstacles to isochronism.

Thirdly, how isochronism can be regulated by two pins can best be explained by a comparison with the regulator pins of the hairspring in a watch. When the distance between these pins is widened it will cause the large vibrations of the balance to go quicker, and if they are brought closer together, then the large vibrations will require more time than the same number of small vibrations, *i. e.*, they will go slower. It is the same with the vibrations of a pendulum. Why that is so can best be understood from the workings of the hairspring.

When the regulator pins of a watch are far apart and the watch be slightly wound so as to make the balance perform small vibrations, say, of about half a circle, and the vibrations of the hairspring do not cause it to touch one of the pins, then the hairspring is used freely over its full length, *i. e.*, from its attaching point on the collet to its attaching point on the stud; but if the watch be wound more, so as to make the vibrations of the balance describe a complete or more than complete circle, the hairspring will touch the regulator pins, and this will make the hairspring shorter and this shortening of the hairspring will cause the large vibrations to be performed in less time. This shows that isochronism may be obtained by the opening or narrowing of the regulator pins. This same rule is applicable upon the suspension spring of the pendulum.

Fourthly, the reason why the cycloid lips illustrated in Fig. 10 produce isochronal vibrations of the pendulum is that their use causes the pendulum to swing in a cycloidal curve, which is the only curve which is theoretically isochronal.

This is not all; another question might here be asked, *i. e.*, why pendulums with a knife edge suspension, like the beam of a precision scale, are not made at present, although their vibrations were so free that they continued vibrating nearly twice as long as a pendulum suspended by a spring, when both were set in motion without any clock movement? It is because the vibrations of that pendulum were too free; it encountered no resistance, no resisting pressure in its large vibrations, so that these large vibrations were of longer duration.

This again is a proof that in general the large vibrations are of longer duration than the short ones, ergo, the pendulum is not isochronal. This pendulum has another disadvantage, *i. e.*, that because of its heavy weight—mercury pendulums weighing about 12 lbs.—the knife edge of its fulcrum will work into the bearing, even if this latter be jeweled.

How should a pendulum be suspended in the back of the clock movement in order that there may be the less friction in the fork?

The center of both axes of rotation, that of the fork and that of the pendulum, should be in a straight horizontal line. If, for instance, the center of suspension of the pendulum be higher, then the fork and the pendulum describe two different circles; that of the pendulum will be greater than that of the fork at their meeting point. If, however, the center of suspension of the pendulum be lower than that of the fork, they will also describe two different circles, and that of the pendulum will be smaller than that of the fork at their point of meeting. This, as can be readily understood, will cause friction in the fork, the pendulum going up and down in it. This is prevented when, as stated before, the center of suspension of the pendulum is in the prolonged straight imaginary line going through the center of the pivots of the fork, which will cause the arcs described by the fork and the pendulum to be the same. It will be well understood from the foregoing that the pendulum should neither be suspended higher nor lower nor to the left nor to the right of the fork.

Alloys are combinations of metals with each other obtained by fusion. Metals form part of the elements of nature, are undecompounded bodies, and distinguished from the other elements by their lustre, weight, etc.

Clock of Remarkable Precision Constructed by Philadelphia Watchmaker.

J. M. ORR, 11 S. 9th St., Philadelphia, Pa., has constructed a very fine precision clock which is of the regular eight-day type, with weight motive power, and performs with wonderful accuracy.

The construction throughout is entirely on the best plan adopted for astronomical purposes; the time being shown on three distinct dials—one circle giving the hours, another the minutes, and a third the seconds. The escapement is of the Dennison four-legged gravity type; the escape wheel being jeweled in ruby, the pallets in sapphire, and stops in agate; the force exercised by the levers on the pendulum, falling by gravity, is equivalent to six grains, which gives the pendulum an arc of 2° 40′ each side of zero.

The train is high numbered, having pinions of 16, and the motive force required to drive the escapement is only $8\frac{1}{2}$ lbs. The pendulum is constructed on the gridiron plan, but much simplified, and is the exclusive invention of Mr. Orr. It weighs a little over 20 lbs., and the compensating effect is obtained by the use of zinc and steel rods, which carry the ball; the arrangement being such that during all temperature changes the center of oscillation remains precisely the same.

The ball is a solid disc of brass, lenticular in form, and is carried precisely on its own center, thereby being entirely neutral in the compensation. The pendulum is fitted with an accurate system of final adjustment for temperature, which can be easily changed without materially altering the rate of the clock. The rating nut is also calculated to effect the timing to within one-half a second daily, the final being done by timing weights.

The clock has been repeatedly tested in temperatures varying from 40° to 90° Fahrenheit, and shows no error under these extremes. Its only error is barometric, which is about 0.10 of a second daily, for a rise or fall of one inch of the barometer. The total error of the clock, as compared daily with the Washington Observatory signals, at noon, has not exceeded five-tenths (0.5) of a second for the month of January, the temperature in the store ranging from 48° to 82°, and the barometer varying from 29″ to 30″, being over an inch difference in barometric pressure, and 34 degrees temperature change.

The rate, as copied from Mr. Orr's rate book for the months of January and June, 1901, is as follows:

January, 1901.			June, 1901.		
Rate.	Bar.	Temp.	Rate.	Bar.	Temp.
+ 0.50	30.5	58°	0.0	29.8	70°
+ 0.25	30.7	60°	+ 0.25	29.8	71°
+ 0.10	30.4	62°	+ 0.25	30.0	76°

Workshop Notes and Queries.

[*Answers are solicited from our readers to the questions published weekly on this page.*]

QUESTION No. 388.—**Fast Colors.**—*Please inform me through Workshop Notes how I can make cloth non-tarnishable.*

C. E. S.

ANSWER:—It is surmised you want to prevent your show window cloth, etc., from becoming discolored, and it must be said that there is no known receipt which would make cloth non-tarnishable from sunlight, for instance. The only preservative is to make a judicious use of the awning. The chemical actions of light rays of different colors are very unequal. The red, yellow and green lights have little influence, while the blue and violet exert the strongest effects. It is for this reason that cloth, which is exposed to gas or candle light, which is yellow, will not tarnish as soon as that which is exposed to the daylight. The electric light is not so harmful as the latter, and because it does not generate such injurious gases as the gaslight, is even less harmful than gaslight. Chevreuil says that the colors are fastest upon cotton, less fast upon silk, and most changeable on woolen goods. Certain kinds of colors have proven to act diversely. Trials to determine the untarnishing quality of colors on goods can be made by exposing to the sunrays a piece of cloth in a photographic printing frame. The rays must be directed upon the cloth perpendicularly. Only one-half of the cloth should be exposed, and the other half should be covered so that the sun will have no action on it. There are but few colors, which, when exposed only for one single summer's day to the sun rays, do not show a perceptible change in color. Trials as to the fastness of color when coming in contact with water, can be made by washing the sample cloth with hot soap and water. Those whose colors are the best can be then readily distinguished from the lesser change they have undergone.

QUESTION No. 389.—**White Silver Alloy.**—*Can you describe in your Workshop Notes a good white alloy for silver settings in diamond work?* *J. M.*

ANSWER:—Pure silver, when used as a background for diamond-setting, very rapidly tarnishes, and the same may be said of the silver when alloyed with a small portion of fine gold. But if aluminum be used as one of the alloying ingredients, a much more lasting preparation can be made. The following proportionate parts of silver and aluminum are taken and fused together under low heat: Fine silver, 1,000 decimals (grams, grains or oz.); pure aluminum, 112 decimals. This produces an excellent alloy, is very workable and does not tarnish so easily as some of the white mixtures used for setting purposes. A much brighter tint is imparted to the alloy by the moderate use of aluminum, in addition to the very white appearance which characterizes it. With more aluminum and less silver than the proportions here given, the compound becomes hard and less workable. In melting this alloy, add the aluminum (having previously heated it very hot) to the fused silver in the crucible, then stir the contents well and pour out immediately.

QUESTION No. 390.—**Gun Metal.**—*I was looking over an old paper of yours, issue of November 12, 1902, and I saw question No. 286, "Gun Metal." You say it is nothing but a finish on steel, and that there is no such metal. "The Keystone," February, 1901, says: "Gun Metal is an alloy of copper and tin." The "Standard Dictionary" (a high authority), says: "It is an alloy of nine parts of copper and one part of tin." I wonder that such diversity of opinion exists among trade journals. If not too much trouble, would you kindly make a note of the fact in your Workshop Notes?*

G. W. W.

ANSWER:—The querist of question No. 286 did not ask us whether there was any such thing as *gun metal*, but he wanted to know if certain articles were made of steel or of gun metal. The querist, being a jeweler, we supposed that he alluded to articles of jewelry, etc., specially the erroneously so-called gun metal watch cases. The answer we gave to it is correct, and does not contain the words *"that there is no such metal."*

If the querist wanted to know if there is such a thing as gun metal, we would have answered differently. *Gun metal* is a term which, of late, has been more and more introduced into jewelry parlance, although many do not seem to correctly understand what it means, and as it is also wrongly applied, we will try to make it clearly understood. *The Keystone* is right in saying that gun metal is an alloy of copper and tin; the answer, however, of the Standard Dictionary, to which you refer, is not correct, as gun metal, or rather, the proportion of metals, in the alloy, used for certain guns, is not the same in every country and for all makes of guns. An alloy or composition of metals cannot be said properly to be a metal, such as copper, tin, lead, iron, etc., and it is for this reason that the words *gun metal* or *bell metal* are not found in a first-class Standard Dictionary, such as that prepared in 1895 by more than 200 specialists and other scholars under the supervision of Isaac K. Funk, D.D., editor-in-chief. The proper word to express the common idea of gun metal is bronze. It includes all the different compositions or alloys in which the principal metal is copper, such as are used for certain kinds of cannons, medals, statues, bells, bearings, etc. Although gun making is not a branch of the jewelry trade, we will enter a little more elaborately into the question in order to thoroughly convince many of our readers how falsely the word gun metal is applied and specially so in applying this word to certain watch cases. Mr. Andrew Ure, M. D., F. R. S. M. G. S. M. A. S., etc., etc., says that bronze for common metal consists of about 90 or 91 of copper, and 10 l cent. of tin. The Dean-Uchatius Bro Gun is composed of an alloy of eight l cent tin, and 92 per cent. copper. Fr the experiments of Tapacino d'Anto made at Turin in 1770, it appears that t most proper alloy of great guns is fr 12 to 14 parts of tin to 100 of copper: b the Comte Lamartilliere concluded from l experiments made at Douay in 1786 t never less than eight nor more than parts of tin should be employed in l parts bronze. In how far *bronze* is actual still used in the manufacturing of gu can be shown by the following extra taken from a table indicating weight, c mensions, etc., of ordnance of the Unit States Land Service, Standard and R tained Calibres, compiled by Lieut. C. Smith, U. S. Ordnance. The term or nance includes artillery of all kinds in t most comprehensive signification:

SEA-COAST PIECES.

GUNS—MATERIAL.

Rifle (model 1873)	Cast iron, wrought iron lin
Rifle (model 1870)	Cast iron, wrought iron lin
Rifle (converted)	Cast iron, with wrought iron tu
Rifle (Parrott, 300-pdr., 200-pdr. and 100-pdr.)	Cast iron, with wrought iron jack
Rifle (Banded, 42 and 32-pdr.)	Cast iro
Smooth bore	Cast iro
Smooth bore (model 1873 and 1861)	Cast iro

SIEGE PIECES.

GUNS.

Rifle	Cast iro
Rifle (Parrott, 30-pdr.)	Cast iro
Howitzers	Cast iro

MORTARS.

Smooth bore	Cast iro
Smooth bore (Coehorn)	Bronz

FIELD PIECES.

GUNS.

Rifle	Wrought iro
Rifle (Parrott, 10-pdr.)	Cast iro
Rifle, Mountain (Hotchkiss)	Stee
Cannon revolver (Hotchkiss)	Steel
Smooth bore	Bronze
Gatling	Steel

HOWITZERS.

Smooth bore	Bronze
Smooth bore, XV., XI., IX. inch, and 32-pdr.	Cast iron
Smooth bore, 24 and 12-pdr	Bronze

RIFLED GUNS.

Parrott	Cast iron with wrought iron re-enforced

RIFLED HOWITZERS.

20-pdr., heavy	Bronze
20-pdr., light	Bronze
12-pdr.	Bronze

In the British ordnance there is only the nine-pdr. and the seven-pdr. No. II. model of bronze; the other seven-pdrs., Nos. I. and II., are of steel and all other guns of wrought iron. The French, Russians and the Germans have no bronze guns. This table, made up by a man whom we might suppose to be well posted on the gun question, shows clearly that the greater part and also the guns of which the best work is expected, are made from other material than bronze, which strengthens our saying that the word gun metal is erroneous. Even the decidedly black color of the steel watch cases bears no resemblance to bronze, the color of which varies from a light brown to all kinds of shades into a dark brown and sometimes turning into a greenish shade. Soldiers always keep their guns clean and never allow them to corrode until they have acquired the black color of the blackened steel watch case.

THE RAMBLER'S NOTES.

WHAT THE RAMBLER SAW AND HEARD AMONG THE DEALERS IN ART POTTERY, CUT GLASS, BRONZES, ETC.

OLD STYLES IN ENGLISH GLASS.

JEWELRY buyers who are desirous of seeing a line of cut glass embracing old English patterns from the period of Queen Anne to the present time, should not miss the opportunity of inspecting the line recently brought from England by John A. Service, the United States and Canadian representative for Josiah Wedgwood & Sons, Ltd., the Worcester Royal Porcelain Co., Ltd., and Thomas Webb & Sons, Ltd. The samples of these firms' products are now displayed at the Astor House, New York, where Mr. Service will remain until the first week in April, showing fine china, pottery, porcelain and glass ware. The great popularity and comparative cheapness of American cut glass has in recent years driven the European product from the American market, so Mr. Service's lines of this ware are entirely different from any of the present standard styles now popular in this country. Among the samples are a number of pieces of a style which was in vogue in England during the times of Lord Nelson, and other cuttings shown are representative of the times of William IV., the Victorian Era and the period of Queen Anne. The cuttings of the time of William IV. show open prism and open flute work, while several pieces of about the same time also show an open flute and an open diamond cutting. The Queen Anne style shows a deep scalloped edge with a raised diamond cutting. Many of the tall vases are so cut as to represent or suggest old English castle towers, their tops being turret shaped and their cuttings and decorations illustrative of the old English style of port holes, loop holes, and other architectural features of castles. A variety of decanters shows all the styles of cutting in vogue in England during the last 200 years. They are thoroughly old style and English in shape as well as cutting.

*

SCANDINAVIAN AND RUSSIAN POTTERY.

MIKAEL SAMuel & Co., importers of art wares from the North of Europe, who removed Jan. 1 from 50 W. Broadway to 41 Barclay St., New York, now have a fine line of Norwegian, Siberian, Finland pottery, Danish chinas and Russian lacquer goods on display in their show rooms. In addition to the regular lines the concern has obtained the American agency for a number of china and pottery concerns in Germany, Austria and France, and the samples from these sources have arrived and are now on exhibition. One of the distinguishing characteristics of most of the goods carried by this house is the peculiarity of shape and general oddity of decorative treatment that they show. It seems to be the impression in Norway, where much of the pottery is made, that there are no curves and that everything must be built in angular form, consequently their pottery is usually made into squares, cubes, polygons, triangular prisms and similar shapes. The Finland pottery is peculiar for its color. It is a quiet drab, splashed with a rusty brown, pale yellow and odd blue gray hues. The finer pieces are different in both shapes and decorations from anything in art lines made in other parts of Europe.

*

GERMAN AND CARLSBAD CHINA

FULL lines of the German and Carlsbad chinas which he carries for the jewelry trade have just been received by C. L. Dwenger, 35 Park Place, New York, and are now ready for inspection in his show rooms. The dinner sets of these lines reflect the prevailing designs and shapes so noticeable in the French and English chinas—principally old style, plain shapes, with raised and under-glazed designs traced in gold. These designs are usually on the border of the pieces, though not always so located, as on some, especially the plates, are designs extending nearly to the center. The fish and game sets, chop trays, vases, steins and mugs are all decorated in large designs and bright colors. A line of plaques contains many original shapes and are decorated in bright and subdued colors and ornamented with rural and urban German and Dutch scenes. A new line in Mr. Dwenger's stock consists of china whisky sets, made up in china. The sets in question consist of a china tray, a whisky pitcher and six small whisky cups, decorated with pink floral designs and fine gold scroll work. These pieces, in view of their oddity, should prove very popular with Spring buyers.

THE RAMBLER.

H. Fiebush has moved his jewelry stock at Redding, Cal., from the Eaton building into more spacious quarters in the Moody building.

W. W. La Porte, San Diego, Cal., has left that city and will locate in Visalia, Cal., where he will be interested in the jewelry business with his brother, V. E. La Porte.

John A. Service,

the SOLE REPRESENTATIVE in the United States and Canada for

The Pearl Market of Wisconsin.

PRAIRIE DU CHIEN is known all over this country and even in Europe as the central mart of the American fresh water pearl. Nearly $1,000,000 has been paid out here during the past two years for pearls and pearl button shells. Carloads of these shells are shipped from Prairie du Chien to European countries and there manufactured into artistic jewelry, ornaments and inlaying work. This pearl material is in great demand and is superior to ivory for fine work.

Many hundreds, yes, thousands, of people are engaged in the pearl business on the Mississippi River, and Prairie du Chien so far seems to be the very center of this great industry. Some have already accumulated fortunes here in pearl shell fisheries. Even girls and boys have earned as high as $4 per day gathering the pearl elam shells. And occasionally, some most fortunate, have found valuable pearls in the shells, and realized from $100 to $1,000 from one day's find.

The price of the shells fluctuate according to the supply and demand. From $10 to $16 at the pearl button factories is the usual range. At no time have these shells been so low in price but persons gathering them could realize fair day's wages.

We know of one family (one among a score), a former railroad man, with wife and one son, who have earned a comfortable home, with money at interest, the past two years. Another family, a laborer, his wife and five sons, with three boats engaged at shell fishing and have in the past three years accumulated enough money from sale of shells and pearls to "buy a farm for each of the boys."

Nearly all of the pearl shell fishers in Prairie du Chien have comfortable homes and money ahead. Of course, there is an improvident class who make a find and have a "big time" whenever they get a valuable pearl, and will not work while the money lasts. But these are exceptions, and as a rule the pearl fishers have money saved, their homes neatly furnished, and plenty and comfort is theirs. This condition has made labor scarce and wages higher here. Farmers' sons deserted the farms, came here, and after a few days' shell fishing found pearls, pocketed hundreds of dollars, and that spoiled them for farm work.

During the past season common labor was hard to obtain at $1.50 per day. Bohemian laborers, the best workers here, would not look at $1.50 per day while they can make $2.75 to $100 fishing for shells. They are their own bosses, and the exciting hope finding a high-priced gem has weaned th from ordinary day's work.

Even the railroads and contractors publie works have been forced to pay hig wages to common laborers here, and l bermen and millmen were unable to get n for the woods and mills.

Local jewelers and dealers here who gaged in pearl buying have also m money. Some have had wonderful succ Later outside pearl buyers came here, a the profits of buyers were less; but all s to prosper and realize handsome money the business.—Prairie Du Chien (W *Courier.*

Russian Exhibition of Historical Atti

THE first international exhibition of h torical attire and accessories was r cently opened in St. Petersburg, for t benefit of a home for poor children. T exhibits include garments, shoes, ornamen cloths, laces, embroideries, fans, jewel snuff-boxes, miniatures, canes, weapo furs, linen and cosmetics.

According to a report by W. R. Holloway United States Consul General at St. Peter burg, the Russian historical section is t most interesting and represents all types Russian dress, from the ninth to the nin teenth century. It is subdivided into eigh epochs, as follows:

(1) The Normans; Varègs and time of the sway—the first Russian princes of the ninth ce tury; (2) the Russia of Kief; (3) the period the Tartar supremacy; (4) the Moscovia (influe of Byzantium); (5) the great Novgorod; (6) R sia of St. Petersburg (periods of Peter the Gre and his successors, of Catherine II. and of Pa I., and his successors up to the present time); (ancient Little Russian attire, furniture, harnes ornaments, and utensils; (8) ancient Polish, Wh Russian and Lithuanian attire, furniture, weapons harness, ornaments and utensils.

The last named exhibit is by far the fin est and richest; next comes the Serbian an Austro-Hungarian section.

Germany, France, Italy, Spain, Greece Sweden, Denmark, Bulgaria and Roumani participate in this exposition.

The building at 32 Park Place, New York, which is owned by the Manhattan Elevated Railway Co., is to be fitted up and used as offices for that company in the near future. One of the concerns now in the building, and which is obliged to move by May 1, when its lease expires, is Cox & Lafferty, who handle cut and engraved glass and who are the New York representatives for the Seneca Glass Co., West Virginia. No suitable place has yet been obtained by this concern.

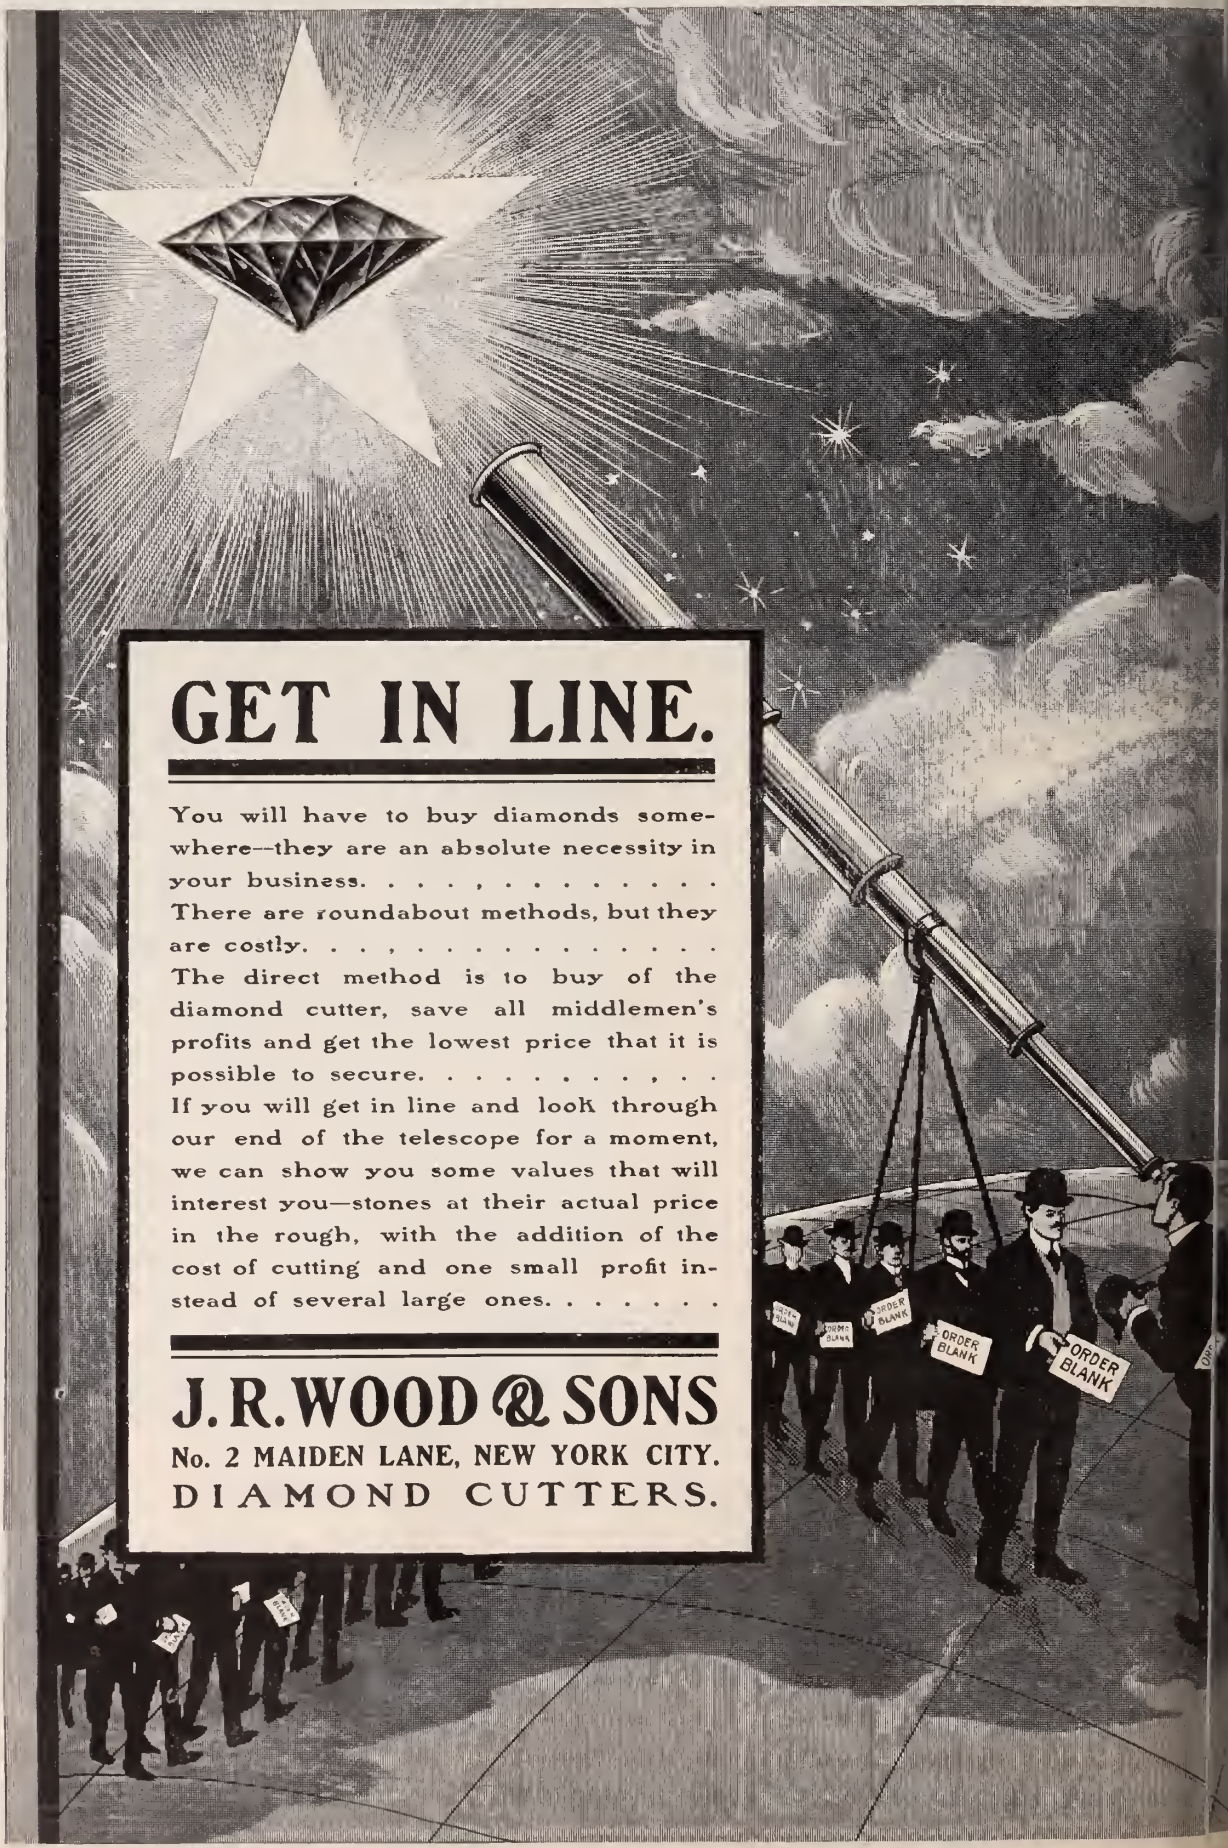
Brooklyn 14 Karat Solid Gold Cases.



B.W.C.C.O.

STYLE

That indefinable something which distinguishes one article from another of almost identical appearance. You can't tell just what it is in a Brooklyn Solid 14 Karat Gold Watch Case that takes the eye and decides a choice in preference to anything else; but the something is there and the best name for it, perhaps, is

STYLE

It's a subtle influence, is this, of style, but none the less potent. It will sometimes compel where there is less intrinsic merit, but where quality and style are wedded as in a Brooklyn 14 Karat Case the attractive power is irresistible.

GET IN LINE.

You will have to buy diamonds somewhere—they are an absolute necessity in your business. . . . . .
There are roundabout methods, but they are costly. . . . . .
The direct method is to buy of the diamond cutter, save all middlemen's profits and get the lowest price that it is possible to secure. . . . . .
If you will get in line and look through our end of the telescope for a moment, we can show you some values that will interest you—stones at their actual price in the rough, with the addition of the cost of cutting and one small profit instead of several large ones. . . . . .

The Strength of a Chain

Foster's Strong Links.

LINK THE THIRD—THIRTY YEARS' EXPERIENCE.

The fact that we have been in business thirty years means two things to every buyer of chains and lockets.

First, no house stays in business thirty years unless its goods give satisfaction.

Second, thirty years' experience must necessarily enable the house that has it to do better work than a house which has not had so thorough a training.

In our thirty years of manufacturing chains we have learned to give the best quality for the money. The chains we make look better and present a better appearance than ordinary chains. Every single one is manufactured of seamless wire by us in our own plant, so that when we guarantee them we know exactly what we are saying.

F&B TRADE MARK REGISTERED

Post Office Department Rules Against Dunning Letters Sent to Collect Bills Due Defunct Jewelry Co.

WASHINGTON, D. C., Feb. 25.—Acting-Assistant Attorney General Christiancy, of the Post Office Department, has made a ruling to the effect that the attempt to collect debts by the use of certain forms of dunning letters practically constitutes blackmail within the regulations of the Post Office Department. This ruling was issued in proceedings for an order denying the use of the mails to a certain collection agency in New York, who have attempted to collect claims alleged to be due to a concern called the American Jewelry Co., who some years ago sent out packages of cheap jewelry to persons in various parts of the country. The jewelry was accompanied by a request to sell or keep the same and remit the value thereof. The company went out of business some time ago, and from the facts before the Assistant Attorney General it appears that the books were turned over to the American State Law Collection Agency of New York for the purpose of collecting the amounts due the company.

Recently complaints have been received by the Post Office authorities from people in all sections of the country to the effect that they had received letters, demanding that they remit the value of the jewelry sent out to them by the defunct concern, under threat of legal proceedings. The Department investigated the matter with a view to forbidding the use of the mails to the collection agency in question, and the Attorney General has decided that certain of the letters complained of practically constitute blackmail, and that the order in question should be issued.

The letter on which the ruling was made reads as follows:

We have received complaint which, if true, means that you have violated the United States mail laws. It is set forth in the complaint that you received goods from the American Jewelry concern of 234 Broadway, New York, by mail, and ignore their demand for settlement. In the affidavit of the proprietor of the said concern he states that a lot of beauty or stick pins, valued at $1.20, were shipped to you, on consignment, the conditions being that you were to sell them and receive a premium or to return the pins if not sold. Furthermore, the affidavit says that notices which the firm have written to you for settlement have apparently been ignored.

If the foregoing facts, as stated in the affidavit, are true, it means that you are still lawfully indebted to the American Jewelry concern in the sum of $1.20.

If you have carelessly neglected this matter in the past we warn you that there is no further leniency to be shown you, and you must return at once to the office of this agency all goods on hand in salable condition, and send payment for all goods which you have sold, used or in any way disposed of.

We understand that the complainants in this case agreed to make you a present for selling the pins, and on receipt of $1.20 they will send the present and credit you in full. If your intentions are honest it will be best to settle the matter at once by remitting to this agency the amount due. Action in the case will be withheld for 10 days awaiting your reply. Yours, etc.,

THE AMERICAN STATE LAW COLLECTION AGENCY,
By Edmund Roberson, Manager.

Romeo Allard, alias Frank Burns, who was arrested recently on a charge of stealing from the firm of Henry Birks & Sons, Montreal, Can., where he was employed as a silversmith, pleaded guilty last week when arraigned before Judge Choquet, and was remanded for sentence.

"Something Different."

In all the arts and crafts it is the man who stamps his own individuality upon his work, and who imparts to his productions his own genius that is a true artist. The workman who is able to only imitate is a mechanic, not an artist.

The making of jewelry is an art-craft, and most susceptible of artistic expression. There are many mechanics but few artists. The productions of the artists are what we seek. We select those pieces that possess a character and originality of their own, which are the qualities that make them salable. Take watch cases for instance, some have all the ear-marks of regularity, while others have an appearance of "something different" that will attract the eye of a prospective purchaser at once. This is especially true of the productions of the Dubois Watch Case Company. Our mounted diamond pieces are of high artistic merit. We believe in advertising the truth only, and therefore solicit selection orders that we may demonstrate that our stock is always as good as we say it is.

The Silver and Silver Plated Ware Tr of Canada.

WASHINGTON, D. C., Feb. 25.—A v interesting report has been received by State Department from Consul Gunsaul at Toronto, Can., in the course of wh he says there is a large sale of silver a plated ware in that city and consular d trict, as well as in nearly all settled p tions of the Dominion. There are seve firms in that city manufacturing th goods, two of them being branches American firms, and are building up extensive business. Aside from the lo manufacturers large importations are ma from the United States and on a smal scale from England, France and Germa the bulk of importations, however, bei from the United States. The goo brought there from England, France a Germany are principally art goods, bronz clocks, etc.

Consul Gunsaulus sends some figures wi his report, from which it is learned that t total value of sterling and other silverwa entered for consumption in Canada for t six months ending December, 1901, w $52,104, of which the United States fu nished $33,846. The total value of cloc imported for the same period was $115,84 of which $101,807 came from the Unit States.

The Consul calls attention to the fa that the trade of Canada in watches about evenly divided between those d American and Swiss manufacture, Switze land having a slight advantage.

There are no particular obstacles to th extension of American trade in the lin mentioned above unless it be the rate d duty, which is 30 per cent., this being levie for the purpose of protecting home manu facturers. The goods of United State manufacture are much in favor in Toront and the trade is constantly on the increas

Among the American articles most i demand are sterling silver and plated war table ware, toilet articles, umbrellas, an silver novelties. Toronto merchants hav informed Consul Gunsaulus that the Amer ican factories are getting out some fine de signs in gold jewelry, such as rings, cuf buttons, and other articles along this lin He thinks a careful regard for the want of the trade in Canada and a proper effor to introduce the goods will result in largel increased sales.

It is pleasing to note that inquiry on th part of Consul Gunsaulus elicits no com plaints as to the packing of American good brought into Canada, and no recommenda tions as to the proper methods in this par ticular are necessary.

According to Consul Culver, at London Ont., the consumption of silver and plate ware in that part of the Dominion of Canada is large and constantly increasing Competition and the low price of silve has so reduced the cost of such ware that it is coming more and more into general use, with a largely increasing demand fo sterling goods. A very large per cent. of this ware formerly came direct from the manufacturers in the United States, but since several American firms have started branch manufacturing establishments in Canada these now supply a large proportion of the goods sold. Some of the dealers in

Consul Culver's district still purchase direct from American houses, but say that they get exceptionally good terms, otherwise they would purchase of the manufacturers now established in Canada.

A report along the same lines as the above has been received from Consul Brush, at Niagara Falls, in which he states that while firms in the United States ostensibly do a large exporting business to Canada in silverware and plated ware, the goods bearing their names are almost entirely manufactured in Canada. The quality and grade, however, are just the same and no injustice is done to the purchaser.

This method has been adopted on account of the 30 per cent. duty enforced by Canada against silver and plated ware imported from the United States. It is estimated that only 25 per cent. of this trade is controlled by Canadian manufacturers, the manufacturers of the United States having covered the field thoroughly. One Canadian manufacturer of blanks sells almost his entire product to different firms of the United States who have extended their Canadian trade through the use of his product.

Consul Brush calls attention to the fact that the preferential tariff in favor of Great Britain does not seem to have aided any in enlarging its trade in this line. The importations from Great Britain in silver and plated ware for 1901 were less than 50,000, against $238,265 from the United States.

Consul Bardel Reports That Swiss Watchmakers Are About to Establish Factories in Germany.

WASHINGTON, D. C., Feb. 25.—Under date of Feb. 2, Consul Bardel, at Bamberg, Germany, has informed the State Department that it is reported from Basel that a number of manufacturers of watches are preparing to emigrate to Alsace, Germany. In the town of Hegenheim (a small place in Alsace, about three miles from Basel), two watch manufacturers have bought the sites for factories and building is to commence at once; the works are expected to be in running order this Fall. In St. Ludwig (a suburb of Basel, but on German territory) three watch manufacturers of Nuremberg have bought lots, where large establishments are to be erected; in Hueningen, a branch of a firm in Chaux de Fonds has been working for several years.

This tendency to move from their own country to Germany, on the part of the manufacturers of Swiss goods, is not new. Four large ribbon manufacturers, originally at Basel, have for years had branches with a number of workmen at St. Ludwig; two silk factories of Zurich have important establishments at Hueningen; in Loerrach and in a number of places in the valley of the Wiesen, Basel manufacturers have branches. This erection of branch factories on German territory has the advantage of saving tariff fees and of employing labor at much cheaper rates than can be found in Switzerland.

Chas. Maughan, of the Goldsmiths Stock Co., Montreal, has just suffered a severe loss in the death of his wife, and the trade of the Dominion feels the greatest sympathy for him.

Mr. Rosenstein's Statement.

Author of Bill To Regulate Sale of Imitation Jewelry Explains Its Provisions.

ALBANY, N. Y., Feb. 25.—Assemblyman Edward Rosenstein, of New York, who introduced a bill placing restrictions on the manufacture and sale of plated and imitation jewelry in this State, was seen by a representative of THE CIRCULAR-WEEKLY in reference to the measure Monday and said:

"I have been prompted to introduce this measure in the Assembly from the fact that I have learned from observation and otherwise, that the practice of sending out inferior jewelry, which in many cases has been offered for sale as first class goods is widespread. I believe the bill to be of great importance to the reputable members of the jewelry trade in this State, as well as to the general public. I have not introduced this bill at the instigation of any person or persons interested in the purposes of the bill, but simply as a means of aiding the public to distinguish substantial jewelry from the imitation article. Should this bill become a law, I believe it will deliver a death blow to the sales of 'fake' jewelry which are conducted throughout the State. It will be impossible for a purchaser to be deceived, as any article of jewelry composed of a metal or any other substance resembling gold or silver will be plainly marked with the name by which the metal or substance of which it is composed is commonly known."

Mr. Rosenstein, when asked about the coincidence of a similar bill appearing in the Massachusetts Legislature, said: "I certainly was not aware of any such bill being offered in that State. I believe, however, that the gentleman who introduced the bill was prompted by a sense of duty to the public."

That Mr. Rosenstein has the hearty support of many of the members of the jewelry trade in New York is evidenced by the fact that he has received numerous letters during the past week urging him to secure the passage of the bill and wipe out a menace of long standing to the trade.

Mr. Rosenstein expects to get his bill out of the Committee on Codes and placed on the order of third reading in the very near future. He does not believe the bill will meet with any opposition, either in the committee or when it comes up for final passage.

A fire which recently swept over Glenwood, Wis., ruined the stock of John E. Olson to the extent of $100.

Death of Albert L. Lincoln.

Boston, Mass., Feb. 25.—Albert Laml Lincoln, a retired jeweler, 93 years old died yesterday morning at his home, 19 Harvard St., Brookline.

Mr. Lincoln was born in Boston, Jan. 16, 1811, and was the son of Joseph Lincoln. He received his education in the public schools of Boston, and early in life entered the jewelry business, in which line he is well remembered by the trade as one of the first, if not the first, manufacturing jewelers in Boston.

For many years he was in the retail business and at one time was in partnership with G. T. Reed, who later became associated with the house of Tiffany & Co. Mr. Lincoln was a member of several well-known jewelry firms, and was finally a member of Lincoln & Foss, later Haddock, Lincoln & Foss, who for nearly 20 years were established on the spot where now stands the Sears building, at Court and Washington Sts. He retired from active business 25 years ago and since then has lived quietly at Brookline.

Mr. Lincoln was married in 1833 to Miss Anne Eliza Stoddard, of Boston. He is survived by two sons and three daughters, all of whom are residents of Brookline. For many years he had been a prominent member of the Second Universalist Church of Boston.

Funeral services were held to-day at his late residence, Rev. Stephen H. Roblin, of the Second Universalist Church, officiating. Burial was in the old Brookline Cemetery on Walnut St.

Funeral of Simeon Marcus.

Boston, Mass., Feb. 25.—Funeral services for Simeon Marcus were held Monday morning at Carroll Place Church (Shaara Jerusalem). The service was conducted by Rabbi Z. J. Friedeman and D. Rosenthal. Prior to the church service there was a short prayer meeting for friends and relatives at the late home of the deceased, 116 Dartmouth St. Burial was at the Jewish Cemetery at Dedham.

Simeon Marcus, the only son of Alfred A. Marcus, was the junior member of A. A. Marcus & Son, of this city. He was born in Grahamstown, South Africa, and came to Boston when a boy. For many years father and son were in the diamond business, being interested in the Kimberley mines.

The deceased was 38 years old and unmarried.

Senator Daniel has introduced into Congress a bill having for its object the aiding of the Thomas Jefferson Memorial Association in erecting at Washington an appropriate memorial to the author of the Declaration of Independence. This bill provides that the association may supply suitable material to the Director of the Mint at Philadelphia, from which may be made medallions of either bronze or silver, not exceeding 150,000, to be sold by the association, the proceeds of such sales to be for the purpose named. The bill also authorizes the Secretary of the Treasury to call for the preparation of four dies for the medallions, of such design and size as may be submitted by the association and approved by the Secretary.

Career of the Late J. H. Mulholland.

SPRINGFIELD, O., Feb. 25.—The funeral services over the remains of J. H. Mulholland, the jeweler whose tragic death during the fire at his store, last week, was recorded in the last issue of THE CIRCULAR-WEEKLY, were held at the First Presbyterian Church, Saturday. When the casket reached the church it was covered with beautiful floral tributes, and the church auditorium was filled to overflowing by the many friends of the deceased, who by their presence testified to the esteem in which the jeweler was held. The services were conducted by Rev. John Clark Hill, who delivered a beautiful eulogy. After the service the remains were laid in Ferncliff Cemetery.

With the death of Mr. Mulholland a pioneer jeweler of this section passed away. The deceased was born here and was the son of George G. Mulholland, who as early as 1822 came to this city and established the first jewelry store in Springfield. J. H. Mulholland learned the jewelry trade in his father's store, and at the age of 17 completed his apprenticeship. In 1856 he assumed the management of the business and conducted it successfully until the calamity which resulted in his death.

The deceased is survived by a widow, Mrs. Mary J. Mulholland, three sons, Geo. and William Mulholland, of this city, and Chas. E. Mulholland, of Los Angeles, Cal., and two daughters, Mrs. Noah Myers and Miss Emily Mulholland. Mr. Mulholland was a member of the First Presbyterian Church for about half a century and was an elder of the church for many years.

Buffalo Jeweler Accuses Watch Repairer of Larceny.

BUFFALO, N. Y., Feb. 25.—Michael Bass, a watch repairer, 26 years old, has been arrested by the police of this city on a charge of stealing several watches and a diamond ring. The complainant in the case is Gustave Frisch, a jeweler of 444 Genesee St., who claims that the jewelry alleged to have been stolen is worth more than $200.

Frisch says he loaned Bass the ring and gave him the watches to repair, and, instead of returning the articles when demanded, the accused pawned them and pocketed the proceeds. Frisch reported the alleged theft to the police, and detectives arrested Bass yesterday afternoon. He was locked up in Police Headquarters, where he strenuously denied that he committed the theft.

Creditors Probing the Bankruptcy of Mrs. M. T. Taylor.

SEATTLE, Wash., Feb. 25.—There is much interest in the new proceedings begun before Judge Hoyt, as Referee in Bankruptcy, by creditors of Mrs. M. T. Taylor, a Whatcom jeweler, who filed a petition in bankruptcy last month. The proceedings are to ascertain how eight boxes supposed to contain jewelry and taken from the store under orders from the United States Court were shipped to Seattle in the name of Mrs. Taylor and were stored in the Redmond Warehouse as the property of Wells Branch. An effort is also being made to locate money and property, which, it is said, were not included in the schedules of assets.

The jewelry business was in the name of Mrs. Taylor, whose husband, Vernon Wells Taylor, has disappeared, and his whereabouts are not now known. Mrs. Taylor claims that she knows absolutely nothing about the jewelry business, which was managed by her husband for the two years they were at Whatcom, and knows nothing about the boxes shipped to Seattle in her name. She claims she supplied the money with which the jewelry business was purchased, but that her husband managed it until Jan. 5, when he went away ostensibly to look for work and left her in charge of the store. After he had gone she learned that the business was in debt about $6,000 and on the advice of her attorney, filed a bankruptcy petition.

William J. Jewett, at one time a watchmaker and jeweler, but afterwards engaged in the stationery business, died last week at his home in Portland, Me., aged 57 years.

Thieves recently gained an entrance to the store of Huber & Bunker, Superior, Minn., and escaped with miscellaneous jewelry valued at $200. The firm has offered a reward of $25 for the recovery of its property and the apprehension of the thieves.

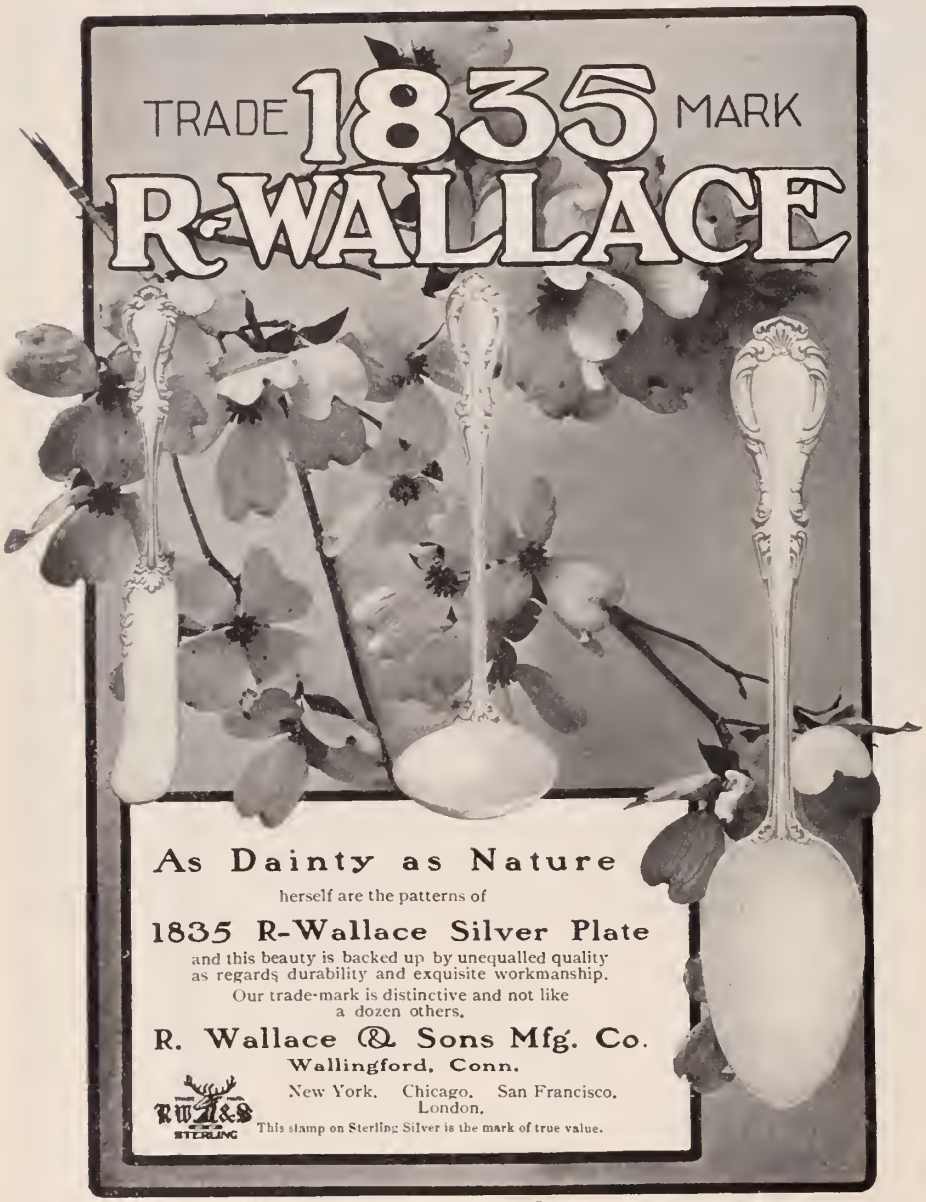
"Rolling in Wealth."

The pursuit of prosperity is at best attended by many difficulties, but those reach the goal first who are most particular about little things.

No man ever yet rolled in wealth who neglected the apparent trifles in his business.

You may think that the question of where you send your scraps and filings is an unimportant matter, but we want to assure you that it is not. In the long run it will pay you well to send them where you can get the most for them—to us.

We can absolutely prove to you that the prices we pay are higher than you can get anywhere else, and, such being the case, why consider anybody else?



Send us your gold and silver sweepings, send us your filings and scraps. Ship us one lot and ask us what we will pay for it. If the price doesn't suit you, we will send it back at our own expense. This shows that we have the courage of our convictions.

We make remittances for old gold and silver the day of receipt, and for sweepings five days after receipt.

IN NICKEL-SILVER AND STERLING

G. I. Mix & Co.'s Workmen Seek To B come Preferred Creditors.

NEW HAVEN, Conn., Feb. 25.—Many cre itors of W. A. Kendrick, Wallingfor doing business under the name of the G. Mix Co., were in Referee Newton's cou Monday morning, when claims were hear The workmen of the firm seek to be mac preferred creditors, although it is contende that a provision of the bankruptcy law mak this impossible. The men were paid montl ly by the firm and when involuntary procee ings were brought by creditors they ha quite a sum owing to them.

Under the provisions of the bankrupt law, it is claimed, it will be necessary for tl workmen to return to the estate all mon paid to them for three months prior to tl filing of the bankruptcy petition before th can be made preferred creditors.

It has been ruled in many cases of th character that money paid by a bankru within three months of his filing a petitic must be returned, otherwise the credit could not become a preferred creditor. I the case of the employes of G. I. Mix Co. it will be impossible in most instanc for them to return the money. Consequen ly they may have to take their chances wi other creditors.

Reported Failure of Geo. E. Moore, De ton, Tex.

HOUSTON, Tex., Feb. 25.—It is reporte here from Denton that George E. Moore, jeweler and optician of that place, has mac a general assignment for the benefit of h creditors. The assignment was filed Satu day evening and S. J. Carroll appointe assignee.

No particulars as to the amount of asse and liabilities of Mr. Moore have yet bee made public, and the assignment is som what of a surprise, as he was believed t have had a capital between $2,000 and $3,00

Mr. Moore is a young man, 25 years ol and has been engaged in the jewelery bus ness in Denton for a little over a year. H had been recently selling part of his stoc at auction.

Maurice Kritzer Files Voluntary Petitio in Bankruptcy.

CHICOPEE, Mass., Feb. 25.—Maurice Krit er, a jeweler of this city, has filed a volu tary petition in bankruptcy in the Unite States Court, and the schedules filed wit the petition show liabilities of $1,024 an assets of $400.

Kritzer for the past five years has ma aged the jewelry store on Main St., co ducted under the name of his wife, Ann Kritzer. He failed once before and ha been in Chicopee since 1896.

It is reported that Mrs. Kritzer has sol the stock in the jewelry store to Harr Gillspie, of Hartford, who will hereaft manage the business under his own name.

R. E. Brigham, Schuylerville, N. Y., ha sold his stock to George Proper.

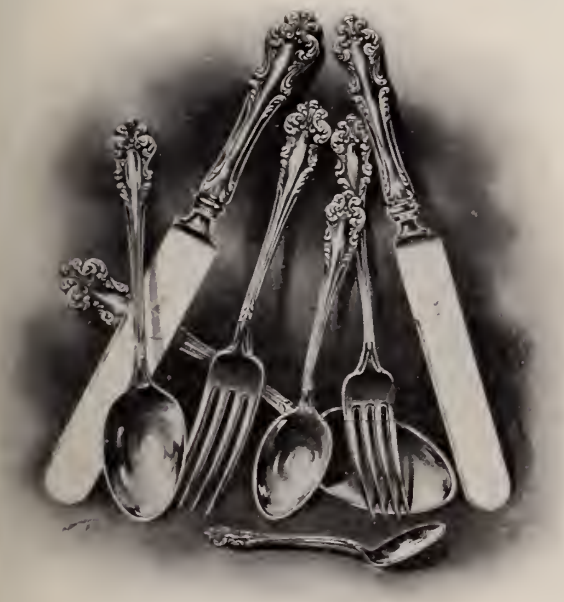
Everett B. Lewis has completed arrang ments for the construction of a large stor building to be erected in Dwight, Ill. Th store rooms will be about 45 feet in lengt with a thoroughly equipped work room i the rear. A steel ceiling will be erecte and all modern improvements added.

An Effort to Corner Rogers Silverware.

To the Trade:

Do you know that the Trust bought and controls "9 Rogers Trade-Marks" on silver-plated ware?

It is to your interest to patronize an independent concern which will keep prices down where they belong.



When legitimate competition is killed, up go prices.

We are not in the Trust.

Our patterns are new and up-to-date. We sell at living prices, and guarantee our goods to strip as much silver as any Rogers brand on the market.

"ONEIDA COMMUNITY QUALITY"

not a mere phrase but a new and positive value which appeals strongly to your self interest. Ask for "SILVERWARE PHILOSOPHY" explaining it.

ONEIDA COMMUNITY, Niagara Falls, N. Y.

Death of H. H. Heinrich.

H. H. Heinrich, a celebrated horologist and for many years one of the most prominent chronometer makers of the United States, died Wednesday noon at his home, 761 Washington Ave., Brooklyn, from apoplexy, superinduced by a breakdown of his system, due to old age.

THE LATE H. H. HEINRICH.

At the time of his death Mr. Heinrich had passed his 80th birthday. He was the son of a farmer in Cranz, Germany, in which town he was born in 1822. Even as a lad, the future chronometer maker had an inborn love for mechanics and an aptitude in the use of delicate instruments. He apprenticed himself to a watchmaker at Hamburg, where he remained a short time, rapidly surpassing his teacher in knowledge and skill. Then began his varied career as journeyman watchmaker at Lunsberg, Hanover, Leipsic, Milan and Switzerland.

At Vienna the future horologist was a pupil of Martin Zeller, and subsequently in Switzerland he made first-class escapements and watches, and established a horological school with which he remained 10 years as teacher. During that time he visited London and Paris, and made the acquaintance of the leading horologists of the time, such as Breguet, Juergensen, Frodsham, Dent, Lange and Kullberg.

Having established a reputation as one of the foremost chronometer makers of Europe, Mr. Heinrich, still a young man, crossed the Atlantic and entered the employ of Blunt & Nichols and subsequently that of Tiffany & Co. Ultimately he went into business for himself at 14 John St., New York, making, repairing and rating chronometers for the trade in general. He subsequently removed from John St. to 102 Fulton St., where he continued in business until his retirement in 1900, when he sold out to C. A. Geisler, at whose home in Brooklyn he died.

Mr. Heinrich received from the World's Fair at Chicago the highest award, consisting of a medal and diploma, for his exhibit of chronometers. He was equally successful in Berne, Switzerland, in 1858, and at the Paris International Exhibition in 1889. He became famous as the inventor of an auxiliary compensation, which has an advantage over other contrivances with a similar object, in that the auxiliary acts continuously as a correcter. He also invented an isochronal regulator and illustrated the theoretical curve of the hairspring; he was the first in this country to employ aluminum in the construction of the escape wheel and balance spring collet, an expedient which, owing to the lightness of the material employed, reduces friction to a minimum.

Mr. Heinrich's success with his continuous acting auxiliary at a prize chronometer test at Washington in 1880 was, at that time, the talk of the horological world. During six months, in a temperature ranging from 35 to 95 degrees of heat his chronometer varied but 1.3 seconds, an error of only .7 seconds at the highest temperature. During the preceding years, in 1875 to 1878, the best chronometers at Greenwich showed a variation of 6.2 seconds to 3.3 seconds in both temperatures, and 7.0 seconds, 2.0 seconds, 9.0 seconds, 3.5 seconds and 11.0 seconds to 5.5 seconds during a period of six months.

Although the deceased lived a life of sacrifice and study, working out some of the greatest horological problems and correcting many of the existing errors in chronometers arising from differences of temperature, he died in comparative obscurity, and the modesty of his surroundings were such as to attract not a single press notice. With his passing the horological world and the science of chronometer making loses one of the greatest exponents of that art. The deceased had contributed many valuable papers to scientific publications and reviews, and was recognized as an authority in all the subjects in which he taught. Combined with his mechanical genius, he was endowed with a thorough appreciation of the demands of science and his debt to the same, and pos-

sessed that rare ability to impart his knowledge to those who desired to learn.

The simple funeral services were performed over his remains at his late home in Brooklyn Friday afternoon and a small number of mourners followed his body to its last resting place in Jersey City.

Mr. Heinrich was as simple as a child, and had a most kindly disposition. He was willing to go to almost any extent to help a friend. He was entirely wrapped up in his work and when a friend asked him at one time why he had not married his answer was that he had never found time. For him every watch had an individuality, which made him take an almost personal interest in it. Frequently when Mr. Heinrich was unable to sleep at night he would leave his bed to go to his bench, which even in the days of his active career was in a room adjoining his sleeping apartment, and work there through the night.

He always considered himself a student, seeking to find the causes for the errors of timepieces, and investigating the methods by which they could be corrected. He aimed not only to accomplish his purpose of correcting the individual watch in hand, but to discover the general law applicable to the error and its correction.

While considering his discoveries of the highest importance to the horological world, Mr. Heinrich carefully kept much of his knowledge to himself, not disclosing his finer methods of adjustment even to those who studied under him. It was his ambition at the end of his life to publish a treatise, through which he should give to the horological world the results of his long life of study and investigation.

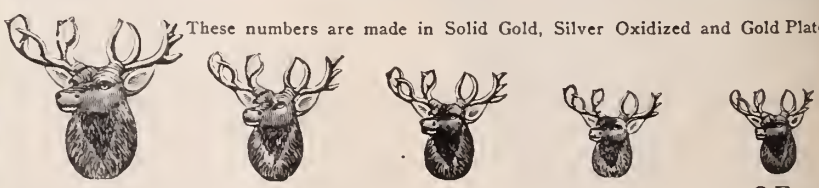
From the mechanical standpoint his work has, perhaps, never been surpassed, and many watchmakers who served an apprenticeship under Mr. Heinrich speak of the marvelous perfection of his work, saying that they would not have believed it possible to do by hand what Mr. Heinrich did but for the fact that they saw him do it. Of him it may be truly said that horology was his world.

The marriage is announced of Robert J. Carter, Bristol, Tenn., and Miss M. A. Monsoni, of Porthmouth, Va. The nuptials were solemnized at the home of the bride's mother in Portsmouth. The couple will reside in Bristol.

Sentence Suspended on Thief Who Robbed Offices of Jewelers and Optician.

Louis Miller, whose picture is in the Rogues' Gallery, was convicted Friday of burglary before Judge Newberger in the Court of General Sessions, New York, for entering the building at 61 Nassau St. on the night of Feb. 17. Sentence was suspended.

Miller's arrest was due to the efforts of Henry H. Bartells and Geo. Mortize, watchmen on Maiden Lane and John St., whose business it is to enter buildings in the jewelry section bounded by those streets, go through all the offices in the buildings and see that everything is straight. About 12 o'clock on Feb. 17, while on their rounds, they noticed that several doors of offices in the building at 61 Nassau St. were open, and, on investigation, found that quantities of plunder consisting of gold spectacle frames, watches and jewelry cases, taken from the offices of the New York Sporting Goods Co., Richard A. Schnell, wholesale dealer in optical goods, and other tenants in the building had been piled up in one of the corridors and arranged in packages for removal.



On the top floor the watchmen found Miller, who had locked himself in one of the vacant offices and refused to come out. He said he had with him a dozen revolvers, all of which were loaded. Bartells and Mortize thereupon battered down the door and dragged Miller to the street, where a policeman took him to the station house.

Miller, who at first gave his name as Frank Raymond, was indicted by the Grand Jury, and tried Friday on the charge of breaking and entering.

The fact that the sentence was suspended in his case has caused indignation among the tenants in the building, who were put to considerable inconvenience in getting back their property, all of which was taken to the police station for identification the following day.

Miller's method of robbery was peculiar. He secreted himself in a vacant office on the top floor of the building late in the afternoon and after the tenants had all vacated for the day he began to ransack the different offices. The goods he had piled up were valued at more than $500. Because of the large amount he had intended to carry away it is thought he must have had an accomplice.

The Strength of Gold Filled Chains

The strength of rolled plate or gold-filled chains has not been a matter of moment since 1865, when William Blackinton invented and dedicated to the public for general use, the hard-soldered link. Provided the links are properly soldered, all gold-filled chains are of like strength. The vital question is the thickness of the gold covering and the length of time it will wear on a person leading a strenuous life. That's the test. How many kinds make good? One kind—the "Old Reliable "W. & S. B.★" never fails to.

Death of William Kerr.

PROVIDENCE, R. I., Feb. 28.—By the death of William Kerr this morning the city loses a watchmaker who had a national reputation as a maker of intricate watches and clocks and other mechanical contrivances equally complicated. Mr. Kerr was one of the veteran watchmakers of the city and his shop window on Westminster St. has often been almost hidden from view at times by the persons who have lined up in front of it viewing the ingenious contrivances with which it was filled.

Mr. Kerr had been ill for some little time and had even been compelled to undergo a severe operation. In spite of his advanced age he had rallied from this and was supposed to stand a good chance for recovery when suddenly pneumonia developed and this new complication proved fatal, the end coming this morning.

Mr. Kerr was born in the village of Manton, a short distance from this city, Dec. 12, 1817, and was, therefore, in his 86th year at the time of his death. Mr. Kerr spent at least 60 years in the pursuit of his chosen calling, but there had been times in his life when he temporarily abandoned it, only to return to his "first love." Mr. Kerr was 16 years of age when he first started to work for the firm of Platt & Carr, then located on Clifford St. In 1835 he decided to do a little watch repairing and watchmaking on his own account, and a place was found for him to set up a bench in the little home at Manton. He finally relinquished this venture and went to Woonsocket, where he was employed by a firm in making spectacle frames and dies. After three years in that city he decided to return to Manton, where he resumed the repairing of watches. Incidentally he devoted considerable of his spare time to the construction of odd bits of mechanism that won for him not a little local fame. It was about 1841 when he constructed several reed organs that are said to have been very pleasing instruments of their kind. While the construction of these was a little out of the line of watchmaking, nevertheless this incident only goes to show the wide scope of Mr. Kerr's ingenuity.

Later Mr. Kerr was engaged in the manufacture of rolled plate, but this venture did not prove an unqualified success, and after a time Mr. Kerr went on the road exhibiting various automatic figures and traveled throughout the principal cities of the country. He was a watch repairer in Boston at the outbreak of the Civil War, having once more returned to the work of his earlier days. In 1873 Mr. Kerr came to this city and established a store on lower Westminster St. He at different times occupied various stores on that thoroughfare until he finally settled at No. 540, between Jackson and Franklin Sts., where his store was located at the time of his death.

Mr. Kerr was married three times. Mary Potter and Lydia Miller, his first two wives, are dead. The third, who was Mary J. Patten, survives him. He leaves two children, a daughter, who is Mrs. Thomas Carpenter, of this city, and a son, Zaland Kerr. Deceased was a member of St George's Lodge, Knights of Pythias.

P. H. Livingston Answers Suit of L. O. Levison, Receiver of Schumacher & Co.

SAN FRANCISCO, Cal., Feb. 26.—An answer was filed in the Superior Court last week to the suit of Louis O. Levison as the receiver of Schumacher & Co., against P. H. Livingston. The defendant is one of four individuals and firms with whom Schumacher is alleged to have pawned or pledged goods of the concern prior to its passing into the hands of a receiver.

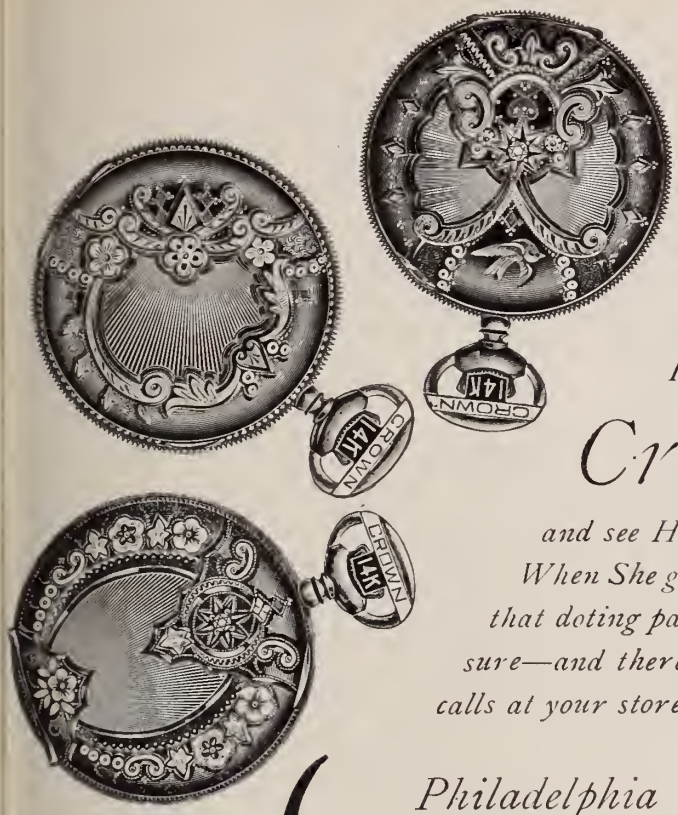
The plaintiff, who represents the creditors, alleged in his complaint that the goods were not pledged in good faith, and further that the pledgees were acting without the law, as they were not duly licensed pawnbrokers. The pledged goods were, by order of Court, turned over to the receiver.

In his answer Defendant Livingston claims that he acted in good faith and that the money was loaned to the firm of Schumacher & Co. at various times, and used by the firm in and about its business and in the payment of its obligations.

The defendant asks judgment against the plaintiff for the possession of the goods or for $37,746.46, their value, in case delivery may not be had.

H. H. Robinson, Bangor, Me., has resumed his business duties after a brief illness.

William F. Meyer, Reading, Pa., has purchased property on Main St. and will take possession April 1. The premises will be entirely remodelled and improved and will be used for an up-to-date jewelry establishment.



You can sell the ELGIN

on its name because it has a name which stands upon a reputation of nearly 35 years of accurate timekeeping—an unbroken record of satisfaction in Elgin reliability and durability. It not only pays a dealer better but it is easier for him to sell the Elgin than inferior watches with no reputation. See Jobbers' List for prices, or write the Company.

Every dealer is invited to send for the Elgin Art Booklet, "Timemakers and Timekeepers," illustrating the history and development of the watch.

Successful Banquet of the Employes of Spaulding & Co.

CHICAGO, Ill., Feb. 25.—The sixth annual banquet of the employes of Spaulding & Co. was held in the banquet hall of the Auditorium Hotel, on the evening of Feb. 21. J. A. Busch was chairman and Alfred Linton, toastmaster.

The hall was hung with flags and bunting of the national colors; roses, tulips, ferns, etc., were daintily and tastefully arranged on the five long tables. The special feature of the evening was a character impersonation by A. A. Hollister and E. H. Ward, of Montgomery and Stone, as the Scarecrow and Tim Woodman, respectively in the Wizard of Oz.

The toastmaster presented Mr. Hollister with a beautiful plush box, wherein was set a hermetically sealed can, said to contain the brains of Balaam's ass, while Mr. Ward received a similar box, which the toastmaster asserted contained the heart of our old and distinguished friend Cleopatra. Both gentlemen received a certificate, signed by a notary public, substantiating Mr. Linton's claim. Another interesting feature was the rendition of W. A. Moore's topical song, entitled "Did He?—I Think He Did," which dealt truthfully and unsparingly with the characters of a number of those present. Frank Dumford's delivery of this bit of satire was vociferously applauded.

Music was furnished by Tomaso's Orchestra, and, judging from the many expressions of pleasure heard from the participants the affair was a grand success. Among the guests present, who numbered 108, were:

Lloyd Milnor, president of the company; Edward J. Smith, secretary; Charles F. Greene, the Paris representative; W. A. Altruz, E. Anderson, E. E. Arnold, H. Berger, C. M. Bird, W. Boetticher, F. M. Bogle, J. G. Brown, J. Buddinger, J. A. Busch, O. C. J. Carlson, B. F. Coffin, J. A. De Laney, G. R. Douce, J. N. Douce, F. M. Dunford, C. R. Erwin, E. P. Felbeck, E. W. Finn, O. Gallagher, T. Griffith, C. S. Groves, C. F. Hass, G. L. Hall, R. R. Hill, C. S. Hannan, C. B. Hastings, G. Henrici, A. A. Hollister, N. H. Howe, R. G. Ingersoll, J. Jensen, C. Johanson, E. R. Johnson, O. Jones, T. W. Kavanagh, H. S. Kerley, E. A. Kilbridge, A. Lindblade, A. Linton, H. Lodge, F. M. Lund, J. Mann, E. C. Martine, W. Mason, L. G. Matalene, M. H. Meck, L. Milliar, J. Monsen, W. A. Moore, E. L. Norton, J. Nudelman, P. B. Olsen, O. Olsen, J. P. O'Malley, J. H. Ostrander, W. Ramaker, A. S. Ronning, E. Rosenquist, J. Seger, C. R. Shepard, J. Smith, A. C. Snow, B. Stark, P. W. Stuhr, C. A. Tiden, H. C. Tilden, E. Trend, P. W. Tuch, J. H. Volkman, H. Wacklin, E. H. Ward, E. J. Weed, L. Wiedel, E. B. Wright, W. E. Yerbury.

The guests were:

C. A. Allen, Jr., H. W. Anderson, R. Atwood, J. Burgess, J. A. Cox, G. Deagan, W. V. Ghislin, J. C. Irwin, E. Klein, F. Lanneau, E. R. Lus., R. C. Lusk, H. M. Pflager, H. Peters, E. P. Smith, G. E. Waldo.

C. H. Rabe Announces the Disappearance of His Partner, W. J. Rieger.

CHICAGO, Ill., Feb. 25.—W. J. Rieger, of the firm of Rabe & Rieger, Hammond, Ind., disappeared Saturday, Feb. 14, and his whereabouts are unknown but the supposition is that he went to Europe.

O. H. Rabe, his partner, has announced the above fact and also the dissolution of the firm of Rabe & Rieger, stating he will assume all liabilities of the firm up to Feb. 14, but that any debts contracted by Mr. Rieger in the firm's name subsequent to above date he will not be responsible for.

Mr. Rabe will continue the business under the style of O. H. Rabe.

Rieger, the missing man, was formerly an officer in the German army. He was prominent in Hammond social circles and at one time was president of the Hammond Trade and Labor Council.

H. E. Osborne, Waukesha, Wis., has commenced suit in the Circuit Court against The Corning Cut Glass Co., of Corning, N. Y. The action of the suit is to recover $1,497.11, which the plaintiff alleges is due him as commissions on goods sold.

68 NASSAU ST., NEW YORK. GENEVA, SWITZERLAND

Pittsburgh Jewelers Claim their Name was Forged to Note Given to New York Diamond Importer.

PITTSBURGH, Pa., Feb. 25.—Facts which seem to indicate that some one has forged the name of a prominent Pittsburgh firm were made public here recently by Spandau Bros., wholesale jewelers, 542 Smithfield St. No one, however, seems to have suffered from the act. On Jan. 22 Spandau Bros. say they received the following telegram from New York City: "Please send new note for $550 immediately by special delivery. We desire to renew for that amount. J. Hochhaus & Son." Two days later a messenger from Spandau Bros.' bank called on the firm and presented a note against them for $900. Spandau Bros. at once recognized the note as a forgery. They told the messenger that they had never signed the note and refused to redeem it. The messenger returned with the note to the bank and Spandau Bros. heard nothing further from it.

J. Hochhaus & Son are diamond importers of Antwerp and have a branch at 51 Maiden Lane, New York. Sam. Hochhaus, of this firm, was shown the above by a CIRCULAR-WEEKLY reporter and made the following statement:

"A man came to me last September," said Mr. Hochhaus, "with letters of introduction to the jewelry trade from Spandau Bros., Pittsburgh. I looked at the letters and the man and thought he was all right. I sold him $3,000 worth of goods, for which he paid me $1,100 in cash and the balance in two notes, one for $900 and the other for $1,000. These notes bore the signature of Spandau Bros. and were indorsed by my customer, and as I knew Spandau Bros.' credit was good, I accepted them. I deposited the $900 note in my bank and had it discounted; the other I kept in my safe. The notes, I think, were for four months' time.

"About two months after I had received them I got a check from the man for $1,000 (deducting the interest) and canceled the note for that amount. About the middle of December I got another check for $900, canceling the other note. I went to the bank to have the note that I had discounted withdrawn and found that they had sent it to a Pittsburgh bank. A few weeks later I sailed for Europe and on my return I was surprised to learn from my clerk that the $900 note had been presented to Spandau Bros. and had been pronounced by them a forgery. I immediately wrote the concern, explaining the situation to them and sent my check for $900 to the bank which discounted it.

"As I heard nothing from either the Pittsburgh jewelers or the bank, I concluded that the matter was all straight. I did not send the telegram referred to, but I wrote a letter to the concern asking an explanation and received no answer thereto."

Mr. Hochhaus last week visited Pittsburgh and explained the facts to Spandau Bros.

Several of the employes of the Wm. B. Durgin Co., Concord, N. H., recently held a preliminary meeting for the purpose of organizing a mutual aid society. The employes of the concern are all in favor of establishing such an association.

The Myers Bill.

Act to Protect Arkansas Pearl Fisheries Passes Both Branches of Legislature.

LITTLE ROCK, Ark., Feb. 27.—The bill designed to protect fresh water pearl fisheries of this State, which was introduced in the early part of the present session of the Legislature by Dr. M. H. Myers, has passed both houses after a prolonged debate, has been enrolled and will this week be presented to the Governor for his approval.

It is generally believed that there is little likelihood of a veto by the Governor, and the bill is considered to be practically as good as a law. The act, as passed by the Legislature, reads as follows:

A BILL FOR AN ACT TO BE ENTITLED AN ACT TO REGULATE MUSSEL AND PEARL FISHING IN THE STATE OF ARKANSAS.

Be it enacted by the general assembly of the State of Arkansas:

Section 1. It shall be unlawful for any person to remove mussel for any purpose from the waters of the State between April 1 and June 30 of each year.

Sec. 2. It shall be unlawful for any person to use at any time during the fishing or open season any instrument called a crow-foot or any similar tool or device the points of which might enter the flesh of the mussel and thereby destroy but not remove the mussel from said water; provided this shall not apply to forks or tongs. Provided further, it shall be unlawful for any person at any time to use dredges for the purpose of removing mussels from the waters.

Sec. 3. It shall be unlawful for any person, corporation or persons to return to the waters any shells once removed from any of the rivers, lakes or bayous of the State of Arkansas.

Sec. 4. Any person violating any of the provisions of this act shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine of not less than $25 nor more than $50 for each offense.

Sec. 5. All laws and parts of laws in conflict with this act are hereby repealed, and this act shall take effect and be in force from and after its passage.

House Bill 96, Myers.

Resolutions on the Death of the Late Henry Hayes.

NEWARK, N. J., Feb. 25.— At a meeting of the standing committee of the Diocese of Newark, in Trinity Church vestry room, yesterday, the following was adopted by a rising vote:

On the second day of February, the Feast of the Purification, 1903, Mr. Henry Hayes, an honored member of this committee, passed from the labors of this present world to that rest which remaineth unto the people of God.

Mr. Hayes had been so long and so efficiently engaged in the work of the church in the undivided Diocese of New Jersey, and the Diocese of Newark, that it is but fitting and right that special mention should be made of the offices he has filled so faithfully and so well.

He was, for more than 20 years, treasurer of the undivided Diocese of New Jersey.

When the Diocese of Northern New Jersey (now Newark), was formed in 1874, he was elected its treasurer, and remained such treasurer up to the time of his death.

He was also for a long time treasurer of:

1. Our diocesan fund for aged and infirm clergy.
2. The corporation for the relief of the widows and orphans of deceased clergymen of the church in the State of New Jersey.
3. Our Diocesan Board of Missions.

He was for a long time a member of the vestry and a warden of Grace Church, Newark, and as diocesan treasurer represented that parish in our diocesan conventions.

In the year 1886 he was first elected a deputy to the general convention of the church, and through subsequent elections served as such deputy up to the time of his death.

He attended the general convention which was held in San Francisco in the autumn of 1901.

He was a valuable and faithful member of our standing committee for 19 years.

Fitted for these various positions by natural ability and business training, he did all the work which they entailed diligently, earnestly and with tact.

These valuable services are now ended, and we grieve at the great loss which the church has sustained.

As a man, Mr. Hayes had many qualities that endeared him to us and to his many other personal friends.

Earnest and positive in his own convictions in regard to the church and its teachings, he yet held and expressed them in the spirit and with the grace of a Christian gentleman.

His own integrity and rectitude of purpose enabled him to appreciate these qualities in others.

Generous and catholic in his own instincts and feelings, he freely gave his money, time and labor for the benefit of others.

We, his associates in the standing committee of the Diocese of Newark, adopt this testimonial by unanimous vote, and direct that it be entered in full in our minutes, and that a copy of it be sent to the widow and son of Mr. Hayes.

WILLIAM R. JENVEY, Secretary.

Capture of One of Three Robbers Who Looted Braddock Jewelry Stores.

PITTSBURGH, Pa., Feb. 28.—A man who gave his name as Enoch York was shot and seriously wounded early this morning in Braddock, while fleeing from Policeman Samuel Bean, of that place, who discovered him in the act of looting the jewelry store of J. Kopsofsky, at 842 Braddock Ave., Braddock. The injured man is believed to be one of a group of three who committed three robberies in Braddock last night. York was the only one of the trio captured.

Shortly after 1 o'clock this morning Policeman Bean heard a crash of glass and discovered three men in front of the Kopsofsky jewelry store. As the officer reached the store they fled. Bean started in pursuit, accompanied by several citizens, and when the men separated the officer continued the search after York.

The fugitive climbed over two fences and was eluding his pursuers when the officer opened fire upon him. One bullet struck the fleeing man in the right thigh and he fell to the ground. Physicians were called and dressed the man's wound, after which he was removed to the Braddock police station and locked up.

At the hearing this morning York denied that he knew the men who were with him and would not admit his complicity in the crimes. The police think that he and his partners are members of a gang of professional crooks who have secured a large amount of jewelry in this neighborhood during the past few months.

An investigation showed that two jewelry stores, both belonging to Kopsofsky, had been looted.

An effort is being made by the citizens of New Albany, Ky., to have the new watch manufacturing company, composed of Henry Weinhardt, of New Albany, and several Louisville and Chicago capitalists, to locate its plant in New Albany instead of Louisville, as was first contemplated.

The new jewelry store recently opened in the Thompson-Simpson-Lain brick building on Holly St., Fair Haven, Wash., was entered by burglars at about 4 or 5 A. M., Feb. 19, and about $100 worth of goods were stolen. The list includes four watches, gold-filled cases, and two revolvers. The burglars gained entrance by crawling through the transom over the back door.

Blank's Patent Opera and Field Glasses,

made by the celebrated L-E-M-A-I-R-E, of Paris,

are the only glasses on the market permitting the free use of both hands in handling the programme or other article, besides combining the quickest focussing attachment ever produced, and the certainty of not dropping the glasses. No other opera or field glasses possess these features. The ring is easily taken off and a handle attached or vice versa.

FOR SALE BY ALL REPUTABLE JOBBERS.

Hammel, Riglander & Co.,
No. 35 Maiden Lane,

The Cincinnati Fire.

Duhme Bros. & Co. and Richter & Phillips Among the Heaviest Sufferers.

CINCINNATI, O., Feb. 27.—One of the most disastrous fires that ever visited this city occurred Wednesday, midnight, ruined five large buildings and did damage to several others. The fire broke out in the basement of the Pike Opera House about 1 A. M. and before it was extinguished the buildings which cover half the square bounded by Vine, 4th, Walnut and 3d Sts., were burned to the ground. The loss is estimated roughly at $2,000,000 and over 200 tenants of these buildings were affected.

Among the worst sufferers of the fire are the Duhme Bros. & Co., who occupied the first floor and basement of the Harrison building, which adjoined the Pike building on the east. This concern's quarters were completely gutted and the loss is estimated by Herman Duhme at more than $40,000.

During the fire in the Pike building, when it became evident that the Harrison building must also be destroyed, work was immediately commenced at removing from the jewelry store silverware, bric-à-brac and other articles that were in the wall cases. About one wagon load was carted away when the heat became so intense that further attempts to save the stock had to be abandoned.

Diamonds and other small stock of value were locked in the safe, and these, it is hoped, are unaffected. The safes cannot be recovered for some time, as the firemen are still pouring water into the ruins, and no attempt can be made to take the safes out until after the walls of the building, still standing, have been taken down.

Duhme Bros. & Co. were insured for $55,000, and in the 66 years in which they and their predecessors have been in business this is their first fire. The business is now temporarily located in the St. Paul building and will remain there for the present.

In the Seasongood building, at the west side of the Pike building, Richter & Phillips occupied two floors, and they are also among the heavy sufferers. The damage to their business, however, is principally by water, as the building was not gutted. They succeeded in getting out a number of trunks containing goods, and their safes, with the contents, are in good condition. The stock in the store and fixtures are completely ruined. Richter & Phillips place their loss at $12,000 and are insured for about $18,000. They have secured two floors at 5th and Vine Sts., into which they will remove their stock and begin business at once.

The stores of Fox Bros. & Co., the Gustav Fox Co. and A. & J. Plaut, on the north side of the street and directly opposite the fire, suffered no loss except to their show windows, the glass of which was broken by the intense heat.

Ivor Williams, a druggist of Foster, Ia., has added a stock of jewelry.

Richard Roberts and L. C. Olmstead, Big Timber, Mont., will form a partnership April 1. In the meantime they will reduce their stock of jewelry, in order to accommodate it to their quarters.

The E. Howard Watch Co.

has ready for delivery

A New Model 16-Size Bridge Movement,

fitting regular model cases. This movement is designed for the very best trade and represents the highest attainment in watch making. Open face and hunting.

Description and full particulars on request.

Hayden W. Wheeler & Co.,

2 Maiden Lane, New York.

[Telephone, 8 Cortlandt.]

Preparations for the Coming Banquet of the Philadelphia Jewelers' Club.

PHILADELPHIA, March 2.—Preparations are rapidly being completed for the eighth annual banquet of the Philadelphia Jewelers' Club, which will be given at Horticultural Hall, Wednesday evening, March 11, at 6.30 P. M. The club has entrusted the banquet preparations to the following committee: L. P. White, chairman; J. Warner Hutchins, Wm. P. Sackett, Wm. H. Long, A. G. Lee, Wm. G. Earle, T. J. Mooney, James H. Kelly and Wm. J. Bruehl.

Each one of these committeemen, who have been active spirits in the club's affairs since its incorporation, have served on the banquet committees of other years and have in no small measure been responsible for the club's fame for generous hospitality. That they will do all in their power to make the eighth annual banquet surpass the seven others goes without saying and that they will succeed already seems assured. From the way subscriptions are being received by Mr. Long, treasurer of the committee, it is probable the attendance will exceed that of last year, when in round numbers 350 jewelers were the club's guests.

The banquet will be given on a more lavish scale than ever, and the guests of honor and speakers will be men of national reputation. Who the speakers will be has not yet been announced. The general decoration of the banqueting hall, the arrangements of the tables, the music, etc., will be on lines similar to last year. Whatever the souvenir of the occasion, and it will be held a secret until the evening of the dinner, it will be such as to be most highly prized by the guests, as have been the souvenirs of recent years.

Members of the Devore Diamond Co. Charged with Running a Lottery.

MINNEAPOLIS, Minn., Feb. 25.—Sanford W. Devore and Norman A. Sprong were arraigned before United States Commissioner Howard Abbott yesterday morning on a charge of conducting a lottery. Mr. Devore and Mr. Sprong, it is said, with Edward Zeizel, constituted the concern known as the Devore Diamond Co., which, it is charged, sells diamonds on a tontine plan.

The working of this company has been the subject of litigation and its methods of awarding the diamonds are claimed to violate the lottery laws. Mr. Zeizel was not in court, and it was explained that he had gone to Chicago, but would return and surrender himself.

Mr. Devore and Mr. Sprong waived examination and were held by the United States Grand Jury in $500 bail. They furnished bonds and were released.

Memphis Jeweler and Wife Give Deed of Trust.

MEMPHIS, Tenn., March 2.—Joseph Friedlander, retail jeweler at 269½ Main St., and his wife have given a deed of trust of $12,000 to the Northwestern Life Insurance Co. in default of interest to that company. The deed of trust is the result of a foreclosure proceeding begun by the life insurance company.

Mr. Friedlander's liabilities are said to be about $45,000, while his assets, consisting of stock, are estimated to be in the neighborhood of $24,000.

Providence.

A new firm for the manufacture of jewelers' findings has been established at 220 Eddy St. under the style of Nettleton & Shepard.

The "Slippery Four" whist team, of the Gorham Mfg. Co., defeated the "Foxy" team, of the same works, at whist last week. The score was 23 to 0. Medals were given the winning team by Robert Currier.

The stock of the plant of the McWilliams Mfg. Co. is being sold in lots to suit the purchaser at private sale. The death of John McWilliams, of this concern, was noted in THE CIRCULAR-WEEKLY several weeks ago.

Another sudden death of one of the old-time jewelers of the city occurred last week, when Cornelius M. Tucker expired while reading a newspaper. The deceased was born in Brooklyn, Conn., 71 years ago. He had made his home in this city for the past 33 years. He leaves a widow, four daughters and one son. Heart failure was responsible for his death.

Articles of incorporation of the P. & A. Linton Co. were filed at the office of the Secretary of State last week. The company is formed for the purpose of buying, selling and dealing in jewelry and jewelers' supplies and materials. The incorporators are Phillip Linton, James A. Davis and George T. Sheridan. The concern is capitalized at $50,000, and its headquarters will be in this city.

At the last meeting of the local union of jewelry workers a number of candidates for membership were admitted, and it was also voted to hold a mass meeting in Music Hall this month. The question of admitting members of "the weaker sex" to membership in the union was considered, and it is said to be probable that the women workers in the shops will soon be admitted to full privileges in the organization.

While at his work in the establishment of Parks Bros. & Rogers, death came to Joseph Westcott, 56 years of age, one day last week. Mr. Westcott had been employed by the firm for a number of years, but had not been in the best of health for some time. On the morning in question one of his fellow workmen saw him reel and fall from his stool. Heart failure was the verdict of the physician who responded to the call for medical attention. Mr. Westcott was unmarried.

Police Commissioner Luther, who is also well known by reason of his connection with W. H. Luther & Son, is having a little difficulty in collecting his salary from the city for the month just closed. Mr. Luther is a Republican, and was elected Commissioner by a Republican Senate over a man nominated by the Governor. Now the Democrats have raised a question as to the legality of the election, and until this is settled the City Treasurer will not pay the salary due.

That the manufacturing jewelers are fully aware that the Rosenstein bill, introduced in the New York Legislature, might affect their interests, is evidenced by the fact that at a recent meeting of the New England Manufacturing Jewelers & Silversmiths' Association the bill was fully

discussed, and at the close of discussion it was voted that President Pearce be given authority to appoint a committee and secure counsel, if necessary, to look after the interests of the jewelers in the association. At the same meeting the advisability of holding regular meetings throughout the year to consider questions of interest to the trade was given attention, and it is by no means improbable that the association will engage a room for this purpose.

The "jewelry district," so called, was visited by another fire early Thursday evening, which, while it fortunately resulted in no loss of life, was, nevertheless, attended by considerable damage and loss to jewelers. The fire was located in the Dyer Land Co.'s building, occupied for the most part by jewelers. The several establishments had practically been vacated for the night when the fire was discovered, although some of the male employes and one woman bookkeeper, Miss Watson, were obliged to make their exit by way of the fire escapes. The fire started in the boiler room, and the smoke and flames poured up a ventilating shaft. The flames burned the shaft for the entire five floors, but were soon under control. An investigation of the damage showed that the W. S. Hough, Jr., Co., and Waite, Mathewson & Co., had suffered no damage, while the same was true of E. Brown & Co.; E. A. Potter & Co. were damaged but slightly by water; Albro & Co., William Smith & Co., Waite, Thresher Co., were slightly damaged by water; B. A. Ballou & Co., on the top floor, escaped without damage. What caused the greatest inconvenience was the loss of power. It will probably be a little short of a week before the machinery in some instances can be operated.

Attleboro.

J. M. Fisher & Co. resumed operations last Saturday, after being shut down several days for stock taking.

The case of Fred M. Ellis, of F. M. Ellis & Co., came up last week in the Bankruptcy Court. Mr. Ellis was not present. Claims from Carl J. Dahlgren, $47.07; Ebenezer Briggs, $12.20; and Clara Leighton, $20.58, were laid on file until the next hearing, when it is expected Mr. Ellis will attend personally.

Suit was entered Saturday in the Common Pleas Division, of the Rhode Island Supreme Court, by William H. Mattis and David Danne against Henry B. Richardson, until very lately of the G. A. Dean Co. The allegation is that in the erection of a house he contracted to pay the plaintiffs $2,266, and now withholds a balance of $650.

The former employes of Fred L. Torrey, who has just sold his holdings in the Torrey Jewelry Co. to his partner, called on him without advance notice one night last week and presented him with a handsome rocking chair, and many kind comments were made on the pleasant relations which had existed during their years of work together.

A Civic Improvement League was organized last week in Attleboro, to undertake to interest owners of factories in bet-

ter surroundings for their help during working hours, and several other kindred movements to make the town more attractive and better to live in. The officers elected include Harold E. Sweet, of the R. F. Simmons Co.; John M. Fisher, of J. M. Fisher & Co.; Willard A. Engley, formerly of Engley, Wetherell & Co.; Charles M. Robbins, of the Charles M. Robbins Co., and Fred W. Lincoln, of J. M. Fisher & Co. All of these men are pledged to active work rather than honorary title-bearing.

By this week the corporation of Reed & Barton, Taunton, hopes to finish a large task it recently undertook. It purchased a very valuable water privilege situated several miles lower than its present works on Mill river, set up an electrical generating plant, and will send back the power there made to its present plant by wires, doubling its light and power facilities, and using the same water twice for its purposes.

North Attleboro.

The T. I. Smith Co. was too busy to close, Washington's Birthday, and is running its pearl department evenings.

W. B. Ballou, of R. Blackinton & Co., and Fred S. Gilbert have returned from New York, where they spent a portion of last week.

Thomas G. Frothingham, who died recently in Washington, was not the well known member of the firm of T. G. Frothingham & Co., of this place, though the similarity of the names at first caused some reports to this effect.

The Paye & Baker Mfg. Co. is very much pleased at the way in which its employes have viewed the removal from Providence to this place. They have followed the concern almost to a man, and think very well of North Attleboro.

A. C. Sylvester, of the Webster Co., H. W. Tufts, of the H. W. Tufts Tool Co., W. G. Franklin, of E. I. Franklin & Co., and F. S. Gilbert, attended a hearing at the State house last week with reference to the Anti-sale law for partridge and woodcock.

The warrant for the annual town meeting contains an article to see if the town will vote to apply to the Legislature for authority to change the corporate name of the town and appoint a committee to receive such names as may be suggested with full power to draft a bill for presentation to the Legislature. This is the culmination of the movement which has been growing in favor for some time. The plan of a change first came up in 1890. At that time the Legislature passed an act which allowed the town to take the name of Sumner, Wamsutta, Stockton, Dunster, Redrock, Samoset or Burden. When the town voted on the act it was turned down by a vote of 383 to 125. In November, 1895, the town again voted on the matter, and public sentiment had changed so that only 42 votes were needed to carry the plan into effect. The vote stood at 254 "yes" and 295 "no." The name of Standish received the greatest number of votes, and the others balloted for were Alden, Dorset, Allerton and Endicott. It is believed that the sentiment

in favor of a change is now largely in the majority.

Alfred Sweet, New York representative for J. F. Sturdy's Sons, has been spending a few days in town.

Henry E. Capron, of Sandland, Capron & Co., recently recovered from an illness which confined him to his home for two weeks.

Frank L. Shepardson, of F. L. Shepardson & Co., is the choice of the Republican party for Overseer of the Poor. He is also a candidate for re-election as Selectman.

N. B. Simpson, master mechanic for the Guild Machine Co., had his shoulder badly hurt last week while hoisting a pulley with a tackle. The big wheel weighing 800 pounds fell, striking him on the shoulder and throwing him fully 12 feet.

Detroit.

F. Kantlehner, Chelsea, Mich., replenished his stock in Detroit, last week.

M. D. Walton, Armada, Mich., who was recently in this city, has constructed a new brick block, part of which is occupied by his jewelry store.

Harmann Gerloff, a jeweler of this city, died by suffocation last Monday morning after inhaling the fumes of potassium cyanide, with which he was cleansing jewelry. Death was hastened by a weak heart. Mr. Gerloff is survived by a widow.

Fred J. Fox, the young Detroit clerk, who secured diamonds from Horace W. Steere, valued at $318, for his employer, Charles Rice, jeweler, 205 Grand River Ave., and then skipped, was arrested last week in Denver, Col. He confessed his guilt to the western officers, but declared that he had taken jewelry, diamonds, etc., valued at $22,000 from Detroit dealers. Fox was brought back Saturday, arraigned and bound over for trial, bail being fixed at $1,000. He tried to pose as a big thief, but is only charged with the larceny of the Steere diamonds by conversion. Up to a recent date he had borne a good reputation.

CHAS. L. TROUT & CO.,

5 AND 7 MAIDEN LANE, NEW YORK.

Washington, D. C.

Henry Ansley has removed from 487 Pennsylvania Ave. to 1328 G St., N. W.

Joseph Drukker has petitioned the Bankruptcy Court for a hearing on his final discharge in bankruptcy. The court has fixed March 14, 1903, as the date of the hearing.

F. W. Brandenburg, trustee of Joseph Drukker, has again asked the Bankruptcy Court to issue a rule against E. Heidenheimer, pawnbroker, to show cause why certain jewelry of Drukker's, held by him on pledge, should not be turned over to the trustee for the benefit of creditors. As a basis for this action the trustee states that four pawn tickets have come into his possession issued by Heidenheimer for jewelry pledged by Drukker, the four tickets showing that $195 was advanced. The trustee believes that there is a substantial equity remaining in the jewelry in pawn which should go to the creditors. The rule has been issued. In the former similar application by the trustee the Traders' National Bank and E. Heidenheimer have returned answers to the rule. The bank, through its cashier, states that on two occasions it loaned Drukker money aggregating $350, taking notes for same with five diamond rings as security. The notes were never paid and as at the time the loan was made the bank had no knowledge that Drukker was contemplating bankruptcy, and as the jewelry was delivered for the sole purpose of securing the loans and not for the purpose of delaying or defrauding creditors, the bank believes it has a good title to the said rings. Heidenheimer states that an examination of his books fails to show any jewelry pledged in the name of Joseph Drukker.

Baltimore.

S. Seff will shortly remove to 108 N. Eutaw St., and is selling his stock at a discount.

The Art Glassworkers' Union, Baltimore, has elected the following as permanent officers: G. W. Hoffner, president; C. Lettaw, vice-president; E. Lettaw, treasurer; R. Weilenbeck, general secretary; H. De Gwise, sergeant-at-arms.

The house at 2630 E. Baltimore St., occupied by Conrad Klank, of C. Klank & Sons, was entered some time between Friday afternoon and Sunday noon and silverware and jewelry to the value of $130 was stolen. Entrance was made through a basement door by means of a jimmy, during the absence of the family.

The case of F. Hooker and H. J. Fehl, whose arrest in Baltimore for setting fire to their jewelry store in Frederick to secure the insurance was told in last week's CIRCULAR-WEEKLY, came up in the Circuit Court for Frederick County, Feb. 24, and on application of counsel for the accused the case was removed to Howard County and will be tried at Ellicott City. An indictment against Hooker for selling goods without a license, owing to the fact that he had greatly underestimated the value of his stock, came up Feb. 24, but was dismissed, as his counsel produced the $4,000 license and satisfied the Court with his arguments.

Thomas Moore, watchmaker under W. P. Sackett, at Wanamaker's, is critically ill with typhoid fever.

C. Wheless, a South Carolina watchmaker, has accepted a position with Harry Cain, 2942 Ridge Ave.

Edward Evans, 2634 Richmond St., is receiving the condolences of the trade on the recent death of his wife.

J. B. Bechtel, of J. B. Bechtel & Co., expects to leave for an extended trip through the west next week.

S. Stamm, watchmaker, 127 S. 9th St., last week removed to 719 S. 2d St., where he has opened a jewelry store.

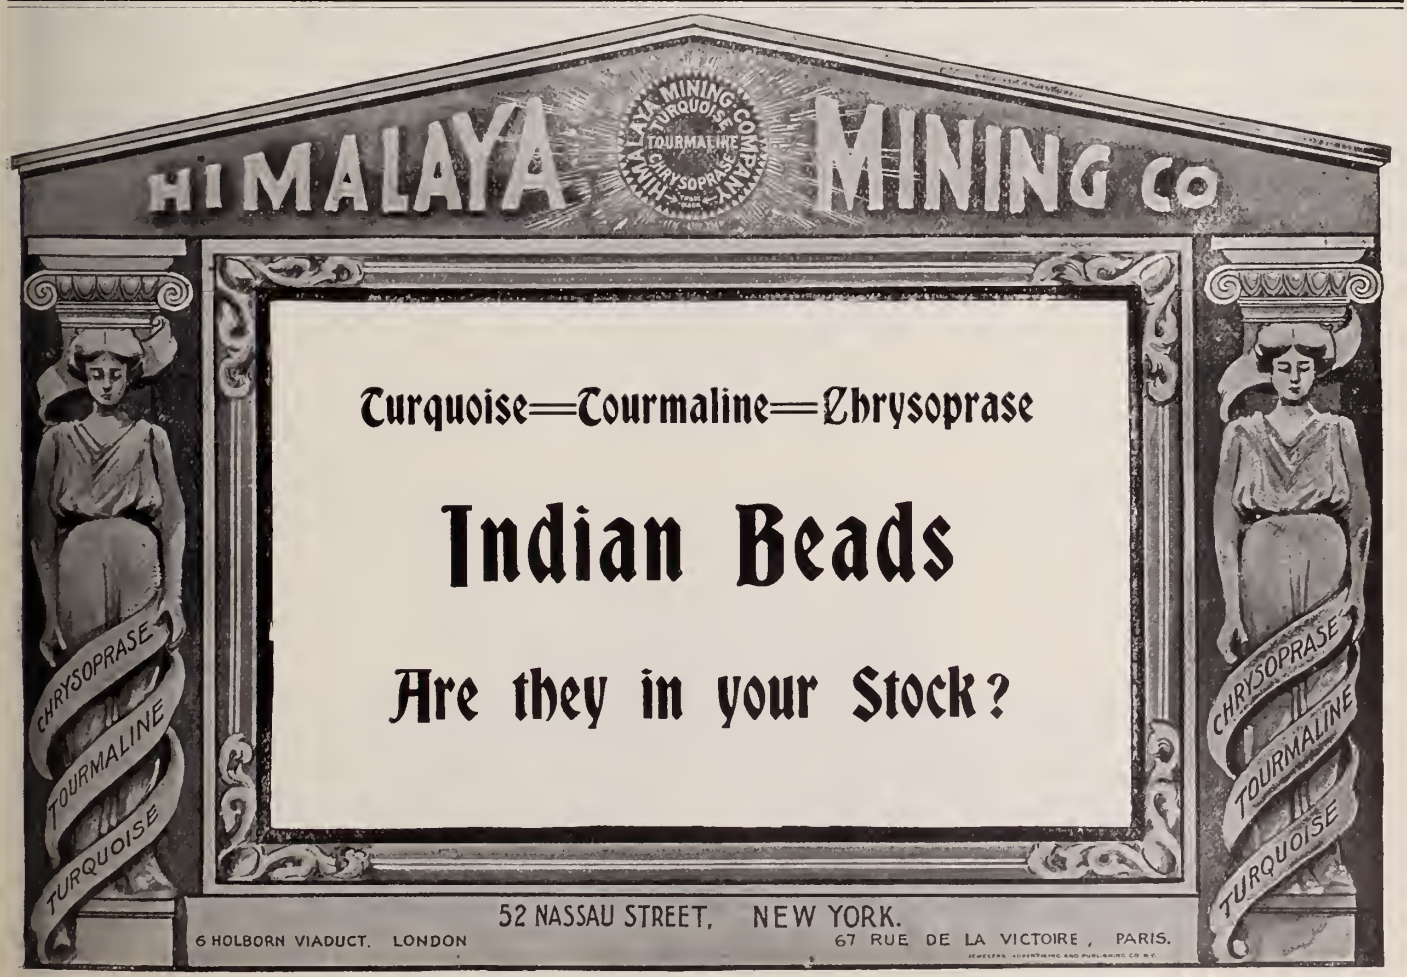
A. Louderback, manufacturing jeweler, 914 Walnut St., under the firm name of Harper & Louderback, will remove about April 1 to 116 S. 8th St., where he will continue business on an extensive scale.

Andrew Littel, with J. B. Bechtel & Co., will leave soon to learn the trade of watchmaker with W. O. Pierce, 13th and Pine Sts.

The building at 1016-18 Chestnut St., until recently occupied by manufacturing jewelers, watchmakers and engravers, is to be torn down soon, it is reported, and a new building erected there.

H. Donath, who has a most attractive jewelry store at 2446 Kensington Ave., was fleeced out of a diamond ring valued at $125 by a fashionably dressed woman who entered his store last week. The method employed was the familiar substitution scheme.

The art stores of Shimamura & Co., Mogi, Emanary & Co. and Momoni & Co., at Atlantic City, were entered by thieves recently, and jewelry and art pieces stolen. On Friday 10 carved ivory images, valued at $1,500, were stolen from Shimamura & Co.'s place.



In order to enlarge the collection of the museum of the University of Pennsylvania, Professor Maxwell Sommerville, the Curator of the Archaeological Department, will leave in two weeks for a three months' tour of Japan. His principal efforts will be directed toward obtaining cameos.

George Weber, of Weber & Bro., 2209 N. Front St., presided at an indignation meeting of Kensington storekeepers last week, when resolutions were adopted importuning the authorities for better police protection for that section, in view of a murder and numerous robberies committed there recently.

The watchmakers' material and jobbing house of Charles M. O'Bryon, 735 Sansom St., was entered by thieves last week and property worth $50 stolen. The robbers forced an entrance through a window in the rear, and that the place was not looted is regarded as particularly fortunate. The thieves were probably frightened off.

Among the retail jewelers in Philadelphia buying goods last week were: David Krause, North Wales, Pa.; A. M. Yeakel, Perkasie, Pa.; J. W. Parrish, Newark, Del.; E. K. Bean, Lansdale, Pa.; Josiah Heckler, Mainland, Pa.; A. M. Kendal, Millville, N. J.; M. K. Louderslager, Souderton, Pa.; H. B. Bode, Atlantic City; Capt. Geo. Bowen, Bridgeton, N. J., and Ceaser Speigler, Allentown.

Plans for the new building of the Bailey, Banks & Biddle Co., to be erected at 1218-20-22 Chestnut St., were filed Friday at the Bureau of Building Inspection for approval by the Thompson-Starrett Co. G. Starrett, of New York, prepared the plans, which provide for a 10 story structure, with a front of brick, granite and terra cotta, copper and plate glass. The building will be 75.5x76.11¾ feet. The factory will be constructed in the rear, on Sansom St., which will have an eight story frontage, and in area will be nearly as large as the store building. The present factory of the company, at 12th and Sansom Sts., is to be sold.

Boston.

Max Posner has just completed a most successful sale for Charles Keene, of this city.

The American Waltham Watch Co.'s directors have declared a regular semi-annual dividend of 4 per cent., payable March 16, to stockholders of record March 1.

On Feb. 23, the day Washington's Birthday was celebrated, an automatic alarm was sounded, calling the firemen to the store of Smith, Patterson & Co., 52 Summer St. There was no fire, the trouble being caused by water leaking into a thermostat.

Additional improvements and more building extension to the plant of the American Waltham Watch Co. at Waltham are to be made. These plans of the company have been maturing for some time, but were kept private. They include the removal of the last of the old buildings, commonly known as the "mud wings," which is the surviving link between the present modern buildings and the second series of factory structures in which the great manufactory was nursed from infancy to its present magnitude.

The Cohannet Silver Co., of Taunton, Mass., filed a certificate of incorporation at the office of the Secretary of State, State House, last week. According to the certificate the company is organized for the "making, manufacturing and selling of all kinds of German silver, solid silver and plated ware, and all other kinds of ware." The capital stock is $10,000 and is held by the following: Elijah W. Burns, 10 shares; Allan M. Burns, 11 shares; William O. Dreghorn, eight shares; William E. McIsaac, eight shares; John J. Nichols, 50 shares; John J. Nichols, 2d, five shares; Fred C. Farrow, five shares; Fred G. Burns, three shares. The officers of the company are: Elijah W. Burns, president, and John J. Nichols, treasurer.

Syracuse.

Fred T. Long, representing Allsopp Bros., spent three days of the past week in Syracuse.

Cyrus E. Hillbrandt, who lived north of Newark and one mile south of Zurick, recently committed suicide by shooting himself through the head, death resulting instantly. The deceased was in the jewelry trade some years ago in Newark, working for A. F. Freck. He also had a jewelry store in Phelps at one time, and recently had worked in Johnstown. He was about 38 years old, and for some time his actions had been so strange as to lead to the determination of his friends to have a commission in lunacy appointed to inquire into his sanity.

Papers will be sent to Albany this week for the incorporation of the Albert G. Finn Silver Co., of this city, with a capitalization of $50,000, one-half of which amount is to be paid in. The company is actively engaged in the manufacture of plated silverware and novelties, having established a factory in the Duguid building, E. Water St. The original company was organized last September under the firm name of the Butler Silver Plate Co. Now that F. A. Butler has retired, organization has been perfected under the new name, with an increased capitalization. The directors of the new company include Albert G. Finn, George W. Hand, John J. Hurley and E. G. Fairchild.

Denver.

E. A. Tyler, of the Ansonia Clock Co., New York, was a visitor to this city last week.

A. C. Bloom is conducting a sale preparatory to moving into a new location at 723 16th St., March 15.

Harry Evans, Breckenridge, Col., and G. L. Muffley, Golden, Col., were in Denver last week on a purchasing trip.

Indianapolis.

F. W. Nichols, of S. T. Nichols & Co., is suffering from an attack of typhoid fever.

Casper Ritzi, Brookville, Ind., has remodeled his store room and added unusually fine black walnut show cases.

Christopher Bernloehr, of Chris. Bernloehr & Bros., recently bought a two-story brick store building, cor. Alabama and 16th Sts., for $13,500.

C. H. Cloud, Montpelier, Ind., will soon move into a handsome two-story brick building, which he has erected in the business section of the town. The building is modern in every respect, and will make a fine home for an up-to-date jewelry store.

Out of town merchants in this city last week included: Geo. L. Spahr, Lebanon, Ind.; J. W. Thompson, Danville, Ind.; Harry Major, Greensburg, Ind.; S. J. Saylor, Rossville, Ind.; J. A. Miessen, Cicero, Ind., and W. J. Hamilton, Linton, Ind.

The beautiful testimonial sword which the Indiana State Legislature presented, Feb. 23, to Admiral Taylor, former commander of the battleship *Indiana,* was furnished by Julius C. Walk & Son. It cost $1,200, and in design and execution showed the most skilful workmanship.

New Stores and Enterprises.

(New Optical concerns will be found in the Optical Department and new enterprises in New York will be found under heading "New York Notes.")

John Diltz has opened a new store in Gas City, Ind.

H. W. R. Johnson is a new jeweler in Butler, O.

M. M. Barber is established in business in Blaine, Wash.

James M. Wilder has commenced business in Oxnard, Cal.

O. C. Voss and A. M. Rich will shortly open a large jewelry and optical establishment in Oakland, Cal., under the firm style of Voss & Rich.

The Newburgh Clock Co. has just been incorporated in Newburgh, N. Y., with a capital stock of $12,500. The incorporators are Alice M. Lyon, W. C. Lyon and Henry C. Jensen, Newburgh.

The Baltimore Silver Plating Co. was incorporated last week by W. S. Carr, R. H. Carr, Jr., James E. Tippett, Geo. L. Mattingly and Andrew Aitken. The capital stock is $4,000, divided into 40 shares of $100 each.

Trans-Atlantic Voyagers.

TO EUROPE.

William Barthman, New York, sailed yesterday on the *Palatia.*

Richard Friedlander, of R., L. & M. Friedlander, New York, and William N. Dreyfus, of Dreyfus & Mayer, New York, will sail to-day on the *Celtic.*

L. C. Maxwell, of Malliet & Maxwell, New York, accompanied by his wife and daughter, will sail to-day on the *Celtic.*

J. G. C. Cottier, of C. Cottier & Son, New York, will sail to-morrow on *La Savoie.*

FROM EUROPE.

Maurice Brower, New York, returned last week on the *St. Paul.*

Baum, Rothschild Bros.

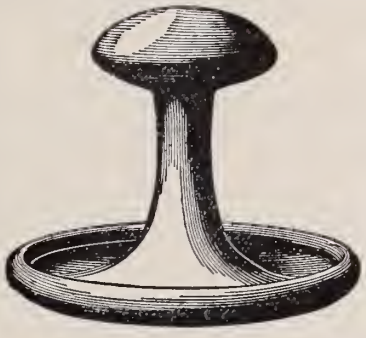
Erroneous Report that W. G. Porter Was Captured at New Haven, Conn.

ALBANY, N. Y., March 2.—Several Albany jewelers were pleased last week when a telegram was received in this city stating that Walter G. Porter, of Gloversville, had been arrested in New Haven, Conn. Porter is wanted on a charge of defrauding Harvey H. Kimmey, a dealer in jewelry supplies of Albany, and the Hartford Sterling Co., of Philadelphia, of over $6,000.

During the past few years, while he represented the Dennison Mfg. Co., several jewelers claim he also tried to get goods from them; consequently there was general interest in the news of the apprehension of Porter, which gave place to disappointment when a later telegram stated that the man in custody was not the jewelry salesman.



The suspect answered the description of Porter in almost every respect, and the New Haven police were so confident that they had captured Porter, they sent word to Albany announcing the fact.

Porter had been employed by Mr. Kimmey and the Philadelphia house up to December last. After he departed his employers had warrants issued charging him with grand larceny. It is also claimed that Porter is wanted in Buffalo and Syracuse on charges that he passed worthless checks on prominent hotels.

P. F. Darrigrand & Co., Utica, N. Y., will remove to a larger store in the near future.

The Giant of Collar Buttons

IN QUALITY,
IN SALES.

One Million Five Hundred Thousand Krementz One-Piece Collar Buttons made and sold within the last year. . . . . .

WHY? Because of their HIGHEST QUALITY, BEST CONSTRUCTION, GIVING THE MOST WEAR, AND GREATEST COMFORT and their IRON-CLAD GUARANTEE.

To verify this we invite the trade to read **"The Story of a Collar Button, with Illustrations,"** which may be had FREE for the asking, and to try the experiment suggested on page 5 of that booklet.

Extract from "Printers' Ink," Nov. 23, 1898.

The Little Schoolmaster now suggests, to every pupil in his class, to send a two-cent stamp to Krementz & Co., 49 Chestnut Street, Newark, N. J., and ask to be favored with a copy of their leaflet, "The Story of a Collar Button." Afterward, if any pupil will send to *Printers' Ink* another leaflet, new or old, that is half as good as this one, or that approaches it in excellence, the deserving student will be rewarded with one of *Printers' Ink's* souvenir spoons as an acknowledgment of his discovery and contribution. "The Story of a Collar Button" is the best piece of advertisement construction that has come to *Printers' Ink's* attention in the year of our Lord 1898.

Should you wish to utilize this booklet to increase your collar button business, we will, on receipt of your order, print your card upon and send you a quantity of them.

Krementz One-Piece Collar Buttons are stamped as follows, ON BACKS:

Patent sustained by United States Supreme Court.

Quality and Construction have made our reputation.

All Krementz Collar Buttons are Manufactured by

Second Prize.—"G. W. F."—G. W. Feldman, Franklin, Pa.

Third Prize.—"A. Y."—Miss E. J. Smith, Brookfield, Mo.

To Protect Pearl-Bearing Mussels.

THERE is considerable interest in Arkansas over the Pearl Fishing bill introduced some time ago by Dr. M. H. Myers, of Lawrence County, and just passed by the Legislature of that State. This bill, which is published in full on another page of this issue, seeks to afford protection to pearl-bearing mussels during the spawning season and to prohibit the custom of dredging for mussel shells.

The bill was opposed on various grounds, though it is claimed that a few pearl buyers and a number of northern pearl button manufacturers were the main instigators of the opposition. Dr. Myers contends that a close season should be enforced in order to protect the mussels during spawning time, and that digging mussels with crow foots and dredges should be prohibited, because these methods needlessly and uselessly kill thousands of bivalves; if measures of protection are not soon taken, he claims, the fresh water pearl fisheries in Arkansas will soon be a thing of the past.

From a superficial point of view, it would appear that the interests of the jewelry trade and the pearl industries in Arkansas can best be served by Dr. Myers's measure. If the industry be menaced by the destructive methods which Dr. Myers points out, it is to be hoped that the Governor of Arkansas will lose no time in signing the bill which provides a remedy for the evil.

Importations of Precious Stones.

THE latest reports from the United States Public Stores at New York show that the importations of pearls and precious stones continue to be very large. The figures reported by Gen. Geo. W. Mindil, the jewelry examiner, show that in the month of February just past the importation of these gems amounted in all to $1,683,360.51, of which the pearls and cut stones were valued at $1,036,783.32 and the uncut stones at $646,577.19. These figures are nearly a quarter of a million more than those of the corresponding month of last year and are almost equal to the figures of February, 1901, which were the largest on record for that month.

A comparison of importations of last month with those of previous Februaries can be made from the following table showing the figures for the past seven years:

Feb.	*Cut.*	*Uncut.*	*Total.*
1903	....$1,036,783.32	$646,577.19	$1,683,360.51
1902	.... 1,023,154.32	434,177.36	1,457,331.68
1901	.... 1,171,313.60	604,760.14	1,776,073.74
1900	.... 533,796.70	44,244.09	578,040.79
1899	.... 737,180.69	482,802.46	1,219,983.15
1898	.... 338,309.17	629,473.60	967,782.77
1897	.... 43,696.80	156,141.72	199,838.52

J. Frank Allee Elected United States Senator from Delaware.

DOVER, Del., March 2.—The compromise between the two factions of the Republican party which to-day resulted in the election by the Legislature of two Senators, has put a Delaware jeweler in the United States Senate. He is J. Frank Allee, of Dover, who is at present a State Senator and represents the Addicks faction of the Republican party. He has been elected to the United States Senate for a term ending 1907.

Mr. Allee was born in Dover 46 years ago. His father was a jeweler and watchmaker and from him Mr. Allee learned the trade and afterward succeeded him in the business, which he still conducts in Dover.

Mr. Allee became actively interested in political matters in 1889, and since then has been closely associated with the Addicks wing of the Republican party. He was elected to the State Senate on the Union Republican ticket in 1898 and 1902.

Mr. Allee is also associated in business with Mr. Addicks. He is president of the Bay State Gas Co. of Delaware and of the Staten Island Brick Co.

Ransom M. Derrick Files a Voluntary Petition in Bankruptcy.

BOSTON, Mass., Feb. 25.—In the United States Bankruptcy Court in this city, yesterday, a bankruptcy petition was filed by Ransom M. Derrick, a manufacturing jeweler of Attleboro, Mass. According to the schedules with the petition, the total liabilities are $1,532.29, while the assets are given as $983.55.

In the list of creditors appear the following named firms: Samuel Moore & Co., $50; Heimberger & Lind, $13; Albert Lorsch & Co., $92; A. Bushee & Co., $51; Regnell, Bigney & Co., $210; Marble, Forester & Co., $88; McDonald & Culver, $13; Joyce Co., $56; Plainville Stock Co., $17; D. A. White Co., $88; P. J. Cummings & Co., $33; J. M. Fisher & Co., $22; the Teed Crandall Co., $12; Allen & Jonassohn, $5; Thomas W. Lind, $27; George W. Dover, $26; Allen, Smith & Thurston, $17; McRae & Keeler, $83; E. A. Fargo Co., $15; W. E. Sanford & Co., $17.

J. Heilbronn and S. Marchand Win Suit Against A. S. Herzog.

A jury in Part VIII. of the Supreme Court in New York, Friday, rendered a verdict of $2,414 in favor of J. Heilbronn and S. Marchand, diamond importers, at 26 John St., New York, in the suit brought by them against Abraham S. Herzog, a diamond dealer, formerly at 45 Maiden Lane, New York, to recover $2,450.12 for goods sold to the defendant in August, 1896.

The case is an interesting one, and has been in the courts for upward of six years. The action was begun by an attachment against Herzog's property on the ground that he had made fraudulent statement to mercantile agencies concerning his resources, and that these statements had induced the plaintiffs to sell him diamonds valued at $2,450.12. The first trial resulted in a verdict in Herzog's favor, but the case was carried to the Court of Appeals, with the result that a new trial was ordered. The case came up Nov. 2, 1901, before Judge O'Gorman and a jury in the Supreme Court and was dismissed. The case was then carried to the Appellate Division of the Supreme Court by Meyer M. Friend, counsel for the plaintiffs, and a new trial was ordered. This trial was before Judge Greenbaum and a jury in Part VIII. of the Supreme Court Thursday and Friday, and Friday afternoon the jury returned the verdict as stated above.

Herzog's defense was that the statements given to the mercantile agencies were written by his son and signed by him without reading them.

Involuntary Petition in Bankruptcy Filed Again Isaac Katz.

An involuntary petition in bankruptcy was filed in the United States District Court at New York, Monday, against Isaac Katz, a dealer in watches and jewelry at 18 Maiden Lane, New York, by Chas. P. Goldsmith & Co., L. Weil & Sons and Manasseh Levy. It is alleged in the petition that Mr. Katz is insolvent and that in January and February he made various transfers of property to creditors to give preferences.

As previously told in THE CIRCULAR-WEEKLY, Mr. Katz called a meeting of his creditors at the office of his attorney, Jan. 3, at which he said his assets were between $2,000 and $3,000, in stock and open accounts, and that his liabilities were in the neighborhood of $10,000. He offered at that time to pay 15 cents on the dollar. The 15 creditors present took no action in the matter and the meeting was adjourned until Jan. 15, when Mr. Katz tried to effect a settlement on the basis of 30 cents on the dollar. He has been trying to effect this compromise, but has not yet been successful.

The petitioners in the bankruptcy proceedings claim that Katz's liabilities are $10,000, of which Chas. P. Goldsmith & Co. are creditors for $1,331; L. Weil & Sons, $116, and Manasseh Levy, $328.

Last Week's New York Arrivals.

THE CIRCULAR-WEEKLY each day posts in its office a bulletin of the latest buyers visiting New York, which every member of the trade is cordially invited to copy.

For the sum of $10. payable in advance, a daily list will be mailed or delivered, during the Spring season (ending July 1, 1903, to the offices of those desiring this service.

Death of William E. Major.

William E. Major, a wholesale dealer in optical goods at 48 Maiden Lane, New York, died Saturday at his home, 71 Kingston Ave., Brooklyn.

The deceased was 53 years of age and had been in business on Maiden Lane for upward of 25 years. He was a prominent member of Mistletoe Lodge, F. and A. M., and a veteran of the 23d Regiment, N. G. N. Y. Death was caused by cancer.

Funeral services were held Sunday at his late residence and the interment was in Greenwood Cemetery.

Death of Andrew J. Christy.

SANDUSKY, O., Feb. 26.—Andrew J. Christy, at one time a prosperous jeweler at Youngstown, O., and well known as a watchmaker, died at the Soldiers' Home in this city Monday.

The deceased was 71 years old and is survived by one sister.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended March 28, 1903.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$249,050.78
Gold bars paid depositors	86,095.51

DIAMONDS!

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

Rue de Meslay, PARIS *Telephone, 2188 Cortlandt* *17 Maiden Lane, NEW YORK*

New York Notes.

A judgment for $126.33 against Blanche Enos, in favor of Theo. B. Starr, was satisfied Wednesday.

Jos. Haskell, of Jos. Haskell & Co., jobbers, 13 Maiden Lane, announces his engagement to Miss Lottie Levy, of Philadelphia.

The New York Aluminum Co., 142 Worth St., successors to the Raymond & Gottlob Co., has removed to 377 Broadway, corner White St.

Louis Friedlander, of R., L. & M. Friedlander, accompanied by his wife, returned last week from a two weeks' sojourn in Atlantic City.

Dolgin & Cohn, manufacturers of rings at 51 Maiden Lane, have dissolved partnerships, and the business will henceforth be conducted by Barnet Dolgin.

A judgment for $502.01 against Wright and James W. Gillies, in favor of Louis Strasburger's Son & Co., was satisfied Wednesday. The judgment was filed Sept. 1, 1884.

Local No. 1 of the Brotherhood of Silversmiths of America began a series of receptions last week at Teutonia Hall for the entertainment of members and fellow-craftsmen.

Geo. W. Heath & Co., manufacturers of gold and silver novelties, formerly at 137 Elm St., have removed their office and factory to the second floor of the Thames building, corner of Thames and Greenwich Sts.

Van Moppes & Son, importers and cutters of diamonds, formerly of 81 Nassau St., have removed to the Fulton building, 87 Nassau St., corner of Fulton, where they have more commodious quarters and better facilities.

Erler & Levine, manufacturing jewelers at 41 John St., have dissolved partnerships. Mr. Erler retires entirely from the business, while Mr. Levine will continue, assuming all the debts and liabilities of the old concern, under the style of P. Levine.

C. E Hoefer, of Woodstock, Hoefer & Co., Kansas City, Mo., was in New York last week, visiting his friends in the trade.

Geo. W. Heath & Co., manufacturers of gold and silver novelties at 137 Elm St., moved, March 1, to the Thames building, corner of Greenwich and Thames Sts. The concern will occupy the second floor of the building and will have better facilities than ever before.

The jewelry stock, formerly owned by Bela E. Brown, the jeweler who was found murdered Jan. 19, 1902, in his store at 24 State St., Rochester, N. Y., will be sold at auction to-day at 135 Bowery, where it has been removed for convenience of selling from the National Traders' Bank, of Rochester, by the administrators of the estate. The stock consists of diamonds, watches and gold jewelry, and is valued at about $55,000.

Maurice Brower, pearl dealer, returned from Europe last week on the *St. Paul*, after a four weeks' business trip to London and Paris. Mr. Brower took with him on his trip more than $100,000 worth of American pearls to dispose of in foreign markets. He reports that pearls are very scarce in both of the principal cities of Europe, being especially so in Paris. After visiting his trade in New York and vicinity, Mr. Brower in a few days will go to Newport, Ark., and Prairie du Chien, Wis., to purchase pearls.

The firm of Allen & Jonassohn, importers of precious stones, which was organized 13 years ago, was dissolved Saturday. Both members of the firm will continue in the same line of business as heretofore conducted by the firm. John F. Allen will be located at 212 Union St., Providence, R. I., the office of the firm in that city, and Oscar T. Jonassohn will continue at 65 Nassau St., the New York office of the former firm Mr. Jonassohn will have a Paris office at 52 Rue de Turbigo, and Mr. Allen will have an office in the same city at 58 Rue de Turbigo.

Patrick Birmingham, 548 W. 43d St., said to be a jewelry salesman, created considerable excitement on a Third Ave. car Wednesday evening by flourishing a revolver in the faces of the conductor and passengers. He was taken to the E. 35th St. police station, and in the Yorkville Police Court, next morning, was held in default of $500 bail for examination. Birmingham produced a permit from Police Commissioner Piper, showing his right to carry the pistol, but the Magistrate was not exactly satisfied with the way he behaved with it. Birmingham is an Englishman, and in explanation of his conduct said he used the revolver to compel the motorman to stop the car and allow him to get on.

A meeting of the board of directors of the Jewelers' Safety Fund Society, for the purpose of electing a president and a director to fill the vacancy caused by the death of Henry Hayes, was held Tuesday afternoon, Feb. 24, in the Jewelers' League Rooms, 169 Broadway. James C. Aikin, of Aikin, Lambert & Co., one of the directors and vice-president, was elected president; Wm. T. Gough, one of the directors, was elected vice-president, to succeed Mr. Aikin, and Louis Kahn, of L. & M. Kahn & Co., another director, was elected second vice-president. The only change in the board of directors was the addition of August Oppenheimer, of Oppenheimer Bros. & Veith. Resolutions in honor of the late president of the society have already been drawn up and are now in the hands of the printer.

Quite a little excitement was created in the Corbin building, at 11 John St., late Wednesday afternoon, when the art room of the Dennison Mfg. Co., on the ground

floor, near the main entrance of the building, caught fire, causing a damage of between $400 and $500 to the stock and fixtures. The loss is fully covered by insurance, so that the actual injury sustained by the Dennison Mfg. Co. resulted merely from inconvenience and loss of business through the closing of this branch store.

Among the business men, who are seeking to obtain an improved ferry service for Staten Island, is Read Benedict, of Benedict Bros., 141 Broadway.

Herman Baum, manufacturer of chains and jewelry at 41 Maiden Lane, has no connection with the Herman Baum, against whom a judgment was filed last week.

Rodenburg & Dunn and the C. H. Cook Co., who were formerly at Room 1303, 9 Maiden Lane, have removed to Room 1308 on the same floor. The change was made necessary by the increase in business.

Wm. Barthman, 1 Maiden Lane, sailed yesterday for Europe on the *Palatia*. He will spend four months on the continent, visiting Naples, Rome, the principal Mediterranean cities, Paris and Amsterdam, and will take a trip through England and Germany before his return.

The business of L. W. Sweet & Co., wholesale and retail jewelers at 37 Maiden Lane, was incorporated Saturday at Albany with a capital of $30,000. The charter states that the company will manufacture jewelry. The incorporators are Benjamin Beekman, L. W. Sweet and Samuel Raives.

Feye Frakman, also known as Fannie Frakman, living at 117 E. 123d St., who filed a voluntary petition in bankruptcy in the United States District Court, was Monday discharged from all her debts in bankruptcy by Judge Adams. The bankrupt's liabilities were $9,325, and there were no assets.

The United States Sub-Treasury, in New York, Thursday, broke all previous records for gold holdings. At the close of business on Wednesday there were in the vaults $217,092,107 in gold, which exceeds all previous records by several hundred thousand dollars. The holdings for the corresponding day in 1902 were $181,681,035.

John G. Williamson and H. R. Caulfield, the alleged proprietors of a company at Haverstraw, N. Y., accused of forming watch clubs, who were arrested the first week in December at the instigation of Anthony Comstock, for running an alleged lottery, will be given an examination before United States Commissioner Shields, March 11, the examination having been adjourned from Feb. 25.

An order was signed in the City Court Wednesday, placing the action of the Photo Jewelry Mfg. Co. against Jos. Wender, on the Special Term calendar for immediate trial. Henry Hoelljes, attorney for the plaintiff, told a CIRCULAR-WEEKLY reporter that the action was to recover $109.71 for goods delivered by the plaintiffs to Mr. Wender, which, the attorney alleged, had not been paid for.

The annual beefsteak dinner of the 18 Karat Club, which is composed of the employes of Tiffany & Co., will be held Saturday evening at 7.30 in Union Square Hotel, Union Square. The arrangements for the dinner and programme for the evening have been under the direction of William Moore. An interesting programme has been arranged, and a very enjoyable time is expected. There will be between 50 and 60 present, and the occasion will be enlivened by music and speech making.

John Hanley, said to be a jewelry peddler of New Providence, N. J., was found lying dead in a field Thursday morning near his home in Summit, N. J. Cuts on Mr. Hanley's head indicated that he had been murdered. The interior of his home was in confusion, showing that a desperate struggle had taken place there. It is thought that he was set upon by tramps, and that after a fight in the building he had followed them outside, where he received the injuries that caused his death.

Jos. Green, a salesman of 243 E. 110th St., filed a petition in bankruptcy in the United States District Court of New York Wednesday. The schedules attached to the petition showed liabilities of $5,853 and no assets. The debts were contracted in 1898, when he was in the jewelry business at 426 Sixth Ave. Green started in business Aug 1, 1895, with a partner, the firm being Green & Abel. Mr. Green had formerly been employed for two years by Albert Lorsch & Co. The firm was dissolved in February, 1898, Mr. Abel going to Waterbury, Conn., and Mr. Green continuing until 1899, when he assigned without preferences to Jacob Levine. The largest creditor is Sol. Lindenborn, to whom is owed $3,225.

A fire in the building at 33 Gold St., at 3 A. M. yesterday morning, caused considerable damage to the factory of C. P. Goldsmith & Co. The loss is fully covered by insurance. The fire started in a printing establishment on the fourth floor of the building and most of the damage was done on that floor and the two floors below. C. P. Goldsmith & Co. occupy the fifth floor and the floor above is occupied by Stern Bros & Co., whose quarters suffered no damage.

Winter Banquet

At the Trocadero, Providence, R. I.

Evening of February 27, 1903.

PROVIDENCE, R. I., Feb. 28.—No merrier company ever assembled in banquet hall than did that which gathered in the Trocadero on Mathewson St. last evening to enjoy the pleasures of the Winter banquet of the New England Manufacturing Jewelers and Silversmiths' Association. Not only were the representative members of the trade from this city and the Attleboros present, but the event was also graced by those prominent in the counsels of the State and municipality, as well as by those who hold positions of responsibility under Government supervision. It was truly a notable gathering, one the like of which is seldom assembled in this city.

Although previous dinners of this char-

ROSWELL C. SMITH,
Toastmaster.

acter given under the auspices of the association have been distinguished by good-fellowship, large attendance and general success, it was generally agreed that in all three points that of last night surpassed all its predecessors. This was due in a large degree to the efficiency of those who had carefully looked after the details of arrangements and had devoted time and attention to an endeavor to have the Winter banquet of 1903 go down in the history of the association as one long to be remembered. In this they were successful.

As a preliminary to the dinner proper there was a reception in the parlors of the Trocadero from 6 o'clock until 7.45, a time sufficiently long to permit the renewal of old acquaintanceships, the forming of new ones and the exchange of reminiscences peculiarly interesting to those whose interests are so closely allied. An opportunity of this kind is available for some only once a year—at these reunions—and it is fully improved.

It was very nearly on the minute called for on the advance programme, 7.15 o'clock, when the march from the lower rooms to the ball room above, where the tables had been spread, was begun. President Frank

FRANK T. PEARCE,
President.

T. Pearce, escorting Gov. Lucius F. C. Garvin, headed the line. To the strains of a lively march the guests took the places assigned them at the tables. When all had seated themselves a flashlight of the company was taken by a firm of local photographers.

The tables were prettily decorated with ferns, potted plants and candelabra with parti-colored shades, and presented a most attractive appearance. Eight tables were required for the accommodation of the 350-odd members and guests. At the head of the table were seated President Pearce, Gov. Garvin, Judge William H. Sweetland, the speakers of the evening; officers of the association and distinguished guests.

During the progress of the dinner music was furnished by Clarke's Providence Orchestra, Herbert L. Clarke, leader. Trombone solos by Mr. Clarke and Claude Spary were heartily encored. During the rendition of popular melodies the orchestra was helped out mightily by a chorus from the tables. Dary & Anthony catered to the entire satisfaction of the gathering. In addition to other delicacies the menu included such insidious concoctions as the "Pearce" cocktail and the "Roswell C." punch.

PRESIDENT PEARCE'S ADDRESS.

After cigars had been lighted, President Pearce called the assemblage to order for the post-prandial exercises. He expressed the pride that he took in the organization and his appreciation of the honor that had been done him in the past four years by his elevation to the presidency. He referred also to the growth of the jewelry in-

ROSWELL C. SMITH,
Chairman Executive Committee.

dustry, its progress and its representative standing in the community.

He extended a cordial welcome to the guests, and said that in looking about him he missed one face and this caused a feeling of sadness to come over him. He proposed a silent toast to Herbert A. Clark, of Attleboro, recently deceased. This suggestion was followed in a manner peculiarly impressive. At the end of a moment of silence the orchestra played "The Vacant Chair," rounding out a moment or two of solemnity amid the general hilarity which had prevailed.

In concluding his remarks President Pearce suggested the advisability of a change in the head of the association, and earnestly recommended as his successor

the chairman of the executive committee, Roswell C. Smith. This was greeted with loud applause. President Pearce then, with a few felicitous words, introduced the toastmaster for the evening, Judge William H. Sweetland.

JUDGE SWEETLAND'S ADDRESS.

Judge Sweetland said that this was a representative gathering of modern business men. They were men who were creators of their own fortunes. He did not see before him a lot of trade marks, but he appeared before the "real thing."

He said that the jeweler must have good taste and be able to read the signs of the times before they appeared. The ordinary manufacturer, he said, makes those things which the public wants, the jewelry manufacturer must make those things he knows the public will want six months hence. He must anticipate the frivolous tastes of women in the matter of jewelry selection. All this, he said, made the jeweler alert and he gathered about him men who are alert and of artistic tastes. The jewelers were doing their share, he said, in building up the city, and what was true of Providence jewelers was equally true of the Attleboro members of the trade.

GOV. GARVIN'S ADDRESS.

Gov. Garvin spoke on "The State of Rhode Island and Its Relation to the Jewelry Industry." He said that the State has intimate relations with an organization such as this. He spoke of the fact that the president of the association held a State office—that of Inspector of Cables. Next to the textile industry, the jewelry industry was the largest in the State, he said, and numerically, in the number of establishments, the jewelers led.

The speaker said that the jewelers must depend upon the middle class for support in their industry. He alluded to the fluctuations that affect the jewelers, and said that anything that affected the great middle class—so called—must affect the jewelers. He said that speculation always preceded hard times, and referred to the speculation in land as being particularly wrong.

He argued that the adoption of the single tax would do away with this speculation in land and urged his hearers to give their attention to this question.

A letter of regret because of inability to be present was read from Gen. Charles R. Brayton, and the toastmaster also spoke with regret of the absence of Mayor Miller, who, by reason of illness, was unable to attend.

MAJOR PIPER'S SPEECH.

Maj. Horace S. Piper, Asst. General Superintendent of the United States Life-Saving Service, Washington, D. C., was next introduced and made a stirring address in which he set forth in detail some of the hardships encountered by the life-saving crews along the Atlantic coast.

He told of the growth of the service from a small beginning, the heroism of those who patrolled the coast to save lives, and narrated instances of gallant rescues.

This address was out of the ordinary and was accorded the attention that it merited.

ADDRESS OF HON. L. G. BLAIR.

Hon. Lafayette G. Blair, of Boston, in his introductory remarks said that he did not know that he had come down to a beauty show, referring to the portraits of President Pearce and Chairman Roswell C. Smith on the menu cards. He said that he did not see how the State could go wrong very well, having as it did Gov. Garvin, a Democrat, as the anchor, and President Pearce, a Republican, as Inspector of Cables.

He made a witty address, closing with remarks in a more serious vein in which he exhorted his hearers to remember that it is character that deserves place and not ambition.

REMARKS OF HON. E. G. BUCKLAND.

Hon. Edward G. Buckland, attorney for the N. Y., N. H. & H. Railroad, was the next speaker. After telling a few good stories, Mr. Buckland referred to the warring conditions existing between capital and labor. He said that he believed something must be done by intelligent citizens to secure a more even balance between the warring factions. It was incumbent upon all good citizens to steer a middle line, he said, and stand for the personal and property rights of all American citizens.

ADDRESS OF HON. GEO. A. LITTLEFIELD.

The last address of the evening was made by Hon. George A. Littlefield, of this city. He compared the value of a man's jewelry to him as the value of the jewelry industry to the city and State. He made an eloquent address on the statesmanship and capability of President Roosevelt to grapple with unforeseen problems, citing the coal strike and the resulting conference at Washington as an instance.

He defended the President from his traducers and commended his address delivered at the Wesley anniversary service in New York to the attention of his hearers.

At the close of this address the W[illegible] banquet came to an end and another successful event had gone down in the history of the New England Manufacturing Jewelers and Silversmiths' Association.

The officers and committees of the association are as follows: President, Frank T. Pearce; vice-presidents, O. C. Devereux, A. A. Bushee and W. H. Riley; secretary, S. A. Baldwin; treasurer, S. A. Manchester; executive committee, Roswell C. Smith, chairman; S. O. Bigney, Frank B. Reynolds; membership committee, Theodore W. Foster, J. Perry Carpenter, Charles M. Robbins; advisory committee, John M. Buffinton, William C. Greene and Nathan B. Barton.

Echoes of the Banquet.

The venerable Major Horton was prominent during the evening passing around the tables shaking hands with old friends.

* * *

The weight of a heavy financial burden bore heavily on Secretary Baldwin in the shape of a money box which he kept close by him all evening.

* * *

President Pearce's suggestion that R. C. Smith be elected the next president of the Association was enthusiastically received.

* * *

The music furnished by Clarke's orchestra was one of the features of the evening. The rendition of "Mr. Dooley" and "In the Good Old Summer Time" was encored again, and again, and the leader's cornet solos were greatly appreciated.

* * *

Louis Blackinton was seen busily engaged at a tête-a-tête, during a large part of the evening.

* * *

S. Manchester was a prominent figure and was greeted by many of his acquaintances in the trade.

As a toastmaster Judge Sweetland exceeded even his brilliant discharge of his duties of last year.

* * *

Mr. Blair's story of "Hooley" was admirably told and caused much merriment.

* * *

Near the head of one of the center tables the singing of "Mr. Dooley" was rendered perfect by the impromptu leading of Henry Carpenter.

* * *

Chairman Smith, of the Executive Committee, seemed to be everywhere at once, seeing that everybody should have a good time.

A list of those who were present at the event included:

Lafayette G. Blair, D. C. Sutherland, George L. Gross, Ben. Wyman, Aldridge G. Pearce, George H. Burnham, Frederick H. Jackson, Harry M. Smith, Fred D. Carr, Frank T. Pearce, N. B. Barton, Edward G. Buckland, Henry Ruyter, Andrew B. Eddy, Chas. C. Newhall, J. C. Mackenzie, Henry A. Carpenter, J. D. Munroe, D. M. Wall, T. A. Barton, Geo. H. Newhall, George S. Ross, Geo. E. Boyden, Walter W. Burnham, Joseph O. Earle, J. T. Inman, T. F. Kilkenny, John F. Brady, J. C. Wolstenholme, William Bens, Edward S. Clark, Arthur W. Dennis, Edwin G. Penniman, Geo. H. Grant, Chas. H. Becker, Joseph M. William Fisher, said to be a New York diamond setter, was married Monday at Worcester, Mass., to Miss Mathylde Ruthberg. There was a large attendance at the wedding.

Canada Notes.

C. S. Ellis, of P. W. Ellis & Co., Toronto, has returned from a trip to New York.

Edmund Eaves, Montreal, has obtained judgment against J. A. D. Landriault, Hawkesbury, Ont., for $342.

N. F. Gundy, representative of the Meriden Britannia Co., has returned to Toronto after a rest at Clifton Springs.

The stock of Abraham Cohen, Montreal, was recently sold for 55½ cents on the dollar, and that of Thomas J. Assaly for 61½ cents on the dollar.

Fire last week destroyed about $5,000 worth of the property of Bloomfield Bros., 1689 Notre Dame St., Montreal. The loss is covered by insurance.

Robt. H. Begley, Ottawa, has given a bill of sale for $700 to Sarah J. Begley.

P. F. Pinsonnault's meeting of creditors took place at Three Rivers, Feb. 26.

The trade is well represented on the new board of directors of the Toronto Industrial Exhibition, which includes W. K. George, of the Standard Silver Plate Co.; W. K. McNaught, of the American Watch Case Co., and R. Y. Ellis, of P. W. Ellis & Co.

Alex. Desmartean has been appointed curator of the estate of Deniger & Mercu glassware, etc., Montreal. The meeting of the creditors of David Lepage, Montreal, glass and crockery, took place Feb. 27.

Frank M. Smith, Wallaceburg, Ont., has given a renewal chattel mortgage to Smith Bros. for $2,606.

James Ryrie, of Ryrie Bros., Toronto, left last week, accompanied by his wife, on an extended trip to Europe. They will visit the Mediterranean and spend two months in Egypt and Palestine. On their return they will spend some time in the leading art centers, where Mr. Ryrie will place extensive orders for gems, art goods, etc.

The second annual meeting of the shareholders of the Wm. A. Rogers Co., Ltd., was held in Toronto Feb. 24, President S. J. Moore occupying the chair. The financial statement showed that the net profits for the year amounted to $102,172, the business having increased 25 per cent. over 1901 and 62 per cent. over 1900. It is proposed to increase the capital by issuing additional shares to the amount of $150,000, in order to extend the business.

A. R. Playtner, principal of the Canadian Horological Institute, Toronto, gave a banquet to the students and friends of that institution, Feb. 24, at the Coronation Hotel. About 60 persons attended. Among those present were: Albert Kleiser, C. S. Ellis, Ed. Beeton, representative of the Elgin National Watch Co., and E. C. Wilkinson. A very enjoyable evening was spent. Messrs. Ellis and Beeton each donoted a gold watch case to be given as a prize to the students making the best watch movements during the term.

News has just been received that the bill introduced in the Kansas State Legislature some time ago, for the regulation of the practice of optometry in that State, failed to pass the House. The strenuous opposition of Senator Staveley, of Osage, Kan., it is said, did much to kill the bill.

BIRTH FLOWER PINS,

A NEW IDEA IN CUFF AND BIB PINS.

10Kt. solid back, rose or green gold finish. A novelty which every jeweler should carry in stock. An article equally appropriate for ladies and children; dainty in design and execution, modest in price, and a good seller for every month in the year.

Send for an assortment.

Henry Freund & Bro., The Jewelry House, No. 9 Maiden Lane, N. Y.

ELK GOODS A SPECIALTY.

Wm. Thurston, formerly with J. C. Herdliska, Princeton, Minn., is now with Fred. H. Klass, Hibbing, Minn.

Kiffe & Schumacher have purchased the jewelry and book stock of G. F. Williams & Co., Mankato, Minn., and will close it out.

Paul C. Puls, Eau Claire, Wis., will soon set out for the Pacific coast. He will visit Seattle and then proceed to Southern California.

Strickland & Co., Fond du Lac, Wis., are selling out their entire stock at auction and intend to conclude their business in that city.

Geo. E. Wheelhouse, Utica, N. Y., who, last year, invented a tape needle, has had it made in sterling silver and is finding a good demand for it.

J. A. Le Blanca's jewelry establishment, Abbeville, La., a short time ago, was entirely destroyed by a fire, in which 17 buildings were burned.

E. W. Slitor, Oneida, N. Y., has sold his electroplating business to Arthur Kinney and Irving Burton, formerly with the Oneida Silverware Mfg. Co.

The death is announced of Mrs. N. Matson, the widow of N. Matson, at one time a prominent jeweler in Milwaukee, Wis. Mrs. Matson was about 80 years of age.

Peter Nelson, who recently closed his jewelry store in Rockford, Ill., will hereafter do the watch and clock repairing for the American Fair Co. of that place.

The store of Wilbur Gibbs, Whatcom, Wash., was recently looted of watches, pistols and other articles. Entrance was gained through a transom which had been left open.

S. Feuerstein, Green Bay, Wis., has been awarded the contract to manufacture over 1,000 emblem pins and buttons for the National Fraternal League, of that city.

An entrance was gained a short time ago to the store of Hopkins & Witty, Dubuque, Ia., but a burglar alarm was sounded and attracted Mr. Witty's attention. The thieves escaped.

The show cases in the store of Vine G. Kittle, Elwood, Ind., last week were badly scorched by a fire which originated from a gas jet which had been left burning all night.

Geo. Morton, recently arrested on the charge of stealing a diamond ring from A. F. Harting, a jeweler of Lexington, Ky., has been bound over to the Grand Jury, with bond placed at $500.

Max Berkewitz, a jewelry salesman, who formerly lived in Pittsfield, Mass., has just been released from the Dentention Hospital, Boston, Mass., where he had been confined for several weeks with smallpox.

The general store of Ole Everson, Meridean, Wis., was recently entered by thieves who blew open the safe. The jewelry case was plundered of all gold goods. Plated and rolled gold stock were left untouched.

Burglars last week entered the residence of M. H. Loomer, Waterloo, Ia., who recently retired from the jewelry business, and secured about $1,000 worth of jewelry. The stolen property includes gold watches, rings and silverware. Bloodhounds were started on the trail of the thieves, but without any success.

The Appleton Time Clock Co., Appleton, Wis., has made arrangements to file articles of incorporation. The new company will probably be incorporated under the laws of South Dakota Interested in the company are O. E. Bell, J. A. Campbell, and J. H. Nunnamacker, of Chicago, the latter being the inventor of certain devices which will be manufactured.

Taliaferro Bros., Covington, Tenn., have sold their jewelry business to Cothran & Hunt, watch repairers of that place, and have purchased the stock and business of S. R. Robertson, Jackson, Tenn. They intend removing the stock of their old store to the new location, which is fitted up in a superior way, and it is expected the combination of goods will make an unusually fine showing.

James Cody, Herman Price and William Ryan, charged with breaking into the store of Richard G. Tafel, Louisville, Ky., and stealing $500 worth of jewelry, were tried last week in the Criminal Court. Cody and Ryan were each sentenced to five years' imprisonment in the penitentiary. Price, who had turned State's evidence and testified against Ryan, was dismissed on motion of the Commonwealth.

O. E. Rector, who recently purchased the stock of Richard H. O'Neill, Lincoln, Neb., is holding a bargain sale of the entire stock preparatory to installing a stock of drugs.

S. E. Theus, Savannah, Ga., is on the Grand Jury for the March term of the Superior Court. He was also chairman and spokesman of a committee from the Retail Merchants' Association of Savannah, which called on Governor Terrell, Feb. 23, while he was in Savannah, to request him to select Savannah as the location of the State rifle shoot, to be held during the Summer. Mr. Theus and R. M. Courteney, of Theus & Co., are among the organizers of the Savannah Chamber of Commerce, now in course of organization.

Last Saturday morning in the Richmond, Va., Police Court, Clifton Maynard, aged 17, and residing in Swansboro, a suburb of Richmond, was sent on to the Grand Jury on the charge of felony. On Feb. 19 he stole from D. Buchanan & Son one solitaire diamond ring valued at $160. He returned the following Saturday and made an attempt to steal another ring, but was caught in the act, and the ring was taken from him. On examination the ring which was stolen on the Thursday previous was also found on him, and he acknowledged the theft.

A new model 16 size bridge movement, designed for the best trade and representing a high attainment in horology, has just been placed on the market by the E. Howard Watch Co. The movement fits regular model cases, open face and hunting. Description and full particulars will be furnished, upon request, by Hayden W. Wheeler & Co., 2 Maiden Lane, New York, the selling agents.

IF YOU send me five or more watches to repair at one time, I give 5% discount.

Connecticut.

The J. B. Williams Co., Glastonbury, has moved into its newly erected office building.

The International Silver Co. has granted its Britannia burnishers at factory "E," Meriden, an increase in wages of 10 per cent.

G. W. Fairchild & Sons, Bridgeport, intend to assume the lease of the quarters soon to be vacated by John Reck, of that place.

Henry W. Cosgrove, at one time in the employ of the New Haven Clock Co., died last Wednesday evening after a lingering illness, aged 54 years.

Col. W. J. Miller and wife, Shelton, have returned from a trip to Washington, D. C., whither they had gone to attend the National Congress of the G. A. R.

Henry M. Mather, a former jeweler of Meriden, was summoned to Suffield one night last week by news of the death of his father, Ralph T. Mather, aged 84 years, and one of the oldest residents of Suffield.

John Ericson, an old employe in the case department of the Seth Thomas Clock Co., Thomaston, dropped dead at his home in Thomaston last Friday night. Mr. Ericson was 65 years of age, and for a long time had suffered from heart disease.

Julian R. Holley, general manager of the Bristol Brass and Clock Co., Bristol, is in Chicago negotiating for the establishment of an office for the display and sale of the firm's goods. P. Welch and S. C. Shubert, also of Bristol, will take charge of the Chicago office.

The report of the distribution of the estate of the late John A. Duey, who for many years conducted an engraving business in New Haven, was made last Thursday by the Probate Court. The estate is appraised at $27,855 and was equally divided between the testator's two daughters.

At the annual meeting of the Valentine-Linsley Silver Co., Wallingford, held last Thursday afternoon, the following directors were elected: Clifford W. Leavenworth, Chas. D. Morris, Frank A. Wallace, Walter J. Leavenworth and Frank W. Morris. Clifford W. Leavenworth was elected president and Chas. D. Morris secretary.

Harris Voloshin, a junk dealer, who was recently arrested for the violation of the Junk law in purchasing stolen property, was tried in the New Haven Court last Friday. He had in his possession some of the dies which had been stolen from the New Haven Clock Co. Voloshin was found guilty and fined $75 and costs. He appealed and his bond was fixed at $250.

The formation of a joint stock company, with a capital of $50,000, for the purpose of buying and running the bankrupt firm of G. I. Mix & Co., Yalesville, is practically assured. The new company will consist principally of Wallingford and Yalesville business men, but there will be a few Meriden men interested, and some of the stockholders are said to be very affluent. The new concern will make about the same line of goods as the defunct company manufactured.

At the annual meeting of the R. Wallace & Sons' Mfg. Co., Wallingford, Feb. 26, the following officers and directors were elected: President, F. A. Wallace; secretary, Henry L. Wallace; treasurer, W. J. Leavenworth; assistant treasurer, C. W. Leavenworth; superintendent, C. D. Morris; assistant superintendent, F. E. Birchfield. The directors include F. A. Wallace, H. L. Wallace and W. J. Leavenworth, of Wallingford; Geo. M. Wallace, New Haven, and Geo. M. Curtis, S. A. Hull and W. W. Mosher, Meriden.

At a meeting of the directors of the New Haven Clock Co., held Feb. 27, the election of officers, which had been postponed at the annual meeting held last December, was as follows: President, Walter Camp; vice-president and assistant treasurer, Geo. E. Stevens; secretary, Frank J. Stevens. E. P. Root, formerly superintendent of the movement department of the factory, was elected a director. The following executive committee was chosen by the directorate: Henry F. English, chairman; P. N. Welch and G. E. Stevens. It is understood that Mr. Camp's election will not prevent him from continuing his duties as athletic advisor of Yale College.

Lancaster, Pa.

J. M. Jenks has been confined to his home for the past week with congestion of the lungs. He expects to resume his duties this week.

Ward F. Waterbury, San Jose, Cal., is taking a course in watchmaking and engraving at the Ezra F. Bowman Technical School. Wm. Arnold is taking a course in engraving at the same school.

The trunks belonging to the Non-Retailing Co. which were used by Fred L. Baker have arrived. The hearing which was to have taken place this week on the charges against Baker has been postponed.

Fred. A. Steuber, Le Roy, N. Y., expects to return to his old store by April 1. The fire which burned the upper floors of his building obliged him to occupy temporary quarters across the street.

PROVIDENCE, R. I.

Albany.

The will of John H. Thorn, the jeweler who died at his home on Willett St., Feb. 11, was admitted to probate by Surrogate Fitts on Friday. The decedent leaves an estate estimated at $6,000 real and $29,000 personal. By the terms of the will the property is bequeathed to the widow, Ellen L. Thorn, and the two sons, John H., Jr., and Charles G. Thorn. Letters were issued to the widow, Ellen L. Thorn.

Goewey & Jennings, 13 S. Pearl St., have had for the past three weeks a contest in progress at their store, in which every boy and girl in Albany and surrounding places was afforded an opportunity of winning a gold-filled watch by correctly estimating the number, or the nearest to the exact number, of beans in a jar which was displayed in the window. The contest closed on Saturday evening and attracted much attention, the contestants numbering several hundred. Miss Winnie Schissler, of Delmar, was awarded the watch. Her estimate was 1459 beans, while in the jar there were 1440.

A rumor was current in Albany last week that Mayor Gaus would not issue a license to any person or persons for the purpose of conducting auction sales, especially in the jewelry line, after May 1. The knowing ones stated that a business man wishing to retire could get a license to sell his stock by auction, but persons wishing to make a business of auction sales would find difficulty in getting licenses. The matter created a great deal of interest among the Albany jewelers, for auction sales have been a cause of annoyance to them for many months past. For the benefit of the Albany jewelers, the representative of THE CIRCULAR-WEEKLY interviewed Mayor Gaus regardnig the rumor. Mr. Gaus stated that the report was without foundation, and he could not imagine where it originated. He did not even consider the matter, to say nothing about forming any definite plan. The Mayor realizes that the Albany jewelers are opposed to auction sales, and trusts that at some future date something will be done for remedying this complaint.

Buffalo.

William Ehmann, Jr., is on a visit of recuperation at Hot Springs, Ark.

H. Angermann, this week will remove from 47 E. Genesee St. to 43 Genesee St.

W. H. Germain has removed from 78 Seneca St. to the new store recently erected at 76 Seneca St.

Albert Zilliox, of 413 William St., has the sympathy of a large circle of friends in his recent bereavement due to the loss of his wife, who died Feb. 10.

The German Jewelry Trade.*

BY W. AUGUSTUS STEWARD.

Chief Instructor in Gold and Silverworking at the Central School of Arts and Crafts, London.

(*Continued from issue of Feb. 4.*)

WITHOUT moralizing, let us consider a few of the other large jewelry factories in Pforzheim. Take for example that of J. F. Glebe. Its growth has been phenomenal, for in less than 40 years and

GENERAL OFFICE J. F. GLEBE.

from very small beginnings the firm has not only made a reputation as the largest ring-producing house in Germany, but also in the world. In 1859 the founder of the firm commenced business in a small workshop as a maker of gold crosses, launching out later in the manufacture of brooches.

Copyright, 1902, by THE JEWELERS' CIRCULAR-PUB. CO. All rights in Great Britain reserved by the author.

pins, and rings, and ultimately making a specialty of finger rings. The illustration of the exterior of the premises (published in THE CIRCULAR-WEEKLY Feb. 4) will give some idea of the magnitude of the establishment, but it cannot give any idea of the clean-looking masonry, the well-kept gardens which face the entrance, or the delightful panorama of the valley of the Enz, backed by the dense green masses of the Black Forest, which is seen from the house.

In the establishment, where something like 400 people are employed, the conditions under which the manufacture is carried on are ideal. The general office is more on the lines of a plain, substantially-furnished sitting-room, while the *cabinet-meister's department*—that is, the foreman's department—is as cosy and comfortable, and when I made a tour of the workshops I found that not only were they long and lofty, but every means had been taken to ensure plenty of light and air. The various departments which I am enabled to illustrate will give a much better idea than mere words as to the conditions under which ring-makers work in Pforzheim. The main workshop is a very commodious place; the same applies to the polishing department, and I think it must be at once apparent to the reader that a production carried on under such extremely healthy conditions must, to no little extent, act to the benefit of the German producers. So far as the use of machinery is concerned, I have indicated that the power for lathes and polishing machinery is obtained by means of an electric motor, but this motor also provides the power to an electric die-cutting machine.

Of the interior the reader will be able to get an idea from the illustrations herewith. The general office is like a modestly furnished reception-room, and it will readily be noted that, although a photographic reproduction of a room necessarily means a curtailment of its size, the comparatively few clerks have plenty of elbow-room, ample light, and work under very comfortable conditions. The same can readily be

CABINET-MEISTER'S DEPARTMENT.

said so far as the *cabinet-meister's* department is concerned. This room in which the material is stored, from which it is handed to the workpeople, and to which it is returned after being made up, is immediately overlooking the main workshop. This is a long and lofty and well arranged place, quite 160 ft. long and at least 50 ft. broad, and accommodates over 200 workmen.

(*To be continued.*)

CHICAGO, ILL.

VOL. XLVI. CHICAGO, WEDNESDAY, MARCH 4, 1903. No. 5.

Chicago Notes.

C. C. Paule, Burlington, Ia., was a recent caller on the Chicago trade.

S. H. Clausin, Minneapolis, Minn., was a visitor to this city last week.

The corporation of Burley & Tyrrell has increased its capital stock from $175,000 to $200,000.

G. L. Gilbert, of G. L. Gilbert & Co., Monona, Ia., visited Chicago last week on a buying trip.

Harry Farquharson, western representative for Bliss Bros. Co., left for his territory last week.

Mr. McDermand, representing W. A. Bowen, Kewanee, Ill., called on the local trade last week.

Mr. Tower, of the Tower Jewelry Co., Springfield, Mo., was among the buyers in town last week.

J. W. Lederer, of the S. & B. Lederer Co., spent the past week at the local office of the company.

M. A. Mead, accompanied by his wife, is spending a month's vacation traveling through Florida.

F. C. Cook, of F. C. Cook & Co., Janesville, Wis., looked up his old friends in the trade the past week.

Mr. Sischo, of Sischo & Beard, St. Paul, Minn., was in Chicago looking over the various lines last week.

Mr. and Mrs. W. E. Fellows, Flint, Mich. were in this city last week, combining business with pleasure.

F. Oehring, of Oehring Bros., was here the past week placing orders for their new store at McGregor, Ia.

H. M. Carle, manager of the local office of the Keystone Watch Case Co., returned last week from the east.

Harry L. Benedict, of the M. S. Benedict Mfg. Co., is expected to return from Syracuse, N. Y., this week.

Albert Kaelker, formerly city salesman for a local house, has accepted a position with the Elmer A. Rich Co.

Mr. Bennett, of the Reed-Bennett Co., Minneapolis, Minn., called on his friends in the local trade last week.

Buck & Schmitz, who started in the jewelry jobbing business, in Masonic Temple, last Fall, expect to shortly increase their present space.

M. D. Twain, representing J. Vivian, Jr., & Co., Laurium, Mich., stopped over in this city last week on his way east.

Word has been received here that R. E. Farnam, Flint, Mich., is closing out his business on account of failing health.

J. Q. Anderson, of the Petoskey Jewelry & Optical Co., Petoskey, Mich., spent a portion of the past week at this market.

Leon Gross will in future represent the Manhattan Silver Plate Co., which is factory "D" of the International Silver Co.

"Will" Manheimer, of Louis Manheimer & Bros., returned Monday from a two weeks' vacation spent at West Baden, Ind.

The corporation of L. H. Schafer & Co. has been licensed to increase the capital stock of the company from $10,000 to $30,000.

Chas. Hoefer, of Woodstock, Hoefer & Co., Kansas City, Mo., was a trade visitor last week, stopping over at this city on his return from the east.

Louis Stern, of Louis Stern & Co., Providence, R. I., was in this city last week accompanied by Ernest Block, one of the traveling representatives of the house.

The Philadelphia Watch Case Co. has made arrangements for larger quarters on the 10th floor of the Silversmiths' building, and will take possession about May 1.

W. S. Gilmore, traveler for the Towle Mfg. Co., was taken sick at Ottawa, Ill., last week, and returned home. A. L. Fuller, with the same company, left Monday for a month's trip east.

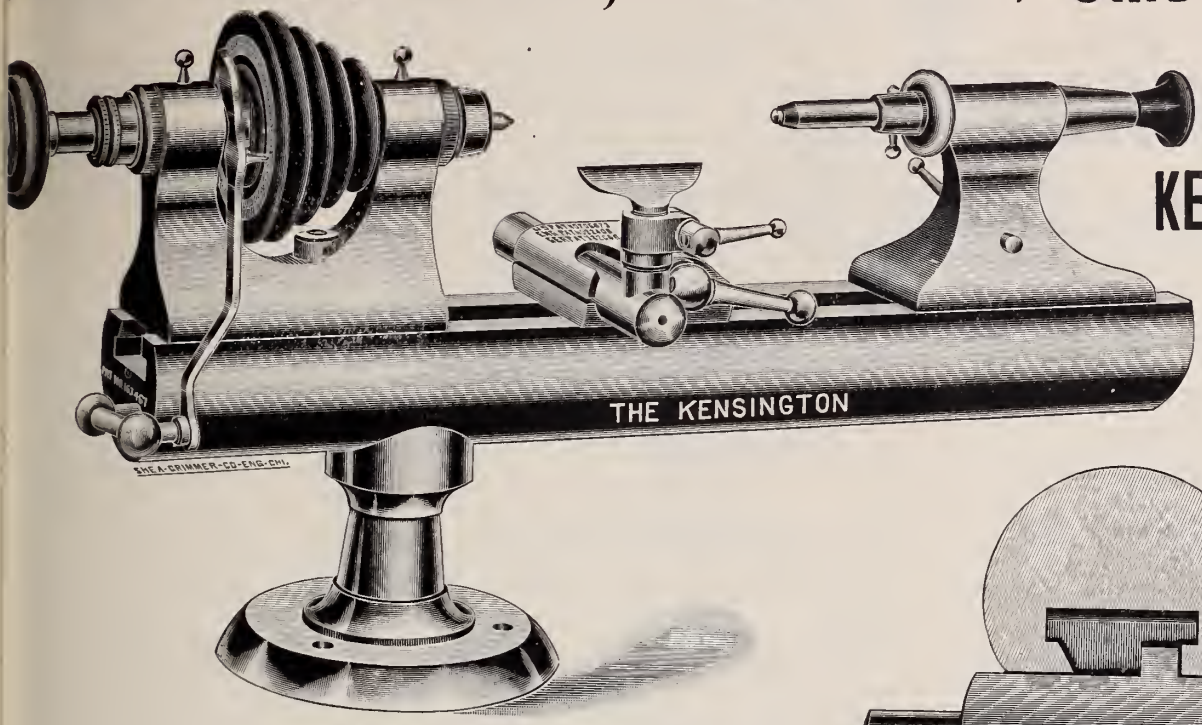
M. C. Eppenstein, president of the Illinois Watch Case Co., is spending a week at West Baden, Ind. Eugene Edelstein, foreign representative of this company, left last week for a trip through Mexico.

It is reported here that S. W. Moody, who has had one of the largest jewelry stores in Battle Creek, Mich., is selling his stock out at auction, on account of inability to secure a renewal of his store lease.

L. M. Levy, manager of the factory of the Philadelphia Watch Case Co., spent a short time at the local office of the company last week, and left town in company with F. E. Hyatt, manager of the local office, to visit the western trade.

W. F. Hayes, formerly traveler for the Julius King Optical Co., will in future represent the Webb C. Ball Watch Co., Cleveland, O., in this city. Mr. Hayes has a temporary office at room 705 Columbus building. The company, however, expects to shortly secure larger quarters in the same building.

Goldsmith Bros., the smelters, refiners and assayers, are now building a two-story brick building, 70x100, as an addition to their factory, at Throop and 58th Sts. The entire addition will be used for the manufacture of sulphate of iron and sulphate of copper. New and modern machinery will be installed and additional help engaged. The new building will be finished in about 60 days.



Despres, Bridges & Noel have signed a five-year lease, beginning May 1, for the space now occupied by A. C. Becken in the Columbus building. Mr. Becken, as reported in a previous issue of THE CIRCULAR-WEEKLY, has arranged to occupy the 11th floor of the Powers building. The removals will commence about the latter part of April.

Among the buyers in Chicago during the past week, not elsewhere mentioned, were: Charles Hoenes, Milwaukee, Wis.; A. E. Templeman, Oskaloosa, Ia.; Frank Smith, Pontiac, Ill.; H. E. Gragg, Morocco, Ind.; F. C. Hyde, Appleton, Wis.; E. A. Goodale, Lenox, Ia.; F. A. Vogt, Mishawaka, Ind.; G. S. Drake, Pendleton, Ind.; C. S. Dustin, Stillman Valley, Ill.

The American Cutlery Co., of this city, has added a new six-story building to its factory on Mather St., which gives the concern a frontage of 400 feet by 110 feet deep. The new building is equipped with steam and electric plants, and 200 additional hands will be engaged to operate new machinery that is being installed, making a total of 700 factory employes. The company's show room is at 707 and 708 Masonic Temple.

B. F. Simpson, who traveled through the northwest for Otto Young & Co. for 18 years, and who at present travels in the same territory for M. A. Mead, has opened a jewelry jobbing house at Minneapolis, Minn. Mr. Simpson will continue to travel on his old territory, carrying a general

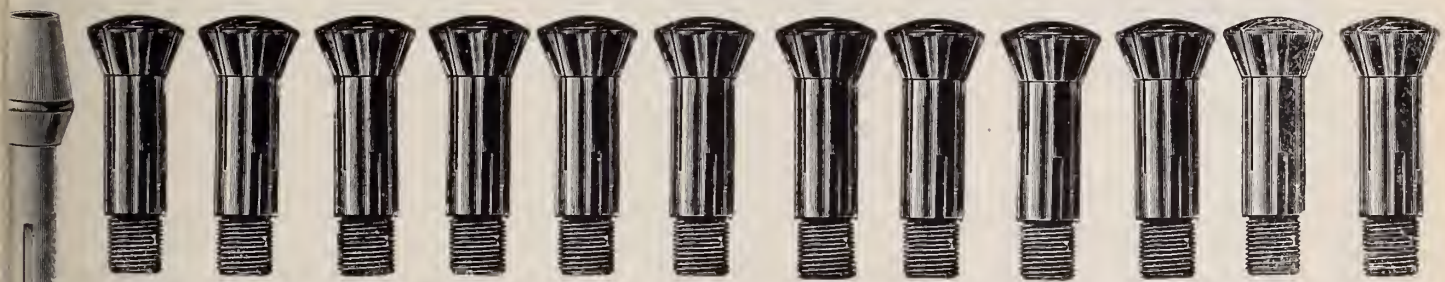
THE KENSINGTON

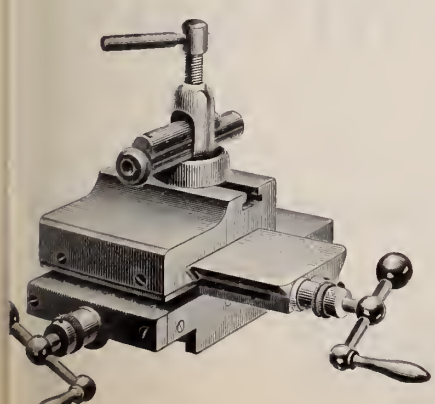
Patent Numbers 706673 and 163467.

We are Sole Agents for the United States and Canada.



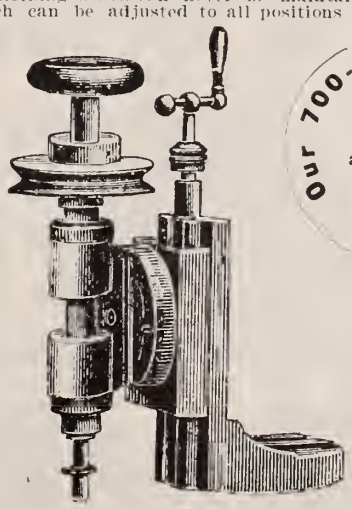
Price, $31.00

including 12 Wire Chucks, 1 Taper and 1 Screw Chucks, 6¼-in. Cement Chucks and Belting.



Sectional view of Bed, showing Beveled Lug Fastening and Tip-over Rest.

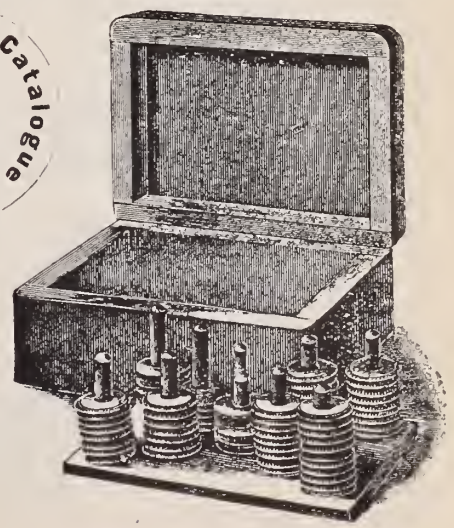
Additional Wire Chucks, Nos. 5 to 50, EACH 50 CENTS.



"THE KENSINGTON" is equipped with all the latest patented improvements which must be seen and tested to be appreciated. Particular attention is called to the style of fastening the Rest, Head and Tailstock to the bed of Lathe. These attachments are fastened by means of a beveled lug (see sect. view), which will always bring these parts in perfect alignment. With this improvement the lathe must remain in perfect line, something which can never be maintained in the old-style shoe fastening. Another special feature is the Sliding Tip-Over Rest which can be adjusted to all positions and can be tightened with one motion of the hand.

The Kensington Slide Rest.

Price, $16.00.



The Kensington Wheel and Cutting Fixture

Will fit any make of Slide Rest, adjustable to height and angle.

The latest construction of a very practical and universal attachment for wheel cutting, drilling and polishing.

Price, $18.00.

Our 700-Page Catalogue sent upon application.

Set of 24 Wheel Cutters in Box, consisting of 8 flat bottom, 8 round bottom, 4 ratchet and 4 wolf teeth cutters of assorted sizes.

Price, per set, $7.00. Single Cutters, each, 35c.

line of jewelry for himself in conjunction with M. A. Mead's line.

Word was received here last week that the charges against M. Henery, who claimed to travel for Johnson & Tomek, of this city, and who was arrested at Sioux City, Ia., on a charge of larceny, had been dismissed and the case settled out of court.

Adolph Malkan, a 17-year-old errand boy in the employ of Shourds, Adcock & Teufel, retail jewelers, at Randolph and State Sts., committed suicide at 10 A. M. Saturday by taking carbolic acid. The deed was committed in a toilet room on the premises of the store. The boy lived with his parents at 246 E. Division St., and had been in the employ of Shourds, Adcock & Teufel about two years. The firm speak in the highest terms of the deceased and are at a loss to account for the deed.

St. Louis.

TRADE CONDITIONS.

Business with the retail jewelers was quiet, last week, and all report that there was very little trade The wholesale trade continues active and the traveling men are sending in good orders.

A. Gerne has returned from a two weeks' trip to Nebraska.

Mr. McQuillan, of Hodenpyl & Sons, New York, is laid up at one of the hospitals here with a severe attack of typhoid fever.

Chas. M. Mauch, of Mauch & Adams, Marshall, Mo., was here last week on business.

Among the out of town visitors in this city last week were: Mr. Hafner, of Hafner & Rogers, DeSoto, Mo.; Ross Larrabee, Macon, Mo.; Mr. Buetner, of the Lawrence Jewelry Co., Cleburne, Tex.

Morris Eisenstadt, of the Eisenstadt Mfg. Co., last week fell and broke his leg while assisting his mother to her carriage in front of her residence. Col. Meyer, of the same company, died suddenly last Sunday while sitting with three others at the bedside of Morris Eisenstadt.

F. R. Ingalls, Long Pine, Neb., recently attempted suicide by shooting himself in the head. It is said that he cannot recover.

Minneapolis and St. Paul.

Mr. Stevens, with the H. E. Murdock Jewelry Co., Minneapolis, is in from a southwestern trip.

J. M. Bennett, of the Reed-Bennett Co., Minneapolis, has gone to New York for two or three weeks.

N. Jacob, Jr., formerly of La Crosse, Wis., has accepted a position with a wholesale house in St. Paul.

George E. Marsh, formerly with C. A. Brown, Appleton, Minn., is now with S. H. Clausin & Co., Minneapolis.

C. C. Norris, formerly in business in Minneapolis, is in Minneapolis for a week or so in the interest of Watson & Newell.

W. R. Dixon has left S. H. Clausin & Co., Minneapolis, to accept a position with the Dixon-Wilson Bookcase Co., of the same place.

F. W. Estabrooks, formerly in business in Minneapolis, but now at Black Duck, Minn., was in Minneapolis last week, accompanied by his wife.

R. B. Wegner, St. Paul, who filed a voluntary petition in bankruptcy last January, with liabilities of $25,599, has settled with creditors at 20 cents on the dollar.

J. B. Hudson and wife, Minneapolis, left for Mexico Sunday, and will make a tour of that country and Central America. They may go as far as South America and will return in about two months.

H. Birkenhauer & Co., Minneapolis, recently had a close call from a fire. A match head flew into a drawer filled with tissue paper and started a blaze, which was small but threatening. The contents of the drawer were all destroyed, but the flames were extinguished before doing serious damage.

W. E. Mowrey, St. Paul, has compounded several new jewelers' solutions, which he is about to place on the market. They include a gilder for steel, a gilder for solder, a solution for gold plating, a silver plater and polisher, an oxidizer and a testing acid. All will be under his trade-mark—a letter "M" enclosed in a square, for the registering of which application has been made.

Among the out of town visitors to St Paul and Minneapolis last week were: A. Aslesen, Dawson, Minn.; Mr. Winger, Herman, Minn.; E. C. Bennett, Zumbrota,

About $1,500 worth of valuable watches and jewelry, belonging to A. N. Anderson, Minneapolis, was stolen from a sample case in the Merchants' Hotel in Black Duck, Minn., last week. A reward of $250 is offered for the apprehension of the thief.

Kansas City.

TRADE CONDITIONS.

The weather, last week, was somewhat mild for this territory. The retail trade has been a little dull, but it is expected that it will soon become more active. The jobbers and manufacturers are still very busy.

Mr. Nevens, of the Meyer Jewelry Co., is in New York in the interests of his firm.

W. M. Jaccard and wife have started on a business and pleasure trip to New York.

C. G. Chapman, with J. R. Mercer, has returned to his business duties after a week's illness.

Mr. Gilbert, of the Jaccard Jewelry Co., has just returned from a business trip to Chicago.

B. C. Kubel, formerly with Gurney & Ware, has accepted a position with the Jaccard Jewelry Co.

J. S. Cody had just recovered from an attack of la grippe, which kept him away from his store for several days.

Mr. Cavanaugh, of the Geo. B. Peck Dry Goods Co., has just returned from a purchasing trip to New York.

The Streicher Watch and Jewelry Co. is making improvements in its workroom and putting in new and modern machinery.

W. W. Trigg & Co. are awaiting the arrival of uniform trays for their show cases. They intend making a specialty of souvenir spoons.

The following out of town merchants visited Kansas City last week: W. S. Noble, Drexel, Mo.; Louis Hoffman, Leavenworth, Kan.; L. A. Corwin, Goff, Kan.; J. E. Hathaway, Parkville, Mo.; A. D. Harry, Norwich, Kan.; W. H. Haupt, Peabody, Kan.; Mr. Reed, with Geo. Porth, Jefferson City, Mo.; Leslie White, Lee's Summit, Mo.; H. C. Schultz, Hays, Kan.; C. H. Seiler, Galena, Kan.; G. A. Young, Moberly, Mo.; D. L. Brown, Glasgow, Mo.; S. J. Strickler, Salina, Kan.; Mr. Hayes, Lawrence, Kan.; F. S. Hester, Lawrence, Kan; W. W. Whiteside, Liberty, Mo.; J. W. Foringer, Topeka, Kan.; W. F. Laraway, Glenwood, Ia.

The second of the Spring series of merchants' meetings arranged by the transportation bureau for the convenience of country buyers opened last Wednesday with a fair attendance. There was a large increase of buyers from Texas and southwestern points, also from Nebraska. There have been more than 500 buyers in this season on the rates arranged by the bureau, and it is expected that number will be doubled two or three times before the last of the series of Spring meetings. An arrangement is made with the buyer by which he can get free transportation to Kansas City and return on condition that he purchases a certain amount of goods in the city.

W. H. Davidson has opened a watch repairing shop at 323 E. Park Ave., Anaconda.

William Surry, who for some time had been located in Missouri, has reopened his watch repairing store at Twin Bridges.

M. Hall, of the Rockford Silver Plate Co., and B. Clausin, of S. H. Clausin & Co., Minneapolis, Minn., visited Anaconda recently.

F. Siegel is looking for a man named Edward French, who, he claims, Feb. 21 presented a check for $85 which was afterwards discovered to be a forgery.

Preparatory to relinquishing his business in the city of Boulder, James K. Moore, jeweler and optician, is holding a closing out sale of his entire stock.

Siegel's jewelry store, 18 E. Park St., has been undergoing extensive alterations. A new plate glass front has been put in, and the store thoroughly remodeled.

A. Frost, manager of the crockery and jewelry department of the Missoula Mercantile Co., Missoula, is contemplating a trip to the eastern markets as well as one to San Francisco and other California cities.

L. F. Verberckmoes, a jeweler and optician at 107 E. Park Ave., Anaconda, is strongly advocating the formation of a retail jewelers' association in Montana, to protect the legitimate jeweler from the damage to his trade done by the department stores and catalogue firms.

C. T. Godsden, superintendent of the new mine syndicate at Yoga, was in Great Falls last week from the company's sapphire properties. He left at once for London, England, where he will remain a month and then return to resume work. He reports that the past season was a most successful and profitable one for the company, indeed, the most profitable it has ever had. During the year a great many improvements have been made on the property, and the equipment of the mine is now modern and complete in every particular. Operations have been considerably extended and the company is now working from a shaft as well as upon the surface.

George Shirkey, of the Keppler Jewel Co., Anaconda, and well known to t members of the trade in Montana, w married Feb. 22 to Miss Viola Powell.

Ed F. Mayer, whose store at 65 Pa St., Butte, was damaged by fire two wee ago, as reported at that time, is expecti to reopen this week with an auction sa He has taken the adjoining premises, whi were also damaged in the fire, and is ha ing the entire store handsomely fitted up.

Articles of incorporation of a n company in Butte, to be known as Pufahl were filed with the county recorder the last week. The principal place of busine is Butte, and the capital stock is $25,0 The directors and incorporators are Pufahl and M. S. Largey, of Butte, a N. J. Bielenberg, of Deer Lodge. W. P fahl has for some time conducted a sto for art wares, pictures, glass and silverwa on Park St., and it is understood that t company will continue at that addre Mr. Pufahl has done the largest busine of the kind in the northwest, and it is e pected that under the new auspices this w be considerably extended.

Pacific Coast Notes.

R. W. Boyle, formerly of Kansas Ci Mo., has located at Flagstaff, Ariz.

B R. Doan has opened a shop at Wh tier, Cal., for the repairing of watch clocks and jewelry.

M. A. Ray, of the Clear Lake Jewelry C Lakeport, Cal., last week visited Lower La and other neighboring towns on business.

An attachment was recently levied on t jewelry stock of Thomas Chamley, Yu City, Cal., to secure payment of a bill ow to John L. Duncan.

Mrs. M. E. Hoyle, Riverside, Cal., h taken quarters in the New Glenwood buil ing on Main St., and will move there as so as the building is ready for occupancy.

J. P. McNulty, Turquesa, N. M., manag of the American Turquoise Co.'s mines, w in Santa Fé last week. No work has be done in the turquoise mines since some tim before Christmas on account of pendi litigation.

Frederick R. Stearns, after a clever pie

ESTABLISHED 1854. **EXCLUSIVE DESIGNS IN ARTISTIC JEWELRY.** INCORPORATED 1893.

23-25 LOOIJERSGRACHT, AMSTERDAM, HOLLAND.

of detective work, recently recovered in Oakland a valuable diamond ring which had been stolen from him last November.

San Francisco.

TRADE CONDITIONS.

Despite the fact that the weather has become favorable to retail trade it seems that the retailers, however much business they may be doing, are making very few purchases themselves. It is the opinion of a number of wholesalers that it is merely an accident and not a true test of the real condition that so little buying is being done, because the season has opened as one entirely favorable for a prosperous year.

The Jewelry Clerks' Union of this city recently initiated four candidates.

Fred Roth, of M. Schussler & Co., is at present in Amsterdam purchasing loose diamonds.

Mr. Kinna, local representative of the Elgin National Watch Co., was on the sick list last week.

S. W. Thompson, Salem, Ore., recently visited Southern California and this city on a pleasure trip.

Caro Jacobs, of J. Jacobs, after returning from a successful northern trip, left last week for Sacramento.

Peter Engle and wife, Marysville, Cal., have just returned home after an enjoyable week spent in this city.

Mr. Allen, of Morgan & Allen, took advantage of the holiday on Washington's Birthday and made a short trip to the interior.

A. I. Hall & Son last week engaged the services of two new watchmakers—George W. Vass, head watchmaker, and F. B. Mitchell.

J. D. Abrams, of Andrews's Diamond Palace, Montgomery St., has returned from Nevada City, where he attended the convention of the Mystic Shriners.

R. L. Radke, of Radke & Co., has just recovered from a severe illness. Fall Leon, watchmaker for the firm, is suffering from an attack of the mumps.

Alfred W. Bradbury, who had been with Shreve & Co. for 18 years, last week tendered his resignation, giving as a reason his advanced age. George Lewis, son of the late partner of George R. Shreve, was elected to succeed Mr. Bradbury as secretary.

Paul and Ernest Shulz, two jewelers of this city, were arrested, recently, on a charge of receiving stolen property, and subsequently admitted to bail in the sum of $2,000. The jewelers declare that they did not know the goods were stolen.

L. A. Berteling, Oakland, Cal., is being sued for $50,000 damages by H. C. Coward, who alleges that Mr. Berteling injured his reputation. The suit was begun more than a year ago, but the trial has been delayed by a number of demurrers.

Hammersmith & Field are making the solid gold invitation plate on which will be inscribed the Union League Club's words of welcome to President Roosevelt and which will be presented to him on the occasion of his visit to the city next May. The gold, which is absolutely pure, was taken from the mines of Amador County, Cal.

Al Cantor, traveling man for Nordman Bros., has just returned from his trip through Southern California, which territory he found to be in a prosperous condition. Arthur Pembroke, who has charge of the clock department for Nordman Bros., has recovered from a week's illness.

A number of jewelers last week went as Mystic Shriner delegates to the convention held in Nevada City, Cal. Among them were Alphonse Judis, of the Alphonse Judis Co.; John A. Hammersmith, of Hammersmith & Field, and R. L. Radke, of Radke & Co.; John A. Hammersmith will be a delegate to the Mystic Shriner convention, which is to be held in Saratoga, July 8-10.

Portland, Ore.

TRADE CONDITIONS.

All of the retailers report splendid trade during the past week. A number of traveling men were here during the past few days, and several out-of-town jewelers have also swelled the list of visitors. Prospects are indeed bright for a good Spring trade.

The L. C. Henrichsen Co. has accepted the agency for Müller's artificial eyes.

W. Friedlander last week enjoyed a fishing trip down the Columbia River.

Some retailers in this city report a special demand for silver flat ware. During the past week one dealer sold four chests of this class of silverware.

Among out of town jewelers who visited Portland last week were: C. W. Gibbs, Wallace, Idaho; J. H. Seymour, Astoria, Ore.; F. E. Wray, Silverton, Ore.; E. W. Wheat, Condon, Ore.

Cincinnati.

Sam Loeb, of the Gustave Fox Co., is now in the south.

Harry M. Bohmer, of Frohman & Co., is taking the place of Jonas Wise on a road trip this month.

G. H. Newstedt furnishes the watch prizes for the *Post's* "proverb hunt," which he is now displaying in his window.

A. Herman, of Herman & Loeb, came back from the road sick, last week, and is confined to his home with la grippe.

Among a number of jewelers who were in town attending the Masonic Consistory, which was in session last week, were: C. C. Fried, Springfield, O., and A. P. McConahay, Van Wert, O.

Rauch & Goldsmith have moved into new and commodious quarters in the new Commercial-Tribune building on Walnut St. They are putting in new and modern furniture and will occupy a suite of offices running the entire depth of the building.

Bert Ganz, of the Gustave Fox Co., returned from an extended eastern trip last week and told of a unique experience in the mountains, when it took 13 hours to cover 70 miles on the C. & O. All the passengers had to get out and shovel snow 15 feet deep in order that the train might proceed.

A man giving his name as James Morrison, of Cincinnati, was arrested at Cattletsburg, Ky., last week while selling jewelry at prices that caused suspicion. At the station house there were found in his clothes 20 watch chains, rings, earrings, sleeve buttons, scarfpins and a host of other pieces. The prisoner claimed to be a sub-jobber, but would not state where he obtained his goods. He told so many conflicting stories that he was held for further investigation.

Pacific Northwest.

Thieves recently entered the store of H. H. Barton, Grant's Pass, Ore., and took a number of watches. The burglars made their entrance by removing a pane of glass from one of the rear windows.

Frank Gunther, Lakeview, Ore., has sold his watchmakers' tools to Ahlstrom Bros., and will discontinue business.

The United States Marshal at Seattle, Wash., has seized eight boxes supposed to contain jewelry which were shipped from Whatcom, Wash., to a Seattle warehouse.
